This company, under contract with Abbott, had started experiments in May, 1967, primarily to determine the effects of long-term feeding of mixtures of cyclamates and saccharin.

The principal concern was with possible ill effects on the liver, kidney and blood supply. But because of the Swiss mice studies, the FDA and the National Cancer Institute requested the Long Island researchers to focus on the bladder. This organ had been considered so unlikely a site for cancer that microscopic examination of tissues from it almost never was undertaken by researchers.

In the phone call to Abbott Laboratories, the Long Island firm reported finding bladder tumors in six of 12 rats that were alive at the end of the experiment.

At the recent press conference called by Secretary Finch, Dr. Steinfeld gave this account of subsequent events:

On Friday, Oct. 10, Abbott scientists went to Long Island to examine the slides. Confirming the findings, they alerted the FDA on Monday. On Tuesday, Dr. Steinfeld asked for a review by Cancer Institute specialists Umberto Saffiotti, Roger O'Gara and Catherine Snell. They were joined on Thursday by a world-famous authority on bladder cancer, Dr. Gilbert Friedell. All agreed the rats had bladder tumors.

Meeting with reporters, Dr. Steinfeld said, "I must emphasize that this result was obtained only by feeding at high dosages for the entire life of the animals." The dosages were 50 times normal maximums.

On Thursday, while the Cancer Institute review was being completed, the Ad Hoc Committee of the NAS-NRC began a previously scheduled two-day meeting.

The committee had before it the summary prepared by the FDA's Bureaus of Science and Medicine. A major part of it was the review of data and slides gathered in the agency's rat study of 1948-49.

The initial impetus to this "re-look" had come several months earlier from Dr. Kraybill, assistant director of the Bureau of Science for biological science research. But when the new report of bladder cancer came in Commissioner Ley put the Drs. Richardson—the husband-and-wife team of pathologists—on a seven-day "crash" project which ended when they wrote up their work just in time for the Ad Hoc Committee meeting.

OLD SLIDES RE-EXAMINED

The Richardsons discovered a highly suspicious frequency of lung tumors in the old data—a discovery made possible by the relatively recent, sophisticated analytical tools, such as the electron microscope, and to today's warier, "different philosophy."

The Ad Hoc Committee did not regard the "re-look" as sufficient in itself to warrant a conclusion that cyclamates could cause cancer in rats. But one member, Dr. F. R. Blood of Vanderbilt University, said that against the unexpected backdrop of the report on bladder cancer, the Richardsons' work assumed significant back-up importance.

On Oct. 17, the Ad Hoc Committee unanimously recommended removal of cyclamates from the GRAS list.

On Saturday morning, Oct. 18, Secretary Finch convened a press conference to announce his order halting production of general purpose cyclamate-sweetened products.

Dr. Steinfeld emphasized that there is "no indication that human bladder cancer from whatever cause is increasing to any significant degree." At the same time, he noted that this form of cancer has "an extremely long latent period" of up to 20 years.

Commissioner Ley told the press conference that the FDA was beginning an urgent new review of additives—including saccharin—on the GRAS list. Secretary Finch said that "if we had greater manpower and more dollars from the Congress, we could accelerate those efforts . . ."

Immediately, Sen. Warren G. Magnuson (D-Wash.), chairman of the Senate Appropriations subcommittee for HEW, announced that he expected Finch to submit a request for funds to review the GRAS list.

Finch pointed out that his action on cyclamates was required not only by the Delaney law, but also "because it is important to follow a prudent course in all matters concerning public health."

This "prudent" view has far-reaching implications, because the possible hazards in the chemical environment of man exist not merely in certain food additives, but also, for example, in pesticides.

Finch may have jolted the public into awareness that human beings have been possible—and unintended—victims of what consumer advocate Nader called "chemical and biological warfare" in the food supply.

[From the office of Senator GEORGE MCGOVERN, Oct. 24, 1969]

MCGOVERN CALLS FOR COMPLETE OVERHAUL OF ADDITIVE REGULATION

The removal by HEW Secretary Robert Finch of cyclamates from the Generally Regarded As Safe Food additive list has opened a Pandora's Box in the food additive field. Now that the box is opened, it should not be closed until every food additive in it is proven safe beyond doubt for human consumption.

Hearings last summer of the Select Committee on Nutrition and Human Needs raised serious questions about this GRAS list and the procedures that the Food and Drug Administration uses in approving food additives. Perhaps the most disturbing aspect, as shown in the case of cyclamates, is that the FDA has apparently been following the line of "approve for use now and test later."

This is obviously not the best way to proceed when dealing with matters affecting the health and well-being of all Americans.

The truth about the GRAS list, as it is presently managed, is that it is a never-never land of non-regulation. Food additives are permitted for use without advance proof of safety and manufacturers are allowed to decide for themselves whether they have to prove products are safe before selling them. What we really need to do is change the name of the GRAS list to the PAS list—instead of Generally Regarded as Safe, it should be *Proven as Safe*. If this situation cannot be corrected administratively within the Executive Branch, then some legislative action is obviously in order.

One question that the Committee probed deeply in its hearings was the use of additives in baby food, particularly monosodium glutamate. A number of independent investigators, including Dr. John Olney, testified in regard to MSG that there were reasons to doubt its safety. That doubt has not been resolved.

I think until it is resolved that, at the very least, it should be moved from baby food or the amounts in baby food drastically reduced. Either the FDA should ask the companies to do this or the companies should do it on their own initiative. I agree fully with the President's Consultant on Nutrition, Dr. Jean Mayer, that MSG doesn't serve any nutritional purpose in baby food and there is no reason to take any risk with a child's health until it has been proved safe.

Whether it should be removed entirely from the GRAS list is less clear. This obviously needs further investigation as quickly as possible. In the future it would be far better to investigate before the fact of public concern, rather than after. It isn't fair to the public or the manufacturers or the companies that use these materials to wait until after they have gone on the market to fully investigate their safety.

Finally, I think, this whole system needs to be reformed. The FDA, I believe, has been timid in attacking this problem despite the urging of some of the very best scientists within it. If the FDA needs more authority or resources to do the job then I think the Congress should provide either or both. In the last analysis, the FDA should apply the same test to food additives that it applies to drugs; they should be proved safe before they are approved for use.

MORATORIUM DAY ADDRESS BY SENATOR McGOVERN

Mr. HUGHES. Mr. President, among the powerful statements made by public leaders of the recent Vietnam moratorium day, one of the most memorable and moving was made by the distinguished Senator from South Dakota (Mr. MCGOVERN).

Senator MCGOVERN delivered versions of these remarks from three platforms on October 15—American University, Washington, D.C.; Boston Common, Boston; and the University of Maine, at Bangor. I need not remind anyone that the Senator from South Dakota was in the vanguard of those pressing for disengagement from the Vietnam war, years ago. He is properly recognized as one of the Nation's foremost spokesmen for peace.

I ask unanimous consent that his address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ENDING THE WAR IN VIETNAM

(Moratorium Day remarks of Senator MCGOVERN, Democrat, of South Dakota)

We meet today for the purpose of putting an end to the most tragic mistake in our national history—the cruel and futile war in Vietnam. We meet today to call our government away from folly into the paths that lead to peace.

This is a day both of regret and affirmation. This is a day not of name calling or violence or destruction. This is a day that calls not for the politics of revenge; but the politics of reconciliation—both at home and abroad.

We seek not to break the President, but to lift the terrible burden of war from his shoulders and from the American people. To do that we must accelerate the agonizingly slow pace of withdrawal from this hopeless conflict. That withdrawal will not be entirely free from pain and embarrassment, but it will be no easier a year from now or two years or five years after more thousands have died and our own society has been further eroded. The President has described Vietnam as our finest hour; it is not, it is our worst hour. The most urgent and responsible act of American citizenship in 1969 is to bring all possible pressure to bear on the Administration to order our troops out of Vietnam *now*. We are here to assert the claims of life over the further claims of death.

I think if Charles Dickens were writing today, he might say of our age as he did of an earlier age: "It is the best of times; it is the worst of times." He would see in Vietnam the tragic loss of some 40,000 young American lives, another 250,000 maimed or wounded; perhaps 2 million Vietnamese slaughtered, another 3 million driven out of their homes into miserable refugee camps, and they too are the children of God. He would see all the tragedy, the heartache, the bloodshed of that war, and he would say this is indeed the worst of times. But perhaps the American people are looking beyond this war to some of the painful lessons it has to teach us. As the first United States Senator to take issue with the sending of American troops into Southeast Asia—in September of 1963—I nevertheless think there may be one enduring benefit that could come from that involvement, if we meet our responsibilities of learning what that war has to teach us. Perhaps it can prevent an even more costly and hopeless venture elsewhere in Asia or the developing world.

My thoughts today are especially with the young Americans still tied to that bitter jungle and those who have left their blood there. We owe it to these brave young men to learn well the lessons purchased with their lives. Otherwise, their all too great sacrifice will have been for naught.

The great historian, Charles Beard, when asked to cite the most profound lesson he had learned in a lifetime of historical study replied: "The sky is darkest just before the stars come out."

Vietnam has taught us that we are capable of wandering away from the great traditions of our nation. But we have also demonstrated that we cannot surrender the ideals of Jefferson and Lincoln and the great moral principles of our society without setting in motion the forces of dissent and redemption.

So perhaps out of the blood-soaked jungles of Southeast Asia will come the humility and the national wisdom that will lead us into the light of a new day. This is the faith that brings us together this moratorium day—a day of conscience and commitment.

The President has said that his concern at this point is not how we got into Vietnam, but how we bring the war to an honorable conclusion. To me the most honorable way to end the war is to relax our embrace of General Thieu and begin the systematic withdrawal of our troops. But I think a community of moral men have a further responsibility to know how we became drawn into this conflict, to learn what lessons that experience has for us, and to apply that wisdom to produce a new foreign policy more calculated toward peace and less likely to involve us in hopeless ventures of this kind that destroy others in the name of freedom while poisoning the well springs of our own national life. We must learn that it is madness—not security—to devote 70% of our controllable federal budget to armaments and only 11% to the quality of life. It is not national defense to spend $25 billion for a worthless Anti-ballistic missile defense and then render 15 million Americans defenseless by malnu-

trition. We must stop permitting the economy of death to starve the economy of life. We must stop trying to be the policeman of a revolutionary world!

Any understanding of the forces that brought us to where we are today, with half a million young Americans still fighting and still dying in Southeast Asia, must go back at least 25 years. For nearly a century prior to the second world war, this area was a colony of the French and had been ruled and exploited to that purpose. With the Japanese invasion of 1940, French power was temporarily shattered.

Unfortunately, a new American president coming into office in the closing weeks of World War II, concentrating his major attention on seemingly more urgent questions, permitted a gradual drift in American policy to support the French effort to restore their colonial control over French Indo-China. That effort, in spite of the sacrifice of the cream of the French army and an expenditure of some $2½ billion in American funds in 8 years of bloody struggle, ended in disaster at Dien Bien Phu.

That was the first tragic mistake on the part of our government—the desertion of our time-honored commitment to self-determination and anti-colonialism. We supported instead a self-defeating French effort to reassert empire in an area where empire was doomed.

Mistake number two occurred between 1954 and 1956 when we joined with the Saigon regime—largely our own creation—to block the election called for by the Geneva Accords to decide the future of North and South Vietnam.

We blocked the election of 1956 for one reason. We were afraid Ho Chi Minh would win it. Indeed, President Eisenhower said Ho would have received 80% of the vote in both North and South Vietnam. How ironical it is that 15 years later, President Nixon is now saying that the one issue we will not negotiate is the right of the Vietnamese to determine their own future. The hypocrisy of all this is that so long as our men and money are in Vietnam they prevent—not advance—self-determination.

Mistake number three came when after conditioning our aid on the necessity of substantial reforms, we permitted the Saigon regime to ignore the necessity of those reforms.

With each new failure, with each new corruption of South Vietnamese generals and politicians, we tried to compensate by increasing inputs of American military power.

If there is one dominant lesson from this bitter experience that we ought never to forget, it is this: we do not have the right or the capacity to save a political regime abroad that lacks the respect of its own people.

There are problems around this world that we cannot solve with military power—even with napalm and B–52's.

I served along with millions of my generation in World War II, in my case as a bomber pilot operating against the Nazi war machine. But what is one to say about the tangle of Southeast Asia, where on one little jungle strip we have dropped more bombs than all the bombs that fell on Japan and Germany in World War II—where a war that began as a struggle over the minds and the hearts of the people of that area has degenerated into a massive bombardment on a scale seldom seen in the history of warfare. Does anyone, even the most ardent hawk, still believe that all of this effort has increased the chances for dignity and freedom and peace. We went in, after all, to reduce the terror in the countryside, to reduce the isolated incidents of guerrilla terrorism that was evident in the 1950's. And we ended up with a young American Major saying sadly after the destruction of a South Vietnamese city of 35,000 people. "We had to destroy the city in order to save it."

And this, it seems to me, underscores the self-defeating nature of our military operations in Vietnam.

Mistake number four—perhaps the most costly of all—is not what we have done to Vietnam but what we have done to ourselves. While we have fought the Viet Cong, we have neglected the enemies within our own society—the blight of our cities, the ugly scars of racism, the pollutions of air, water and land, the joblessness, the bad housing, the ill health, the dull schools, and the hungry of the poor. In short, we have waged war abroad while surrendering to those enemies seizing our own land.

Our plea today is that our government get out of this war that breeds violence both at home and abroad. The Thieu-Ky regime is not worth the 40,000 young Americans who have died. It is not worth the 8,000 who have died in 1969. It is not worth the scores who will die this week. It is not worth one additional young life. Let's stop saving face and begin saving lives. Let us stop killing Asians and begin the healing of our own land.

In his fine play, *"Incident at Vichy,"* Arthur Miller has von Berg express his deep guilt over the terrible atrocities of the Nazis toward the Jews; he threatens to commit suicide. But recognizing that von Berg, while deploring the atrocities, is doing nothing to stop them, Leduc replies indignantly: "It's not your guilt I want, it's your responsibility."

And so it is with Vietnam. It is not enough to beat our breasts, to confess our guilt—we must *act* as responsible men and women.

I believe that the students and citizens across the land who have declared this peaceful moratorium deserve the active support of us all.

This is the highest patriotism. It is carried out by Americans who love their country enough to call her to a higher standard. I regret that the President has said he will pay no attention to this effort. If he holds to that course, he will learn as his predecessor learned, that American foreign policy cannot be formed in defiance of the conscience and the common sense of the American people. We have been requested instead to maintain silence for 60 days. But we need not a moratorium of freedom of speech in America but a moratorium on killing in Vietnam. If we are to recapture the American dream, we need not a conspiracy of silence; we need to hear a new call to "life, liberty and the pursuit of happiness."

So I support the moratorium and whatever similar events follow, so long as the war continues. Having fought against our war policy for six years, I don't intend to quit fighting this evil until we have ended it once and for all. And there is no way to end it except to remove our troops! To those who say this will cause a bloodbath in Vietnam, I say there is a bloodbath now. But let us and other friendly countries around the world open our borders to any Vietnamese who might feel threatened by our disengagement. Let us arrange for the mutual exchange of prisoners and provide for the defensive deployment and security of our troops. And then let us remove every last American soldier from Vietnam. Let us bring our youth home from the bloodshed in Asia to join us in the redemption of our own beloved but deeply troubled land.

To challenge the mistaken policies of our country is to pay it a high compliment—because it is based on the faith that we can do better.

"This," said Camus in one of his *Letters to A German Friend,* "is what separated us from you; we made demands. You were satisfied to serve the power of your nation, and we dreamed of giving ours her truth."

So let us do our nation the high honor of serving not her power, but condemning her evil and giving her the truth. For it is still the truth that sets both men and nations free.

IRS CONDONES SHELL'S ABUSE OF EMPLOYEES' RIGHTS

Mr. PROXMIRE. Mr. President, the Shell Oil Co. has been forcing its employees to listen to its views on oil depletion and oil imports, and the Internal Revenue Service is apparently going to allow Shell to deduct the cost of this lobbying from its taxable income.

Shell has been requiring its employees during working time to attend lectures at which the company's position on the oil depletion allowance and the oil import program was presented. Not only were the employees forced to listen to the oil industry's position, but Shell, apparently with the blessings of the Internal Revenue Service, is going to deduct the cost of these brainwashing sessions.

I am all for well-informed citizens, but forcing a group of employees to listen to only one side of an issue is surely not the hallmark of a free democratic society. Communist China may believe in forced indoctrination, but we in the United States certainly do not. What possible use of this information can the employees of Shell make except to write to their Congressmen?

Section 162(e)(2)(B) of the Internal Revenue Code is quite clear that such lobbying activities are not deductible expense. Yet the IRS wrote to me that such "lectures" did not "appear" to be lobbying activity. If these propaganda sessions are not, to use the code, an "attempt to influence the general public or segments thereof, with respect to legislative matters," I do not know what is.

I am going to request the IRS to reconsider its decision and am going to call upon Shell to pledge not to indulge in any further propaganda sessions unless they allow opposing views to be heard.

THE READER'S DIGEST ARTICLE ON AMERICAN PRISONERS IN VIETNAM

Mr. THURMOND. Mr. President, in the recent Vietnam demonstrations, little concern was exhibited for the 401 American servicemen known to have been captured by the enemy. We do not know whether most of them are dead or alive. Hanoi has signed the Geneva Convention on Prisoners of War, but refuses to acknowledge that these men are prisoners of war. Hanoi will allow no international inspection team to visit the prison camps or to make inquiries about the welfare of the men involved.

In the November Reader's Digest, released yesterday, the plight of these prisoners—and their families—is detailed with great feeling. The article cites examples of mistreatment and inhuman conduct. For example, Reader's Digest says:

> Prisoners are fed little but rice, and many suffer from malnutrition. Some are afflicted with intestinal parasites. Except when allowed out to empty toilet pails, prisoners are confined in huts, often locked in wooden foot blocks or handcuffs. Barbaric treatment is not unusual. In Hanoi's prisons, men have been kept in a pitch-black room for more than a year, hung from ceilings by their arms, tied with ropes until they developed infected scars, and burned with cigarettes. At least one has had his fingernails ripped from his hands. The broken bones of another, set by communist doctors and still in casts, were rebroken by guards.

Mr. President, these barbarities were performed by the same enemy whose flag has been adopted by many American protesters.

However, such sentiments are expressed by only a handful of Americans. The vast majority want to know what they can do to help. Reader's Digest has come up with a plan. The article urges that an avalanche of letters should descend upon representatives of foreign nations, the Congress, and the chief North Vietnamese negotiator in Paris. The Digest reasons that continuing exposure of the plight of the Americans held prisoner will create a wave of indignation that the North Vietnamese cannot ignore.

Accordingly, the Digest has offered to send to its readers a list of Washington, D.C., addresses, of Ambassadors of the foreign nations whose assistance could be particularly vital; and a list of selected foreign newspapers. Anyone who wants this list need only send a postcard to Reprint Editor, The Reader's Digest, Pleasantville, N.Y. 10570.

Mr. President, I commend the Reader's Digest for its excellent plan, and I urge all Americans to follow it as far as they are able.

Mr. President, I ask unanimous consent that the article entitled "What You Can Do for American Prisoners in Vietnam," published in the November Reader's Digest, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Reader's Digest, Oct. 26, 1969]

WHAT YOU CAN DO FOR AMERICAN PRISONERS IN VIETNAM

(By Louis B. Stockstill [1])

Once a month from her apartment in Arlington, Va., Gloria Netherland walks down a long hallway to the mail chute and deposits a letter. She watches it drop from sight on the first leg of a journey into an unknown void halfway round the world. The letter begins "Dear Dutch." Whether Dutch will receive it is impossible to say.

Gloria and Dutch have been married 18 years, but she doesn't know whether he is alive or dead. For more than two years she has written the monthly letters—six lines each, according to current communist rules. None is answered; none is returned. But, in the pattern of "dreadful uncertainty" that characterizes her life, she never fails to write.

Capt. Roger M. Netherland, shot down over North Vietnam in May 1967, is officially "missing in action"; fliers reconnoitering the site where his plane plunged to the ground believe they heard his voice, but no word has come through since.

Gloria Netherland is but one of hundreds of American wives and parents whose husbands and sons are the forgotten men of the Vietnam war—approximately 1,400 men captured or missing and possibly in enemy hands. Most of the known captives are imprisoned in North Vietnam. Others are held by the Vietcong in the South. A few are interned in Laos and Red China.

On the shoddy pretext that these captives are "criminals," not POWs, Hanoi will not allow neutral inspections of its prisons—inspections required under the Geneva Conventions, ratified by North Vietnam in 1957 and by 119 other governments since the origination of the Conventions in 1949. In blatant disregard of international rules, Hanoi refuses even to identify the prisoners it holds, to release the sick and wounded, or to allow proper flow of letters and packages, though the Red Cross has tackled the problem again and again.

Evelyn Grubb's only knowledge of her husband, for example, has come from a Hanoi propaganda gesture. An unarmed reconnaissance aircraft, piloted by Maj. Wilmer "Newk" Grubb, was shot down in January 1966. Hanoi gloatingly publicized his capture. Each time Evelyn writes, she sends photographs of their four sons—stapled to the letter so that Newk will know if they have been removed. She doesn't know whether he has received a single photograph or letter. In almost four years, she has received no further official word of her husband.

Until recently, the American public has been provided scant information about American POWs in Vietnam. Now, for the first time, our officials are waging an open fight for the prisoners. The diplomatic maneuverings which previously shielded many aspects of the situation from public view—although perhaps right for that period—have been partially cast aside. The United States is speaking out. Yet, in order for the tough and forthright new policies to produce desired results, citizens must join the attack. Our assistance could be crucial.

Here, then, are the sobering facts about the prisoners—the way they are used and abused by Hanoi.

MISERY AND MALNUTRITION

The armed forces have been able to positively identify 401 men as captured (Air Force, 192; Navy, 140; Army, 46; Marine Corps, 23). Some intelligence about these men must be kept secret or couched in guarded language to protect them. Nevertheless, accounts of inhumane treatment have emerged. Consider Navy Lt. (j.g.) Dieter Dengler, who was taken by the Pathet Lao in 1966 and turned over to North Vietnamese soldiers. He was spread-eagled by his captors and left at night to the mercy of jungle insects, repeatedly beaten with sticks for refusing to sign a statement condemning the United States, and tied behind a water buffalo and dragged through the bush. The once 157-pound flier weighed 98 pounds following his escape and rescue.

Other escaped prisoners have told of similar maltreatment in Pathet Lao and Vietcong jungle camps. Prisoners are fed little but rice, and many suffer from malnutrition. Some are afflicted with intestinal parasites. Except when allowed out to empty toilet pails, prisoners are confined in huts, often locked in wooden foot blocks or handcuffs. Barbaric treatment is not unusual. In Hanoi's prisons, men have been kept in a pitch-black room for more than a year, hung from ceilings by their arms, tied with ropes until they developed infected scars, and burned with cigarettes. At least one has had his fingernails ripped from his hands. The broken bones of another, set by communist doctors and still in casts, were rebroken by guards.

Prisoner treatment varies, of course. North Vietnam operates its best-known prison camp—known as the "Hanoi Hilton"—in central Hanoi. Here prisoners are wakened between 5 and 6 a.m. by a gong, followed by a 30-minute Radio Hanoi English-language broadcast of propaganda piped into their cells. At mid-morning they are taken out to empty toilet buckets. At 11 a.m., as much as 19 hours after they last ate, they are fed. Food—picked up on a wooden tray and eaten in the individual cells—consists mainly of pumpkin or squash, pork fat, a vegetable resembling wild onion tops, and bread or rice. Then, prisoners may "nap" on their bare board bunks until two in the afternoon, when their cells are flooded with another half-hour Radio Hanoi broadcast. Between 4 and 6 p.m. they are fed the second and final meal of the day.

Prisoners generally are isolated from communication with more than one or two other prisoners. Many are kept in solitary. Certain prisoners have been allowed on occasion to write to their families, but few letters ever reach home. U.S. officials, with reasonable suspicion, regard the "Hanoi Hilton" as a propaganda showplace. It is the lone prison that foreign journalists have been allowed to enter.

PATTERNED RELEASE

To date, only a handful of Americans have been released: 16 by the Vietcong, nine by Hanoi. The releases by Hanoi—on two occasions last year and one this August—have all followed a disturbing pattern. First, just three men have been let out at a time, and always accompanied by blatant propaganda. Second, the names of the men to be freed have been withheld for periods of more than a month after the intention to release was announced, thus creating untold agony for thousands of hopeful next of kin. Third, releases are carried out via dissident Americans instead of through the International Committee of the Red Cross.

The release last August illustrates how completely Hanoi milks the prisoner situation for its own purposes. To begin with, it was carried out via a group of eight dissenting Americans—a pacifist, two members of the Students for a Democratic Society, a member of anti-war organizations, a man who had served a stockade sentence for refusing to fight in Vietnam, and three cameramen from an underground movie-making outfit. All but one went to North Vietnam, where they were solicitously entertained for a couple of weeks.

Finally, on August 4, Hanoi named the men who were to be freed. Two were Navy men (Lt. Robert F. Frishman, captured 21 months earlier; and Seaman Douglas B. Hegdahl, imprisoned for two years and four months); the third was Air Force Capt. Wesley L. Rumble, a prisoner for 15 months.

At an airport press conference in Vientiane, Laos, U.S. newsmen described the men as "pale and gaunt." Lieutenant Frishman, acting as spokesman for the prisoners, selected his words carefully. He said only that he was "happy to be returning home."

"How was the treatment you received while a prisoner?" he was asked.

"I received adequate food, clothing and housing," Frishman replied.

VIEW FROM THE SIDE

When the three men arrived at Kennedy International Airport in New York, I was there to see them for myself. To television audiences, the returning prisoners may have looked reasonably well cared for. But their appearance as they disembarked was deeply saddening. Frishman and Hegdahl were first off the plane. Rumble, ill, stooped, pale, was assisted down the steps, helped into a police car, and rushed to a waiting medical-evacuation plane.

The two Navy men were ashen. Their eyes were deep, hollow circles of darker gray, much like the exaggerated eyes of starving children. Frishman had been seriously wounded. The North Vietnamese doctors had removed his elbow and tied the muscles together. "I am glad to still have my arm," he said. It hung at his left side, the loose sleeve of his jacket emphasizing that the arm was terribly wasted.

A reporter asked Hegdahl how much weight he had lost. He had "no comment." But then Frishman addressed the microphones: "I lost 45 pounds. Seaman Hegdahl lost 60 pounds."

What about the welfare of the other prisoners still held by Hanoi?

"No comment."

As Frishman turned to leave, I saw him for the first time from the side. His shoulders

[1] Louis R. Stockstill, in researching this article, talked to dozens of government officials and numerous wives of Vietnam prisoners. A free-lance writer in Washington, D.C., Stockstill was for 22 years a reporter for the *Armed Forces Journal*, covering Congress and the Department of Defense.

were incredibly thin. The collar of his shirt hung loosely about his neck. The lines of his nose, his cheeks, his chin were sharply drawn, haggard. So were Hegdahl's. Their tightly stretched, almost translucent skin had a corpse-like pallor.

Their "escorts" had nothing but praise for what they had seen in North Vietnam, including Hanoi's "humane" treatment of prisoners. "How many prison camps did you visit?" I asked. After repeated evasions, their leader admitted that he had "no information at all" about any of the prison camps. Nor had they brought any hint that North Vietnam might consider changing its policy on prisoners.

THE PRISONERS TALK

Twenty-five days later, I saw Frishman and Hegdahl at Bethesda Naval Hospital in Maryland. Sunshine had improved their color; they had regained some weight. They were ready to open up.

Frishman recounted how he had been blindfolded after his capture and, despite serious injuries, driven in a truck to other locations, where he was stoned by the populace. When he reached the prison, he was refused medical treatment and told he was "going to die in four hours" unless he talked. When he passed out, he was taken to a hospital. "Then, even with my bad arm, they tied me up with ropes."

Doctors operated on his arm, but failed to remove missile fragments; so it was six months before the incision healed over. "I would wake up and find my arm stuck to the blankets. . . . The scab would come off. . . . The wound would drain again."

Hegdahl, too, had been subjected to solitary confinement for more than a year. He was permitted occasional mail, but the letters were rifled of enclosures (including money) sent by his parents. The lone package he was allowed had been plundered before he got it. For propaganda purposes he was photographed "reading" a U.S. magazine, which he was allowed to hold "just long enough for them to take the picture."

Frishman was cautioned before his release not to forget that "we still have hundreds of your buddies." But those still imprisoned want the facts out in the open, he said. As one prisoner said to him, "Don't worry about telling the truth. If it means more torture, at least we'll know why we're getting it. It will be worth the sacrifice."

Plan for Action. Hanoi's continued lack of compassion has brought rising anger in Congress. In August, 42 Senators banded together in a strong statement condemning North Vietnam for its cruel treatment of the prisoners and their families. The declaration, sponsored by two opponents of our Vietnam policies, Charles Goodell (R., N.Y.) and Alan Cranston (D. Calif.), says that if North Vietnam thinks it can "influence the policy of the United States toward the Vietnam conflict" through its intransigent position on the prisoners, it is "doomed to failure." Those signing the statement included both Democrats and Republicans, and represented 33 of the 50 states.[2]

This sort of initiative is helpful, but only full and continuing exposure of the plight of the prisoners and their families, together with relentless public pressure at home and abroad, is likely to produce action. A business-as-usual attitude on the part of the American public can only indicate to Hanoi that these men who have given so much to their country have indeed been forgotten.

In my interviews with numerous government officials, with representatives of the Red Cross, members of the armed forces and next of kin of the prisoners, I have asked each person what would be the most effective attack that could be launched. They agreed that dramatic results could come from a vigorous letter campaign directed to 1) representatives of foreign nations and the press of those nations; 2) your Congressmen; and 3) Xuan Thuy, chief North Vietnam negotiator in Paris.

The mail to the foreign nations should urge that pressure be brought to bear on Hanoi to live up to the "spirit" of the Geneva Conventions by putting into practice the Conventions' rules on the treatment of war prisoners.

The letters to Xuan Thuy should make the same demands. And those individuals who are not in sympathy with the war itself should make it clear that proper treatment of the prisoners is an overriding consideration. All should note that continued intransigence on the part of Hanoi will stiffen the resolve of the American public, not weaken it.

Letters to members of Congress should call for a joint resolution demanding proper treatment for the prisoners and missing men.

There is a chance—possibly a good chance—that world opinion might force Hanoi to honor basic codes of human decency.

"By any human standards" the position of North Vietnam is "totally inexcusable," says Secretary of State William P. Rogers. "I don't understand why we have not become more excited about the prisoner question."

The Secretary is telling the people of the United States that their concern is important. The rest is up to you. If you want to help the men whom many Americans have forgotten, you can. Your letter could be the one that spells the difference.

NOTE.—If you want to help, send a postcard to Reprint Editor, The Reader's Digest, Pleasantville, N.Y. 10570, giving your name and address; you will be mailed a list of Washington, D.C., addresses of ambassadors of the foreign nations whose assistance could be particularly vital; and a list of selected foreign newspapers. Letters to Xuan Thuy can be addressed to: Xuan Thuy, North Vietnam Delegation, Paris Peace Talks, Paris, France (airmail rate, 20 cents).

[2] On August 21, the North Vietnamese delegation in Paris vehemently rejected the protest as "slander" and an attempt "to deceive public opinion."

ADDRESSES BY GALO PLAZA ON LATIN AMERICA

Mr. KENNEDY. Mr. President, on successive days at the beginning of this month, Mr. Galo Plaza, Secretary General of the Organization of American States, delivered two major addresses on American policy toward Latin America and on the future of the Alliance for Progress. Mr. Plaza's remarks have special significance because of the close relationship between Mr. Plaza and Governor Rockefeller, who headed the administration's specific study missions to Latin America earlier this year. Indeed, a number of commentators have suggested that the addresses may be a partial preview of the major policy statement on Latin America that President Nixon will deliver at the end of this week.

In his statements, Mr. Plaza speaks eloquently of the needs of Latin America and discusses many of the recommendations that political and diplomatic leaders of Latin America have made in urging the United States to adopt a more progressive policy for the hemisphere. Mr. Plaza places special emphasis on more enlightened American trade and aid policies toward Latin America, including special trade concessions, more extensive public assistance programs, and greater private investment.

Mr. President, when Governor Rockefeller embarked last May on the first of his four study missions to Latin America, President Nixon emphasized that the purpose of the trip was to listen to the leaders of Latin America and bring back recommendations for new policies. In spite of the turbulence surrounding some aspects of the missions, many experts believe that the Governor was able to gather a broad range of meaningful impressions.

Because of the continuing concern of many of us in Congress for improving U.S. policy toward Latin America, I believe that Mr. Plaza's remarks will be of wide interest. I, therefore, ask unanimous consent that his recent addresses in New York City and in Hamilton, Bermuda, be printed in the RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM THE ADDRESS BY GALO PLAZA AT THE ANNUAL AWARD DINNER OF THE AMERICAS FOUNDATION, NEW YORK CITY, OCTOBER 6, 1969

I recently came across a sharp indictment of the trade and shipping policies of the developed countries written by an articulate young statesman of an underdeveloped country. He said that the states of his region of the globe must unite against certain powers which are naturally bent on—and I quote—"fostering divisions among us, depriving us of an active commerce in our own bottoms, . . . monopolizing the profits of our trade, and clipping the wings by which we might soar to greatness."

The words sound like they might be those of a nationalistic Latin American accusing the United States of economic aggression, but they were actually written in 1787 in *The Federalist* by Alexander Hamilton. The underdeveloped nation in danger of having its wings clipped was the United States.

Today the shoe is on the other foot. History has been kind to the United States, bringing it to a position of unparalleled economic preeminence, in which its action—or inaction—has repercussions around the globe. This position places a gigantic burden of responsibility on the United States.

Today it is the Latin America nations and the other developing nations of the world that are calling upon the United States for greater financial cooperation and trade liberalization, while at the same time seeking to assert their economic independence. On the basis of its own history, the United States should have no difficulty in understanding this position.

The most recent Latin American statement of the problems in inter-American economic relations is the Latin American consensus of Viña del Mar. It was approved by the Special Committee for Latin American Coordination (CECLA) in May of this year and subsequently presented to President Nixon and to the Inter-American Economic and Social Council at its meeting in Port-of-Spain. This significant document reflects a growing tide of nationalism, regional cohesion, and solidarity in Latin America.

Shorn of its diplomatic amenities, the Consensus declares that the United States should make a greater effort to fulfill its obligations and commitments in the inter-American system.

The Consensus reiterated the Latin American countries' conviction that economic growth and social progress are basically their own responsibility, but that they need the support of the developed countries.

Among the major obstacles which the Consensus cited as a brake on Latin American economic growth are the conditions on trade

and aid. In the area of trade, the main concern is with tariff and nontariff restrictions that impede access to the principal world markets under equitable or favorable conditions for Latin American raw, semi-processed, and manufactured products. In the area of aid, the Consensus cites the progressive deterioration of the volume, terms, and conditions of international financing assistance.

During the period of the Alliance for Progress Latin America has been contributing to a significant extent to strengthening the United States balance of payments position. When all factors are taken into account, including debt service, last year there was a net inflow of funds from Latin America to the United States of about $500 million. This naturally raises some questions in Latin America about who is aiding whom.

What is it that the Latin American countries expect from the United States? In the area of trade policy, they call for:

Reduction or elimination of tariff and non-tariff barriers to Latin American exports of all types.

Establishment of a system of generalized trade preferences for manufactures and semi-manufactures.

Consultation prior to the imposition of measures affecting Latin America's trade.

Establishment of national or inter-American systems of export credit.

Elimination of discrimination against Latin American vessels and cooperation in the creation of Latin American merchant fleets.

Stabilization of market fluctuations through commodity agreements, buffer stocks, and supplementary financing.

In the area of aid policy, the Latin American countries seek:

Expansion of the volume of financial cooperation so that Latin America can achieve a net inflow of funds of reasonable magnitude, rather than net outflows as at present.

An easing of lending conditions, with longer grace periods and lower interest rates, subsidized where necessary.

The untying of United States aid, at least within the Latin American region, and more concerned efforts within OECD to achieve an untying of credits by all industrialized countries.

Cooperation in achieving a shift in policy of international financial institutions to permit program or sectoral lending and the financing of local currency costs where needed.

None of these objectives in trade and aid is new. They have been reiterated time after time in the inter-American meetings of the past decade. Many of them are reflected in the economic standards of the amended Charter of the Organization of American States, which has been ratified so far by thirteen countries, including the United States. Latin America is calling upon the United States to put the principles of inter-American economic cooperation into full practice.

There is certainly no lack of excellent studies to assist the United States in formulating a new Latin American policy. There are even studies on the studies.

The studies are valuable, but they are no substitute for action. That is why the recent mission of Nelson Rockefeller is so important. It is not just one more study. It is a reflection of the actual needs and aspirations of the Latin American countries, and President Nixon has announced that a number of its recommendations will be adopted. This is a promising sign.

I believe that multilateralism deserves a much more substantial vote in inter-American relations. The political pitfalls of bilateral economic cooperation have been all too clear in recent years. It is difficult for any powerful country to avoid charges of intervention when it decides unilaterally which countries should get aid, how much they should get, and under what conditions it should be granted.

The multilateral framework for economic cooperation in the Americas already exists in the inter-American system. The organization of American States is a tried and tested vehicle for reconciliation of United States and Latin American views in the political sphere, and it is perfectly capable of performing the same function in the economic sphere, if the parties are willing.

The Inter-American System is stronger and more vigorous than ever. That vigor is reflected in the reform of the OAS Charter, the launching of massive new programs in the fields of education, science, and technology, and the settlement of the recent conflict between El Salvador and Honduras.

The General Secretariat of the OAS has been revitalized with the introduction of modern administrative techniques in order to provide more effective service to member states in accordance to each country's needs.

In other words, the Organization of American States can serve as both the forum for the elaboration of inter-American economic policy and the machinery for carrying out that policy, largely obviating the need for bilateral programs.

Two important inter-American meetings in the coming weeks will give the United States an opportunity to indicate the extent to which it is willing to revamp its Latin American policy and move toward multilateralism. In a few weeks a special Committee of the Inter-American Economic and Social Council at the expert level will meet in Washington to draft a new enocomic policy for the Americas.

The committee's recommendations will then come before a meeting of the IA-ECOSOC at the ministerial level in Caracas in December. The importance of these meetings cannot be overstressed. Let us hope, for the future of the Americas, that they achieve their objective.

Inter-American Cooperation for Development

(Address by Galo Plaza, Secretary General of the Organization of American States, at the National Conference of UPI Editors and Publishers, Hamilton, Bermuda, October 7, 1969)

In both the United States and Latin America there are symptoms of dissatisfaction with the current state of inter-American relations. This should alert us that the time has come to forge news bases for inter-American cooperation for development.

There are—to be sure—those who doubt that there is or should be any special relationship between the United States and Latin America. To me that is an unrealistic view, because the fate of the nations of the New World has become increasingly intertwined over the years and it is destined to become even more so in the future. This is recognized in the treaties of the inter-American system. It is a matter of geography and history.

I do not suggest that the unique relationship that links the United States and Latin America should be at the detriment of commercial, cultural, and political relations with other countries or regions. I merely suggest that United States cooperation in the development of Latin America should be a priority consideration for that country, based on considerations of enlightened self-interest rather than moral responsibility alone.

Hasn't the United States been doing more than its share? This is the attitude of many aid-weary Americans. The answer is no. It is true, as the Chairman of the Inter-American Committee on the Alliance for Progress has said that the contributions of the United States have been a real and noteworthy factor in advance made during the decade in all countries of the region, and without that cooperation Latin America would be in worse economic shape than it is.

THE NATURE OF U.S. AID

But let us take a closer look at U.S. aid. Since 1965 United States financial cooperation with Latin America has been shrinking, while the conditions on loans have become more onerous. Humiliating amendments have been made to the aid authorizations, inspired by internal political considerations. These have soured inter-American relations. The Hickenlooper Amendment, a supposed deterrent against nationalization, is a case in point.

Much is heard, even in sophisticated circles, of the crushing burden of aid on the American taxpayer. Those who lament the burden usually overlook three basic facts:

First, only one third of a cent of each taxpayer's dollar goes for economic cooperation with Latin America.

Second, around 80 percent of all official capital flow have been in the form of loans—not grants—and most of them are repayable in dollars. Fully half of the amount loaned during the sixties has already come back to the United States in the form of payments of principal and interest. Interest alone in the first seven years of the decade amounted to $734 million.

Third, of the loans made bilaterally by the United States Government as well as a large part of those extended by the Inter-American Development Bank, more than 90 cents of each dollar that is lent is spent in the United States, on United States goods and services. Tied loans mean the borrowing countries have no flexibility to shop around for the best buy.

The fact of the matter is, in other words, that the aid burden largely rests on the receiver rather than the donor.

In terms of net capital flow, Latin America is actually aiding the United States. In 1967 there was a net inflow of capital and service payments from Latin America to the United States amounting to some $500 million. Taking into account this fact, and the fact that United States aid has remained fully tied, it is clear that Latin America made a positive contribution to reducing the balance of payments deficits of the United States. Latin America, in effect, shared with the United States some of the sacrifices needed to safeguard the latter's external accounts.

It is imperative that these facts be brought out and publicized widely in the United States. The ignorance that has prevailed on this issue is a source of annoyance to Latin Americans whose debt repayment burden currently eats up about one third of their gross capital inflow. The bulk of the burden is on them, not the U.S. taxpayer.

LATIN AMERICA'S RECORD

Let us examine Latin America's record in the past decade.

Average annual growth in GNP per capita was 1.6 percent during 1961 to 1968. This is far short of the 2.5 percent goal of the Charter of Punta del Este. The 3.1 percent annual expansion of the population has prevented better results.

Between 1964 and 1968 government revenues increased 30 percent. Taxes as a percentage of GNP increased, reflecting the rising mobilization of domestic resources. More than 90 percent of the resources applied to development came from domestic sources.

In the countries plagued by inflation, the rate has tended to slow down in the past two years, especially in Argentina, Brasil, and Uruguay.

In the agricultural sector performance has been good, but not brilliant. Agricultural output increased markedly, keeping abreast of the population increase. Both the diversity of output and yields improved with more

widespread use of fertilizer and improved technology, and some reforms in land tenure systems.

Industrial production has consistently outpaced total output during the sixties. In twelve countries industrial production rose by an average of nearly 50 percent. In Panama and El Salvador production more than doubled; in Peru and Mexico it increased about two-thirds.

The illiteracy rate is dropping as school enrollment has doubled in this decade, but the population has grown so fast that there are more school-age children without schools today than there were in 1960.

Considerable gains have also been recorded in health, particularly in the expansion of urban water supply systems and sewerage.

Apart from the quantifiable elements, there have been noteworthy institutional and administrative changes in Latin America. Economic growth in quantitative terms does not tell the full story of a nation's progress in the struggle for development. Some countries with high growth rates owe these mainly to fortuitous weather conditions or windfalls in export prices. On the other hand, some countries show lower growth rates because of the amount of resources being channeled into health or education, or because income is being redistributed more equitable and stabilization programs are in force. So we must consider not only the growth figures but the facts that modern management techniques are being introduced into the private and public sector, that economic development planning is becoming increasingly efficient and operational, and that institutions are being founded to mobilize savings, promote exports, stimulate industrialization, and strengthen agricultural extension. These institutions are having their effect on the framework of Latin American society.

PRIORITIES FOR THE NEXT DECADE

The number-one economic objective of Latin America in the seventies will be to penetrate foreign markets and increase and diversify its exports. Expansion of exports should be on the order of 6 or 7 percent per year—almost double the rate actually achieved in recent years. Without this, it will be impossible for Latin America to achieve economic growth rates required for adequate living standards, reasonably full employment, and industrialization. Granted, expansion of exports at the rate I have suggested is no easy task. It will require the concerted internal efforts of the Latin American countries, and it will also require a more liberal and far-sighted attitude on the part of the world's major industrialized powers, particularly the United States and the European countries.

If the United States were to relax its tariff and non-tariff obstacles to imports from Latin America this would have a tremendous impact on Latin America's overall capacity to import. It would do far more to boost U.S. sales to Latin America than tied aid.

Closely related to the problem of exports is the problem of unemployment. At least 25% of the labor force was unemployed or underemployed in 1960 and the figure today is believed to be even higher. No development policy can fail to take this into account. We must find ways to reconcile the need for technological innovations with the need to create jobs. I submit that one step in this regard would be a policy of intra-regional migration to match the labor force with the labor requirements of the region as a whole.

The farm people also deserve high priority in Latin America in the seventies. In most of the countries, agricultural policy should pursue not only increased efficiency in production but an increase in the area under cultivation. Rural unemployment and underemployment is every bit as serious as urban unemployment, and must be attacked with equal vigor. We must modernize our marketing techniques, integrate our markets, and ensure adequate remuneration for farm workers. Only by raising farm income can we hope to create the demand needed to sustain competitive industries, particularly in manufactured products.

As for direct foreign private investment in Latin America, there is a need for a clearer definition—without rigid or formal rules or codes—of the terms under which it is welcome. Latin America needs the capital, technology, and market connections that the foreign investor can offer, but it needs them on terms that provide maximum possible stimulation to its own future development and at least cost in terms of the balance of payments.

We must examine new forms of private foreign investment and create what I would call "naturalized" rather than nationalized enterprises—companies that would operate in the full interests of national development and conform to local conditions.

Even presuming more favorable international policies on trade and private investment, there will still be a substantial need in the seventies for public external financial cooperation for Latin American development. What part should come from the United States? The General Secretariat of the Organization of American States, in a technical study presented to the Inter-American Economic and Social Council in June, has suggested that the United States might furnish $1.1 billion to Latin America annually from 1970 through 1975. Although this is more than double the amount made available in recent years, it would not be unrealistic in terms of the commitment made by the United States at Punta del Este. The OAS proposal suggested that of that $1.1 billion, $475 million be reserved for bilateral programs. The rest, $650 million, would be a nonreimbursable contribution to the Inter-American Development Bank. It would enable the Bank to mobilize more funds elsewhere, and increase its Latin American lending operations to $1.3 billion per year and soften the terms for those loans. Adoption by the United States of a policy of this nature would be a tremendous boon to Latin American development. It would be a revolutionary breakthrough in inter-American relations.

MULTILATERALISM VERSUS BILATERALISM

To put inter-American relations on a new level of cohesion and solidarity, I would call for a major new forward step toward multilateralism, with decisions in the hands of multilateral bodies in which the national interests of each Latin American country are properly represented—bodies with the authority to assess the performance of the borrowers as well as the donors.

If the flow of aid is to be rationalized and performance monitoring is to become more meaningful and nonpolitical, an increasing share of external assistance must be multilateral rather than bilateral. Bilateral cooperation is a natural source of friction and annoyance, and whatever political advantages have been scored by the lender on occasion are generally more than offset by the disadvantages. The chances of abuse in aid and the imposition of myriad terms and conditions are infinitely less under multilateralism than under bilateralism.

I believe that the next phase of inter-American cooperation for development should be largely multilateral. To eliminate purely political considerations from the process, financial allocations in Latin America could be made in accordance with the Inter-American Committee on the Alliance for Progress—CIAP—on the basis of each country's performance. This was the intent of the Fulbright Amendment, which should be given more widespread application with emphasis on the multilateral approach. CIAP is the ideal organ for the job. It has no weighted votes, and only one of its ten members represents the United States. It has shown its competence in making annual assessments of internal and external resource needs and availability, and it has the technical backing of the OAS General Secretariat.

Multilateralism in technical assistance is equally as important as multilateralism in financial assistance. The OAS Program of Technical Cooperation, which was recently reorganized to meet the member states' designated priorities more effectively, is an ideal vehicle for this purpose.

LATIN AMERICA'S GOALS

Relations between the United States and Latin America in the seventies will have to take into account an emerging unity of purpose among the Latin American nations. Today Latin America is more united and more cohesive than ever before. The countries recognize an identity of interest and the need to negotiate and cooperate with the United States on the basis of equality, dignity, and reciprocity.

The hammering out of a common bargaining position by the Latin American countries acting in unity, as was done in the recent Consensus of Viña del Mar, can make negotiation within the inter-American system more meaningful. It can lead to a stranger partnership between the United States and Latin America, within the OAS. It is the OAS that offers the best possible means for solution of common problems. The OAS can be the cushion or shock absorber for reconciling the various interests and forces at play.

In the weeks ahead there is an excellent opportunity to lay the basis for a new era of multilateral economic cooperation in the Americas. A special committee of the Inter-American Economic and Social Council at the Expert Level will meet in Washington within a few weeks to work out details of the new policy. The Committee's recommendations will be acted upon by a special meeting of the Economic and Social Council in Caracas in December.

The Latin American countries seek cooperation, not charity; dignity, not dependence; and interest, not intervention. These desires are just and reasonable, and I firmly believe that they should guide our actions in the Americas in the coming decade. Action is what is called for now. The time for studies and resolutions is past.

AIR AGE EDUCATION

Mr. PEARSON. Mr. President, I recently had occasion to read a statement by Dwane L. Wallace, chairman of the board of Cessna Aircraft Co. in Wichita. I found Mr. Wallace's statement to be significant and extremely interesting. Mr. Wallace spoke on the relations between air age education and the future of aviation and particularly general aviation. Because his remarks are appropriate and worth while I ask unanimous consent that this statement by Mr. Wallace be printed in the RECORD at this point.

Mr. President, I also ask unanimous consent that a reprint of an article from the Wichita Eagle of March 23, 1969, be printed in the RECORD. This article relates how the introduction of a course in aeronautics at the Osage City High School ultimately had an impact on the redevelopment of the Osage City Airport.

There being no objection, the statement and article were ordered to be printed in the RECORD, as follows:

THE IMPORTANCE OF AIR AGE EDUCATION, THE PRESENT STATUS, AND FUTURE NEEDS FROM AN ENGINEERING STANDPOINT

(By Dwane L. Wallace)

When we think of a pioneer, we usually think of someone who has been around for ever and ever.

But this isn't necessarily true.

We can quickly think of people who qualify as pioneers in some field or another, but are still quite young.

The most obvious example is an astronaut. There just aren't any old astronauts as yet, but they all have to be classified as pioneers.

You know, we have a lot of young pioneers in the engineering side of general aviation.

There are a number of us who have been tinkering with airplanes for quite a while, but for the most part, we would have to say that any engineer who has been involved in general aviation for even twenty years would still have to be considered a pioneer. He's a guy who has really been around in this business, because it actually wasn't until the mid-1940's that general aviation began to take shape from a product engineering standpoint.

But no matter how long this pioneering engineer has been around, he has just been laying the groundwork for what is yet to come.

Even if a man is one of those 20-year pioneers in our business, he is still working on what we would have to call the early designs of general aviation vehicles.

And if that sounds strange, let me remind you that right now the year 1990 is the same distance away from us as the year 1948. And I submit to you that progress in our business will be multiplied between now and 1990 when compared to our progress since 1948.

Let me remind you also that most of you have children who will spend the most productive years of their lives in the 21st century.

We can't help but try to project ourselves over the next few years to 1990—or 2000—or 2010.

And we can't help but ask some questions: What will our general aviation products look like? How will they be powered? What human engineering factors will determine cabin design and layout? What affect will further development of electronics and guidance systems have on aircraft design and the operation of those airplanes?

These, of course, are engineering type questions—questions that you and I are likely to ask one another in business conversations or in meetings such as this.

But there are other questions we need to be asking also: Who is going to be *buying* our products in these years to come? What attitude is the public going to have about our business? How can we best *educate* people to the advantages and purposes of general aviation?

This last question—the one relating to education—has become a matter of great concern in our industry in recent years.

Most of the general aviation companies have become involved to one degree or another in the matter of air age education.

We aim our educational messages at a wide variety of audiences, but certainly one of the most important of these audiences consist of our young people.

The attitudes these people are forming right now during their schooling will determine the shape of our world for many years to come. Their opinions about business, science, technology, government, social programs—all are being determined by what they are studying today.

Likewise, their attitudes about aviation.

Our job is to help influence those attitudes favorably.

In speaking to these young people, we are trying to relate aviation to the world as it will be in their time. We are trying to show how aviation will affect such things as human communications, social traditions, cultural structures, economic principles, and business practices in years to come.

In short, we are trying to put aviation into the mainstream of their lives instead of letting them think of it as something apart from their normal activities.

To do this job, we have air age education programs aimed at all levels of schooling.

In literally thousands of elementary schools throughout the country, teachers are using special kits which help them work aviation examples into such diverse subjects as science, social studies, geography, and mathematics.

In hundreds of high schools, students are taking credit courses which not only cover the history of aviation but also give them enough practical study of airmanship that they are qualified to take an FAA private pilot's written examination at the end of the semester. Many of these high school courses also include some type of actual flight experience for the students.

In growing numbers of junior colleges and vocational schools, students are being taught the practical aspects of some career within aviation.

All of this air age education activity isn't just happening. It takes time, effort, money, ideas and people.

And you and I should be a part of this activity. You and I already know the story of aviation. If we *really* believe in it, then we have an obligation to help see that today's young people have the proper knowledge with which to put aviation in their own future.

And in the process of doing this, you and I will also be helping to educate ourselves. The fact that we are an integral part of the air transportation system—the growth of which will 'key' the economy of the 1970's.

We will be helping to remind ourselves of the great potential of the general aviation business.

We will be helping ourselves avoid the problem of tunnel vision, so that we can understand the big picture of general aviation.

We will be helping ourselves see through someone else's eyes that we are in an exciting, dynamic industry which needs new ideas and new ways of doing things, helping to inoculate ourselves against that costly disease—"Hardening of the Altitudes."

Air age education is a never-ending process for all of us—and involvement in it will be stimulating and rewarding.

[From the Wichita Eagle and the Beacon, Mar. 23, 1969]

HIGH SCHOOL COURSES HELP AIRPORTS

It was a similar bent prop incident that helped spark the people of Osage City, Kan. to action on their airport.

Seems a distinguished visitor landing his own plane at the airport for the first time had difficulty determining exactly where the runway was.

The wrong choice resulted in minor damage to the airplane and considerable local embarrassment.

It was about the same time that local school officials were organizing an aeronautics course in the high school after attending a summer workshop on the subject at Wichita State University.

That was a year ago, and through what was termed a "total commitment—a total community effort," the "Osage City Farm" is fast being reverted to its original status and use as the "Osage City Airport."

Following the minor mishap on the field, several concerned citizens—again mostly non-pilots—used the local chamber of commerce as a platform and expressed a desire to improve conditions at the airport.

"We wanted something we could be proud of and that would be safe," recalled Jack French, local optometrist and airport sparkplug.

"I spoke out too loudly at the chamber one day and they made me chairman of the committee," he said.

From the chamber, French and company went to the city council, which promptly agreed to spend some $4,000 that had accumulated from growing crops on the airport.

The real test, however, came when businessmen contributed another $5,000 for the airport improvement program.

Equipment and labor was donated by Clem Thompson, local earth moving contractor, whose son just happened to be a student pilot.

WEATHER MAJOR BAR

Only the weather is now holding up completion of the new runway—2,650 feet by 50 feet with a six-inch base. An oil surface is being used to avoid the expense of asphalt and the special equipment required to lay it.

"We hope it will keep its resiliency by reworking it every three years," French explained. City fathers have agreed to begin collecting that optional ½-mill levy this year for airport maintenance.

According to French, between 90 and 95 per cent of all the merchants in the community donated some funds and the board of education also chipped in as did a number of people from the farming community.

Federal funds were never sought since federal standards would have required about 3,800 feet by 60 feet of runway and the cost would have been much higher.

Much of the success of the Osage City project has been credited to the high school aeronautics course.

"I don't think the airport would be what it is without the course," commented Kenneth Kern, Osage City High School principal.

Fifteen students are enrolled in the course, started last year by science teacher-pilot Jim Buller and five adults are taking an adult education private pilot ground school class from Buller at night.

In addition, five high school students and four adults currently are taking flying lessons. Prior to the start of construction on the new runway, an Emporia, Kan. flying instructor would fly up to Osage City twice a week to give instruction.

Although there are now only two aircraft based on the field, Osage Citians are thinking of attracting aircraft owners from Topeka—25 miles north—with new T-hangars and improved facilities.

SENATOR HARRIS ON "MEET THE PRESS"

Mr. HART. Mr. President, I ask unanimous consent to insert in the RECORD at this point the text of NBC's "Meet the Press" of October 19, 1969, at which the distinguished Senator from Oklahoma (Mr. HARRIS) was the guest.

There being no objection, the text was ordered to be printed in the RECORD, as follows:

MEET THE PRESS, OCTOBER 19, 1969

(Produced by Lawrence E. Spivak)

Guest: Senator FRED R. HARRIS, Chairman, Democratic National Committee.

Moderator: Lawrence E. Spivak.

Panel: Peter Lisagor, Chicago Daily News; Robert Semple, Jr., the New York Times; Paul Duke, NBC News; Russell Freeburg, Chicago Tribune.

Mr. SPIVAK. Our guest today on Meet the Press is the Chairman of the Democratic National Committee, Senator Fred R. Harris of Oklahoma. Senator Harris served as co-chairman of the Hubert Humphrey presidential campaign.

Now we will have the first questions from Paul Duke of NBC News.

Mr. DUKE. Senator Harris, the man who is generally regarded as the leader of the Democratic party, Hubert Humphrey, recently said that he believes President Nixon is proceeding on a right path in Vietnam. Do you share that belief?

Senator HARRIS. Well, I don't have any right to speak for Vice President Humphrey or anyone else. I simply have felt, as we said in a bipartisan resolution which I co-sponsored with Senator Church and Senator Hatfield the other day, the President has indicated that this war is unwinnable militarily and that, therefore, we think he ought to get about getting us out of it on a much more rapid and systematic basis. That is my own personal view and, of course, I am the only person I am entitled to speak for.

Mr. DUKE. Well, about a year ago, Senator, you were regarded as a one hundred per cent supporter of Lyndon Johnson and his policies regarding Vietnam. Does this mean a change in your own personal position?

Senator HARRIS. Yes, it does, and I would just say this: I didn't change my mind, however, about this war during this administration. I spoke out against the war during the previous administration.

In August of last year, for example, prior to the Democratic National Convention, I called for, among other things, a unilateral, unconditional bombing halt, and, so, my own feeling about it now, the necessity for us to disengage more rapidly than we are presently doing is not a partisan matter as some would try to make it because, as I said, I spoke out during the last administration.

Mr. DUKE. But isn't it true, Senator, that President Nixon is taking many of the steps which you and other Democrats advocated six, nine months ago, a year ago? He is trying to reduce the level of the fighting, he is bringing the boys home, and there are now reports that the Administration is considering trying to bring home as many as 300,000 troops by sometime in 1970? Doesn't this show real progress?

Senator HARRIS. I think the key to what you have just said is that there are "reports" that the President wants to bring home 300,000 people by the end of 1970. We also saw Melvin Laird, the Secretary of Defense, in what one newspaper has said was somehow a misquoting of him, say something about residual forces and so forth, and we have seen the President of the United States say that he thought President Thieu was one of the four or five greatest statesmen of all time, that Vietnam may be one of our finest hours in history and so forth.

I think that what those of us who are speaking out now are saysing is, "Mr. President, when opposition to this war is at such a tremendous level and when you have had nine of ten months now, going on to ten months, to take a fresh look at this war—and even you have now said it is unwinnable militarily and you are going to get us home—I think we are entitled to more than vague "reports," and certainly more than conflicting statements on one side or another of this issue, and that is why I am so pleased to see the President is going on the air November 3rd, apparently, and I just hope he will articulate a policy, tell us what it is we are doing there and that that will mean a more speedy disengagement.

Mr. DUKE. Nonetheless, Senator Harris, to repeat the question, isn't it true that the President is taking many of the steps which many Democratcs had advocated?

Senator HARRIS. Yes. Yes, I think so, but the problem is about it—for example on withdrawals, it won't do to say "I am going to withdraw 25,000 troops now and then we will wait and see," and there are three or four conditions, what Saigon does and what Hanoi does and this and that before we decide. I think a key word is "systematic." Former Secretary of Defense Clark Clifford, for example, has said we must have systematic troop withdrawals and he laid down a time table for that. And I think the systematic nature of those withdrawals is very important because only then does he believe, and do I believe that President Thieu, for example, will begin to make the decisions in the South that have to be made if that government is going to be supported in the South and if they are to take on more of their own responsibility, and secondly if Hanoi is to feel any greater pressure for negotiations. The systematic troop withdrawal is what is important and I think we haven't seen that to date, plus we have not seen a plain statement for the people of this country of the common sense of what the President is doing or for that matter, what he is doing.

Mr. SEMPLE. Senator Harris, if President Nixon liquidates this war rapidly but fails to achieve an honorable settlement along the way, and the Viet Cong takes over, will he be fair game for Democratic charges of surrender in 1970 and 1972?

Senator HARRIS. Well, I think you have got some charged words there about "honorable" and so forth. Let me just say this: My own involvement in speaking out on this war has been for the reason which comes up in your question. That is, I think we ought to say to the President of the United States that "If you will move in that direction, then we are going to support you." And I think we are helping to create the climate within which the President can more rapidly and honorably disengage.

Mr. SEMPLE. I use the word "honorably" for a very particular reason. It seems to me that there will be a rather substantial counter-reaction in this country if, in fact, he liquidates the war and withdraws precipitously in such a way that the enemy does take over. There is a rather large emotional commitment to our stakes in Vietnam and what you seem to be suggesting is that the Democrats will not criticize him if that happens.

Senator HARRIS. Well, I don't think that has to happen. I do not accept that as what will happen, if he will do what we suggest.

I suggest: (1) A stand-still cease fire, which I earlier suggested we should accept on the death of Ho Chi Minh, and I think it tragic, we didn't do that, and (2) I suggest a more rapid systematic withdrawal of troops.

Now, I would not bind the President to an exact timetable. I think we should hold him to his press conference of June 19th of this year when he said he hoped to beat the schedule advocated by Secretary Clifford, but I just think now is the time when we must transfer more of the responsibility to the South Vietnamese people themselves and there is no time better than the present to do that.

Mr. SEMPLE. Well, isn't the President in effect, embarking on a timetable at the moment?

Senator HARRIS. I hope so.

Mr. SEMPLE. I mean this is the only way I can read his original withdrawals of 25,000 and 35,000 troops. As I understand you, you would have him proceed faster?

Senator HARRIS. Yes, I would, and not only faster, but in a systematic way. I think that is what is important. It is only by that means that we can signal Hanoi and signal Saigon in a meaningful way that we are on the way to allowing the people of South Vietnam to achieve self-determination.

Mr. FREEBURG. Senator Harris, I'd like to ask you about your role in dissent in Vietnam. You were quoted recently as saying it is time to take the gloves off and you favored the moratorium last week.

Looking back to Johnson, President Johnson was sort of run out of office. Your own candidate last year started his lowest point after the demonstrations in Chicago.

Isn't there danger, after President Nixon has only been in office for ten months, of again breaking a President before he—and in this case, before he really has a chance to do something?

Senator HARRIS. I don't think it is a question, Mr. Freeburg, of breaking a President, and I think it is unfortunate that some people can't disassociate the issue from the personalities. You and I know that we got into this war through four administrations. I think there is enough blame to go all the way around, myself included, as I have made clear. I think all of us can take a part of the blame; those of us who supported this war and those of us who remained quiet while the policy unfolded.

What we are trying to do is create the climate within which the President can do the right thing and that is begin to get us out of there at a much more rapid rate, and I think we are doing that, and I just believe enough in the American system that it will respond and I am hopeful that in his statement on November 3d the President will spell out his policy to do that.

Mr. FREEBURG. Have you made up your mind yet whether you will back the November 14th to 15th anti-war demonstrations which are led by more militant people or are you going to wait until after November 3rd to see what he says?

Senator HARRIS. First of all, I am not involved. It is my understanding from the papers that a lot of people and different organizations are involved and apparently there is some disagreement among themselves. I read in the papers today about a disagreement on what they plan in November. I certainly have no plan to be involved in those and I am very interested in what the President does on November 3rd.

Mr. LISAGOR. Senator Harris, just one other question on Vietnam: Why should Hanoi negotiate at all if you want the President—and many people want the President, and even the President wants—to establish a system of systematic withdrawal from South Vietnam? If you were in Hanoi, wouldn't you just sit tight and wait?

Senator HARRIS. First of all, may I say, Mr. Lisagor, that if that is an argument to be made against my own position, it is a better argument against President Nixon's because he has come in now with a fresh look at this war and has decided against military victory and has started us on what I hope and believe is some irrevocable move to disengage.

Mr. LISAGOR. It is irreversible, is it not?

Senator HARRIS. It seems to me it has to be, but it has got to be more systematic and more rapid. At any rate, that is an argument to be made against his position and not against those of us who are calling for more rapid disengagement. But I would say this to you:

First of all, former Secretary of Defense, Clark Clifford, is convinced that only through the announcement of a systematic withdrawal of American troops will we have a chance—and there may not be a chance—but will we have a chance of getting Hanoi to bargain. If they are faced with the prospect that they are eventually going to have to deal with a purely indigenous, purely local, popularly-supported government in the South, that prospect has the better chance of getting them to negotiate.

The second thing is, former Ambassador and chief negotiator at Paris, Averell Harriman, feels that, if anything, the moratorium on balance helped the negotiations because it helped to show Hanoi that we really mean it when we say we are going to disengage.

Mr. LISAGOR. Senator, I'd like to switch you over to the economy. The President made a speech Friday in which he, in effect, blamed the Democrats for inflation, saying that they spent an awful lot more money than they collected in taxes over the past five or so years. Do you believe he has moved vigorously

enough on this inflation front to halt the rise in wages and prices?

Senator HARRIS. I certainly don't. Again, you know, I think you can get into this "blame" business, but the truth of the matter is that the consumer price index on meat and fish and poultry, for example, has gone up during the first eight months of this administration more than in all the previous eight years combined. Interest rates have reached a one hundred year high level. We have seen copper and steel prices go up alarmingly at a time when the President has refused to use the moral persuasion of that office, and now he seems to be willing to try to come through the back door and try to do that, but I think the President of the United States has got to be a leader in working with management and with labor in working out wage-price guidelines and I think it doesn't help at all, when many of us are trying to cut down, for example, on unessential defense expenditures—as, for example, on ABM—it doesn't help for him to come along then and recommend an SST.

Mr. LISAGOR. Do you think we can cure this problem of inflation or bring it into control without an increase in unemployment? We have already seen an increase, but don't you think that unemployment has to go higher than it is now, the rate, and also what should we do about it?

Senator HARRIS. No, I do not think that we have to say that, that some level of unemployment is acceptable. You know, unemployment is a euphemistic term which means that individual people, family heads, are out of work, and I thought it was appalling what Secretary Kennedy said before the committee the other day, that there was some level of acceptable unemployment and he refused to even say that six or seven per cent unemployment was unacceptable.

I think that what the Administration must do, as it tightens up, is to understand that it has to put a net under this fallout. If we are going to begin to tighten up and people are going to fall out of jobs, then we have to have a net to catch them. We have that in a bill by Jim O'Hara in the House, and one being perfected by Senator Gaylord Nelson in the Senate, and I just think that is the No. 1 thing that we need to be doing in this Congress.

Mr. SPIVAK. Senator Harris, you and other Democrats keep talking about a time table. What do you mean by a time table? Have you a time table?

Senator HARRIS. What I have said, Mr. Spivak, is that I think that what Secretary Clifford has recommended is a minimum. He has said that we ought to have 100,000 American troops out by the end of 1969 and all combat ground troops out by the end of 1970.

Mr. SPIVAK. Well, how do you know the President isn't planning to do that?

Senator HARRIS. Well, the President said twice on June 19 in his press conference in answer to two separate questions he hoped to beat that schedule. I just want to hold him to that.

Mr. SPIVAK. Do you want him to announce a monthly time table? I just don't quite understand what you mean by a time table.

Senator HARRIS. Not exactly monthly, but I think he must say what he systematically plans to do. Only by that way will he convince both Hanoi and Saigon that that is what we intend to do and only by that kind of systematic withdrawal will, it seems to me, the other good things that might flow from that occur.

Mr. DUKE. Senator Harris, isn't it possible all this criticism will make it more difficult for Mr. Nixon to extricate us from Vietnam?

Senator HARRIS. No, I think not, Mr. Duke. I think we are going to make it easier for him and that is what I hope to do, and I think that is our responsibility as a responsible opposition party. We have to help to create the climate in which he can do the right thing.

Mr. DUKE. I would like to go back to the economy for just a moment. Granted that we do have inflation today, isn't it also true that the Democrats must share a large part of the blame for inflation because it originated during a Democratic Administration?

Senator HARRIS. I think that is partly true. Nobody denies that. It is so funny to me that when people say "Well, maybe you are right, but you Democrats were just as bad or nearly as bad." Well, you know I like to think of Tennyson's line that Bob Kennedy used for that book "Come, my friend, 'tis not too late to seek a newer world."

Mr. SEMPLE. Senator, I'd like to ask you a couple questions about the Democratic Party, if I may. The McGovern Commission has proposed some rather far-reaching reforms in the party, including the admission of 18 and 19 year olds, younger people to party affairs, even though they can't vote. What is your opinon of some of those proposed reforms?

Senator HARRIS. I think that is a very good idea. The Democratic Platform binds us to try to change the law for an 18-year-old vote. I think in the meantime it is a very good idea to open up the party's processes to those 18 years old or more. That is why, if I could just kind of expand the question to get back to Vietnam slightly, that is why I wanted in a positive way to lend the influence of my office as a Member of the Senate from Oklahoma to these kids who wanted in a peaceful, non-violent, lawful way to show what they thought about this war. Young people are the ones who primarily fight the wars, and yet most of them are too young to vote and I think it was unfortunate President Nixon said he wouldn't be affected by what they did. He later changed his mind, I think, and he is obviously affected, and Rogers Mortor endorsed it and so forth, but I think we have to open up the processes of the party and the country to those who are powerless and a group which is more powerless than some, are the young.

Mr. SEMPLE. Well, as a related question I'd like to ask you whether the Democratic Party isn't moving very rapidly in the direction of becoming a party based largely on Northern liberal intellectuals, the blacks, and as you suggest, some of the young. Now that at least seems to be the direction Mr. Nixon is trying to push you in and I wonder if you are willing to settle for it either in the long run or the short run?

Senator HARRIS. No, we are not willing to settle for it, and I think the greatest comeback this year in addition to the New York Mets, may be the Democratic Party. We have had five Congressional elections, you know, in 1969, and prior to Mr. Nixon's election, four out of those five were held by Republicans and now four of the five are held by Democrats, including the one in Massachusetts where a Democrat hadn't been elected since 1820, and the one that was Mel Laird's old seat, where a great young fellow, David Obey was elected, the first time in all history a Democrat was elected there. I don't think you can overgeneralize from that, but I think if you have good candidates, if you speak to the issues, if you put together a responsible, middle ground—you know that is what we are trying to do, is to get the middle-ground people to respond to these issues that face the country—we can win.

Mr. FREEBURG. Senator Harris, in connection with the party, Governor McNair of South Carolina recently warned the Democratic Party leaders the liberals were trying to force the Southern conservatives out of the party and then you have the new Democratic coalition on the other side.

How do you compare the Democratic Party now to a year ago, has it healed any, do you still have bad splits in the party, as I tried to point out here might be possible?

Senator HARRIS. Well, to coin a phrase or two, I think "we see the light at the end of the tunnel" and "we have begun to turn the corner" and we have seen a few "captured Republican documents" which indicate that we are making some headway. Those races, I said, that we had won this year, already, we have paid off $500,000 on the debt we owed since I became Chairman. We are building back toward the 1970 campaigns and I think that we are making some progress. There are a lot of people that confuse disagreement with hopeless division. I believe there is a great deal of dynamism in the party. For example, in the McGovern Commission, the spectacle of a party—and this is rather unusual—engaged in self-renewal, in reforming and rebuilding itself from within.

Mr. LISAGOR. Speaking of splits in parties, Senator, what should the President do about the Judge Haynsworth appointment now?

Senator HARRIS. I think he ought to accept the advice of members of his own party, such as Senator Ed Brooke of Massachusetts and the Whip on the Republican side in the Senate, Bob Griffin of Michigan, and withdraw that name.

Mr. LISAGOR. I'd like to ask you one other economy question. You are a member of the Senate Finance Committee and the President has said he will veto any tax reform bill that comes out with less revenue than he thinks it ought to contain. Will that bill come out with reduced revenues and what should it be?

Senator HARRIS. I don't know how to answer that because who knows yet what it may do?

I think that, first of all, we have got to have substantial tax reform in this country. We have got to collect more from a lot of people who are not paying their share. We have got to give tax reduction to the over-burdened middle and lower-income people and we are going to do that, but I think as of this moment we can't decide how much tax reduction there will be until we get a final look at that bill.

Mr. SPIVAK. Gentlemen, we have about three minutes.

Senator, may I ask you a question? You endorsed Tom Bradley for Mayor of Los Angeles because you said it was a race of national importance. Where do you stand on the race for Mayor in New York City, which is also of national importance?

Senator HARRIS. I am not going to get involved in the race in New York City. I did not endorse Tom Bradley for the reason you said. I endorsed Tom Bradley because the Los Angeles County Democratic Committee asked me to make a tape for him. I have had no such invitation on the New York race and, as you know, the Democrats are greatly split up there.

My two bosses on the National Committee from New York, the National Committman and woman, are split—well, not really split; the National Committeewoman has endorsed John Lindsay; the National Committeeman has not taken any position and therefore there is not anything that I can do and I don't intend to get involved in it.

Mr. DUKE. Well, if the Democratic nominee for Mayor, Mr. Procaccino, if he asked your help, would you give him help?

Senator HARRIS. It would have to come from others and not just from Procaccino and I don't intend to get involved in that race for the reasons I have just said, but also I would just say I have got a lot of other things to do; we have other congressional races, governors' races, and so forth.

Mr. DUKE. Do you think Senator Edward Kennedy could come back to capture the Democratic presidential nomination, if not in 1972, at some future date?

Senator HARRIS. I think that is certainly an open possibility. I was one of those who said very strongly and early that I thought Senator Kennedy ought to remain in the Senate and that he had been an outstanding leader in the Senate as Majority Whip. He himself has removed himself from the '72 race, but who knows after that?

Mr. SEMPLE. What about your own ambi-

tions in 1972, Senator? There have been a lot of rumors, as you well know.

Senator HARRIS. Right. I am not running for President or Vice President in 1972. That has caused me a lot of trouble and particularly since Ted Kennedy took himself out for 1972. That has put a lot of pressure on me and some people wonder if that is what I am using the Democratic National Committee to do. I would just say that I consulted with people like John Baily and Steve Mitchell and Clinton Anderson and others and they told me that this wasn't a very good stepping stone.

Mr. FREEBURG. Do you see any role for Gene McCarthy in the party's future?

Senator HARRIS. I certainly do. I see Senator McCarthy quite often as a member of the Finance Committee. I have just read his latest book. He is very concerned about the issues that still confront this country and I hope that he will continue to feel that the Democratic party is the proper forum to help do something abut the issues.

Mr. LISAGOR. Senator Harris, you have said that the Administration is like Noah's ark. It has two of everything. What did you mean by that?

Senator HARRIS. For example, on desegregation, you know, we have got the Mitchell line, which is a rather hard line, and we have got the Finch line, which is a line that is on the side of human rights it seems, and the President then took the middle course. As you know, he said he was not for instant integration and he was not for segregation forever—somewhere in between. I don't know how you can compromise a moral issue like that, but that is what has been happening with different kinds of spokesmen within the Administration.

Mr. SPIVAK. I am sorry to interrupt, but our time is up. Thank you, Senator Harris, for being with us today on "Meet the Press."

EXPRESSION OF SUPPORT FOR PRESIDENT NIXON

Mr. BENNETT. Mr. President, the Vietnam protest movement in the United States tends to give an unfair impression of American public opinion. Last October 15, when a very small group of Americans was marching in protest, a silent majority of our people went about their normal activities. One cannot deny the fact that vocal activists receive much more publicity than the quiet American who does not take to the streets.

However, the protest movement has prompted many Americans to write to their Senator or Congressman, expressing support for President Nixon's Vietnam policy.

I was very impressed when I received a copy of a telegram sent to the President by the Utah Student Body Presidents' Conference, held at the University of Utah, October 17 and 18, 1969. It was signed by seven of the nine college student body presidents in my State. It reflects, I think, the fact that most Americans still support the course being followed by our able President, and also reflects an understanding by these people that this is a very complicated and difficult war to terminate. They realize that the options of all-out war and immediate withdrawal are not acceptable to the American people.

I ask unanimous consent that the telegram sent to President Nixon be printed in the RECORD. In addition to the stand taken by the student body presidents, have received a petition from Frank C. Overfelt, student body president at the University of Utah, signed by many of his colleagues and expressing support for Mr. Nixon.

A third item which I find interesting is a Support-torium signed by 20 persons in the Salt Lake area, expressing a position similar to the students and the student body officers. I ask unanimous consent that the telegram from Frank Overfelt and the Support-torium with the accompanying signatures also be included in the RECORD.

There being no objection, the telegram and signatures were ordered to be printed in the RECORD, as follows:

[Telegram sent to President Nixon on Vietnam issue]

RESOLUTIONS OF THE UTAH STUDENT BODY PRESIDENTS' CONFERENCE, HELD AT THE UNIVERSITY OF UTAH, OCTOBER 17 AND 18, 1969

President RICHARD NIXON,
Washington, D.C.

We, the undersigned Student Body Presidents of the universities and colleges in Utah, commend your efforts towards peace in Vietnam.

FRANK C. OVERFELT,
University of Utah.
PAUL NEUENECHWANDER,
Weber State University.
RAYMOND W. POLLARD,
Dixie College.
NEIL O. GRUWELL,
Utah State University.
RICHARD WILLIAMS,
Snow College.
DON MARCHANT,
Southern Utah State College.
KEN KARTCHNER,
Brigham Young University.

[Telegram]

RICHARD M. NIXON,
President of the United States,
White House,
Washington, D.C.:

We, the undersigned students of the University of Utah wholly endorse your plans for peace in Vietnam, and heartily encourage your extended efforts in this regard.

Frank C. Overfelt, Student Body President, Associated Students of the University of Utah; Pete Dixon, James S. Jardine, Galen W. Williams, Craig K. Lambson, Ronald H. Cannegieter, Douglas P. Richards, Lannie Remmons Pace, Dan Hinmon, Andy Tralison.

Michael R. Weiler, Marjorie Meads, Jonathan A. Dibble, James S. Jackson, James Ashley Brinton, Mr. and Mrs. Michael Christensen, Lorraine Shanley, Pat Thomas, Roger Davis, Ted Adams, James M. Schutz, Leah F. Spencer, Harvey P. Cahoon, David F. Evans.

Deann E. Kenipner, Edward D. P. Lunt, Lynon H. Affiect, Stewart Karren, Diana Karren, Robert B. Ingebretson, Randy Kriten, Janet Allen, Jesse F. Cannon, David J. Hippen, Brian G. Mason, Lori Duncan, Gill Mulvay.

Kathy Wood, Debra D. Gardner, Vicki Jean Lewis, George G. Hollis, II, Lynn H. Gillette, John Lever, Shirley Moore, Kaye Lynne Pugh, Tamara Andrew, Brent Evans, Mike Miller, Blaine K. Sebring.

Janet Lee Matthews, Karl C. Rowe, Suzanne Dean, Lorin W. Brown, Alan Van Fleet, Rodger E. Brown, Kevin Brooke Taylor, Margie Faceo, Kent Jaffa, Lawrence Francis Cavanaugh, Jr.

Scott Anderson, Laszlo Preysz, J. Adrian Overlins, Lynette Timmerman, Jeri Rubisch, Richard Mott, Larry Hemingway, Cathy Daines, Steve Lowe.

SUPPORT-TORIUM, OCTOBER 15, 1969

As citizens of the United States, we wish to express our support of President Nixon in an honorably negotiated withdrawal of troops in the Vietnam war. This should be done at the earliest possible time, but at his discretion of a lasting peace, and not by irresponsible pressure groups.

Edward E. Rabiger, Salt Lake City, Utah; June J. Rabiger, Salt Lake City, Utah; Maurice W. Hanks, Salt Lake City, Utah; Alexander L. Fortemoto, Tooele, Utah; Paul B. Masock, Salt Lake City, Utah; Gilbert B. Hamblin, Salt Lake City, Utah; Lt. Leander E. Woods, Tooele, Utah; Hiro Dwasaki, Salt Lake City, Utah; L. Dean Henson, Magna, Utah; Lloyd Gorep, Tooele, Utah.

Dennis R. Orgill, Grantsville, Utah; Terry Anthony, S.L.C., Utah; Donald V. Horrocks, Taylorsville, Utah; Thurmon Lee, Tooele, Utah; Kelland H. Willis, Salt Lake City, Utah; Zeff Burks, Tooele, Utah; Allen L. Taylor, Grantsville, Utah; Diana Jacobson, Tooele, Utah; Harold Ballard, Salt Lake City, Utah; Elizabeth Ballard, Salt Lake City, Utah.

NATIONAL GALLUP POLL FINDS MAJORITY OF AMERICANS SUPPORT S. 3000; FAVOR TOTAL IMMEDIATE WITHDRAWAL FROM VIETNAM

Mr. GOODELL. Mr. President, for most Americans the subject of the Vietnam war has evoked confusion, complexity, and frustration.

Despite all of the setbacks and disappointments we have suffered since our military involvement in Vietnam began in the early years of this decade, our people have long been optimistic.

They rallied behind a succession of American Presidents committing us to a continued American presence in Vietnam.

Mr. President, this optimism is no longer there. There is now mounting evidence that a growing majority of our people—young and old, from every segment of our society—no longer support the continuation of American military intervention in Vietnam.

An important indicator of this remarkable change in view is the recent Gallup poll released on October 12.

This survey was based on interviews conducted in over 300 localities across the Nation.

A clear majority of our citizens—57 percent—stated that they wanted Congress to enact S. 3000, "The Vietnam Disengagement Act."

Under the terms of this bill, which I introduced on October 7, no funds may be expended to support American military personnel in Vietnam after December 1, 1970.

The withdrawal would not be abrupt, but would be accomplished in an orderly fashion under a schedule determined by the President.

The South Vietnamese Government would then be required to take up the burden of the war on its own. We would continue to supply them with necessary military and economic aid.

Another important indicator of rising popular support for prompt and complete withdrawal of U.S. troops is to be found in the large number of people who rallied to the October 15 moratorium and signed petitions expressing this view.

In assessing the broad impact of moratorium day, the press has consistently reported that persons from all segments of our society participated.

In this connection, I direct the attention of the Congress to an article entitled "Patricia Wall's Enlistment," which appears in the October 24 issue of Time magazine.

Further evidence of the wide base of support for disengagement are two petitions which are currently being circulated in the Harvard Graduate School of Business.

The first, circulated by the Harvard Business School Vietnam Peace Committee, has been signed so far by 508 of the 1,500 students in the school. It "opposes further U.S. military involvement in the war in Vietnam."

The second, circulated by the Harvard Business School Resistance Group is signed by 133 students to date. It calls the war "a grave crime against humanity" and demands "immediate and unconditional withdrawal of all U.S. forces."

The median age of the entering class at the Harvard Business School is 25. About 37 percent are veterans and 41 percent are married.

Another important barometer of public opinion on this, as on other issues, is the mail from our constituents.

To date, I have received 12,873 individual pieces of mail in favor of the enactment of S. 3000. I have received 1,192 letters in opposition. This constitutes 12-to-1 support for the bill.

These expressions of opinion come from virtually every State in the Union. They represent the views of persons of all ages and of many different political persuasions and social backgrounds.

Mr. President, I ask unanimous consent that the texts of the Gallup poll, the Time magazine article, and the two petitions from the Harvard Business School be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

THE GALLUP POLL: 57 PERCENT BACK GOODELL PLAN TO WITHDRAW ALL TROOPS FROM VIETNAM BY END OF 1970

(By George Gallup)

PRINCETON, N.J., October 11.—A majority of citizens sampled throughout the nation—57 per cent—say they would like to have Congress pass the bill proposed by Sen. Charles Goodell to withdraw all U.S. troops from Vietnam by the end of 1970 and turn the fighting over to the South Vietnamese.

However, a sizable proportion of Americans—43 per cent—say they would like the proposed bill defeated or have yet to make up their minds about it.

A view commonly held by those who favor the bill is one expressed by a young construction worker from Pennsylvania: "We've started the ball rolling and pulled out some of our troops—why don't we go all the way?"

A 23-year old housewife said: "We have obligations to South Vietnam, but we're spending too much money and giving up too many lives for something that is not that important."

PLAN SEEN AS "UNREALISTIC"

Opposed to the bill is a youth worker from Red Bank, N.J., who commented: "The plan is unrealistic. You can't just pull out overnight and leave the South Vietnamese defenseless. The situation will have to be greatly improved before we can take all our forces out."

An Army captain from Georgia also opposes the bill: "It would limit the alternatives possible in Vietnam and tie the President's hands."

DETAILS OF SURVEY

Results of the current survey are based on interviews begun Friday, Oct. 3 and represent the views of a nearly completed sampling of 1478 adults interviewed to date. Interviews in the study are being conducted in person in over 300 localities across the nation. Each person is asked this question:

A U.S. Senator has proposed legislation to require the withdrawal of all United States troops from Vietnam by the end of next year. The fighting would be turned over entirely to the South Vietnamese, with the U.S. providing military supplies and financial help. Would you like to have Congress pass or defeat such a proposal?

Here are the results:

GOODELL PLAN

	Percent
Like to see Congress pass it	57
Defeat it	31
No opinion	12

Persons with a college background are less favorably disposed toward the bill (49 per cent express support) than are persons with less formal education. A larger proportion of Democrats (62 per cent) than Republicans (52 per cent) favor passage.

BASIC ATTITUDES ON VIETNAM WAR

Nationwide surveys in recent weeks have revealed these basic facts about U.S. public opinion on the Vietnam war:

1. As the war has continued, a growing number of Americans, now at a peak of 58 per cent, believe it was a mistake to have become involved in Vietnam with troops. The proportion who hold this opinion now clearly exceeds the proportion who in the early fifties felt our involvement in the Korean war was a mistake. This reached a high of 51 per cent in April, 1952.

2. The majority of Americans believe the war is primarily South Vietnam's and not ours and, for the last four years, have favored a policy of training and equipping more South Vietnamese soldiers and the phasing out of American troops as soon as the South Vietnamese could take over.

3. Despite these feelings about our military involvement, the public has at no time favored an abrupt and total withdrawal.

[From the Time magazine, Oct. 24, 1969]

PATRICIA WALL'S ENLISTMENT

Patricia Wall is not an activist. She is a Democrat of center-stripe conviction, a Roman Catholic, a young (31) suburban (Evanston, Ill.) mother of two and wife of a vice president at the First National Bank of Chicago. Her joiner's urge has been satisfied by participation in the 4–H Club. When she told her husband Bernard that she planned to attend a Moratorium observance at Mundelein College, he had a surprise for her too: he had decided to take part in a businessmen's discussion of the war at his downtown bank.

A year ago, Mrs. Wall, a petite, college-educated brunette, would have hung back. She was not a hawk, but neither was she a participant in the peace movement. "The whole problem is so complex," she explained, "that for a while it overwhelmed me. But then I began to realize that the complexity of a problem shouldn't be a reason not to do anything." There was another influence working as well: "As my husband and I have grown older, we have become increasingly aware of our Christian responsibilities and more deeply committed to our moral obligations, and this, too, led to my decision to participate."

Early Wednesday morning, Pat packed her children off to school and boarded the train to Mundelein, a Catholic girls' school run by the Sisters of Charity of the Blessed Virgin Mary. She entered Coffey Hall, picked up a black crepe armband and some pamphlets in the lobby and went inside to sit down.

About 100 people had shown up for the observance, including teachers, students, nuns and visitors like Pat Wall. They listened intently as Sister Ann Ida Gannon, the school's president, greeted them: "This day will be a failure if most of you let it stop at 4 or 5 o'clock. Today is only a beginning." It was a thoughtful group, not one inclined to swallow any spoon-fed dogmatism. When a bearded teacher began to criticize "our corrupt society" and "our bankrupt electoral system," one woman in the audience objected quietly but firmly that she was there to protest the war in Viet Nam, not the state of society or the electoral system.

Though silent during the discussion, Pat Wall was going through an internal process of decision. Soon a petition was passed around. One woman pointed out that it called for complete and immediate withdrawal of U.S. troops, and refused to sign. She argued that such precipitous action was impractical. When the petition reached Pat, she hesitated, started to pass it along, then got it back and signed.

Later she reflected: "When I went to that meeting this morning, I believe that I was emotionally committed. Now it is more than that. I've enlisted." How would she serve? "I really don't know what we might do next. I just can't tell. We are not the sort of people who picket and hand out pamphlets. But I do think we might have some of the people who spoke this morning over to our home. I'd like to have some of our neighbors in to hear them talk."

HARVARD BUSINESS SCHOOL VIETNAM PEACE COMMITTEE

We, students at the Harvard Business School, oppose further United States military involvement in the war in Vietnam. Our government has shown itself time and again unwilling to extricate itself from a fight which has never been curs. It has thus demonstrated a remarkable insensitivity to the wishes of many millions of Americans representing virtually every segment of our society. This constitutes in our belief a clear abdication of governmental responsibility that seriously impairs the ability of the United States to act effectively in its domestic crisis.

We therefore call upon the leaders of our private sector to marshal every resource, exercise every pressure, and implement every lawful means to make our government stop this war. We urge the leaders of industry and finance to take these steps in the long-run interest of the free enterprise system and of all Americans.

HARVARD BUSINESS SCHOOL RESISTANCE GROUP

We, the undersigned students at the Harvard Business School, are opposed to the American war in Vietnam. The foundation of our opposition does not lie in "practical" arguments of economic expediency.

Our opposition is rooted in our moral conviction that the war is a grave crime against humanity.

We condemn the systematic attacks against the Vietnamese people, the indiscriminate destruction of defenseless villages and the ruination of the countryside. The Vietnamese people have demonstrated, through a quarter century of struggle, that they are not intimidated by foreign powers and that they will not tolerate the rule of landlords and military cliques.

We demand the immediate and unconditional withdrawal of all U.S. forces from Southeast Asia.

WEST VIRGINIA UNIVERSITY PERCUSSION ENSEMBLE

Mr. BYRD of West Virginia. Mr. President, so much publicity has been focused on demonstrations and disorder on col-

lege and university campuses that constructive achievement by students may sometimes be overlooked.

Among outstanding achievements that deserve recognition and commendation, I believe, are those of the West Virginia University Percussion Ensemble, a 13-member group of unusually accomplished student musicians which is carrying the name of West Virginia and its university far beyond the borders of the Mountain State.

This ensemble—which recently performed in the Washington area and has other out-of-State performances scheduled for this season—was selected by the U.S. State Department to be the first percussion group in the United States to tour Latin America.

As a result of this outstanding honor, the ensemble, which is directed by Philip J. Faini, visited nine Latin American countries during the past summer and won high critical acclaim for its music. It is the only performing student group from West Virginia University ever to go abroad on such a mission.

The ensemble visited Haiti, Trinidad, Panama, Colombia, Ecuador, Paraguay, Uruguay, Argentina, and Brazil. It gave about six performances each week during its 8-week tour, made radio and television appearances, and conducted music workshops.

The group, a part of the WVU Creative Arts Center, was selected for the cultural tour by the Office of Cultural Presentations, Bureau of Educational and Cultural Affairs, U.S. Department of State. Traveling from June 26 to August 20, it performed at government embassies, theaters, universities, and cultural centers.

The honor given the ensemble, Mr. Faini said, was "recognition of the people of West Virginia who have supported a university in which the arts, along with other disciplines, are allowed the freedom and resources to research and develop new programs."

The State Department's cultural presentation program, started in 1954, I am told, annually sends abroad about 30 to 35 performing groups and individuals, both professional and academic, to increase international understanding through cultural exchange. In selecting performers to be sent abroad, panels of experts recommend groups in the fields of music, dance and drama to the State Department. The WVU unit was one of only six academic groups chosen in 1969.

Nearly 100 instruments, plus WVU's unique collection of African drums and other native instruments acquired by Faini on an African trip last summer, were taken along by the ensemble.

The group last winter presented a concert at WVU featuring authentic African music performed for the first time in concert in the United States. Mr. Faini tape-recorded the African music during a trip to Africa in the summer of 1968 and transcribed it into musical notation for the ensemble. Some of the selections were incorporated into the tour program. Although percussion instruments are as old as man himself, music written especially for this medium is a development of the 20th century.

The group has performed in the rotunda of the West Virginia State Capitol, at the Governor's Mansion for the State Legislature, and at schools and colleges throughout the Eastern United States. It has premiered 20 new works for percussion as well as being one of the few, if not the only, percussion ensemble in the Nation to perform the authentic African music as part of its repertoire.

It has also made an album, entitled, "Protest in Percussion," which is now in its third pressing.

Mr. Faini is a graduate of West Virginia University with high honors. He received his bachelor's degree in music in 1959, and his master's degree in theory and composition in 1966.

He attended the university on a Board of Governors scholarship, and was the recipient of a Presser Foundation award for excellence in music. While a student at WVU, he was one of the three original members of the first percussion ensemble at WVU, formed in 1956.

Mr. Faini has studied percussion with Roy C. Knapp, Jose Bethancourt, Irvin Honsa, Harvey Biscun, and Frank Lorince, and he has been a staff member of the Fred Waring Music Workshop at Delaware Water Gap, Pa., and has worked professionally in radio, television, with symphony orchestras, and with a number of name bands and singers.

A native of Masontown, Pa., Mr. Faini was a high school band instructor for 3 years prior to joining the staff of Potomac State College at Keyser, W. Va., in 1959 as an instructor in band and instrumental music. He joined the WVU faculty in 1961.

He is West Virginia chairman of the National Association of College Wind and Percussion Instructors, State chairman of the Percussive Arts Society, a member of the Music Educators National Conference, and a member of Phi Mu Alpha, professional music society.

Mr. President, it is a pleasure for me to add my commendation to the plaudits this fine group has already received. On its Latin America tour it performed to capacity crowds, received standing ovations, and was given excellent reviews, from some of which I quote the following excerpts:

"Excellent concert," La Tribuna, Asuncion, Paraguay; "U.S. Percussion Group Great," Evening News, Port of Spain, Trinidad; "Magnificent performance," El Universo, Guayaquil, Ecuador.

"A great musical experience," El Tiempo, Quito, Ecuador; "An extraordinary event in Haitian musical life," Le Nouvelliste, Port au Prince, Haiti.

"The two performances were a veritable artistic banquet offered by the cultural ambassadors from the United States," Le Matin, Port au Prince, Haiti.

"These students display magnificent musical training and instrumental skill," Panorama, Buenos Aires, Argentina.

"The utmost in interpretative facility and versatility—the group impressively showed their elan and nimbleness," Buenos Aires Herald, Argentina.

I am happy to be able to add this recognition for Mr. Faini and his students. There is little doubt in my mind that this is one of the outstanding college groups of its sort in the United States, and I think West Virginians should be extremely proud of it. The Percussion Ensemble is one more evidence of the high quality educational opportunities West Virginia University offers in many fields.

WEST FRONT OF CAPITOL

Mr. CASE. Mr. President, last Tuesday the Senate struck down by 53 to 24 the recommendation of the Appropriations Committee that $1.75 million be provided for planning the extension of the west front of the U.S. Capitol.

I was glad to join in the successful effort to deny these funds which, I believe, would have been a downpayment on a large, expensive and probably unnecessary addition to our Nation's most important shrine.

Before any permanent work on the admittedly deteriorated west front is undertaken, we must know whether restoration is possible. The proposed extension would bury forever the last remaining walls of the Capitol that date back to the founding of the Republic.

Fortunately, the legislative appropriations bill as it passed the Senate does contain $250,000 for a needed study of restoration.

The Senate action now goes to conference with the House which, by contrast, provided $2 million solely for planning the west front extension.

The better than 2-to-1 Senate vote for delaying extension while the question of restoration is explored is a mandate to Senate conferees to hold fast to the position taken by our body in this matter. I am confident they will do so.

DAVIS AND ELKINS COLLEGE NAMES ITS LIBRARY JENNINGS RANDOLPH HALL IN HONOR OF SENATE COLLEAGUE

Mr. BYRD of West Virginia. Mr. President, it is infrequent that we in public service have the opportunity to serve with a man who possesses the rare qualities of my senior colleague from West Virginia.

Senator JENNINGS RANDOLPH has now added nearly 11 years of dedicated, energetic service in this body to a notable and helpful career, that included 14 years as a Member of the House of Representatives as well as achievements as an educator, writer, editor, and business executive.

JENNINGS RANDOLPH certainly must be regarded as one of the great humanitarians of the U.S. Senate. His interests range far beyond the vital concerns of the Committee on Public Works which he chairs with distinction and wisdom. Wherever there is an issue that affects people, there you will find Senator RANDOLPH as their advocate.

It was, therefore, immensely proper, Mr. President, for Davis and Elkins College in Elkins, W. Va., to name its library "Jennings Randolph Hall" in recognition of the many contributions to State and Nation made by this most distinguished former member of the college faculty.

The dedication of the Davis and Elkins Library took place on October 20 in con-

nection with the college's Founders Day program at which Senator RANDOLPH received the Founders Award.

Many friends and associates were in Elkins that day to join in tribute to Senator RANDOLPH. The Honorable James E. Allen, Jr., U.S. Commissioner of Education, Assistant Secretary of Health, Education, and Welfare, and a former student of the Senator at Davis and Elkins, delivered a thoughtful address at the Founders Day program.

Dr. L. Quincy Mumford, Librarian of Congress, was the principal speaker at the library dedication.

The board of trustees of Salem College, Senator RANDOLPH'S alma mater, which he still serves as a trustee, sent its own citation in appreciation of his work. Telegrams were received from many persons, including Gov. Arch A. Moore, Jr., West Virginia; the Senator's colleagues on the Public Works Committee; Senator RALPH W. YARBOROUGH, chairman of the Committee on Labor and Public Welfare, and Senator CLAIBORNE PELL, chairman of its Subcommittee on Education. Senator RANDOLPH is the ranking majority member of the committee and an active member of the subcommittee.

A bronze plaque in the library summarizes, succinctly and without embellishment, the inspiration for the college's action in these words:

Jennings Randolph—Educator, Journalist, Orator, Corporation Executive, College and Foundation Trustee, Distinguished Public Servant. Member of the United States House of Representatives (1933 to 1947). Entered Senate of the United States in 1958.

The events of the Founders Day program and the dedication of Jennings Randolph Hall were reported in depth by the Elkins Inter-Mountain under the direction of its capable editor, Eldora M. Nuzum.

Mr. President, so that his colleagues may be aware of the esteem and affection which is felt for Senator RANDOLPH in West Virginia, I ask unanimous consent that articles and an editorial from the Elkins Inter-Mountain, the citation from Salem College, and excerpts from the addresses of Commissioner Allen and Dr. Mumford, be printed in the RECORD.

There being no objection, the material was ordered printed in the RECORD, as follows:

AN ELKIN'S INTER-MOUNTAIN EDITORIAL

A benchmark in the history of Davis and Elkins College was reached this week when the college trustees bestowed a double honor on U.S. senator Jennings Randolph, one of its more illustrious former faculty members and today an honorary trustee.

At the annual Founders Day Convocation, Sen. Randolph was given the coveted Founders Award, and immediately thereafter the college library was renamed Jennings Randolph Hall. This dual event was a fitting tribute to the senator. No single West Virginian, either past or present, has worked more tirelessly for the greater glory of his state and nation.

The list of Randolph's accomplishments are almost limitless. Starting with his post college days, when as athletic director he gave a special aura to D&E in the sports pages of the big city press and put Elkins on the map of touring America, to his present eminence in the Senate, where as floor manager of special legislation for Appalachia he brought new hope to the impoverished of 13 states, he has built a solid and enviable record of accomplishment.

In education, in aviation, in public welfare, in road building, in human rights, and in public health the name of Jennings Randolph is synonymous with "I will overcome." He is considered one of the great liberals of the past half century, and, as such, he has spent the greater part of his public career crying out against the apathy and indifference which have kept so many Americans trapped beyond the pale of first class citizenship. His has been a clear, incisive voice advocating dignity, equality and a full share in the American bounty for everybody, regardless of color, creed or station in life.

But on Monday, when Davis and Elkins College paused to honor him, it was typical of Jennings Randolph that he did not talk of past accomplishments in the time allotted him as speaker. He chose instead to speak of his mother, father and friends, and of the special parts they played in his life. While greatness has touched him, he is essentially a modest man who has never forgotten those who helped him along the way.

He was fittingly and eloquently eulogized by such illustrious compatriots as James E. Allen, U.S. commissioner of education, and Dr. L. Quincy Mumford, Librarian of Congress. But despite everything that was said, Randolph cannot be placed in any particular mold. His public and private works are so varied and complex, so diverse and diffused that when one speaker characterized him as "Mr. Small College," we suddenly realized Jennings Randolph is a man of all seasons and many descriptions.

Monday was a homecoming for him, a day of greeting old friends and recalling fond memories. But while it could easily have been the high point of an enviable career, we suspect it was a day of rededication for this man of high spirit and boundless energy. In spite of his years, he constantly toils at setting his sights on new goals, and undoubtedly Monday was one of those days of looking upward toward the new and brighter horizons.

We want to take this means of adding an amen to everything said about Jennings Randolph on Monday. But lest our efforts at commendation be construed as a valedictory, we hasten to say, "Hurry to it Jennings. For a man of your productive capacities, there are yet more mountains to cross and other streams to ford."

[From Salem (W. Va.) College]

The Honorable Jennings Randolph, distinguished son of the town of Salem, West Virginia, reared in Salem, graduated from Salem Academy and Salem College, is proudly recognized and warmly greeted this day of October 20, 1969, by Salem College, its students, faculty and Board of Trustees, on this Fourth Annual Founders' Day observance at Davis and Elkins College.

Whereas, the Honorable Jennings Randolph, a man of successful careers—practicing journalist, editor and newspaper owner; author; learned educator; business executive; and now public servant, has brought honor to Davis and Elkins College, which he served as professor for six years and as trustee several terms, and to his Alma Mater, Salem College, which he continues to serve as trustee;

Whereas, the Honorable Jennings Randolph has honored and served his fellowman through his unselfish devotion as a state official, his courageous and forthright leadership in the United States Congress as Congressman and now as Senior Senator of his beloved State of West Virginia;

Whereas, Senator Jennings Randolph has strived constantly for opportunity for all citizens and for social and economic progress for West Virginia and our nation, as evidenced by the many meaningful programs in health, education, training and public facilities, he has authored and floor-managed in the Senate of the United States;

It is my great privilege and honor as Chairman of the Board of Trustees of Salem College, by action taken by the Trustees assembled during the regular Board meeting of October 14, 1969, to recognize the honor this day accorded to Senator Jennings Randolph by Davis and Elkins College, which has named the college library, *Jennings Randolph Hall*, and to convey to our learned and honorable trustee, our expression of recognition and deeply-felt best wishes.

Signed, this 20th day of October, 1969.

HARRY R. HENSLEY,
Chairman, Board of Trustees.

DAVIS AND ELKINS AND THE FUTURE OF HIGHER EDUCATION

(By James E. Allen, Jr., Assistant Secretary for Education and U.S. Commissioner of Education)

It is a privilege to be here today. This is, of course, a standard opening for a speech, but on this occasion I can say it with a depth of meaning that far transcends the mere politeness of good manners.

For me, coming to Davis and Elkins College, and to Elkins, is coming home—coming home with all the joy and satisfaction of one who considers himself to have had here the happiest and best of childhoods and youth, in the most beautiful of surroundings.

Those who planned this program could, I am sure, have chosen better speakers, but I am equally sure that they could not have chosen anyone—except perhaps one of my four brothers—for whom a Founders Day Convocation of this College could have more genuine personal meaning.

A part of this meaning lies, of course, in the fact that Davis and Elkins is my Alma Mater. But even more it springs from the fact that my Father was the second President of Davis and Elkins, assuming that office only six years after the founding of the college in 1904, and holding it for twenty-five years.

There were only two buildings then—the College itself, completely housed in one building on the hill, and the President's home just below on the river. My Father was not only president and professor, but also had a hand in providing food for the students, gardening and sometimes milking the cows, or taking care of the tennis court—or whatever else might need doing.

The College was his life—and its successful future, his dream. I only wish he could be alive to see how magnificently his dream has been realized.

It is a great pleasure also to be here when Senator Randolph is receiving the Founders Day Award and the honor of having the new library bear his name. My friendship with Jennings Randolph began in our Elkins days when I first knew him as teacher and fellow tennis player. It has been a great satisfaction to follow his distinguished political career and to note his contribution to the progress not only of our home State but to that of the Nation as well.

In my own work as an educator, I have had special reason to appreciate his support and understanding of education's needs. Now that I too am in Washington, my more frequent contacts with him only serve to increase my appreciation and respect for his service to State and Nation.

Among the 2500 institutions of higher education in our Nation, Davis and Elkins is relatively young but in those years its rate of growth and its achievements have equaled and even surpassed many more venerable colleges and universities. Caught up in the period of rapid, general expansion to meet evergrowing numbers, the particular distinction of this institution is that it has managed to grow, yet to preserve the special feel-

ing and atmosphere of a small college, to maintain a dedication to quality, and to continue that attention to moral and spiritual values, inherent in a church-related institution, which from the beginning was the essence of the spirit of Davis and Elkins.

I can but reflect on the satisfaction my Father would receive from this continuing emphasis on moral and spiritual values. In one of his speeches while President here he said:

"The morals of business and the government rest upon the morals of the people, the sovereign source of all power. The good man begets a good citizen; the bad man the bad citizen, and the morals of your community, state, or nation will depend upon what the community life of its citizens is.

"It would seem, therefore, that our so-called denominational schools have a responsibility which the state cannot assume, namely, Christian education, or the development of the spiritual life of our youth. No education can be complete without this for upon our spiritual development depends our moral nature, or character, and upon this, the stability of government and the welfare of the state and nation."

Certainly a time such as ours today—a time so characterized by conflict and tension, by the search for social justice for all, reinforces our need for moral and spiritual guidance in seeking solutions to the sensitive, complex and fundamental problems we face.

This Founders Day Convocation is enhanced with the knowledge that the Founders of this institution, Senator Henry Gassaway Davis and Senator Stephen B. Elkins, could now take pride not only in its physical growth but in the allegiance that is still given to those principles that prompted and determined its beginnings.

But the proper spirit of a Founders Day, its greatest benefit, its true purpose, is to look to the past to strengthen the future.

It is my hope that you students particularly, whether directly involved in education, or as interested, concerned, participating citizens, will, both now and in the future, accept the obligation of the educated for education and give your support at a time of unprecedented opportunity, hope and promise for the realization of our American goal of true equality of educational opportunity.

The relevance of higher education to the needs of our times, the broadening of the opportunities for this level of education, will play a major role in determining the conduct of all of education. Such a strengthening will also contribute to enriching the future of us all, making it not only more secure, but more exciting, more varied, more satisfying—and most important of all, a time more welcoming to the realization of the truest and finest aspirations of the human spirit.

On this Founders Day I am confident that Davis and Elkins will reaffirm its determination to continue to develop in honor to the principles on which it was begun and also to have a vigorous and significant part in assuring that higher education will continue to be a source of strength and power for our Nation.

Thank you for allowing me to share this day and for giving me the opportunity of coming home. Thomas Wolfe, in the title of one of his novels, asserts that "You Can't Go Home Again". He is right that you can't in expectation of recapturing bygone days or of finding things the same. But when you can come back to changes that are so constructive, so good, coming home can be the satisfying experience that it is for me today.

Once again my congratulations to Senator Randolph, and my best wishes to Davis and Elkins, a college that will always have a very special place in my memories, my affection and my concern for education.

EXCERPTS FROM ADDRESS BY L. QUINCY MUMFORD, LIBRARIAN OF CONGRESS

Although I have no formal ties with Davis and Elkins College, the time that I have spent on your campus has given me a deep appreciation of the history and tradition as well as the beauty of this fine college.

Special events in the life of an institution or of an individual are the time for a backward look, for indulgence in reminiscence, for a certain complacence in the comparison of *then* with *now*.

Some 50 years ago, Davis and Elkins College, according to its catalog for 1917–18, crested "a lofty ridge, a hundred feet or more above the immediate valley and two thousand feet above the sea," commanding "a magnificent view of the surrounding country." Down in the valley lay Elkins, described as a "thriving city" of seven thousand people.

Among the institutions in Elkins "worthy of special mention" the catalog told its readers were the Odd Fellows' Home, the Children's Home of the State, the Young Men's Christian Association. What interest the first two might hold for prospective students is unexplained, but about the third there can be no doubt. The Y.M.C.A. was clearly rendered "doubly attractive" because it had a swimming pool built through the generosity of Mr. Richard Chaffey.

Many a present-day university or college president might sympathize with the declaration, stated with forcible italics:

"The College *will not admit students in the hope of reforming them*. The regulations governing student conduct are such as ordinary conditions would require. We have no recourse in the matter of disciplining students who wilfully and repeatedly cause unnecessary noise or disturbance but to request them to leave the institution."

The writer adds, and we might wonder if he is only reassuring himself:

"It is taken for granted that students have learned self-control in a large measure before leaving home. . . ."

Life on campus a half century ago had little resemblance to present-day college life. Those enrolling at Davis and Elkins in 1918 were told without equivocation:

"No body of students shall participate in any public game, or contest, or entertainment, without previously obtaining the consent of the faculty."

Times and manners, philosophies and relationships change with the years and, in many cases, it is right that they do. But some things remain constant. One of the constants at Davis and Elkins has been the realization of the importance of the library in the life of a college. We have only to look about us today to see evidence that here this realization has not been lost but has developed as the college developed.

The 50-year-old catalog told its students and doubtless their parents that:

"One of the imperative needs of the College is, first, greater library floor space, and, secondly, more books. Our books cannot be properly protected as at present arranged. A fireproof library building must be had before the library can be further developed. The library now contains many excellent reference books, a large collection of publications from the various bureaus of the government, and a carefully selected list of representative magazines. Next year the library will be accessible at stated hours daily, but the reading room will be open until ten o'clock each night."

The plight of the college library a half century ago excites my sympathy, for the Library of Congress, too, finds that its "books cannot be properly protected as at present arranged" in cramped and crowded quarters. The Library of Congress is one of the world's largest libraries, adding more than one new item every second of every working day to the collections that already occupy 270 miles of shelves. We also need the "greater library floor space" for the Library's expanding programs and the growing collections in many formats—books, pamphlets, prints, music, photographs, periodicals, newspapers, maps, negatives, microforms, and motion pictures. We hope to find it in a long awaited third building.

The Library of Congress has a partnership with libraries. Through the generosity and vision of the Congress, the work of its Library is made available to all libraries, of all types, and in all parts of the United States. Almost everyone in this audience has at some time consciously or unconsciously used LC printed catalog cards as he searched his local public or college catalog for the material he wanted.

The mention of interlibrary loan reminds me of another bond between the Library of Congress and libraries and their users throughout the country. Its vast resources are national resources and are available to those who need them. Your college library here, for instance, may borrow materials not readily accessible within the area for persons engaged in advanced research. West Virginia libraries of all types—university, college, public, Federal and State—have made 70 interlibrary loan requests to the Library of Congress in the 3½ months since July 1 of this year.

Davis and Elkins College shares another bond with the Library of Congress—a high regard for Senator Randolph. Senator Randolph has long been a friend to libraries, books, and the cause of education. As a member of the James Madison Memorial Commission and as Chairman of the Public Works Committee he has been active in planning this much needed addition to alleviate the Library's space problems. The new Madison Memorial Building, for which Senator Randolph has worked so devotedly, is a necessity, and we value his interest and support in recognizing the need for its construction.

Senator Randolph has long been associated with interests of an educational nature. The legislation he has sponsored in these fields merits and receives the highest praise.

All of us at the Library of Congress congratulate Davis and Elkins College on its appreciation of the place of a library in the continuing education of men and women, on the fine new building to house that library, and on its choice of a name for that building. May the library and the one for whom it is named both continue to enjoy a happy and rewarding life.

[From the Elkins Inter-Mountain, Oct. 20, 1969]

D&E PAYS TRIBUTE TO "MR. SMALL COLLEGE": NAMES LIBRARY IN HONOR OF SEN. RANDOLPH

A man a Senate colleague once described as "the best-informed member of the Senate on the problems of our small colleges" was honored at Davis and Elkins College today when the school library was named "Jennings Randolph Hall."

In pre-dedication remarks, Davis and Elkins College president, Dr. Gordon Hermanson pointed out former Senator Wayne Morse's tribute to Sen. Randolph as an expert on the problems of small colleges, and conferred the title of "Mr. Small College," on the former D&E athletic director and instructor.

Dr. Hermanson paid tribute to Sen. Randolph with these words:

"Senator Randolph was born at Salem, W. Va., just two years before the founding date of Davis and Elkins College.

"He was graduated from Salem Academy in 1920 and from Salem College in 1924. He is the recipient of numerous honorary degrees.

"Senator Randolph distinguished himself

in the field of journalism as a writer, editor, and newspaper owner; in business as an airlines executive, in education as an author, faculty member, administrator, and trustee at several institutions; and in philanthropy, as a foundation trustee and adviser.

"His ties with Davis and Elkins College have been particularly close since 1925. In that year he joined the faculty teaching public speaking and journalism; was faculty adviser to the student newspaper; coached the debating team; prepared news releases and was in charge of the College News Bureau. During the six years that he was associated with the College he is perhaps best remembered for his leadership as athletic director. Working closely with the athletic staff, he developed an intercollegiate program that became well-known throughout the United States. From 1938 through 1961 he was a member of the Board of Trustees, and since 1962 he has served as Honorary Trustee.

"Following his election to the House of Representatives in 1952, he left Davis and Elkins College to begin a long and distinguished career as a statesman and public servant.

"During his seven terms of office in the House of Representatives, he was noted for his support of liberal and progressive national legislation. Since 1958, when he was elected to the United States Senate, meaningful programs in health, education, training, and public facilities have been fashioned through the dedicated efforts of Senator Randolph, which reflect his humanitarian philosophy of life. He was the principal sponsor and Senate floor manager of the Appalachian Regional Development Act of 1965, which authorizes a program of regional economic development in all of West Virginia and parts of 11 other states.

"He has long been an active sponsor of legislation to develop increased educational and training opportunities and was a strong force in the passage of the Higher Education Facilities Act, Library Services and Construction Act, the Elementary and Secondary Education Act, the Manpower Development and Training Act, and the Economic Opportunity Act.

Davis and Elkins College is proud to honor the man who has come to be known as "Mr. Small College." As former Senator Wayne Morse recently said of Senator Randolph: "the entire Senate recognizes the Senior Senator from West Virginia as the best informed member of the State on the problems of our small colleges."

"We are honored to present to you the recipient of the Fourth Annual Founders Award, the Honorable Jennings Randolph, United States Senator from West Virginia."

Speaking today at the Founders Day ceremony of dedication of "Jennings Randolph Hall"—the Davis and Elkins College library with its new $140,000 addition—was Dr. L. Quincy Mumford, Librarian of Congress and an Eisenhower appointee who was continued in office through two Democratic administrations.

Dr. Mumford, the first professionally-trained librarian to fill the post of the nation's chief librarian, is a native North Carolina, graduate of Duke University and Columbia Universty School of Library Science.

He served as director of the Cleveland Public Library before his appointment as Librarian of Congress in 1954, and was president of the American Library Association the year he was selected by the late former President Dwight D. Eisenhower.

When Dr. Mumford was appointed Librarian of Congress in 1954, the Democratic Washington Post and Times Herald in Washington, D.C. observed, "This is manifestly a merit selection by the President and deserves the warmest public approbation. The Library of Congress is, in respect to the number of volumes it embraces, the world's greatest library today. It ranks among the greatest libraries of the world by every other standard as well . . ."

LEADER FOR LIBRARY LEGISLATION

All legislation introduced in Congress for the development of library services and construction since Sen. Randolph has been in Congress has had his leadership, sponsorship or support.

As a member of the Subcommittee on Education, the West Virginia Senator has participated in the formulation of the landmark measures for library assistance which have been approved by Congress in the 1960s.

In commenting on his advocacy of improved library facilities, Randolph said: "An equipped library is becoming with every passing day more indispensable. The challenges of our society are interrelated with the sheer magnitude of the information which is pouring forth, from every quarter of the globe in every tongue and dialect on every scientific and scholarly subject. There must be ready access to this knowledge if our problems are to have solutions."

"But," the Senator observed, "we must make the commitment to develop new library systems and to expand existing ones. This is a critical year of decision for the future of library programs, since the Budget Bureau request contains no funds for library construction and only a $44.2 million request for program development. This is extremely disappointing. The House of Representatives has approved $9 million for construction and $113 million for programs. I am hopeful that the Senate will concur in or increase the House level of funding. I shall work toward that end."

The laws providing assistance for libraries, in which Senator Randolph has been active, include: the Library Services and Construction Act, the Elementary and Secondary Education Act, the Higher Education Act, and the Higher Education Facilities Act.

SPECIAL GUESTS AT CEREMONY

Randolph's wife, Mary, and their two sons, Jay and Frank, and his sister, Mrs. Ernestine Carr of Washington, D.C., attended the Founders Day celebration today. Mrs. Randolph and Frank arrived from Washington Saturday accompanied by Miss Marie Lantz, administrative assistant to the Senator. Jay, a sportscaster for NBC, flew from Kansas City to Pittsburgh last night after broadcasting a game and arrived in Elkins just past midnight.

From Clarksburg came his cousins, Byron Randolph, West Virginia counsel and trustee for Benedum Foundation and Mrs. Jack Thrasher and her husband. Other relatives on hand were the Senator's aunt, Mrs. Myrtle Moore of Clarksburg and a cousin, Nelle Edgell of Salem, accompanied by Mr. and Mrs. Jean Lowther of Salem. Lowther was best man at Randolph's wedding.

In addition to Miss Lantz, other members of the Senator's staff here from Washington are James Harris, his executive assistant; Phillip McGance, legislative assistant; and Mrs. William Sargent, his personal secretary, accompanied by Mr. Sargent. They were joined by Mrs. Ruth McGraw of Clarksburg, his state secretary.

Representing the Senate Public Works committee of which Randolph is chairman was Richard Royce, staff director.

Senator Randolph spoke Sunday afternoon at the dedication of the Concord College Fine Arts Center and was accompanied from Bluefield to Elkins last night by former Gov. and Mrs. Hulett C. Smith who attended today's activities. Arriving late Sunday was Joseph E. Casey, former U.S. Representative from Massachusetts who entered the House of Representatives with Senator Randolph in 1933.

At least six college presidents were among the distinguished guests today: K. Duane Hurley, president of Salem College; Easton K. Feaster, president of Fairmont State College; Stanley Martin, president of West Virginia Wesleyan College; William J. L. Wallace, president of West Virginia State College and Dr. John P. Mauer, president of Southeastern University, Washington, D.C., where Senator Randolph was dean and a teacher.

Dr. David Johnson and Miss Betty Bailey represented the Benedum Foundation at Pittsburgh which contributed $40,000—the largest single gift—toward the construction of the new addition to the library.

Heading the list of industrial and business leaders were: John Jones, assistant to the president of Weirton Steel, Weirton; Charles Van Horn, assistant to the vice president, Baltimore and Ohio Railroad of Baltimore and a native of Harrison County, W. Va., and Herbert Richey, president of Valley Camp Coal Co., Cleveland, Ohio, whose company employs more than 2,000 West Virginians.

Other special guests were Arthur Dunlap, executive director of the W. Va. Foundation for Independent Colleges, and Mrs. Davis Ratliff of Foxsell, Va.

BEHAVIORAL SCIENCES SURVEY URGES SOCIAL REPORTING

Mr. MONDALE. Mr. President, as chairman of the Special Subcommittee on Social Program Planning and Evaluation of the Senate Committee on Labor and Public Welfare, I wish to discuss an extraordinarily important report that has just been issued, and which parallels and confirms findings that have emerged in the hearings my subcommittee is holding.

This report is entitled "The Behavioral and Social Sciences: Outlook and Needs." This report was produced under the auspices of the National Academy of Sciences and the Social Science Research Council, and was drafted by the Behavioral and Social Sciences Survey Committee. A more authoritative or impressive authorship and sponsorship of a report of this kind could hardly be imagined. The report is the product of about a score of the Nation's most eminent social scientists, representing every discipline in the social and behavioral sciences. The joint sponsorship of the National Academy of Sciences and the Social Science Research Council provide further testimony to the scientific importance and nonpartisan character of this report.

The first recommendation of the report is this:

> The Committee recommends that substantial support, both financial and intellectual, be given to the efforts under way to develop a system of social indicators and that legislation to encourage and assist this development be enacted by Congress.

I am happy to say that some time ago I introduced, with a score of my distinguished colleagues in this body, legislation that would in fact have specifically encouraged and assisted the development of social indicators, or measures of the quality of life. Our Full Opportunity Act, S. 5, specifically provides for the collection, analysis, and dissemination of social indicators. It is by no means surprising that this distinguished body of social scientists should emphasize the need for better information on our social

problems and the extent to which—if at all—they are changing in response to changing public policies and different levels of public expenditure. Testimony before my subcommittee has suggested that the lack of information about what our programs accomplish is simply scandalous. We spend billions of dollars on public programs, but pennies, if anything at all, to learn what, if anything, they actually accomplish.

The report also advocates an annual social report, which would call public attention to changes in the condition of a society and analyze the policies the Nation faces. Again, the Full Opportunity Act would make such an annual report, prepared by a council of social advisers, mandatory. Whereas the bill, as presently worded, would call for the prompt establishment of a council of social advisers, and immediate attempts to begin preparing annual social reports, the behavioral and social science survey, with characteristic academic caution, recommends prior experiment with social reports issued by private foundations. Its authors argue that such privately issued social reports would help develop the social scientist's capabilities to make recommendations about concrete policy problems. From the perspective of the Senate, I am inclined to think that involvement in the policy process is the best way to insure that social scientists consider practical policy problems. I am also conscious of the immediacy of the Government's need for more information and analysis concerning policy alternatives. But this is merely a question of timing and tactics, on which a generally satisfactory compromise can easily be found. The basic point is the agreement on the need for social reporting, and that point has emerged, not only in the hearings I have been holding, but also in this distinguished and nonpartisan body of social scientists. The Department of Health, Education, and Welfare has indeed already taken the beginning step here. It issued "Toward a Social Report," the first step toward social reporting, in January of this year, and then recommended that the Federal Government begin issuing regular social reports within 2 years.

My subcommittee is also most interested in funding for basic research in the social sciences, and in this connection is most interested in the imaginative proposal, first put forth by my distinguished colleague FRED HARRIS, and which I have cosponsored along with other Senators. The report recommends that funding for research in the social science increase at 12 to 18 percent per year. Its members are divided on whether a separate social science foundation, or combined support for physical and social sciences through the National Science Foundation, would be best, but their recognition of the need for improved and expanded support for social science research is unmistakable.

In view of the importance of the report at issue, I ask unanimous consent that its "Summary and Major Recommendations," and the Washington Post article about it, be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

SUMMARY AND MAJOR RECOMMENDATIONS

We are living in social crisis. There have been riots in our cities and in our universities. An unwanted war defies efforts to end it. Population expansion threatens to overwhelm our social institutions. Our advanced technology can destroy natural beauty and pollute the environment if we do not control its development and thus its effects. Even while scientific progress in biology and medicine helps to relieve pain and prolong life, it raises new problems relating to organ transplants, drugs that alter behavior, and the voluntary control of genetic inheritance.

At the root of many of these crises are perplexing problems of human behavior and relationships. The behavioral and social sciences, devoted to studying these problems, can help us survive current crises and avoid them in the future, provided that these sciences continue to make contributions of two kinds: first, in increased depth of understanding of human behavior and the institutions of society; and, second, in better ways to use this understanding in devising social policy and the management of our affairs. Recommendations for achieving such growth are the central concern of this survey and this report.

Social problems are most visible during crisis, but they persist even in relatively calm times, for the human needs that underlie them are continuous. Our concerns must include health and access to medical care, raising children to become effective and satisfied adults. We want a society that provides educational services in classrooms, museums, libraries, and the mass media, and that offers abundant opportunity for satisfying and productive work without fear of unemployment. People need pleasant, livable housing, efficient and economical means of transportation, and opportunities for esthetic outlets and the appreciation of nature. The social order must provide safety for citizens and freedom of movement without fear of attack or molestation. It must encourage individuality and cultural diversity, while reducing intergroup tensions; and it must progress toward international understanding and the elimination of war as an instrument of national policy.

These are large issues, involving values and goals as well as means. The job of the social scientist is clear. He can keep track of what is happening, work at understanding the sources of conflict and resistance to change, and try to determine both the intended and unintended consequences of problem-solving actions. Through the development of general scientific principles and the analysis of specific instances, social scientists seek to illuminate the ways in which the society is working.

This survey was undertaken to explain the behavioral and social sciences and to explore some of the ways these sciences could be developed and supported so that their potential usefulness to society can be realized. The survey is directed to two tasks: first, to assess the nature of the behavioral and social science enterprise in terms of its past growth, present size, and anticipated development; and second, to suggest ways in which these sciences might contribute both to basic understanding of human behavior and to effective social planning and policy-making.

THE SCOPE OF THE BEHAVIORAL AND SOCIAL SCIENCES

This survey embraces nine behavioral and social science disciplines: anthropology, economics, geography, history, linguistics, political science, psychiatry, psychology, and sociology. It also takes into account the social science aspects of statistics, mathematics, and computation. The survey recognizes the contributions to behavioral and social science by professionals in business, education, law, public health, medicine, and social work, although it does not cover these fields in detail. The importance of collaborative work in solving social problems emphasizes the links between these sciences and engineering, architecture, and the biological and physical sciences.

The behavioral and social sciences have shared in the rapid expansion of knowledge common to all fields of scholarship over the last decade and have attracted an increasing number of trained workers (Figure SR–1). Increasing proportions of bachelor's and master's degrees were granted in these fields between 1957 and 1967, and the trend will probably continue. The relative proportion of doctorates may decline slightly, not because of a slowing down in their production but because of very rapid increases in other fields, notably in engineering. Ironically, despite the increase in the number of degrees granted (Figure SR–2) [Not printed in the RECORD], the social sciences face manpower shortages because of the upsurge of interest in them.

Behavioral and social scientists are more inclined to pursue academic careers than are many other scientists, although a trend toward greater nonacademic employment is apparent. Approximately half of all professional behavioral and social scientists work in universities or four-year colleges. Many others work in other educational settings, such as junior colleges and secondary schools, and in public-school administration. The rest are employed in government, hospitals, research centers, and industry; economists and psychologists find more employment outside universities than do others.

SCIENCES OF BEHAVIOR AND THE PROBLEMS OF SOCIETY

All sciences make some distinctions between basic research, applied research, and the development of products, processes, or services based on research. The history of science shows that the relationship between basic and applied science is complex, with basic research sometimes lagging behind, and sometimes leading applied research. But the scientific method can be applied to problems of a practical nature, whether or not the applications can be derived from the basic science of the time.

The third category of scientific activity—development—is more difficult to define for the behavioral and social sciences. The result of development in the physical sciences or in engineering is usually a tangible product, such as a color television set or a space capsule, and it is relatively simple to determine developmental costs. Although there are some tangible products of behavioral and social science, such as computerized instructional systems, many useful ones are services or processes in the public domain, such as a parole system, a new form of welfare payments, or a form of psychotherapy.

If the usefulness of social-problem-relevant research is to grow, the scale of social science research will have to expand, because many problems can be studied only on a national or international level. As this scale increases, the basic sciences of human behavior should benefit, much as the natural sciences have benefited from increases in the scale of their own research.

The Committee has considered several steps to strengthen the behavioral and social sciences, both as sciences and as contributors to public policy.

One step is to develop improved *social indicators:* measures that reflect the quality of life, particularly in its noneconomic aspects. Some data for constructing social indicators now exist. We have data on educational opportunities, adequacy of housing, infant mortality, and other statistics bearing on health, highway accidents and deaths, violent crimes, civil disorders, reflections of cultural interests (library use, museum and theater attendance), and recreational activities. We now need a major effort to find indicators that can accurately reflect trends for the nation as a whole as well as differences among regional, sex, age, ethnic, and socioeconomic groups. Most social changes are gradual. A sensitive social indicator should tell us whether, in the area to which it pertains, things are getting better or worse, and to what degree.

Social indicators should help us measure the effects of social innovations and changes in social policy as well as assess their unintended by-products. New methods of construction as well as changes in building codes could be reflected in changes in indicators of the quality of housing. Broad programs for increasing highway safety might affect accident indicators and also the consumption of alcohol under certain circumstances.

Indicators that measure our economic state are in use, but they are not precisely analogous to the *social* indicators we are proposing. Economic values can be expressed in dollars, and economic indicators can be aggregated to produce a single economic unit, such as the gross national product (GNP). There is no corresponding unit of value by which to measure the quality of life. This is not an obstacle to the development and use of separate quantitative indicators, each of which measures some aspect of the quality of life, even though it may not be possible to combine them into a single number.

The development of a useful system of social indicators is not simply a matter of measuring many aspects of society. The central problem is to decide which among many measurable attributes most truly represent the fundamental characteristics with which we are concerned. Thus, progress toward valid indicators will depend largely on the understanding we obtain from research into the basic structure and processes of our society. Conceptual and theoretical work at the highest level is necessary if we are to interpret the changes taking place.

To expedite the development and use of a system of social indicators, we offer the following recommendation:

Recommendation: Social Indicators—The Committee recommends that substantial support, both financial and intellectual, be given to efforts under way to develop a system of social indicators and that legislation to encourage and assist this development be enacted by Congress.

We believe that the resources of the federal government will have to be called upon to develop successful indicators. The estimated annual cost of running an organization to carry on developmental work is $1.5 million. Access by such an organization to data routinely collected by federal agencies would facilitate its work. Because the effort would be in the national interest, we suggest that the task of developing social indicators be undertaken directly by the government; in Chapter 6 we discuss several alternatives for locating an indicator agency within the federal system.

If social indicators are to be useful to society, they will have to be interpreted and then considered in conjunction with the making of social policy. Just as the annual Economic Report of the President interprets economic indicators, an annual social report should eventually be produced that will call attention to the significance of changes in social indicators.

Because of the particular problems involved in developing sound, workable social indicators, we are hesitant to urge an official social report now. We favor, instead, a privately sponsored report during the next few years, perhaps through the initiative of either the National Research Council or the Social Science Research Council, or through a joint effort of the two.

If such an annual social report proves substantial after reasonable experimentation, it might then become a government responsibility like the annual economic and manpower reports now made for the President. This approach is also discussed in Chapter 6, where we offer the following recommendation.

Recommendation: A privately developed annual social report—The Committe recommends that behavioral and social scientists outside the government begin to prepare the equivalent of an "Annual Social Report to the Nation," to identify and expedite work toward the solution of problems connected with the eventual preparation of such a report on an official basis. Support for this endeavor should come from private foundations as well as from federal sources.

A natural next step would be to establish a council of social advisers to consider the policy implications of the report. We do not recommend the establishment of such a council until the annual social report shows that social indicators do indeed signal meaningful changes in the quality of life.

For the present, we urge full participation of behavioral and social scientists in the Office of Science and Technology and in the President's Science Advisory Committee, as well as in the numerous advisory bodies attached to administrative agencies and the Office of the President (see Chapter 5).

Behind the development of social indicators and an annual report lie some basic steps: to gather better social data and to store it in usable form, with the necessary safeguards against invasion of privacy. Fortunately, we have the experience of the Decennial Census and the Current Population Survey, without which a great deal of social science, particularly demography, could not have been developed. There are also many sample surveys that deal with employment and other economic factors and statistical reports on agriculture, health, and other aspects of life.

Even in a non-Census year, the federal government spends more than $118 million on statistical programs. Data are scattered through government agencies in many forms, and suggestions for centralizing those data in some form of national data system have been made several times. We see many problems in such plans and therefore recommend that the President appoint a special commission with a full-time professional staff and a broad-based advisory committee to make a detailed study with recommendations. Suggestions should come from data-collection agencies of government, from representatives of the various behavioral and social sciences, from computer specialists, and from the public.

Further specification of the task of the proposed commission is given in Chapter 7. We summarize our position in a recommendation:

Recommendation: A national data system—The Committee recommends that a special commission be established to investigate in detail the procedural and technical problems involved in devising a national data system designed for social scientific purposes; that it recommend solutions for these problems and propose methods for managing a system that will make data maximally useful, while protecting the anonymity of individuals.

Protecting respondents' anonymity is very important and may prove to be among the most difficult problems to be dealt with. We propose, therefore, that it be faced in advance of the report that the special commission on a national data system may issue, and that some method be found for continuing to monitor the data systems as new methods of data storage and retrieval are created. The benefits of having policy guided by accurate information about the welfare and quality of life of the citizen can be very great, but it would be a sad consequence if, in the process of obtaining this information, the availability of data about individuals became a limitation on their freedom. To this end we offer the following recommendation.

Recommendation: Protection of anonymity—The Committee recommends the establishment within an appropriate agency of the federal government, or as an interagency commission, of a high-level continuing body, including nongovernmental members, to investigate the problems of protecting the anonymity of respondents, to prescribe actions to resolve the problems, and to review the dangers that may arise as new techniques of data-matching are developed.

BEHAVIORAL AND SOCIAL SCIENCE RESEARCH IN UNIVERSITIES

In PhD-granting universities, research in the behavioral and social sciences is conducted in departments of colleges or arts and sciences, in profressional schools, and in institutes and research centers that exist outside the departments. Research funds are almost equally divided among these three administrative units, although departments employ more behavioral scientists because they have teaching responsibilities as well as research assignments (see Figure SR–3).

FIGURE SR–3.—*Distribution of behavioral and social science research funds and research personnel among departments, institutes, and professional schools, Ph. D.-granting universities, fiscal year 1967*

[2] Multiple-discipline institutes account for 75% of full-time research personnel within all institutes.

Source: Questionnaire survey.

Doctorate-granting departments are usually heavily committed to research, whereas professional schools are more variable in the extent to which they foster organized research in the behavioral and social sciences. Many schools of business, education, and medicine have fairly well established traditions of research relating to the behavioral and social sciences. Schools of law and schools of social work, however, give less attention to organized research in these sciences. Neither of these has anything like the behavioral and social science research expenditure per school that is found in schools of business, education, or medicine.

Law schools have not had sufficient access to research funds, their faculties have had little free time for research, and they have not developed a pattern of employing research technicians as schools of business, education, and medicine have. A growing number of law schools desire to change this state of affairs and to introduce more social science research; in Chapter 11 we offer a

recommendation for inducements to aid them in doing so.

University institutes devoted wholly or in part to behavioral science research have proliferated for a number of reasons, including administrative convenience, exploration of interdisciplinary work, and concentration on research on social problems. Approximately a fourth of the scientists working in institutes and a fifth of the research money are in institutes representing only one discipline. The rest of the personnel and funds are in interdisciplinary institutes. Approximately one fifth of all institutes are oriented toward research contributing to the solution of social problems, as in the many urban institutes that have recently been formed in universities.

Despite the variety of administrative arrangements discussed above, universities are still often handicapped when trying to do fully satisfactory research into social problems.

Disciplinary departments in universities, which grant most of the PhD degrees, are often better suited to basic research than to applied research. Their faculties sometimes cooperate with other departments and institues on research, but such work usually lacks the continuity and staffing necessary for applied research. Furthermore, disciplinary values tend to favor research oriented toward problems of particular disciplines. Departments try to achieve a balance between specializations in the disciplines, which, while admirable in itself, presents problems in organization of large task forces to study significant social problems.

Institutes usually have limited full-time staffs and rely heavily on part-time workers from the disciplines. Consequently, they have little control over the education of most of their workers. The result is that much of their research leads back to disciplinary interests because that is where professional advancement lies. Moreover, the availability of research funds for institutes is unstable by nature, and the level and character of research fluctuates according to the money available.

Professional schools are concerned with particular kinds of applied research related to their professional foci; thus many general social problems tend to lie outside the sphere of any single school.

Professional schools also have the mixed blessing of a close relationship with client systems (such as hospitals, businesses, courts, or legislatures). This linkage is helpful in directing research to significant problems, but it also tends to limit the research to the interests of its clients. Further, research goals must compete with the primary task of training a body of professional workers. Often research suffers.

In view of these limitations, we believe a new university organization should be created for training and research on social problems. To clarify the essential elements of this organization, we have proposed a new school, which we call a Graduate School of Applied Behavioral Science.

Recommendation: A graduate school of applied behavioral science—The Committee recommends that universities consider the establishment of broadly based training and research programs in the form of a Graduate School of Applied Behavioral Science (or some local equivalent) under administrative arrangements that lie outside the established disciplines. Such training and research should be multi-disciplinary (going beyond the behavioral and social sciences as necessary), and the school should accept responsibility for contributing through its research both to a basic understanding of human relationships and behavior and to the solution of persistent social problems.

Such a recommendation should, of course, be adapted to local situations. However, such a school should be of scientific stature commensurate with that of the best medical and engineering schools. It should have a core faculty with tenure, like any professional school, and it should not be organized along disciplinary lines. Disciplinary departments would, of course, continue outside the new school. If the school develops topical subdivisions (such as urban research centers, or centers studying the development of new nations), these subdivisions should be terminated when they are no longer pertinent.

The new school should have its own PhD program, and it should attempt to educate its students for inventive development relevant to social problems. In other words, the school should do empirical research on significant social problems and train professionals to carry on this kind of research.

Such a school will require considerable planning, and it will face many obstacles. Among these is the problem of developing professional identity for its graduates. Many of them will probably be employed in nonacademic settings, and the university-professorship model of career aspirations will not serve. It may be necessary, therefore, to create a new professional society and new journals devoted to applied behavioral science in order to define a new professional identity.

The word "applied" in the title promises that the school will cover that end of the spectrum, but, of course, it must also be concerned with basic research. A high-level applied school will inevitably work on basic problems of data-collection and analysis, model-building, and simulation. Work on social indicators, even on a local scale, could improve the statistical basis of the indicators and investigate how to combine them or substitute one for another. Beyond such methodological problems, each Graduate School of Applied Behavioral Science should have some specialized areas of research, for the whole of applied behavioral science is too broad to tackle all at once. The problems of the cities, of poverty, of crime, of nation-building, of conservation, of regoinal governments, of individual growth and development, of early education—any one of a range of problems—could serve among the specialities in one school.

Instructive precedents in a number of universities exhibit many qualities of the proposed new type of school; Chapter 12 discusses these and the proposed school at greater length.

BEHAVIORAL AND SOCIAL SCIENCES OUTSIDE THE UNIVERSITY

Substantial numbers of social scientists work in nonacademic settings for federal, state, and local governments, for business and industry, and for nonprofit research organizations. Their functions, however, are not too different from those of their university colleagues.

The federal government estimates an 18.4 percent growth in federal social science employment from 1967 to 1971, and a similar growth is reported by state governments and nonprofit organizations. The percentage growth in federal social science employment is greater than the growth in overall federal employment and total federal scientific employment for the same period. Chapter 13 reports the limited data we have collected.

One indication of the amount of nonacademic research in the behavioral and social sciences is the amount of federal funds for nonacademic research performers, both to private research organizations and to the government. Roughly half of the federal funds go to nonuniversity research, and it is divided about equally between the government, on the one hand, and industrial firms and nonprofit institutions on the other (Table SR–1).

TABLE SR–1.—FEDERAL OBLIGATIONS FOR BASIC AND APPLIED RESEARCH IN BEHAVIORAL AND SOCIAL SCIENCES, FISCAL YEAR 1967, BY PERFORMER

[Dollar amounts in millions]

	Federal obligations for basic and applied research		
	All fields of science	Behavioral and social sciences	Behavioral and social sciences as percent of total obligations
Intramural (within Government departments and agencies)	$1,574	[1] $77	9

THE FINANCING OF RESEARCH

In 1966–1967, some 3.4 percent of the nation's total research and development expenditure was spent on the behavioral and social sciences—about $803 million. This was more than double the amount spent for social science research and development in 1961–1962 (Table SR–2).

TABLE SR–2.—SUPPORT OF RESEARCH AND DEVELOPMENT IN THE BEHAVIORAL AND SOCIAL SCIENCES, 1962, 1967 BY SOURCE

[Dollar amounts in millions]

Source of funds	1961–62	1966–67
Federal Government:		
Basic research	$46	$132

Source: Table 1–2 and table A–8, appendix.

Between 1959 and 1968, federal support of behavioral and social science research increased at an average rate of approximately 20 percent a year. Since today's social problems are so urgent, it is important to maintain growth at least close to this level. We distinguish between normal projected growth (no increase in the scale of research operations) and projected new programs (the addition of new large-scale research). In Chapter 14 we discuss the matter more fully and offer the following recommendation concerning normal research support.

Recommendation: Rate of Federal funding for normal research support—The Committee recommends an annual increase in funds available from the federal government for support of basic and applied research in the behavioral and social sciences of between 12 and 18 percent to sustain the normal growth of the research enterprise over the next decade.

To sustain normal growth in the behavioral and social sciences, the indicated increase in research funds will be needed, and a corresponding increase will also be needed for instructional funds, student aid, space, and equipment. Our recommendation also applies to funding for behavioral and social science research outside the universities.

The costs of projected new programs are not included in the normal-growth projections, for they are of a different character from the steady and gradual increase required by the increases in the number of social scientists and the growing sophistication of research techniques. However, the new programs require abrupt increases in funding, with each program having minimum start-up costs. The operating costs of the various new programs, when they are in full swing, are likely to total an additional $100 million annually, as explained in Chapter 14.

The agencies supporting the behavioral and social sciences are chiefly the Department of Health, Education, and Welfare (primarily through the Office of Education, the National Institutes of Health, and the National Institute of Mental Health), the Department of Defense, the Department of Agriculture, and the National Science Foundation. We welcome their continued support and believe that other agencies should expand their use of behavioral and social science research, through both intramural and extramural support. In short, we endorse the principle of pluralistic support for the social sciences.

Proposals to establish a national social science foundation pose some problems concerning the role of the National Science Foundation. The implication that social science is important enough to warrant a special foundation is gratifying, but the issues are complex, and the members of the Committee are somewhat divided in their views. Because the charter of the National Science Foundation has recently been enlarged to permit support of applied research, and explicitly to support the social sciences, we favor giving it the opportunity to exercise its new functions. However, we also suggest that, if the National Science Foundation is unable to exercise its new obligations in social sciences, then a new foundation may be needed. Recomemndations bearing on the National Science Foundation appear in Chapter 14.

Private foundations have been a significant source of support to the behavioral and social sciences through the years, frequently playing innovative roles and contributing in a variety of ways to the development of these sciences. The role of the foundations is discussed in Chapter 15.

WORLDWIDE DEVELOPMENT OF THE SOCIAL SCIENCES

Worldwide interest in the social sciences is growing, partly in response to the processes of development and modernization in new nations. Social scientists in other countries seek to strengthen their professional capabilities, and there is considerable American interest in study and research overseas.

Collaboration across national boundaries is especially important in the social sciences. Generalizations based on work in only one country may be too parochial and circumscribed, and some kinds of situations important to an understanding of human behavior cannot be studied satisfactorily in any one nation. In Chapter 16 we offer some suggestions about the relationships among social scientists on an international basis, and we discuss the strengthening of organizations devoted to furthering international social science.

OUTLOOK FOR THE BEHAVIORAL AND SOCIAL SCIENCES

As the sciences advance and research at their growing edges becomes more demanding of special knowledge and skills, the tendency toward specialization increases. This trend is important for the advancement of the frontiers of science, but it also runs counter to the demand for science to deal with problems of great complexity in an integrated way. While we recognize the legitimacy of specialization within disciplines, we recommend more attention to large-scale research concerning our rising social problems.

Our society cannot delay dealing with its major social problems. We cannot consume our resources and pollute our environment and then hope to replenish and restore them. We cannot permit international relations to deteriorate to the point of resorting to nuclear weapons. Social unrest, a result of rising expectations and frustrated hopes, will eventually reach a point of no return.

The social sciences will provide no easy solutions in the near future, but they are our best hope, in the long run, for understanding our problems in depth and for providing new means of lessening tensions and improving our common life.

[From the Washington Post, Oct. 27, 1969]

ANNUAL REPORTS URGED ON "SOCIAL CRISIS" IN UNITED STATES

(By Stuart Auerbach)

A high-powered group of social scientists is calling for an "annual social report" to the President that would explain the behavior of Americans.

This report would offer solutions to major social problems and predict future crisis in much the same way that the President's Council of Economic Advisers analyzes economic problems in its annual report.

The report would be established immediately by private social scientists under foundation and federal grants. But by 1976 it would be issued by a newly created President's Council of Social Advisers.

The recommendations are contained in a 320-page, 2½-year study to be released today.

The study, sponsored by the National Academy of Sciences and the Social Science Research Council, recommends appropriations of at least an additional $100 million a year for new social science projects and the establishment of a national data bank to provide the information they need.

"The social sciences will provide no easy solutions in the near future," the study concludes. "But they are our best hope, in the long run, for understanding our problems in depth and for providing new means of lessening tensions and improving our common life."

The study also reflects the twin desires of American social scientists: to help solve the nation's social problems and to boost themselves to the status that the physical biological and engineering scientists achieved in the post-Sputnik era.

Social and behavioral scientists work in the fields of anthropology, economics, geography, history, linguistics, political science, psychiatry, psychology and sociology as well as some aspects of statistics and mathematics.

"We are living in a social crisis," begins the study.

The report concludes that a full range of national crises—from urban riots and student rebellions to pollution and overpopulation—have roots in "perplexing problems of human behavior and relationships."

And, the study says, the advance of science and technology continually creates new problems—such as organ transplantation, genetic control of heredity and the use of mind-bending drugs—that social scientists can help solve.

The study acknowledges that shortcomings among social scientists now prevent them from contributing their full potential to the nation.

One flaw the study cites is the frequent inability of social research to cut across the narrow boundaries of the different fields. To correct this, the study recommends the establishment of a new kind of graduate school specializing in applied behavioral research.

Another is the lack of hard data on which social scientists can base their analysis. The study recommends "a major effort to develop improved social indicators: measures that reflect the quality of life."

This would cost about $1.5 million, the study estimates, and should be done by the federal government.

These indicators would be reported and explained in the annual social report. Because of the problems in developing these indicators, the study says the report should be privately produced until it is solid enough "to signal meaningful changes in the quality of life."

The next step would be the formation of the Council of Social Advisers to draw up the report for the President.

The study also calls for a National Data System, with safeguards for privacy, to collect information needed by the social scientists.

To provide this new dimension for government policy-makers, the study recommends a continued increase in the funds appropriated for social science research.

In 1967, the study says, public and private sources spent $803 million on social science research projects—double the amount spent five years earlier.

The federal share has increased about 20 per cent a year, and the study recommends that future increases should drop to about 12 to 18 per cent a year "to sustain normal growth."

Federal funding for social science research amounted to $297 million in 1967.

The new projects recommended in the report—amounting to about $100 million a year—would be added to the research funding.

The study was drafted by a 21-member committee, with representatives from all the social sciences, headed by Ernest R. Hilgard of Stanford University and Henry W. Riecken of Washington.

It is one of a series of studies prepared by the National Academy of Sciences surveying the status, needs and opportunities of the various sciences. The full study will be published as a book by Prentice-Hall Inc.

CONCLUSION OF MORNING BUSINESS

Mr. MANSFIELD. Mr. President, is there further morning business?

The ACTING PRESIDENT pro tempore. Is there further morning business? If not, morning business is concluded.

UNIFORM RELOCATION ASSISTANCE AND LAND ACQUISITION POLICIES ACT OF 1969

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the unfinished business be laid before the Senate.

The ACTING PRESIDENT pro tempore. The bill will be stated by title.

The BILL CLERK. A bill (S. 1) to provide for uniform and equitable treatment of persons displaced from their homes, businesses, or farms by Federal and federally assisted programs and to establish uniform and equitable land acquisition policies for Federal and federally assisted programs.

The Senate resumed consideration of the bill.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

THE ALBERT PARVIN FOUNDATION

Mr. WILLIAMS of Delaware. Mr. President, in the October 23 issue of the Washington Post there was published an article written by Jean Heller, entitled "Financing of Parvin Unit Traced."

This article calls attention to a hotel-casino sale arranged by gangster Meyer Lansky which helped finance a foundation that for 9 years was headed by Supreme Court Justice William O. Douglas.

During this period Justice Douglas was on the payroll as the top officer, and while the article quotes him as claiming he knew nothing about the deal it is hard to understand how the highest paid officer of the foundation would not be aware of its activities. To accept this explanation would be to proceed on the premise that the $12,000 annual payment to Justice Douglas was a gratuity for which no services were rendered or expected.

Under the circumstances I think the American people are entitled to a better explanation.

I ask unanimous consent that the article to which I have referred be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FINANCING OF PARVIN UNIT TRACED

(By Jean Heller)

LAS VEGAS, NEV., October 22.—A hotel-casino sale arranged by gangster Meyer Lansky helped finance a foundation headed for nine years by Supreme Court Justice William O. Douglas, who said today he knew nothing about the deal.

Douglas helped create and direct the Albert Parvin Foundation and served as its only salaried officer—president—until last May.

Douglas was asked if he were aware when he helped set up the foundation that one of the biggest chunks of its financial backbone would come from a business deal arranged by Lansky. His office said Tuesday he would have no comment.

But today after an Associated Press story about the deal appeared, Douglas said in a Washington statement: "I never had anything to do with the transaction and I never knew anything about it. I had no information whatever about it."

PARVIN WAS PRESIDENT

The deal was for the 1960 sale of the Flamingo Hotel-Casino here. Parvin was president and principal stockholder of Hotel Flamingo, Inc., the company which owned the hotel-casino. Parvin then used a portion of the money derived from the $10.5 million sale to finance his new foundation.

Under a contract signed by Parvin as company president, Lansky was paid $200,000 for acting as middleman in the sale of the Flamingo to a trio of Florida hotelmen. The contract read, in part:

"Flamingo acknowledges that Lansky has been the finder of the purchaser of the property belonging to it, and as a result of Lansky's services in supplying the information as to the purchaser and advising Flamingo thereof, that he is entitled to payment for the services thereon . . .

"Flamingo agrees to pay Lansky and Lansky agrees to accept as payment from Flamingo the sum of $200,000 . . ."

The agreement, also signed by Lansky, was dated May 12, 1960. More than a month before, the three Florida hotelmen, Samuel Cohen, Morris Lansburgh and Daniel Lifter, had applied to Nevada officials for approval of their purchase of the hotel-casino.

In May 1960, the Nevada Gaming Control Board approved the sale and the following month the Nevada Gaming Commission gave the final okay.

UNAWARE OF LANSKY

There is no mention in the hearing transcripts of either body of the involvement of Lansky as middleman in bringing buyer and seller together. Nevada sources said privately that neither the board nor the commission was aware of Lansky's role.

The terms of the contract with Lansky stipulated that if the sale was made, as it was, Parvin's company would pay Lansky the $200,000 fee in quarterly installments of $6,250 starting Jan. 2, 1961. That schedule would mean the last payment was made to Lansky in October 1968.

An attempt to contact Parvin for comment was unsuccessful.

Parvin is the former owner of the Parvin-Dohrmann Co., a multi-million-dollar-a-year Los Angeles hotel supply business. Although Parvin has sold his interest in Parvin-Dohrmann, he still maintains his foundation.

A federal grand jury in New York is reported to be investigating the dealings of Parvin, Parvin-Dohrmann and other individuals and companies, but this investigation appearently is unreleated to the Flamingo sale.

CRITICIZED IN CONGRESS

In an interview several years ago, Parvin said he contacted Douglas in 1960 and sought help in setting up the foundation. Douglas agreed to help and later served as its $12,000-a-year president.

Douglas was sharply criticized by members of Congress last spring for his involvement with the foundation. He severed his ties with the organization in May.

It could not be determined how long Lansky knew Parvin, but Nevada records show Lansky had two attempted dealings with the Cohen-Lansburgh-Lifter group prior to the Flamingo sale.

The three Florida hotelmen have been associates in such Miami Beach operations as the Sans Souci, Deauville, Sherry Fontenac, Casablanca, Versailles, Crown and Eden Roc hotels and the Waikiki Motel.

According to a report prepared by the Nevada Gaming Control Board's investigators, Lansky asked the trio if they would be interested in buying the Havana Riviera Hotel in Havana, Cuba. Two years later, he asked them if they would be interested in making a loan on a motel north of Miami Beach. Both times the Florida hotelmen declined.

Mr. WILLIAMS of Delaware. I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MOSS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

CHILD PROTECTION AND TOY SAFETY ACT OF 1969—CONFERENCE REPORT

Mr. MOSS. Mr. President, I submit a report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the House to the bill (S. 1689) to amend the Federal Hazardous Substances Act to protect children from toys and other articles intended for use by children which are hazardous due to the presence of electrical, mechanical, or thermal hazards, and for other purposes. I ask unanomous consent for the present consideration of the report.

The ACTING PRESIDENT pro tempore. The report will be read for the information of the Senate.

The legislative clerk read the report.

(For conference report, see House proceedings of October 21, 1969, pp. 30803–30804, CONGRESSIONAL RECORD.)

The ACTING PRESIDENT pro tempore. Is there objection to the present consideration of the report?

There being no objection, the Senate proceeded to consider the report.

Mr. MOSS. Mr. President, the conference has reported a substantially improved bill. Although Members of the other House, in considering the bill passed by this body some months ago, made some improvements in the Senate version, they also made some procedural changes that could have impeded the implementation of this important piece of legislation.

The main issue in conference was this: Given the need to protect children from articles which have electrical, mechanical, and thermal hazards, given the need to provide procedural safeguards for affected persons, and given the limited resources of the administering agency, what procedure for removing hazardous toys from the marketplace will best balance those interests?

Despite some misunderstanding on the part of the conferees, both the Senate and House procedures allowed the Secretary of Health, Education, and Welfare to summarily remove an article from the market. The House procedures provided for this upon a finding of "imminent hazard." The Senate procedures provided for this through section 553 of title 5, United States Code. Summary action provided for in clause (B) of the last sentence of subsection (b) of section 553.

The House procedure required a time-consuming formal hearing at all times before any order of the Secretary could become final. In other words, the House procedure which provided great procedural protection to industry was potentially so administratively burdensome that the Secretary of Health, Education, and Welfare might have been unnecessarily deterred from acting to protect our Nation's children. The Senate procedure on the other hand, did not unduly burden the administrative agency but provided fewer procedural safeguards for industry.

Although some might minimize the importance of procedures, they can spell

the difference between agency action or inaction, particularly when an agency has limited resources and manpower. Congress cannot afford to pass legislation promising to protect the children of our Nation and then impose unreasonable administrative burdens that will negate its actual implementation. For this reason the Senate requested a conference on the House amendments to the Senate toy safety bill. I am satisfied that the procedures formulated in conference are workable and that they will facilitate the implementation of this bill, while still protecting the rights of affected parties. Therefore, because the Senate's aim in calling for a conference has been achieved, I recommend approval of the conference report.

The conferees who signed the conference report have unanimously agreed to it. I know of no reason why the matter should not now be agreed to by this body. It has been cleared with the minority members of the committee. I move its immediate adoption.

The ACTING PRESIDENT pro tempore. The question is on agreeing to the conference report.

The report was agreed to.

Mr. MUSKIE. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MUSKIE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

UNIFORM RELOCATION ASSISTANCE AND LAND ACQUISITION POLICIES ACT OF 1969

The Senate resumed the consideration of the bill (S. 1) to provide for uniform and equitable treatment of persons displaced from their homes, businesses, or farms by Federal and federally assisted programs and to establish uniform and equitable land acquisition policies for Federal and federally assisted programs.

Mr. MUSKIE. Mr. President, the Uniform Relocation Assistance and Land Acquisition Policies Act of 1969 will establish a uniform policy with respect to relocation assistance and land acquisition involving Federal and federally assisted programs. S. 1 came to the floor of the Senate with the sponsorship of 42 Senators, the endorsement of many public officials throughout the country and the strong support of citizen groups devoted to the public interest. Hearings were held on February 19, 20, 25, 26, and 27, and the bill was approved by the Subcommittee on Intergovernmental Relations on April 16, 1969. Favorable action was taken by the Committee on Government Operations on September 23, 1969.

This is as high priority a measure as stands before the Senate. There are more than 50 Federal programs which result in the condemning of land and quite literally, the bulldozing of hundreds of thousands of people from their homes and businesses annually. Many of these people are low-income families. Many are the elderly. They are small farmers and small businessmen. In most cases, their entire lives and economic and social well-being have centered around the property or neighborhoods which are being uprooted.

This is what we have been doing to them. The question that must be answered is: What are we to do for them?

Here, the record is clear. Nearly all federally assisted programs have differing, if not conflicting, provisions for helping those displaced. They range from no assistance in some cases to liberal benefits and protection in others. This lack of uniformity only provides irritation and confusion, as well as an unfortunate image of the Federal Government at the State and local level. It has served to undermine confidence in and support for many Federal programs.

The problem has been explored thoroughly by the Subcommittee on Intergovernmental Relations over the past 4 years. Building on the recommendation of the Select Subcommittee on Real Property Acquisition of the House Public Works Committee as well as a special report on the problem developed by ACIR, and on other basic studies in the field, legislation was developed and passed unanimously by the Senate during the 89th Congress. Again, during the 90th Congress, the legislation, as part of the Intergovernmental Cooperation Act of 1968, was improved and strengthened and passed by the Senate. At the same time, the Congress included in its Highway Act of 1968, a substantial part of the relocation provision developed through earlier efforts, and expanded HUD's relocation authorizations under the Housing Act of 1949.

Although the House passed the Intergovernmental Cooperation Act, it had not completed its consideration of the issue of relocation and land acquisition. Conferees on the bill were, however, in agreement regarding desirability of congressional action on the matter and recommended that it be taken up as soon as possible.

I understand that the House Public Works Committee plans hearings and active consideration of this legislation this session.

The primary objective of S. 1 is to establish a uniform policy among Federal agencies, and State and local recipients of Federal funds in their dealing with property owners and others displaced by Federal or federally aided land acquisitions.

Specifically, S. 1, does this in two ways: First, it provides for relocation payments, advisory assistance, assurance of available relocation housing, and economic adjustments and other assistance to owners, tenants and others displaced; and second, it establishes policies to guide all Federal and federally assisted agencies in negotiations with owners for the acqusition of real property for public use.

With regard to relocation assistance, the displaced person is entitled to payments including a moving expense and a dislocation allowance. The individual's need for readjustment allowance is covered by the bill's provision that he receive an amount equal to the average annual net earnings of his business or farm, or $5,000, whichever is less, if the enterprise had net earnings of less than $10,000. For the small farm operator with earnings of less than $1,000 annually, the bill provides payment of $1,000.

For the large number of individuals displaced from their homes, and not eligible for assistance as owners, the bill provides payment up to $1,500. For the owner-occupier, the bill provides for an amount, which when added to the acquisition payment, equals the price required for a decent, safe, and sanitary dwelling.

The bill further provides that the Federal Government will provide the first $25,000 of the cost of providing such payments and assistance to any person displaced prior to July 1, 1972.

Relocation policies of the past have failed to account for the need of advisory assistance for those being displaced by acquisitions for public improvements. The bill would require that steps be taken to assure that the displaced persons receive the maximum help necessary to make the move. These would include the following:

First, determination of the needs of the displaced families, individuals, business concerns, and farm operators for such assistance.

Second, assurance that there will be adequate services in the areas to which the affected persons will move, including utilities, commercial facilities, and housing, as well as accessibility to their places of employment.

Third, assistance to businesses and farm operators in obtaining and becoming established in suitable location.

Fourth, supplying of information concerning FHA home acquisition program benefits, and the small business disaster loan program and other such programs offering assistance to displaced persons.

Fifth, assistance in minimizing hardships incurred as a result of adjusting to dislocation.

Sixth, assurance that the coordination of relocation activities with other governmental actions undertaken in the community or nearby areas will be done.

With regard to uniform land acquisition policies and procedures, the bill sets forth a congressional mandate of 12 provisions which must be followed in the taking of property for Federal purposes. They are as follows:

First. Transactions must be carried out in a manner that will assure that the person whose property is taken is no worse off economically than before the property was taken.

Second. Every reasonable effort must be made to acquire the property at a negotiated price.

Third. Real property must be appraised before the negotiations begin, and the owner is given the opportunity to accompany the appraiser during his inspection of the property.

Fourth. Before negotiations begin, the Federal agency head involved will establish an amount he believes to be just compensation, but the amount cannot be less than the approved appraised value

of the property. This provision is intended to assure that the Government will reimburse an owner in an amount which is fair and reasonable, and that its offer will not be less than the appraised value. It is not intended to preclude effective negotiation nor establish a one-price policy.

Fifth. No owner is required to surrender possession of real property before the agency concerned pays the agreed purchase price.

Sixth. Construction will be scheduled to provide the owner/occupant with at least 90 days' notice to move.

Seventh. If the structure is not required, he shall offer to permit its owner to remove it.

Eighth. Those who are permitted to occupy the property on a rental basis for a short term, are to be charged a fair rental value figure.

Ninth. Condemnation time cannot be advanced nor deferred. Every effort must be made to assure that the owner is given reasonable time to negotiate with the agency.

Tenth. No Federal agency shall intentionally make it necessary for an owner to institute legal proceedings to prove the fact of the taking of his property.

Eleventh. If only a portion is to be acquired, leaving the unacquired portion without economic use, the Federal agency concerned shall offer to acquire the whole property.

Twelfth. In determining the boundaries of a proposed public improvement, the Federal agency is required to take into account human considerations including the economic and social effects on the owners and tenants of the property in the area.

The testimony of witnesses was overwhelmingly in support of the objectives of the legislation.

The problems created by the impact of such acquisitions have long been one of the Nation's top domestic burdens. Various estimates place the displacement figure, over the next 10 years, in excess of one million people, 180,000 businesses and 40,000 farms. Much of this problem will be covered by the present relocation and acquisition programs of HUD and the new programs authorized under the Highway Act of 1968. Yet, many other agencies and programs still lack consistency as well as identity with requirements of these programs.

The results of these inconsistencies have caused confusion and hardship—often of a very serious nature. They will continue to do so unless there is coordination of all operations.

The uprooting of an individual, his family, his business or farm, and the taking of his land is a very personal matter. We cannot make the process painless, but we can insure fair and evenhanded administration—consistent with protection of individual rights and community needs. To do less is to continue to exact a high price from people who are least able to absorb the burden of these Federal programs.

Mr. President, I ask unanimous consent that the committee amendments be agreed to en bloc.

The ACTING PRESIDENT pro tempore. Is there objection? The Chair hears none, and it is so ordered.

Mr. MUNDT. Mr. President, I want to associate myself with the remarks of my colleague, the senior Senator from Maine, in support of passage of S. 1. This legislation would provide fair and just treatment for those whose home and businesses are taken for projects of the Federal Government or by State and local government with Federal financial assistance.

This bill has one basic purpose and that is to make these people so displaced "economically whole." Our Constitution provides that when property is taken for a public purpose that the owner will receive just compensation. However, when the fair price is paid for the property it does not provide for expenses that are incurred by the owner for being disrupted and in seeking a new location for his home or business. This bill would seek to compensate for these expenses and would seek to establish uniform land acquisition policies in the hope that the Government as buyer and the landowner as seller can arrive at a just price without going into condemnation court.

The effort to provide additional compensation was recognized by Congress when it approved the urban renewal legislation and more recently in the Highway Act of 1968. Our bill seeks to carry the benefit of these two statutes to all Federal and federally assisted land acquisition to provide uniformity of policy so badly needed in this area.

The Senate approved the essential language of S. 1 in both the 89th and 90th Congresses in recognition of this need and I hope it will see fit to do so again today.

Mr. JAVITS. Mr. President, it is a fact, is it not, that this legislation is really a landmark measure, and I ask that with real deference to the Senator from Maine, because so many of us have joined with him so often in legislative matters.

Mr. MUSKIE. It is a landmark measure. And I welcome the opportunity to express my appreciation to the distinguished Senator from New York and all the other cosponsors who have taken a real and active interest in the legislation.

The fact that the measure passed so easily is a reflection of the fact that over the past 3 years a great deal of time and effort has been devoted to it and many committee hearings have been held in which the Senator was involved.

I hope that this year the Senate action will be matched on the House side.

Mr. JAVITS. Mr. President, this matter has been and is of profound importance. It is so difficult for people to understand the structure of the inequities involved here in respect to housing and road construction when we are dealing with the homes of individuals. Under the leadership of the distinguished Senator from Maine (Mr. MUSKIE), this measure has been brought to passage. It is a matter that has been long overdue.

Mr. President, we all owe a debt of gratitude to the distinguished Senator from South Dakota (Mr. MUNDT), the ranking member of the committee.

Mr. MUSKIE. Mr. President, the distinguished Senator from South Dakota (Mr. MUNDT) has taken affirmative, positive, and a cooperative attitude toward the bill during the 3 or 4 years we have studied the measure and has made invaluable contributions to its structure. He has been of great assistance. I have welcomed his help and support over the years.

Mr. JAVITS. Mr. President, I think it is fair for us to express a deep feeling of grievance over the inequities which the bill seeks to cure. I hope very much for that reason that it will find a response in the other body.

The Senator from Maine, the Senator from South Dakota, and I and others will do our utmost in this endeavor.

Mr. President, relating to the so-called outdoor advertising industry amendment, this measure also dealt with moving expenses for billboards. I want to confirm that by collaboration between the majority and minority, the expenses of moving the billboards were limited to what they are really entitled to under the present Federal law, and that there is no expansion of anything but the concepts established by virtue of codification which is the inheritance from the old bill.

Mr. MUSKIE. The Senator is correct. I know that he has taken a special interest in this problem and with his help, the outdoor advertising business is helped to the extent of making it eligible for actual moving costs and no more. This is the sort of assistance which is available to many displaced businesses.

Mr. JAVITS. Mr. President, I thank the Senator.

Mr. President, I congratulate the Senator from Maine. It has been a longstanding fight. I think that really out of deference to him we ought to move heaven and earth to get this matter enacted into law.

Mr. MUSKIE. I thank the Senator from New York.

THE MOM AND POP AMENDMENT

Mr. TYDINGS. Mr. President, as a cosponsor of S. 1, the Uniform Relocation Assistance and Land Acquisition Policies Act of 1969, I am pleased that the Senate will shortly enact the bill and want to congratulate the junior Senator from Maine for his fine effort on the Intergovernmental Relations Subcommittee in preparing this legislation.

Providing for uniform and equitable treatment of persons displaced from their homes, businesses, or farms by Federal or federally assisted projects is only fair.

The disruptive impact on people as they are displaced is now all too familiar. Hearings held by the subcommittee have illustrated the damaging effects on individuals resulting from displacement. They brought out the confusion and unfairness caused by the basic inadequacy and inconsistency of the measures available to the public agencies to relieve the consequent hardship.

This bill will go a long way toward removing this inconsistency and inadequacy.

Mr. President, of special interest to me

is the effect of land acquisition, clearance, and relocation of small businesses, particularly those owned by the elderly—such as the "mom and pop" grocery or candy store. The price of progress here in urban renewal is very high. It often means destruction of the livelihood of the small neighborhood storekeeper.

I know of a corner candy store owner in Baltimore who lived in the same location for 40 years. His store was a hub of neighborhood activity, part and parcel of the community. I lived nearby when I was a student at the University of Maryland and often stopped off at the store to chat and buy a newspaper or last-minute groceries.

An urban renewal project was begun in the neighborhood a number of years later, land was acquired and the store owner reimbursed for his property. But the amount was insufficient. The owner was too old to start again. His clientele was gone, his goodwill a thing of the past. He was set adrift at age 65 with little or no future.

I felt that such an individual deserved additional assistance.

I, therefore, offered an amendment which provided a lump-sum payment, in lieu of relocation and moving expenses, equal to three times the average annual net earnings of the business for the last 3 years to be made to a store owner over 50 years of age. This was known as the "mom and pop amendment" and provided for the small business proprietor who could not start over again.

The subcommittee accepted my amendment but changed the payment to twice the annual net earnings, limited the payments to not more than $5,000, and raised the age requirement to 62. I felt that, while a step in the right direction, this still fell short of what was really needed.

I thus urged the subcommittee at its hearings on February 20 of this year to increase the amount of the possible payment and, at the minimum, to lower the age limitation to 58 years. This would not substantially increase the cost of the program, but would soften significantly the impact of dislocation on our older, small businessmen.

The subcommittee agreed to increase the upper limitation of the payment to not more than $6,000, an increase of $1,000; to allow the payment to be equal to three times the average annual net earnings, as originally provided, rather than twice; and to lower the age requirements from 62 to 60. The amendment, the last sentence in section 211(c)(1) of the bill, now reads:

> Notwithstanding the preceding sentence, in the case of a displaced person who is sixty years of age or over, this payment shall be in an amount equal to three times the average annual net earnings of the business or $6,000, whichever is less.

The subcommittee deserves high marks for this action which demonstrates their continued concern for the Nation's older, small businessman. I am delighted that it has, to a very large extent, accepted my "mom and pop amendment" and want to call this amendment to the attention of my colleagues.

The "mom and pop amendment" will cushion the impact of federally necessitated relocation programs on many of our older citizens and ease the often difficult adjustment period that results. It is completely within the tradition of a government "for the people."

Mr. COOPER. Mr. President, last year when the Senate Committee on Public Works, on which I serve as the ranking minority member, extended the biennial highway authorizations and enacted one of the most constructive measures to be recommended to the Senate during my service on the committee, it included in the Federal-Aid Highway Act of 1968 a title II providing relocation assistance to families, farms and businesses displaced by road construction. The committee, under the leadership of our chairman, the Senator from West Virginia (Mr. RANDOLPH), and largely on the initiative of the Senator from Maine (Mr. MUSKIE), devoted a great deal of attention and the most careful consideration to the provisions of title II, which added a new chapter 5 to title 23 of the United States Code.

I think it fair to say that we considered at that time that this legislation could provide a model for relocation assistance in the programs of other Federal agencies which acquire property in carrying out Federal construction and Federal grant programs. In fact, in my statement of views, which were made a part of the committee report on the Highway Act of 1968, I called attention to the significance of this legislation in these words:

> Of great importance, title II will establish a comprehensive program of relocation assistance designed to assure fair treatment and reasonable help to those individuals, families, farms, and businesses displaced by highway construction projects. I consider these provisions fair, proper, and a great advance in compensating those who are uprooted and dislocated by Federal projects. The Intergovernmental Relations Subcommittee of the Committee on Government Operations has given leadership in this field, and I hope very much that the relocation assistance provided by this bill for the highway programs will be extended to the construction projects of the Corps of Engineers, and to the other Federal agencies.

I also spoke in the Senate in support of this wonderful new program—because I have been interested for many years in securing fair and better treatment for those who are displaced by great dam, highway or other projects, and I have had a good deal of experience with those problems as they have arisen in connection with projects in my own State of Kentucky. The Senators from Maine and from West Virginia will recall that I suggested at that time that these provisions ought to be extended to Corps of Engineers' projects, which are also under the jurisdiction of the Committee on Public Works.

As I understand, the bill now before the Senate, S. 1, which has come to us from the Committee on Government Operations, would extend to all Federal agencies and programs the land acquisition policy and relocation assistance program first applied to road construction by the 1968 Highway Act—and its purpose is to do so on a uniform basis. While S. 1 technically would repeal title II of the 1968 act, those provisions would be incorporated in this act, and applied to other programs as well as to the Federal-aid highway program.

The States are now implementing the provisions of the 1968 Highway Act, and as its provisions, or the provisions of S. 1 if adopted by the House of Representatives, are put into effect, no doubt some problems may arise, as is usually the case with any new program of such scope. But I hope very much that the experience under the Highway Act will prove helpful. If difficulties arise in applying these principles to highway or civil works projects, I am sure that our committee will want to be helpful.

Providing just compensation, and equitable assistance to those who are displaced, so that their lives are not unduly disrupted by public projects and they are kept "whole" as we say, is not simple or easy. But it is right and necessary, and I have been glad to support this measure. I commend the Senator from Maine, and his colleagues from South Dakota (Mr. MUNDT) and New York (Mr. JAVITS) for what I know was long and careful work in bringing this bill before the Senate for its approval.

The ACTING PRESIDENT pro tempore. The bill is open to further amendment; if there be no further amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed.

Mr. MUSKIE. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. BYRD of West Virginia. Mr. President, I move to lay that motion on the table.

The motion was agreed to.

INTERGOVERNMENTAL PERSONNEL ACT OF 1969

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 486.

The ACTING PRESIDENT pro tempore. The bill will be stated by title.

The ASSISTANT LEGISLATIVE CLERK. A bill (S. 11) to reinforce the federal system by strengthening the personnel resources of State and local governments, to improve intergovernment cooperation in the administration of grant-in-aid programs, to provide grants for improvement of State and local personnel administration, to authorize Federal assistance in training State and local employees, to provide grants to State and local governments for training of their employees, to authorize interstate compacts for personnel and training activities, to facilitate the temporary assignment of personnel between the Federal Government, and State and local governments, and for other purposes.

The ACTING PRESIDENT pro tempore. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on

Government Operations with amendments: On page 2, after the enacting clause, insert "That this act may be cited as the 'Intergovernmental Personnel Act of 1969' "; on page 3, line 22, after the word "as", insert "(1)"; in line 23, after the word "local", strike out "governments." and insert "governments, and (2) to encourage innovation and allow for diversity on the part of State and local governments in the design, execution, and management of their own systems of personnel administration."; on page 4, line 16, after the word "policy." insert "The President may terminate the council at any time after the expiration of three years following its establishment."; on page 7, line 21, after the word "to" where it appears the second time, strike out "States for up to 75 per centum of the costs of developing and of carrying out programs or projects which the Commission finds" and insert "a State for up to 75 per centum (or, with respect to fiscal years commencing after the expiration of three years following the effective date of the grant provisions of this Act, for up to 50 per centum) of the costs of developing and carrying out programs or projects, on the certification of the Governor of that State that the programs or projects"; on page 11, line 7, after the word "to", strike out "general local governments, or combinations of such governments, that serve a population of fifty thousand or more, for up to 75 per centum of the cost of developing and carrying out programs or projects which the Commission finds" and insert "a general local government, or a combination of general local governments, that serve a population of fifty thousand or more, for up to 75 per centum (or with respect to fiscal years commencing after the expiration of three years following the effective date of the grant provisions of this Act, for up to 50 per centum) of the costs of developing and carrying out programs or projects, on the certification of the Governor of that State that the programs or projects."

On page 12, line 6, after the word "grant" strike out "provisions, as provided in section 513" and insert "provisions"; at the beginning of line 24, strike out "provisions as provided in section 513" and insert "provisions"; on page 13, line 12, after the word "or", strike out "governments to the State office designated under section 202(b)(1) of this Act for review, except that, if no State office has been so designated, such application shall be submitted to the Governor for his review. Any comments and recommendations of the State office or of the Governor, as the case may be, and a statement by the general local government or governments that such comments and recommendations have been considered prior to its formal submission will accompany the application to the Commission. However, the application need not be accompanied by such comments and recommendations and by such a statement if the general local government or governments certify that the application has been before the State office or the Governor, as the case may be, for review for a period of sixty days without comments or recommendations on the application being made by that office," and insert "combination of such governments to the Governor for review and certification that the programs or projects are consistent with the applicable principles set forth in clauses (1)–(6) of the third paragraph of section 2 of this Act. The Governor may refer the application to the State office designated under section 202(b)(1) of this Act for review. Comments and recommendations (if any) made as a result of the review, a statement by the general local government or combination of such governments that it has considered the comments and recommendations, and the certification of the Governor shall accompany the application to the Commission. The application need not be accompanied by the certification of the Governor if the general local government or combination of such governments certifies to the Commission that the application has been before the Governor for review and certification for a period of sixty days without certification by the Governor. However, if during such sixty-day period the Governor (1) has found that the programs or projects are not consistent with the applicable principles set forth in clauses (1)–(6) of the third paragraph of section 2 of this Act and (2) has set forth in writing the reasons, specifically and in detail, therefor, the application may not be submitted to, or be considered by, the Commission."

On page 15, line 20, after the word "may", strike out "accept from such governments payment, in whole or in part," and insert "waive, in whole or in part, payments from such governments"; on page 18, after line 2, strike out:

(D) sections 2(a)(5), 402(a)(5), 503(a)(3), 513(a)(3), 1002(a)(5), 1402(a)(5), 1062(a)(5), and 1902(a)(4) of the Social Security Act (42 U.S.C. 302(a)(5), 602(a)(5), 703(a)(3), 713(a)(3), 1202(a)(5), 1352(a)(5), 1382(a)(5), and 1396a(a)(4)); and

And, in lieu thereof, insert:

(D) sections 2(a)(5)(A), 402(a)(5)(A), 505(a)(3)(A), 1002(a)(5)(A), 1402(a)(5)(A), 1602(a)(5)(A), and 1902(a)(4)(A) of the Social Security Act (42 U.S.C. 302(a)(5)(A), 602(a)(5)(A), 705(a)(3)(A), 1202(a)(5)(A), 1352(a)(5)(A), 1382(a)(5)(A), and 1396a(a)(4)(A)); and

On page 22, line 8, after the word "agencies" strike out "are authorized to receive payments from, or on behalf of, State and local governments for the costs of training provided under this section, and to enter into agreements with them for this purpose. The head of the Federal agency concerned may waive all or part of such payments," and, in lieu thereof, insert "may waive, in whole or in part, payments from, or on behalf of, State and local governments for the costs of training provided under this section." in line 20, after the word "the" insert "initial"; on page 23, line 9, after the word "program," strike out "and, to the same extent provided in section 302(b) of this Act, receive or waive" and insert "and receive or waive, in whole or in part,"; on page 24, line 20, after the word "per centum", strike out "of the cost of developing and carrying out training and educational programs for their professional, administrative, and technical employees and officials, which the Commission finds are consistent with the applicable principles set forth in clauses (1)–(6) or the third paragraph of section 2 of this Act."; and insert "(or, with respect to fiscal years commencing after the expiration of three years following the effective date of the grant provisions of this Act, for up to 50 per centum) of the costs of developing and carrying out programs, on the certification of the Governor of that State that the programs are consistent with the applicable principles set forth in clauses (1)–(6) of the third paragraph of section 2 of this Act, to train and educate their professional, administrative, and technical employees and officials.".

On page 28, line 14, after the word "or", strike out "governments to the State office designated under section 304(b)(1) of this Act for review, except that, if no State office has been designated, such application shall be submitted to the Governor for his review. Any comments and recommendations of such State office or the Governor, as the case may be, and a statement by the general local government or governments that such comments and recommendations have been considered prior to its formal submission will accompany the application to the Commission. However, the application need not be accompanied by such comments and recommendations and by such a statement if the general local government or governments certify that the application has been before such State office or the Governor, as the case may be, for review for a period of sixty days without comments or recommendations on the application being made by that office." and, in lieu thereof, insert "combination of such governments to the Governor for review and certification that the programs or projects are consistent with the applicable principles set forth in clauses (1)–(6) of the third paragraph of section 2 of this Act. The Governor may refer the application to the State office designated under section 304(b)(1) of this Act for review. Comments and recommendations (if any) made as a result of the review, a statement by the general local government or combination of such governments that it has considered the comments and recommendations, and the certification of the Governor shall accompany the application to the Commission. The application need not be accompanied by the certification of the Governor if the general local government or combination of such government certifies to the Commission that the application has been before the Government for review and certification for a period of sixty days without certification by the Govcrnor. However, if during such sixty-day period the Governor (1) has found that the programs or projects are not consistent with the applicable principles set forth in clauses (1)–(6) of the third paragraph of section 2 of this Act and (2) has set forth in writing the reasons, specifically and in detail, therefor, the application may not be submitted to, or be considered by, the Commission.".

On page 30, line 6, after the word "per centum", strike the word "of" and insert

"(or, with respect to fiscal years commencing after the expiration of three years following the effective date of the grant provisions of this Act, up to 50 per centum) of".

On page 39, line 15, after the word "subchapter," strike out "II" and insert "III"; on page 43, line 7, after "(A)," strike out "travel and per diem instead of subsistence" and insert "travel, including a per diem allowance"; in line 10, after "(B)," strike out "per diem instead of subsistence," and insert "a per diem allowance"; in line 13, after "(C)," strike out "travel and per diem instead of subsistence," and insert "travel, including a per diem allowance"; on page 49, line 23, after the word "allocate," insert "20 per centum of the total amount available for"; on page 50, after line 7, strike out:

(b) In each fiscal year, 15 per centum of the total amount available for grants under this Act shall be apportioned equally among the States and the amount apportioned for each State shall be reserved for programs or projects in that State. However, any amount so reserved but not used in any fiscal year shall be added to the total amount available for grants under this Act in the next succeeding fiscal year. For the purpose of this subsection, "State" means the several States of the United States, and the District of Columbia.

And, in lieu thereof, insert:

(b) (1) The Commission shall allocate 80 per centum of the total amount available for grants under this Act among the States on a weighted formula taking into consideration such factors as the size of population and the number of State and local government employees affected.

(2) The amount allocated for each State under paragraph (1) of this subsection shall be further allocated by the Commission to meet the needs of both the State government and the local governments within the State on a weighted formula taking into consideration such factors as the number of State and local government employees and the amount of State and local government expenditures. The Commission shall determine the categories of employees and expenditures to be included or excluded, as the case may be, in the number of employees and amount of expenditures. The minimum allocation for meeting needs of local governments in each State (other than the District of Columbia) shall be 50 per centum of the amount allocated for the State under paragraph (1) of this subsection.

(3) The amount of any allocation under paragraph (2) of this subsection which the Commission determines, on the basis of information available to it, will not be used to meet the needs for which allocated shall be available for use to meet the needs of the State government or local governments in that State, as the case may be, on such date or dates as the Commission may fix.

(4) The amount allocated for any State under paragraph (1) of this subsection which the Commission determines, on the basis of information available to it, will not be used shall be available for reallocation by the Commission from time to time, on such date or dates as it may fix, among other States with respect to which such a determination has not been made, in accordance with the formula set forth in paragraph (1) of this subsection, but with such amount for any of such other States being reduced to the extent it exceeds the sum the Commission estimates said State needs and will be able to use; and the total of such reductions shall be similarly reallocated among the States whose proportionate amounts were not so reduced.

(5) For the purposes of this subsection, "State" means the several States of the United States and the District of Columbia.

On page 53, line 23, after "Sec. 509.", strike out:

(a) To carry out the programs authorized by this Act, there are authorized to be appropriated at any time after its enactment not to exceed $20,000,000 for fiscal year 1970; $30,000,000 for fiscal year 1971; and $40,000,000 for fiscal year 1972.

(b) Any amounts appropriated under this section shall remain available until expended, and any amounts authorized for any fiscal year under this section but not appropriated may be appropriated for any succeeding fiscal year commencing prior to July 1, 1972.

And insert:

There are authorized to be appropriated, without fiscal year limitation, such sums as may be necessary to carry out the programs authorized by this Act.';

On page 54, line 12, after "Sec. 510(a)", strike out:

There is established a revolving fund, to be available without fiscal year limitation, for financing training and such other functions as are authorized or required to be performed by the Commission on a reimbursable basis by this Act and such other services as the Commission, with the approval of the Bureau of the Budget, determines may be performed more advantageously through such a fund.

(b) The capital of the fund shall consist of any appropriations made for the purpose of providing capital (which appropriations are hereby authorized), and such unexpended balances of appropriations or funds relating to the activities transferred to the fund and the fair and reasonable value of such stocks of supplies, equipment, and other assets and inventories on order as the Commission may transfer to the fund, less the related liabilities, unpaid obligations, and accrued annual leave of employees who are transferred to the activities financed by the fund at its inception.

(c) The fund shall be credited with—

(1) reimbursements or advance payments from available funds of the Commission, other Federal agencies, State or local governments, or other sources for supplies and services at rates which will approximate the expense of operations, including the accrual of annual leave, the depreciation of equipment, and the net losses on property transferred or donated; and

(2) receipts from sales or exchanges of property and payments for losses or damage to property accounted for under the fund.

(d) Any unobligated and unexpended balance in the fund that the Commission determines to be in excess of amounts needed for its operations shall be deposited in the Treasury as miscellaneous receipts.

And insert:

Section 1304(e) of title 5, United States Code, is amended to read as follows:

"(e) (1) A revolving fund is available to the Commission without fiscal year limitation for financing—

"(A) investigations, training, and such other functions and services as the Commission is authorized or required to perform on a reimbursable basis; and

"(B) such other functions and services as the Commission, with the approval of the Bureau of the Budget, determines may be financed more advantageously through the funds, and to the maximum extent feasible, each individual activity shall be conducted generally on an actual cost basis over a reasonable period of time.

"(2) The capital of the fund consists of the aggregate of—

"(A) appropriations made to provide capital for the fund, which appropriations are hereby authorized; and

"(B) the sum of the fair and reasonable value of such supplies, equipment, and other assets as the Commission from time to time transfers to the fund (including the amount of unexpended balances of appropriations or funds relating to activities the financing of which is transferred to the fund) less the amount of related liabilities, the amount of unpaid obligations, and the value of accrued annual leave of employees, which are attributable to the activities the financing of which is transferred to the fund.

"(3) The fund shall be credited with—

"(A) reimbursements and advance payments from available funds of the Commission, other agencies, or State or local governments, or from other sources, for those services and supplies provided at rates estimated by the Commission as adequate to recover expenses of operation, including provision for accrued annual leave of employees, the depreciation of equipment, and the net losses on property transferred or donated to the fund; and

"(B) receipts from sales or exchanges of property, and payments for loss or damage to property, accounted for under the fund.

"(4) Any unobligated and unexpended balances in the fund that the Commission determines to be in excess of the amounts needed for activities financed by the fund shall be deposited in the Treasury of the United States as miscellaneous receipts."

(b) Section 1304(f) of title 5, United States Code, is amended by striking out "investigations made" and inserting "investigations, training, and functions performed" in place thereof.

(c) The fund referred to in the amendment made by subsection (a) of this section shall be held and considered to be the same fund as that referred to in section 1304(e) of title 5, United States Code, as in existence immediately prior to such amendment, and the capital thereof immediately following such amendment shall be the same as that immediately prior to such amendment.

And on page 58, after line 20, insert a new section, as follows:

CONFLICTS OF INTEREST—EXEMPTION

SEC. 514. Section 207(b), title 18, United States Code, is amended by adding the following before the period at the end thereof: ": And provided further, That nothing in subsection (a) or (b) shall prevent a former officer or employee, including a special Government employee, from acting or appearing personally as agent or attorney for a unit of State or local government, or two or more such units, if (i) the former officer or employee is a full-time officer or employee of such unit or units; and (ii) the head of the department or agency concerned with the matter shall certify that in his opinion the interest of the Government will not be prejudiced by such action or appearance by the former officer or employee".

So as to make the bill read:

S. 11

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Intergovernmental Personnel Act of 1969".

DECLARATION OF POLICY

SEC. 2. The Congress hereby finds and declares—

That effective State and local governmental institutions are essential in the maintenance and development of the federal system in an increasingly complex and interdependent society.

That, since numerous governmental activities administered by the State and local governments are related to national purpose and

are financed in part by Federal funds, a national interest exists in a high caliber of public service in State and local governments.

That the quality of public service at all levels of government can be improved by the development of systems of personnel administration consistent with such merit principles as—

(1) recruiting, selecting, and advancing employees on the basis of their relative ability, knowledge, and skills, including open consideration of qualified applicants for initial appointment;

(2) providing equitable and adequate compensation;

(3) training employees, as needed, to assure high-quality performance;

(4) retaining employees on the basis of the adequacy of their performance, correcting inadequate performance, and separating employees whose inadequate performance cannot be corrected;

(5) assuring fair treatment of applicants and employees in all aspects of personnel administration without regard to political affiliation, race, color, national origin, sex, or religious creed and with proper regard for their privacy and constitutional rights as citizens; and

(6) assuring that employees are protected against coercion for partisan political purposes and are prohibited from using their official authority for the purpose of interfering with or affecting the result of an election or a nomination for office.

That Federal financial and technical assistance to State and local governments for strengthening their personnel administration in a manner consistent with these principles is in the national interest.

SEC. 3. The authorities provided by this Act shall be administered in such manner as (1) to recognize fully the rights, powers, and responsibilities of State and local governments, and (2) to encourage innovation and allow for diversity on the part of State and local governments in the design, execution, and management of their own systems of personnel administration.

TITLE I—DEVELOPMENT OF POLICIES AND STANDARDS

DECLARATION OF PURPOSE

SEC. 101. The purpose of this title is to provide for intergovernmental cooperation in the development of policies and standards for the administration of programs authorized by this Act.

ADVISORY COUNCIL

SEC. 102. (a) Within one hundred and eighty days following the date of enactment of this Act, the President shall appoint, without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, an advisory council on intergovernmental personnel policy. The President may terminate the council at any time after the expiration of three years following its establishment.

(b) The advisory council of not to exceed fifteen members, shall be composed primarily of officials of the Federal Government and State and local governments, but shall also include members selected from educational and training institutions or organizations, public employee organizations, and the general public. At least half of the governmental members shall be officials of State and local governments. The President shall designate a Chairman and a Vice Chairman from among the members of the advisory council.

(c) It shall be the duty of the advisory council to study and make recommendations regarding personnel policies and programs for the purpose of—

(1) improving the quality of public administration at State and local levels of government, particularly in connection with programs that are financed in whole or in part from Federal funds;

(2) strengthening the capacity of State and local governments to deal with complex problems confronting them;

(3) aiding State and local governments in training their professional, administrative, and technical employees and officials;

(4) aiding State and local governments in developing systems of personnel administration that are responsive to the goals and needs of their programs and effective in attracting and retaining capable employees; and

(5) facilitating temporary assignments of personnel between the Federal Government and State and local governments and institutions of higher education.

(d) Members of the advisory council who are not regular full-time employees of the United States, while serving on the business of the council, including travel time, may receive compensation at rates not exceeding the daily rate for GS–18; and while so serving away from their homes or regular places of business, all members may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703 of title 5, United States Code, for individuals in the Government service employed intermittently.

REPORTS OF ADVISORY COUNCIL

SEC. 103. (a) The advisory council on intergovernmental personnel policy shall from time to time report to the President and to the Congress its findings and recommendations.

(b) Not later than eighteen months after its establishment, the advisory council shall submit an initial report on its activities, which shall include its views and recommendations on—

(1) the feasibility and desirability of extending merit policies and standards to additional Federal-State grant-in-aid programs;

(2) the feasibility and desirability of extending merit policies and standards to grant-in-aid programs of a Federal-local character;

(3) appropriate standards for merit personnel administration, where applicable, including those established by regulations with respect to existing Federal grant-in-aid programs; and

(4) the feasibility and desirability of financial and other incentives to encourage State and local governments in the development of comprehensive systems of personnel administration based on merit principles.

(c) In transmitting to the Congress reports of the advisory council, the President shall submit to the Congress proposals of legislation which he deems desirable to carry out the recommendations of the advisory council.

TITLE II—STRENGTHENING STATE AND LOCAL PERSONNEL ADMINISTRATION

DECLARATION OF PURPOSE

SEC. 201. The purpose of this title is to assist State and local governments to strengthen their staffs by improving their personnel administration.

STATE GOVERNMENT AND STATEWIDE PROGRAMS AND GRANTS

SEC. 202. (a) The United States Civil Service Commission (hereinafter referred to as the "Commission") is authorized to make grants to a State for up to 75 per centum (or, with respect to fiscal years commencing after the expiration of three years following the effective date of the grant provisions of this Act, for up to 50 per centum) of the costs of developing and carrying out programs or projects, on the certification of the Governor of that State that the programs or projects are consistent with the applicable principles set forth in clauses (1)–(6) of the third paragraph of section 2 of this Act, to strengthen State and local government personnel administration and to furnish needed personnel administration services to local governments in that State. The authority provided by this section shall be employed in such a manner as to encourage innovation and allow for diversity on the part of State and local governments in the design, execution, and management of their own systems of personnel administration.

(b) An application for a grant shall be made at such time or times, and contain such information, as the Commission may prescribe. The Commission may make a grant under subsection (a) of this section only if the application thereof—

(1) provides for designation, by the Governor or chief executive authority, of the State office that will have primary authority and responsibility for the development and administration of the approved program or project at the State level;

(2) provides for the establishment of merit personnel administration where appropriate and the further improvement of existing systems based on merit principles;

(3) provides for specific personnel administration improvement needs of the State government and, to the extent appropriate, of the local governments in that State, including State personnel administration services for local governments;

(4) provides assurance that the making of a Federal Government grant will not result in a reduction in relevant State or local government expenditures or the substitution of Federal funds for State or local funds previously made available for these purposes; and

(5) sets forth clear and practicable actions for the improvement of particular aspects of personnel administration such as—

(A) establishment of statewide personnel systems of general or special functional coverage to meet the needs of urban, suburban, or rural governmental jurisdictions that are not able to provide sound career services, opportunities for advancement, adequate retirement and leave systems, and other career inducements to well-qualified professional, administrative, and technical personnel;

(B) making State grants to local governments to strengthen their staffs by improving their personnel administration;

(C) assessment of State and local government needs for professional, administrative, and technical manpower, and the initiation of timely and appropriate action to meet such needs;

(D) strengthening one or more major areas of personnel administration, such as recruitment and selection, training and development, and pay administration;

(E) undertaking research and demonstration projects to develop and apply better personnel administration techniques, including both projects conducted by State and local government staffs and projects conducted by colleges or universities or other appropriate nonprofit organizations under grants or contracts;

(F) strengthening the recruitment, selection, assignment, and development of handicapped persons, women, and members of disadvantaged groups whose capacities are not being utilized fully;

(G) achieving the most effective use of scarce professional, administrative, and technical manpower; and

(H) increasing intergovernmental cooperation in personnel administration, with respect to such matters as recruiting, examining, pay studies, training, education, personnel interchange, manpower utilization, and fringe benefits.

LOCAL GOVERNMENT PROGRAMS AND GRANTS

SEC. 203. (a) The Commission is authorized to make grants to a general local government, or a combination of general local governments, that serve a population of fifty thousand or more, for up to 75 per centum (or, with respect to fiscal years commencing after the expiration of three years following the effective date of the grant provisions of

this Act, for up to 50 per centum) of the costs of developing and carrying out programs or projects, on the certification of the Governor of that State that the programs or projects are consistent with the applicable principles set forth in clauses (1)–(6) of the third paragraph of section 2 of this Act, to strengthen the personnel administration of such governments. Such a grant may be made only if, at the time of submission of an application, the State concerned does not then currently have an approved application for a grant adequately providing, in the judgment of the Commission, for assistance in strengthening the personnel administration of that local government or combination of local governments. However, such a grant, except as provided in subsection (b)(1) of this section, may not be made until the expiration of one year from the effective date of the grant provisions of this Act.

(b) An application for a grant from a general local government or a combination of general local governments shall be made at such time or times and shall contain such information as the Commission may prescribe. The Commission may make a grant under subsection (a) of this section only if the application therefor meets requirements similar to those established in section 202(b) of this Act for a State application for a grant, unless any such requirement is specifically waived by the Commission, and the requirements of subsection (c) of this section. Such a grant may cover the costs of developing the program or project covered by the application. The Commission may—

(1) waive, as the request of a general local government or combination of such governments, the one-year waiting period, unless the State concerned declares, within ninety days from the effective date of the grant provisions of this Act, an intent to file an application for a grant that will provide adequately for assistance to the local government or governments; and

(2) make grants to general local governments, or combinations of such governments, that serve a population of less than fifty thousand, if it finds that such grants will help meet essential needs in programs or projects of national interest and will assist general local governments experiencing special problems in personnel administration related to such programs or projects.

(c) An application to be submitted to the Commission under subsection (b) of this section shall first be submitted by the general local government or combination of such governments to the Governor for review and certification that the programs or projects are consistent with the applicable principles set forth in clauses (1)–(6) of the third paragraph of section 2 of this Act. The Governor may refer the application to the State Office designated under section 202(b)(1) of this Act for review. Comments and recommendations (if any) made as a result of the review, a statement by the general local government or combination of such governments that it has considered the comments and recommendations, and the certification of the Governor shall accompany the application to the Commission. The application need not be accompanied by the certification of the Governor if the general local government or combination of such governments certifies to the Commission that the application has been before the Governor for review and certification for a period of sixty days without certification by the Governor. However, if during such sixty-day period the Governor (1) has found that the programs or projects are not consistent with the applicable principles set forth in clauses (1)–(6) of the third paragraph of section 2 of this Act and (2) has set forth in writing the reasons, specifically and in detail, therefor, the application may not be submitted to, or be considered by, the Commission.

INTERGOVERNMENTAL COOPERATION IN RECRUITING AND EXAMINING

SEC. 204. (a) The Commission may join, on a shared-costs basis, with State and local governments in cooperative recruiting and examining activities under such procedures and regulations as may jointly be agreed upon.

(b) The Commission also may, on the written request of a State or local government and under such procedures as may be jointly agreed upon, certify to such governments from appropriate Federal registers the names of potential employees. The State or local government making the request shall pay the Commission for the costs, as determined by the Commission, of performing the service, and such payments shall be credited to the appropriation or fund from which the expenses were or are to be paid.

TECHNICAL ASSISTANCE

SEC. 205. The Commission may furnish technical advice and assistance, on request, to State and general local governments seeking to improve their systems of personnel administration. The Commission may waive, in whole or in part, payments from such governments for the costs of furnishing such assistance. All such payments shall be credited to the appropriation or fund from which the expenses were or are to be paid.

COORDINATION OF FEDERAL PROGRAMS

SEC. 206. The Commission, after consultation with other agencies concerned, shall—

(1) coordinate the personnel administration support and technical assistance given to State and local governments and the support given State programs or projects to strengthen local government personnel administration, including the furnishing of needed personnel administration services and technical assistance, under authority of this Act with any such support given under other Federal programs; and

(2) make such arrangements, including the collection, maintenance, and dissemination of data on grants for strengthening State and local government personnel administration and on grants to States for furnishing needed personnel administration services and technical assistance to local governments, as needed to avoid duplication and insure consistent administration of related Federal activities.

INTERSTATE COMPACTS

SEC. 207. The consent of the Congress is hereby given to any two or more States to enter into compacts or other agreements, not in conflict with any law of the United States, for cooperative efforts and mutual assistance (including the establishment of appropriate agencies) in connection with the development and administration of personnel and training programs for employees and officials of State and local governments.

TRANSFER OF FUNCTIONS

SEC. 208. (a) There are hereby transferred to the Commission all functions, powers, and duties of—

(1) the Secretary of Agriculture under section 10(e)(2) of the Food Stamp Act of 1964 (7 U.S.C. 2019(e)(2));

(2) the Secretary of Labor under—

(A) the Act of June 6, 1933, as amended (29 U.S.C. 49 et seq.); and

(B) section 303(a)(1) of the Social Security Act (42 U.S.C. 503(a)(1));

(3) the Secretary of Health, Education, and Welfare under—

(A) sections 134(a)(6) and 204(a)(6) of the Mental Retardation Facilities and Community Health Centers Construction Act of 1963 (42 U.S.C. 2674(a)(6) and 2684(a)(6));

(B) section 303(a)(5) of the Older Americans Act of 1965 (42 U.S.C. 3023(a)(5));

(C) sections 314(a)(2)(F) and (d)(2)(F) and 604(a)(8) of the Public Health Service Act (42 U.S.C. 246(a)(2)(F) and (d)(2)(F) and 291d(a)(8)); and

(D) sections 2(a)(5)(A), 402(a)(5)(A), 505(a)(3)(A), 1002(a)(5)(A), 1402(a)(5)(A), 1602(a)(5)(A), and 1902(a)(4)(A) of the Social Security Act (42 U.S.C. 302(a)(5)(A), 602(a)(5)(A), 705(a)(3)(A), 1202(a)(5)(A), 1352(a)(5)(A), 1382(a)(5)(A), and 1396a(a)(4)(A)); and

(4) any other department, agency, office, or officer (other than the President) under any other provision of law or regulation applicable to a program of grant-in-aid that specifically requires the establishment and maintenance of personnel standards on a merit basis with respect to the program;

insofar as the functions, powers, and duties relate to the prescription of personnel standards on a merit basis.

(b) The Commission shall—

(1) provide consultation and technical advice and assistance to State and local governments to aid them in complying with standards prescribed by the Commission under subsection (a) of this section; and

(2) advise Federal agencies administering programs of grants or financial assistance as to the application of required personnel administration standards, and recommend and coordinate the taking of such actions by the Federal agencies as the Commission considers will most effectively carry out the purpose of this title.

(c) So much of the personnel, property, records, and unexpended balances of appropriations, allocations, and other funds of any Federal agency employed, used, held, available, or to be made available in connection with the functions, powers, and duties vested in the Commission by this section as the Director of the Bureau of the Budget shall determine shall be transferred to the Commission at such time or times as the Director shall direct.

(d) Personnel standards prescribed by Federal agencies under laws and regulations referred to in subsection (a) of this section shall continue in effect until modified or superseded by standards prescribed by the Commission under subsection (a) of this section.

(e) Any standards or regulations established pursuant to the provisions of this section shall be such as to encourage innovation and allow for diversity on the part of State and local governments in the design, execution, and management of their own individual systems of personnel administration.

(f) Nothing in this section or in section 202 or 203 of this Act shall be construed to—

(1) authorize any agency or official of the Federal Government to exercise any authority, direction, or control over the selection, assignment, advancement, retention, compensation, or other personnel action with respect to any individual State or local employee;

(2) authorize the application of personnel standards on a merit basis to the teaching personnel of educational institutions or school systems;

(3) prevent participation by employees or employee organizations in the formulation of policies and procedures affecting the conditions of their employment, subject to the laws and ordinances of the State or local government concerned;

(4) require or request any State or local government employee to disclose his race, religion, or national origin, or the race, religion, or national origin, of any of his forebears;

(5) require or request any State or local government employee, or any person applying for employment as a State or local government employee, to submit to any interrogation or examination or to take any psychological test or any polygraph test which is

designed to elicit from him information concerning his personal relationship with any person connected with him by blood or marriage, or concerning his religious beliefs or practices, or concerning his attitude or conduct with respect to sexual matters; or

(6) require or request any State or local government employee to participate in any way in any activities or undertakings unless such activities or undertakings are related to the performance of official duties to which he is or may be assigned or to the development of skills, knowledge, or abilities which qualify him for the performance of such duties.

(g) This section shall become effective sixty days after the date of enactment of this Act.

TITLE III—TRAINING AND DEVELOPING STATE AND LOCAL EMPLOYEES

DECLARATION OF PURPOSE

SEC. 301. The purpose of this title is to strengthen the training and development of State and local government employees and officials, particularly in professional, administrative, and technical fields.

ADMISSION TO FEDERAL EMPLOYEE TRAINING PROGRAMS

SEC. 302. (a) In accordance with such conditions as may be prescribed by the head of the Federal agency concerned, a Federal agency may admit State and local government employees and officials to agency training programs established for Federal professional, administrative, or technical personnel.

(b) Federal agencies may waive, in whole or in part, payments from, or on behalf of, State and local governments for the costs of training provided under this section. Payments received by the Federal agency concerned for training under this section shall be credited to the appropriation or fund used for paying the training costs.

(c) The Commission may use appropriations authorized by this Act to pay the initial additional developmental or overhead costs that are incurred by reason of admittance of State and local government employees to Federal training courses and to reimburse other Federal agencies for such costs.

TRAINING OF PERSONNEL ENGAGED IN GRANT-IN-AID PROGRAMS

SEC. 303. (a) Any Federal agency administering a program of grants or financial assistance to State or local governments may—

(1) establish, provide, and conduct training programs for employees and officials of State and local governments who have responsibilities related to the federally aided program, and receive or waive, in whole or in part, payments for such training and credit any such payments to the appropriation or fund used for paying the training costs; and

(2) authorize State and local governments—

(A) from Federal funds available for State or local program administration expenses under grants or financial assistance; or

(B) from other Federal grant or financial assistance funds when so provided in appropriation or other Acts;

to establish, conduct, provide, and support training and education programs for their employees and officials who have responsibilities related to the federally aided program, including internship, work-study, fellowship, and similar programs if approved by the Federal agency concerned, provided that full-time, graduate-level education supported under this subsection shall be consistent with provisions made for Government Service Fellowships under section 306 of this Act.

(b) The State or local government concerned shall—

(1) in accordance with eligibility criteria prescribed by the Federal agency concerned, select the individual employees and officials to receive education and training in programs established under this section; and

(2) during the period of the education or training, continue the full salary of the employee or official concerned and normal employment benefits such as credit for seniority, leave accrual, retirement, and insurance.

GRANTS TO STATE AND LOCAL GOVERNMENTS FOR TRAINING

SEC. 304. (a) If in its judgment training is not adequately provided for under grant-in-aid or other statutes, the Commission is authorized to make grants to State and general local governments for up to 75 per centum (or, with respect to fiscal years commencing after the expiration of three years following the effective date of the grant provisions of this Act, for up to 50 per centum) of the costs of developing and carrying out programs, on the certification of the Governor of that State that the programs are consistent with the applicable principles set forth in clauses (1)–(6) of the third paragraph of section 2 of this Act, to train and educate their professional, administrative, and technical employees and officials. Such grants may not be used to cover costs of full-time graduate-level study, provided for in section 306 of this Act, or the costs of the construction or acquisition of training facilities. The State and local government share of the cost of developing and carrying out training and education plans and programs may include, but shall not consist solely of, the reasonable value of facilities and of supervisory and other personal services made available by such governments. The authority provided by this section shall be employed in such a manner as to encourage innovation and allow for diversity on the part of State and local governments in developing and carrying out training and education programs for their personnel.

(b) An application for a grant from a State of general local government shall be made at such time or times, and shall contain such information, as the Commission may prescribe. The Commission may make a grant under subsection (a) of this section, only if the application therefor meets requirements established by this subsection unless any requirement is specifically waived by the Commission. Such grant to a State, or to a general local government under subsection (c) of this section, may cover the costs of developing the program covered by the application. The program covered by the application shall—

(1) provide for designation, by the Governor or chief executive authority, of the State office that will have primary authority and responsibility for the development and administration of the program at the State level;

(2) provide, to the extent feasible, for coordination with relevant training available under or supported by other Federal Government programs or grants;

(3) provide for training needs of the State government and of local governments in that State;

(4) provide, to the extent feasible, for intergovernmental cooperation in employee training matters, especially within metropolitan or regional areas; and

(5) provide assurance that the making of a Federal Government grant will not result in a reduction in relevant State or local government expenditures or the substitution of Federal funds for State or local funds previously made available for these purposes.

(c) A grant authorized by subsection (a) of this section may be made to a general local government, or a combination of such governments, that serves a population of fifty thousand or more only if, at the time of the submission of an application, the State concerned does not then currently have an approved application for a grant adequately providing, in judgment of the Commission, for training of employees of that local government or combination of local governments. However, such a grant, except as further provided in this subsection, may not be made until the expiration of one year from the effective date of the grant provisions of this Act. To be approved, an application for a grant under this subsection must meet requirements similar to those established in subsection (b) of this section for State applications, unless any such requirement is specifically waived by the Commission, and the requirements of subsection (d) of this section. The Commission may—

(1) waive, at the request of a general local government or a combination of such governments, the one-year waiting period provided under subsection (c) of this section unless the State concerned declares, within ninety days from the effective date of the grant provisions of this Act, an intent to file an application for a grant that will provide adequately for the training of employees of the general local government or governments; and

(2) make grants to general local governments, or combinations of such governments that serve a population of less than fifty thousand if it finds that such grants will help meet essential needs in programs or projects of national interest and will assist general local governments experiencing special needs for personnel training and education related to such programs or projects.

(d) An application to be submitted to the Commission under subsection (c) of this section shall first be submitted by the general local government or combination of such governments to the Governor for review and certification that the programs or projects are consistent with the applicable principles set forth in clauses (1)–(6) of the third paragraph of section 2 of this Act. The Governor may refer the application to the State office designated under section 304(b)(1) of this Act for review. Comments and recommendations (if any) made as a result of the review, a statement by the general local government or combination of such governments that it has considered the comments and recommendations, and the certification of the Governor shall accompany the application to the Commission. The application need not be accompanied by the certification of the Governor if the general local government or combination of such governments certifies to the Commission that the application has been before the Governor for review and certification for a period of sixty days without certification by the Governor. However, if during such sixty-day period the Governor (1) has found that the programs or projects are not consistent with the applicable principles set forth in clauses (1)–(6) of the third paragraph of section 2 of this Act and (2) has set forth in writing the reasons, specifically and in detail, therefor, the application may not be submitted to, or be considered by, the Commission.

GRANTS TO OTHER ORGANIZATIONS

SEC. 305. (a) The Commission is authorized to make grants to other organizations to pay up to 75 per centum of (or, with respect to fiscal years commencing after the expiration of three years following the effective date of the grant provisions of this Act, up to 50 per centum) of the costs of providing training to professional, administrative, or technical employees and officials of State or local goverments if the Commission—

(1) finds substantial State and local government interest in the proposed program; and

(2) approves the program as meeting such requirements as may be prescribed by the Commission in its regulations pursuant to this Act.

(b) For the purpose of this section "other organization" means—

(1) a national, regional, statewide, areawide, or metropolitan organization, representing member State or local governments;

(2) an association of State or local public officials; or

(3) a nonprofit organization one of whose principal functions is to offer professional advisory, research, development, educational or related services to governments.

GOVERNMENT SERVICE FELLOWSHIPS

SEC. 306. (a) The Commission is authorized to make grants to State and general local governments to support programs approved by the Commission for providing Government Service Fellowships for State and local government personnel. The grants may cover—

(1) the necessary costs of the fellowship recipient's books, travel, and transportation, and such related expenses as may be authorized by the Commission;

(2) reimbursement to the State or local government for not to exceed one-fourth of the salary of each fellow during the period of the fellowship; and

(3) payment to the educational institutions involved of such amounts as the Commission determines to be consistent with prevailing practices under comparable federally supported programs for each fellow, less any amount charged the fellow for tuition and nonrefundable fees and deposits.

(b) Fellowships awarded under this section may not exceed two years of full-time graduate-level study for professional, administrative, and technical employees. The regulations of the Commission shall include eligibility criteria for the selection of fellowship recipients by State and local governments.

(c) The State or local government concerned shall—

(1) select the individual recipients of the fellowships;

(2) during the period of the fellowship, continue the full salary of the recipient and normal employment benefits such as credit for seniority, leave accrual, retirement and insurance; and

(3) make appropriate plans for the utilization and continuation in public service of employees completing fellowships and outline such plans in the application for the grant.

COORDINATION OF FEDERAL PROGRAMS

SEC. 307. The Commission, after consultation with other agencies concerned, shall—

(1) prescribe regulations concerning administration of training for employees and officials of State and local governments provided for in this title, including requirements for coordination of and reasonable consistency in such training programs;

(2) coordinate the training support given to State and local governments under authority of this Act with training support given such governments under other Federal programs; and

(3) make such arrangements, including the collection and maintenance of data on training grants and programs, as may be necessary to avoid duplication of programs providing for training and to insure consistent administration of related Federal training activities.

TITLE IV—MOBILITY OF FEDERAL, STATE, AND LOCAL EMPLOYEES

DECLARATION OF PURPOSE

SEC. 401. The purpose of this title is to provide for the temporary assignment of personnel between the Federal Government and State and local governments and institutions of higher education.

AMENDMENTS TO TITLE 5, UNITED STATES CODE

SEC. 402. (a) Chapter 33 of title 5, United States Code, is amended by inserting the following new subchapter at the end thereof:

"SUBCHAPTER VI—ASSIGNMENTS TO AND FROM STATES

"§ 3371. Definitions

"For the purpose of this subchapter—

"(1) 'State' means—

"(A) a State of the United States, the District of Columbia, the Commonwealth of Puerto Rico, and a territory or possession of the United States; and

"(B) an instrumentality or authority of a State or States as defined in subparagraph (A) of this paragraph (1) and a Federal-State authority or instrumentality; and

"(2) 'local government' means—

"(A) any political subdivision, instrumentality, or authority of a State or States as defined in subparagraph (A) of paragraph (1); and

"(B) any general or special purpose agency of such a political subdivision, instrumentality, or authority.

"§ 3372. General provisions

"(a) On request from or with the concurrence of a State or local government, and with the consent of the employee concerned the head of an executive agency may arrange for the assignment of—

"(1) an employee of his agency to a State or local government; and

"(2) an employee of a State or local government to his agency;

for work of mutual concern to his agency and the State or local government that he determines will be beneficial to both. The period of an assignment under this subchapter may not exceed two years. However, the head of an executive agency may extend the period of assignment for not more than two additional years.

"(b) This subchapter is authority for and applies to the assignment of—

"(1) an employee of an executive agency to an institution of higher education; and

"(2) an employee of an institution of higher education to an executive agency.

"§ 3373. Assignment of employees to State and local governments

"(a) An employee of an executive agency assigned to a State or local government under this subchapter is deemed, during the assignment, to be either—

"(1) on detail to a regular work assignment in his agency; or

"(2) on leave without pay from his position in the agency.

An employee assigned either on detail or on leave without pay remains an employee of his agency. The Federal Tort Claims Act and any other Federal tort liability statute apply to an employee so assigned. The supervision of the duties of an employee on detail may be governed by agreement between the executive agency and the State or local government concerned.

"(b) The assignment of an employee of an executive agency either on detail or on leave without pay to a State or local government under this subchapter may be made with or without reimbursement by the State or local government for the travel and transportation expenses to or from the place of assignment and for the pay, or supplemental pay, or a part thereof, of the employee during assignment. Any reimbursements shall be credited to the appropriation of the executive agency used for paying the travel and transportation expenses or pay.

"(c) For an employee so assigned and on leave without pay—

"(1) if the rate of pay for his employment by the State or local government is less than the rate of pay he would have received had be continued in his regular assignment in the agency, he is entitled to receive supplemental pay from the agency in an amount equal to the difference between the State or local government rate and the agency rate;

"(2) he is entitled to annual and sick leave to the same extent as if he had continued in his regular assignment in the agency; and

"(3) he is entitled, notwithstanding other statutes—

"(A) to continuation of his insurance under chapter 87 of this title, and coverage under chapter 89 of this title or other applicable authority, so long as he pays currently into the Employee's Life Insurance Fund and the Employee's Health Benefits Fund or other applicable health benefits system (through his employing agency) the amount of the employee contributions;

"(B) to credit the period of his assignment under this subchapter toward periodic step-increases, retention, and leave accrual purposes, and, on payment into the Civil Service Retirement and Disability Fund or other applicable retirement system of the percentage of his State or local government pay, and of his supplemental pay, if any, that would have been deducted from a like agency pay for the period of the assignment and payment by the executive agency into the fund or system of the amount that would have been payable by the agency during the period of the assignment with respect to a like agency pay, to treat (notwithstanding section 8348(g) of this title) his service during that period as service of the type performed in the agency immediately before his assignment; and

"(C) for the purpose of subchapter I of chapter 85 of this title, to credit the service performed during the period of his assignment under this subchapter as Federal service, and to consider his State or local government pay (and his supplemental pay, if any as Federal wages. To the extent that the service could also be the basis for entitlement to unemployment compensation under a State law, the employee may elect to claim unemployment compensation on the basis of the service under either the State law or subchapter I of chapter 85 of this title.

However, an employee or his beneficiary may not receive benefits referred to in subparagraphs (A) and (B) of this paragraph (3), based on service during an assignment under this subchapter for which the employee or, if he dies without making such an election, his beneficiary elects to receive benefits, under any State or local government retirement or insurance law or program, which the Civil Service Commission determines to be similar. The executive agency shall deposit currently in the Employee's Life Insurance Fund, the Employee's Health Benefits Fund or other applicable health benefits system, respectively, the amount of the Government's contributions on account of service with respect to which employee contributions are collected as provided in subparagraphs (A) and (B) of this paragraph (3).

"(d) (1) An employee so assigned and on leave without pay who dies or suffers disability as a result of personal injury sustained while in the performance of his duty during an assignment under this subchapter shall be treated, for the purpose of subchapter I of chapter 81 of this title, as though he were an employee as defined by section 8101 of this title who had sustained the injury in the performance of duty. When an employee (or his dependents in case of death) entitled by reason of injury or death to benefits under subchapter I of chapter 81 of this title is also entitled to benefits from a State or local government for the same injury or death, he (or his dependents in case of death) shall elect which benefits he will receive. The election shall be made within one year after the injury or death, or such further time as the Secretary of Labor may allow for reasonable cause shown. When made, the election is irrevocable unless otherwise provided by law.

"(2) An employee who elects to receive benefits from a State or local government may not receive an annuity under subchapter III of chapter 83 of this title and benefits from the State or local government for injury or disability to himself covering the same period of time. This provision does not—

"(A) bar the right of a claimant to the greater benefit conferred by either the State or local government or subchapter III of chapter 83 of this title for any part of the same period of time;

"(B) deny to an employee an annuity accruing to him under subchapter III of chapter 83 of this title on account of service performed by him; or

"(C) deny any concurrent benefit to him from the State or local government on account of the death of another individual.

"§ 3374. Assignments of employees from State or local governments

"(a) An employee of a State or local government who is assigned to an executive agency under an arrangement under this subchapter may—

"(1) be appointed in the executive agency without regard to the provisions of this title governing appointment in the competitive service for the agreed period of the assignment; or

"(2) be deemed on detail to the executive agency.

"(b) An employee given an appointment is entitled to pay in accordance with chapter 51 and subchapter III of chapter 53 of this title or other applicable law, and is deemed an employee of the executive agency for all purposes except—

"(1) subchapter III of chapter 83 of this title or other applicable retirement system;

"(2) chapter 87 of this title; and

"(3) chapter 89 of this title or other applicable health benefits system unless his appointment results in the loss of coverage in a group health benefits plan the premium of which has been paid in whole or in part by a State or local government contribution.

"(c) During the period of assignment, a State or local government employee on detail to an executive agency—

"(1) is not entitled to pay from the agency;

"(2) is deemed an employee of the agency for the purpose of chapter 73 of this title, sections 203, 205, 207, 208, 209, 602, 603, 606, 607, 643, 654, 1905, and 1913 of title 18, section 638a of title 31, and the Federal Tort Claims Act and any other Federal tort liability statute; and

"(3) is subject to such regulations as the President may prescribe.

The supervision of the duties of such an employee may be governed by agreement between the executive agency and the State or local government concerned. A detail of a State or local government employee to an executive agency may be made with or without reimbursement by the executive agency for the pay, or a part thereof, of the employee during the period of assignment.

"(d) A State or local government employee who is given an appointment in an executive agency for the period of the assignment or who is on detail to an executive agency and who suffers disability or dies as a result of personal injury sustained while in the performance of his duty during the assignment shall be treated, for the purpose of subchapter I of chapter 81 of this title, as though he were an employee as defined by section 8101 of this title who had sustained the injury in the performance of duty. When an employee (or his dependents in case of death) entitled by reason of injury or death to benefits under subchapter I of chapter 81 of this title is also entitled to benefits from a State or local government for the same injury or death, he (or his dependents in case of death) shall elect which benefits he will receive. The election shall be made within 1 year after the injury or death, or such further time as the Secretary of Labor may allow for reasonable cause shown. When made, the election is irrevocable unless otherwise provided by law.

"(e) If a State or local government fails to continue the employer's contribution to State or local government retirement, life insurance, and health benefit plans for a State or local government employee who is given an appointment in an executive agency, the employer's contributions covering the State or local government employee's period of assignment, or any part thereof, may be made from the appropriations of the executive agency concerned.

"§ 3375. Travel expenses

"(a) Appropriations of an executive agency are available to pay, or reimburse, a Federal or State or local government employee in accordance with—

"(1) subchapter I of chapter 57 of this title, for the expenses of—

"(A) travel, including a per diem allowance, to and from the assignment location;

"(B) a per diem allowance at the assignment location during the period of the assignment; and

"(C) travel, including a per diem allowance, while traveling on official business away from his designated post of duty during the assignment when the head of the executive agency considers the travel in the interest of the United States;

"(2) section 5724 of this title, for the expenses of transportation of his immediate family and of his household goods and personal effects to and from the assignment location;

"(3) section 5724(a)(1) of this title, for the expenses of per diem allowances for the immediate family of the employee to and from the assignment location;

"(4) section 5724(a)(3) of this title, for subsistence expenses of the employee and his immediate family while occupying temporary quarters at the assignment location and on return to his former post of duty; and

"(5) section 5726(c) of this title, for the expenses of nontemporary storage of household goods and personal effects in connection with assignment at an isolated location.

"(b) Expenses specified in subsection (a) of this section, other than those in paragraph (1)(C), may not be allowed in connection with the assignment of a Federal or State or local government employee under this subchapter, unless and until the employee agrees in writing to complete the entire period of his assignment or one year, whichever is shorter, unless separated or reassigned for reasons beyond his control that are acceptable to the executive agency concerned. If the employee violates the agreement, the money spent by the United States for these expenses is recoverable from the employee as a debt due the United States. The head of the executive agency concerned may waive in whole or in part a right of recovery under this subsection with respect to a State or local government employee on assignment with the agency.

"(c) Appropriation of an executive agency are available to pay expenses under section 5742 of this title with respect to a Federal or State or local government employee assigned under this subchapter.

"§ 3376. Regulations

"The President may prescribe regulations for the administration of this subchapter."

(b) The analysis of chapter 33 of title 5, United States Code, is amended by inserting the following at the end thereof:

"SUBCHAPTER VI—ASSIGNMENTS TO AND FROM STATES

"Sec.

REPEAL OF SPECIAL AUTHORITIES

SEC. 403. The Act of August 2, 1956, as amended (7 U.S.C. 1881–1888), section 507 of the Act of April 11, 1965 (20 U.S.C. 867), and section 314(f) of the Public Health Service Act (42 U.S.C. 246(f)) (less applicability to commissioned officers of the Public Health Service) are hereby repealed.

SEC. 404. This title shall become effective sixty days after the date of enactment of this Act.

TITLE V—GENERAL PROVISIONS

DECLARATION OF PURPOSE

SEC. 501. The purpose of this title is to provide for the general administration of titles I, II, III, and V of this Act (hereinafter referred to as "this Act"), and to provide for the establishment of certain advisory committees.

DEFINITIONS

SEC. 502. For the purpose of this Act—

(1) "Commission" means the United States Civil Service Commission;

(2) "Federal agency" means an executive department, military department, independent establishment, or agency in the executive branch of the Government of the United States, including Government owned or controlled corporations;

(3) "State" means a State of the United States, the District of Columbia, the Commonwealth of Puerto Rico, and a territory or possession of the United States, and includes interstate and Federal-interstate agencies but does not include the governments of the political subdivisions of a State; and

(4) "local government" means a city, town, county, or other subdivision or district of a State, including agencies, instrumentalities, and authorities of any of the foregoing and any combination of such units or combination of such units and a State. A "general local government" means a city, town, county, or comparable general-purpose political subdivision of a State.

GENERAL ADMINISTRATIVE PROVISIONS

SEC. 503. (a) Unless otherwise specifically provided, the Commission shall administer this Act.

(b) The Commission shall furnish such advice and assistance to State and local governments as may be necessary to carry out the purposes of this Act.

(c) In the performance of, and with respect to, the functions, powers, and duties vested in it by this Act, the Commission may—

(1) issue such standards and regulations as may be necessary to carry out the purposes of this Act;

(2) consent to the modification of any contract entered into pursuant to this Act, such consent being subject to any specific limitations of this Act;

(3) include in any contract made pursuant to this Act such covenants, conditions, or provisions as it deems necessary to assure that the purposes of this Act will be achieved; and

(4) utilize the services and facilities of any Federal agency, any State or local government, and any other public or nonprofit agency or institution, on a reimbursable basis or otherwise, in accordance with agreements between the Commission and the head thereof.

(d) In the performance of, and with respect to the functions, powers, and duties vested in it by this Act, the Commission—

(1) may collect information from time to time with respect to State and local government training programs and personnel administration improvement programs and projects under this Act, and make such information available to interested groups, organizations, or agencies, public or private;

(2) may conduct such research and make such evaluation as needed for the efficient administration of this Act; and

(3) shall include in its annual report a report of the administration of this Act.

(e) The provisions of this Act are not a limitation on existing authorities, unless other statutes but are in addition to any such authorities, unless otherwise specifically provided in this Act.

REPORTING REQUIREMENTS

SEC. 504. (a) A State or local government office designated to administer a program or project under this Act shall make reports and evaluations in such form, at such times, and containing such information concerning the status and application of Federal funds and the operation of the approved program or project as the Commission may require, and shall keep and make available such records as may be required by the Commission for the verification of such reports and evaluations.

(b) An organization which receives a training grant under section 305 of this Act shall make reports and evaluations in such form, at such times, and containing such information concerning the status and application of Federal grant funds and the operation of the training program as the Commission may require, and shall keep and make available such records as may be required by the Commission for the verification of such reports and evaluations.

REVIEW AND AUDIT

SEC. 505. The Commission, the head of the Federal agency concerned, and the Comptroller General of the United States, or any of their duly authorized representatives, shall have access, for the purpose of audit and examination, to any books, documents, papers, and records of a grant recipient that are pertinent to the grant received.

DISTRIBUTION OF GRANTS

SEC. 506. (a) The Commission shall allocate 20 per centum of the total amount available for grants under this Act in such manner as will most nearly provide an equitable distribution of the grants among States and between State and local governments, taking into consideration such factors as the size of the population, number of employees affected, the urgency of the programs or projects, the need for funds to carry out the purposes of this Act, and the potential of the governmental jurisdictions concerned to use the funds most effectively.

(b)(1) The Commission shall allocate 80 per centum of the total amount available for grants under this Act among the States on a weighted formula taking into consideration such factors as the size of population and the number of State and local government employees affected.

(2) The amount allocated for each State under paragraph (1) of this subsection shall be further allocated by the Commission to meet the needs of both the State government and the local governments within the State on a weighted formula taking into consideration such factors as the number of State and local government employees and the amount of State and local government expenditures. The Commission shall determine the categories of employees and expenditures to be included or excluded, as the case may be, in the number of employees and amount of expenditures. The minimum allocation for meeting needs of local governments in each State (other than the District of Columbia) shall be 50 per centum of the amount allocated for the State under paragraph (1) of this subsection.

(3) The amount of any allocation under paragraph (2) of this subsection which the Commission determines, on the basis of information available to it, will not be used to meet needs for which allocated shall be available for use to meet the needs of the State government or local governments in that State, as the case may be, on such date as the Commission may fix.

(4) The amount allocated for any State under paragraph (1) of this subsection which the Commission determines, on the basis of information available to it, will not be used shall be available for reallocation by the Commission from time to time, on such date or dates as it may fix, among other States with respect to which such a determination has not been made, in accordance with the formula set forth in paragraph (1) of this subsection, but with such amount for any of such other States being reduced to the extent it exceeds the sum the Commission estimates said State needs and will be able to use; and the total of such reductions shall be similarly reallocated among the States whose proportionate amounts were not so reduced.

(5) For the purposes of this subsection, "State" means the several States of the United States and the District of Columbia.

(c) Notwithstanding the other provisions of this section, the total of the payments from the appropriations for any fiscal year under this Act made with respect to programs or projects in any one State may not exceed an amount equal to 12½ per centum of such appropriation.

TERMINATION OF GRANTS

SEC. 507. Whenever the Commission, after giving reasonable notice and opportunity for hearing to the State or general local government concerned, finds—

(1) that a program or project has been so changed that it no longer complies with the provisions of this Act; or

(2) that in the operation of the program or project there is a failure to comply substantially with any such provision;

the Commission shall notify the State or general local government of its findings and no further payments may be made to such government by the Commission until it is satisfied that such noncompliance has been, or will promptly be, corrected. However, the Commission may authorize the continuance of payments to those projects approved under this Act which are not involved in the noncompliance.

ADVISORY COMMITTEES

SEC. 508. (a) The Commission may appoint, without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, such advisory committee or committees as it may determine to be necessary to facilitate the administration of this Act.

(b) Members of advisory committees who are not regular full-time employees of the United States, while serving on the business of the committees including traveltime may receive compensation at rates not exceeding the daily rate for GS–18; and while so serving away from their homes or regular places of business may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703 of title 5, United States Code, for individuals in the Government service employed intermittently.

APPROPRIATION AUTHORIZATION

SEC. 509. There are authorized to be appropriated, without fiscal year limitation, such sums as may be necessary to carry out the programs authorized by this Act.

REVOLVING FUND

SEC. 510. (a) Section 1304(e) of title 5, United States Code, is amended to read as follows:

"(e)(1) A revolving fund is available to the Commission without fiscal year limitation for financing—

"(A) investigations, training, and such other functions and services as the Commission is authorized or required to perform on a reimbursable basis; and

"(B) such other functions and services as the Commission, with the approval of the Bureau of the Budget, determines may be financed more advantageously through the fund, and to the maximum extent feasible, each individual activity shall be conducted generally on an actual cost basis over a reasonable period of time.

"(2) The capital of the fund consists of the aggregate of—

"(A) appropriations made to provide capital for the fund, which appropriations are hereby authorized; and

"(B) the sum of the fair and reasonable value of such supplies, equipment, and other assets as the Commission from time to time transfers to the fund (including the amount of unexpended balances of appropriations or funds relating to activities the financing of which is transferred to the fund) less the amount of related liabilities, the amount of unpaid obligations, and the value of accrued annual leave of employees, which are attributable to the activities the financing of which is transferred to the fund.

"(3) The fund shall be credited with—

"(A) reimbursements and advance payments from available funds of the Commission, other agencies, or State or local governments, or from other sources, for those services and supplies provided at rates estimated by the Commission as adequate to recover expenses of operation, including provision for accrued annual leave of employees, the depreciation of equipment, and the net losses on property transferred or donated to the fund; and

"(B) receipts from sales or exchanges of property, and payments for loss or damage to property, accounted for under the fund.

"(4) Any unobligated and unexpended balances in the fund that the Commission determines to be in excess of the amounts needed for activities financed by the fund shall be deposited in the Treasury of the United States as miscellaneous receipts."

(b) Section 1304(f) of title 5, United States Code, is amended by striking out "investigations made" and inserting "investigations, training, and functions performed" in place thereof.

(3) The fund referred to in the amendment made by subsection (a) of this section shall be held and considered to be the same fund as that referred to in section 1304(e) of title 5, United States Code, as in existence immediately prior to such amendment, and the capital thereof immediately following such amendment shall be the same as that immediately prior to such amendment.

LIMITATIONS ON AVAILABILITY OF FUNDS FOR COST SHARING

SEC. 511. Federal funds made available to State or local governments under other programs may not be used by the State or local government for cost-sharing purposes under grant provisions of this Act, except that Federal funds of a program financed wholly by Federal funds may be used to pay a pro rata share of such cost sharing. State or local government funds used for cost sharing on other federally assisted programs may not be used for cost sharing under grant provisions of this Act.

METHOD OF PAYMENT

SEC. 512. Payments under this Act may be made in installments, and in advance or by way of reimbursement, as the Commission may determine, with necessary adjustments on account of overpayments or underpayments.

EFFECTIVE DATE OF GRANT PROVISIONS

SEC. 513. Grant provisions of this Act shall become effective one hundred and eighty days following the date of enactment of this Act.

CONFLICT OF INTEREST—EXEMPTION

SEC. 514. Section 207(b), title 18, United States Code, is amended by adding the following before the period at the end thereof: ": And provided further, That nothing in subsection (a) or (b) shall prevent a former officer or employee, including a special Government employee, from acting or appearing personally as agent or attorney for a unit of State or local government, or two or more such units, if (i) the former officer or employee is a full-time officer or employee of

such unit or units; and (ii) the head of the department or agency concerned with the matter shall certify that in his opinion the interest of the Government will not be prejudiced by such action or appearance by the former officer or employee".

Mr. MUSKIE. Mr. President, I ask unanimous consent that the committee amendments be considered en bloc.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

The question is on agreeing to the committee amendments.

The committee amendments were agreed to en bloc.

Mr. MUSKIE. Mr. President, the Intergovernmental Personnel Act of 1969 is a measure designed to help strengthen State and local governments through improved personnel administration and more efficient recruitment and training of personnel, particularly in the administrative, technical and professional categories of need. S. 11 came to the floor of the Senate with the sponsorship of 29 Senators, the endorsement of many Governors, mayors, and other public officials throughout the country, and the strong support of citizen groups devoted to the public interest.

This is proposed legislation equal in its potential effect upon the quality of American public administration to that initiated through the Pendleton Civil Service Act of 1883. It is crucial to the successful execution of programs of Federal aid to State and local governments which Congress has authorized. It is urgently necessary in order that government below the Federal level be able to assume its full share of responsibility for the public services demanded in this period of rapid growth and social change.

Specifically, the bill seeks to achieve the following purposes:

First, to provide for intergovernmental cooperation, through an advisory council appointed by the President, in the development of policies and standards for the administration of programs for the improvement of State and local personnel administration and training.

Second, to authorize the Civil Service Commission to make grants to State and local governments in order to plan and make improvements in their systems of personnel administration.

Third, to transfer to the Civil Service Commission responsibility for administration of existing Federal statutory provisions requiring merit personnel administration for State and local employees engaged in certain federally assisted programs.

Fourth, to authorize Federal agencies to admit State and local government officials and employees, particularly in administrative, professional, and technical occupations, to Federal training programs.

Fifth, to authorize Federal agencies administering programs of grants-in-aid to State or local governments, to provide special training for State and local government officials or employees who have responsibilities related to those programs.

Sixth, to authorize the Civil Service Commission to make grants to State and local governments and other appropriate organizations for carrying out plans for training State and local government employees, as well as for the development of such plans, and for Government service fellowships for employees selected for special graduate-level university training.

Seventh, to authorize the Civil Service Commission to join with State and local governments in cooperative recruitment and examining activities.

Eighth, to give the consent of Congress to interstate compacts designed to improve personnel administration as well as the training of State and local employees.

Ninth, to authorize the temporary exchange of personnel between and among the levels of government.

Tenth, to direct the Civil Service Commission to coordinate these activities, in order to avoid overlap and duplication of effort and thus insure maximum effectiveness of administration.

Mr. President, it is appropriate to recount the conditions that have brought about the need for the enactment of this measure.

A burgeoning population and increasing urbanization in America poses tremendous problems for government at all levels. The areas of need are well known—slums and commercial blight, substandard housing, environmental pollution, crime, delinquency, unemployment, traffic congestion, to mention only some of the major problem areas. Our citizens demand more effective government. They require better education for their children. They demand more and better roads, recreation facilities, hospitals and programs for safeguarding the economic and social security of their being.

The major burden for providing these public services rests with our States and local governments. But, as these demands have mushroomed, their capacity to meet them has not. This is especially the case in terms of the numbers of qualified administrative, professional and technical personnel needed by State and local governments to plan, organize and administer the wide variety of programs authorized by past Congresses.

Between 1955 and 1965, State and local government employment increased from 4.7 million to 7.7 million persons. It is estimated that this total will increase to 11.4 million by 1975. Total recruiting needs for these employees, other than for teachers, are estimated at 2.5 million over the 10-year period, or an average of 250,000 per year. This, just to stay abreast of replacement and growth needs.

Nothing similar to this critical manpower situation has ever been faced by State and local governments before. There can be little question, that now and in the future, State and local governments face a serious problem of obtaining and retaining large numbers of high quality personnel. There can be no question that the general shortage of such trained and talented people throughout the country will compound this problem.

S. 11 is intended to help strengthen State and local governments in their efforts to recruit and train personnel to meet these needs. It is almost identical with the bill (S.699) which passed the Senate in the 90th Congress by a substantial majority. House action did not take place and the measure died with adjournment.

Hearings were held on March 24, 25, and 26, and the bill was approved by the subcommittee on May 6, 1969. Favorable action was subsequently taken by the Committee on Government Operations.

The proposed legislation has now been considered in three Congresses. We have delayed much too long in dealing with the critical shortage of properly qualified personnel for the public service. Since the great expansion of public programs that occurred during the depression thirties, government has been chronically deficient in manpower. I quote from the report of the Commission of Inquiry on Public Service Personnel issued in 1933:

> In spite of the vital importance of government and governmental services, American national, State, and local governments do not at the present time attract to their service their full share of men and women of capacity and character. This is due primarily to our delay in adjusting our attitudes, institutions and public personnel policies to fit social and economic changes of the past seventy years.

Mr. President, this should be revised to read "the past 100 years," for three and a half decades have passed and we have still not taken the obviously needed steps.

Such conditions are deplorable from any point of view, but they are intolerable when we consider that the vast programs of Federal aid, costing in excess of $20 billion annually, are largely dependent upon State and local governments for their execution. The burden grows constantly. S. 11 is intended to help strengthen State and local governments in their quest for improved administration of these many programs and providing for meeting their responsibilities within the federal system.

Mr. MUNDT. Mr. President, S. 11 reported by the Government Operations Committee was considered by the Intergovernmental Relations Subcommittee in this Congress and in the 90th Congress.

There has never been any divergence of view that the purposes of this bill for improving personnel administration in State and local governments were needed to meet the growing demands placed on State and local governments for governmental services. This bill authorizes the Civil Service Commission to make grants to these governments for carrying out training programs of its employees, for inclusion of State and local employees in existing Federal training programs, and to provide fellowships for university and college graduate training.

In the last Congress when this legislation came to the floor of the Senate as S. 699, I led opposition on the floor to the manner in which funds authorized for a grant program for up to 75 percent of the cost of developing and carrying out programs and projects which the Civil Service Commission found were consistent with merit principles outlined in the bill.

In our hearings this year, Robert Hampton, Chairman of the Civil Service Commission, made suggestions for

amending the bill to insure an important State voice in the developing and approval process by including a certification by the Governor that the State or local government's plan meets the merit principles of the bill. Chairman Hampton's proposals were agreed to by both the chairman and me and by other members of the committee.

For these reasons, I hope that the Senate will approve passage of S. 11 as an important step toward improvement of intergovernmental relations between the National, State, and local governments in providing services demanded by our citizens.

Mr. RIBICOFF. Mr. President, increasing demands for effective services are being made upon State and local governments across the country. The inability of local government to respond to these demands is becoming critical and should be of great concern to the Congress.

The Federal Government has helped expand State and local government programs without doing anything comparable to develop their professional, administrative, and technical capabilities.

If we are to appropriate billions of dollars each year to solve the problems confronting the Nation, it is surely sensible to spend a relatively small sum to insure that these programs will be properly administered.

The Government Operations Committee has now reported out S. 11, the Intergovernmental Personnel Act of 1969. This act is a meaningful first step toward developing effective State and local governments. As a member of the Subcommittee on Intergovernmental Relations, I am pleased to cosponsor this legislation.

When enacted, this bill will provide Federal grants to State and local governments to improve personnel administration and employee training. In addition, Federal assistance in training State and local employees will be available and the exchange of Federal, State, and local personnel will be encouraged and facilitated.

S. 11 is a comprehensive, carefully constructed approach to the problems of governmental efficiency. The bill has been reviewed and discussed extensively in the past by committees in both the House and Senate and the Senate last year passed, by a substantial margin, a basically similar measure. The House, however, did not act upon the bill.

S. 11 as now reported incorporates several changes made following testimony on earlier bills considered by the Congress. Several problems disclosed earlier have been remedied by the bill which has been called the first comprehensive plan for intergovernmental cooperation since the Pendleton Civil Service Act of 1887.

It is my hope that, before the end of this session, S. 11 will pass the Senate and the House and be enacted into law. We have had enough delay in this important area.

There can be no doubt about the need for passage of S. 11.

Citizens are demanding action from their local governments. They seek better education, better police and fire protection, better roads and public transportation, clean and abundant water, unpolluted air, more and better recreation facilities, and more and better health services and hospitals.

The major burden of providing these and other such services rests on State and local governments. The demands made have far outrun the fiscal, administrative, and personnel capabilities of State and local governments.

The growth rates of State and local governments have been phenomenal. The number of Federal civilian employees rose from 2.4 million in 1946 to 3 million in October 1967—a 25-percent hike. On the other hand, State and local employee figures jumped in number from 3.6 million in 1946 to 9 million in 1967—an incredible 150 percent leap. Total recruiting needs for administrative, professional, and technical personnel at the local level are now estimated at 250,000 a year, and rapidly growing.

Linked with these developments has been an increase in intergovernmental assistance programs. Federal aid to States and localities amounted to $1.8 billion in 1948, and is expected to reach $25 billion for fiscal year 1970, a 1,290-percent increase.

Expanded Federal assistance has aggravated personnel problems at the local government level. Federal programs have moved local government into new and complex areas and programs which have seriously challenged the knowledge and competence of present employees.

James Sundquist and David Davis of the Brookings Institution have described the situation well in "Making Federalism Work":

> The irreversible nature of the changes wrought in the Federal system in the past decade gives special urgency to the administrative problems of federalism. While the Federal government will set objectives and allocate marginal resources available for new government programs to achieve the objective, it cannot administer the programs directly in most cases—and should not, even if it could. . . . Administration, perforce, is thrust upon the state and local governments through grant-in-aid programs of various types.

Existing local resources simply do not permit long-range plans for training programs and other personnel services. Recruiting programs are generally feeble, underfinanced, and unsuccessful. Perhaps no greater problem faces local government today than that of attracting and retaining an adequate number of competent employees.

According to a survey conducted by the Public Personnel Association, little more than half of the 346 local government personnel agencies covered gave any attention at all to employee training. The amounts budgeted for this activity were small, commonly ranging from 2 to 10 percent of the total personnel agency budget.

A survey of the International City Managers Association revealed that only 30 percent of the local governments and 40 percent of the States responding conducted regular training programs for their key staff, and many of the programs that were conducted proved inadequate.

What we now have is an ineffective and piecemeal approach for Federal training and technical assistance efforts. Most programs now relate to the needs of specific grants and to the specific State and local personnel administering them. Neglected has been the overall workings of central personnel management and training, which give local government its day-to-day thrust and capacity.

There is now talk of even greater decentralization of Federal programs. State and local governments should have more responsibility for making their own decisions about program priorities and then administering these same programs. Implementing such proposals will be disastrous, however, if we are not concerned at the same time with the qualifications, abilities, and training of the local government employees who are to run these new programs.

S. 11 provides the mechanism to solve these problems.

The ACTING PRESIDENT pro tempore. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed.

Mr. MUSKIE. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. JAVITS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

ORDER OF BUSINESS

Mr. MUSKIE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. CRANSTON in the chair). Without objection, it is so ordered.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

RETIREMENT OF JUSTICES AND JUDGES OF THE UNITED STATES

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 445, S. 1508. I do this so that the bill will become the pending business.

The PRESIDING OFFICER. The bill will be stated by title.

The ASSISTANT LEGISLATIVE CLERK. A bill (S. 1508) to improve judicial machinery by amending provisions of law relating to the retirement of justices and judges of the United States.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on the Judiciary with an amendment after line 6, to insert:

(b) The first paragraph of section 373 of title 28, United States Code, is amended by inserting immediately after the last comma therein the following: "or at any age after serving at least twenty years continuously or otherwise."

So as to make the bill read:

S. 1508

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 371(b) of title 28, United States Code, is amended by inserting immediately before the period at the end of the first sentence the following: ", or at any age after serving at least twenty years continuously or otherwise."

(b) The first paragraph of section 373 of title 28, United States Code, is amended by inserting immediately after the last comma therein the following: "or at any age after serving at least twenty years continuously or otherwise."

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. DOLE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

PURPLE PRIDE—PURPLE POWER

Mr. DOLE. Mr. President, every day Members of this body rise to make pronouncements concerning our great country. For the most part, we are engaged in serious debate which directly or indirectly affects nearly every American, as well as millions of people throughout the world.

Now and then, something out of the ordinary happens which may not have a great impact on world affairs, but which should be called to the attention of the Members of this body.

I witnessed such an extraordinary happening on Saturday when the Kansas State University Wildcats overwhelmed the great Oklahoma Sooners in Manhattan, Kans., by a score of 59 to 21, the worst loss ever inflicted on an Oklahoma University team. This was a highly significant event and, frankly, one which defies adequate description because Kansas State had not tasted victory over Oklahoma in 35 years.

For years, the Kansas State football team was the "doormat" of the Big Eight Conference, but during all those years thousands of faithful Wilcat fans took defeat in stride and muttered to themselves, "Wait until next year."

This year, under the tutelage of Coach Vince Gibson, the Wildcats have arrived, and even the most casual observers are singing their praises.

"Purple Pride," a slogan initiated by Coach Gibson, has been converted to "Purple Power" in 3 short years. All Kansans, and particularly K-State fans, take great pride in this year's great football team, which for the first time in my memory is the No. 1 team in the Big Eight Conference.

With an overall season record of 5 victories and 1 defeat—and a narrow one at that—the enthusiastic Wildcat fans are certain the Wildcats will be playing in one of the major bowl games on New Year's Day. Certainly the Wildcats deserve a successful season, and I join hundreds and thousands of Kansans and sports fans all across America in wishing them every success in the weeks ahead.

ORDER OF BUSINESS

Mr. DOLE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

PRESIDENT'S MESSAGE ON THE MERCHANT MARINE

Mr. BYRD of Virginia. Mr. President, I welcome President Nixon's message to Congress on the merchant marine.

This represents the first national commitment to a strong merchant fleet since the Second World War.

Just after that war, the United States was carrying more than 57 percent of its foreign trade in its own ships. Today, that figure has dropped to 6 percent.

Nearly 96 percent of imported raw materials—materials upon which our security and well-being depend—arrive in this country aboard foreign ships.

Our fleet is down to 950 ships. It ranks behind the fleets of the United Kingdom, Japan, the Soviet Union, Liberia, and Norway.

The United States is a maritime Nation by necessity. Unless we are content to become a second-rate nation, we must export and we must import.

We cannot afford to depend upon foreign fleets to haul our commerce. Experience has shown that these ships may not be available when they are most needed.

Our maritime needs demand that we weld together investments of public funds and private funds with the investment of the genius of American research. We need, too, an investment that is less tangible, namely, one that involves a joint commitment by Government and industry to the goal of a strong merchant fleet.

The President's message will do much to stimulate the needed commitment.

ORDER OF BUSINESS

Mr. BYRD of Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. FANNIN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

PREVENT POLITICAL PAYOFFS

Mr. FANNIN. Mr. President, events of the past few weeks have caused me considerable concern in regard to the future exercise of democratic processes in our country. I am referring to a press report which appeared in one of the Washington papers to the effect that special interest groups are putting their most highly skilled lobbyists to work on making sure President Nixon's nominee to the Supreme Court, Clement F. Haynsworth, is not confirmed by the Senate.

On the same day this story appeared in Washington, Mr. President, the front page of the Toronto Telegram in Canada carried a banner story detailing some of the pressure brought to bear in this country last year on behalf of a convicted labor racketeer, Harold Chamberlain Banks, resulting in a so-called contribution of more than $100,000 to the campaign coffers of the Democratic Party.

Many Members of the Senate are familiar with the Hal Banks story. He is an American citizen, convicted of conspiracy to commit assault in Canada in a brutal waterfront war between rival unions. He skipped $25,000 bail and fled to the United States, where he was arrested aboard a yacht of the Seafarers International Union. Picked up by American authorities upon Canada's request to have him returned to face a perjury charge—the assault charge was not covered under our extradition treaty with Canada—he was bound over for return by the U.S. Commissioner in Brooklyn. This was early in November of 1967.

On December 26, 1967, two highly significant communications were directed to the then Secretary of State, Mr. Dean Rusk; one was a memorandum from the Secretary of Labor, Mr. Willard Wirtz, the other was a long letter from the president of the AFL–CIO, Mr. George Meany.

These missives, Mr. President, both dated the same day, December 26, 1967, urged Banks not be returned to Canada. In addition, Abraham Chayes, backed up by the then Undersecretary of State, Nicholas Katzenbach, urged Mr. Rusk not to send Banks back to Canada. Chayes, incidentally, had been the principal legal advisor to Mr. Rusk before leaving the State Department. At the time of this meeting with Mr. Rusk, Chayes was employed by Banks, or his agents, to plead his case in this highly unusual, secretive procedure before the Secretary, in the Secretary's office.

Mr. Rusk decided that Banks should not go back to Canada, nor should it even be submitted to an impartial international third party for arbitration.

Shortly after his decision, $5,000 checks began pouring into various Democratic presidential campaign committees around the country until the total contribution amounted to $100,000—which was reached within a few days.

Last year, as some of you may remember, I attempted to secure the release of the controversial memorandum from Secretary Wirtz. He would not release it. I think we now see the reasons why.

I ask unanimous consent, Mr. President, that the December 26 memoran-

dum from Mr. Wirtz to Mr. Rusk along with the December 26 letter from Mr. Meany to Mr. Rusk be printed in the RECORD at the end of my remarks as exhibits 1 and 2.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibits 1 and 2.)

Mr. FANNIN. Mr. President, I do not think it is in the best interests of the American people to have such a bald exercise of the power of union officialdom, when George Meany can, with or without checking with union members, vow that Clement Haynsworth will not sit on the Supreme Court of the United States.

It is not right, Mr. President, for a union goon—who Mr. Meany himself states is a "controversial figure"—be allowed to roam free in the United States as the result of what appears to be a $100,000 political payoff.

Last April I went to see the new Secretary of State about this "Banks" matter. I simply asked him to look into it again and review the basis of the previous Secretary's decision, particularly in the light of events subsequent to that decision. Members of the administration in power at that time may well have been unaware of the fact that the Seafarers International Union was so willing to unzip its members' purses in return for Hal Banks' freedom. Nevertheless, the payments did take place. No one denies it—least of all the union leaders involved. I just asked the present Secretary to review the whole matter—$100,000 and all—and see if the Canadian claim that Banks was a labor goon, their Hoffa-in-exile, and ought to be returned to the authorities, was valid.

I have not as yet received a reply, but I think I know why. I am afraid that "holdovers," some of the people left over from the previous administration, are anxious to keep their skirts clean on this issue. I am afraid that the Secretary is a victim of some leftovers who are giving him poor advice. Naturally, a Cabinet officer cannot attend to every detail of his department. That is what a staff is for. I feel sure the Banks matter has come to his attention, Mr. President. I feel equally sure that he must question the complete objectivity of the advice given by some who were involved in the first decision. I am still hopeful that the whole matter can be solved in a way that is satisfactory to Canada and the United States, who should be good friends.

Any citizen, Mr. President, has a right to be heard. But union officials, through the exercise of the tremendous sums of money at their disposal, are apparently able to exercise power that borders on the dictatorial.

The opponents of Judge Haynsworth have manifestly failed to demonstrate their allegation that he is antilabor. In fact, one of the leaders of the fight against Haynsworth was quoted in the press last Wednesday as saying he felt that labor had a "weak case" in trying to substantiate such a theory. Even so, Mr. President, most of the vocal opponents of Judge Haynsworth here in the Senate have in this, as well as previous, Senate confirmation debates, said they do not feel a particular nominee's ideological bent is a legitimate cause for refusing him a seat.

Mr. President, I am sympathetic with some who have cringed before this awesome display. In my view, it is wishful thinking for Republicans to think they can buy the good will of Mr. Meany and his minions. I do not wish to be misunderstood, Mr. President; I consider George Meany a worthy opponent in this matter. He is fighting for what he considers best, as am I, but he is holding a club over the heads of some that is an intolerable threat to the exercise of democratic processes and has been brought about in large measure by the preferential treatment accorded unions under our internal revenue laws.

He has committed himself and the AFL–CIO treasury to the destruction of Judge Haynsworth just as labor tried to destroy Judge John Parker 40 years ago.

If Mr. Meany and his millions can destroy an honest man of integrity on a flimsy and irresponsible record of the nine-page bill of particulars presented by the Senator from Indiana, then no man in the U.S. Senate, or indeed in public life, is safe from their vindictive power.

In the Senate Finance Committee, Mr. President, we are wrestling with the problem of a tax reform bill. One of the items which most urgently needs reform is the section of the IRS code which permits union leaders to exercise this kind of political power and still retain their tax-exempt status. Such preferential treatment is simply not right. Union leaders, in the exercise of their office, should have to abide by the same rule of "no politics" as applies to all other tax-exempt organizations.

In the case I have laid before the Senate today, we have one of the most naked examples of the brash display of monetary power, exercised freely without any form of restraint. And it is made possible by the special status enjoyed by these union leaders under our tax laws.

On September 4, I introduced an amendment to H.R. 13270—amendment No. 145—to the tax bill which would correct this intolerable situation. I am trying to see that the amendment is incorporated in the tax bill. It should be supported by every fair-minded American. I am convinced by the private talks I have had with some rank and file union members, that they support this bill. Of course, it is opposed by union leaders.

What would my amendment do? Plainly and simply, it would require that unions abide by the same statutes that presently apply to other tax-exempt organizations. That is the extent of the amendment, Mr. President. It is simple. It is straightforward.

The events which have transpired over these past days and weeks have convinced me more than ever that the amendment should be a part of the tax laws. I think the majority of Americans, union and nonunion, agree on the restoration of this democratic process and the elimination of an inordinate amount of power in the hands of a few.

Mr. President, I am sure a cry will arise from the AFL headquarters that their political contributions are voluntary, and thus should not make them subject to paying taxes. In anticipation of this kind of argument, Mr. President, I refer to a transcript of oral arguments before the U.S. Supreme Court in which Mr. Joseph Rauh, Jr.—at that time in 1956, he was general counsel for the United Auto Workers—said:

> When he (a union member) pays his dues, he has paid for his political action.

Lest some say I am taking that statement out of context, Mr. President, I ask unanimous consent to have printed in the RECORD as exhibit 6 a summary of that case with appropriate appendixes. The exchange to which I refer will be found in appendix "C."

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 6.)

Mr. FANNIN. Sixty-three years ago, Samuel Gompers, founder of the AFL, recognized this danger when he said:

> It is doubtful to my mind if the contributions and expenditures of vast sums of money in the nominations and elections for our public offices can continue to increase without endangering the endurance of our Republic in its purity and in its essence . . . the necessity for some law upon the subject is patent to every man who hopes for the maintenance of the institutions under which we live . . .

Mr. President. the idea that a union member can successfully withstand the pressures if he objects to the use of his dues for political ends with which he may not agree, is simply not in accordance with reality. It is for the maintenance of these rights of the individual that I am offering my amendment.

Mr. President, I ask unanimous consent that several newspaper articles which bear on this matter and to which I have referred, be printed in the RECORD as exhibits 3, 4, and 5.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibits 3, 4, and 5.)

EXHIBIT 1

U.S. DEPARTMENT OF LABOR,
OFFICE OF THE SECRETARY,
Washington, December 26, 1967.

Memorandum to: The Secretary of State.
From: The Secretary of Labor.

You have before you a request from the Canadian Government for the extradition of Hal Banks, a former Canadian labor official affiliated with the Seafarers' International Union of North America.

The request for extradition is based on an (sic) information alleging that Banks committed perjury 4 years ago when he denied before a Royal Commission having participated in illegal conduct six years prior thereto, a matter for which he was subsequently tried and convicted.

This extradition proceeding is a small outcropping of a matter which has an over 10-year history of intermingling of government (Canadian, U.S., and international), labor-management, internal union, and individual affairs. Some parts of the record are sordid and ugly; others are a chronicle of awkwardness.

On several occasions during the past four years, Under Secretary Reynolds and I have been called on to try to straighten out one aspect or another of this situation. It was, until this extradition request, in a posture which offered fair promise of continued—and generally satisfactory—quiescence.

I am not in a position to express a judgment on either the technicalities of the extradition issue or the political implication of whatever action is taken regarding it.

I do note these two things:

1. It is wrong, in terms of human equities and basic democratic principles, for an individual to be used this way in this matter. Banks, as a particular person, presents no case for special consideration. But the rerelationship of "the system" to "the individual" is involved here—and this individual is being used as a pawn.

2. There is a possibility (which I cannot assess) of Banks' extradition reopening what has in the past been a disruptive situation.

I shall of course be glad to supply whatever background or detail on this matter you may consider pertinent.

WILLARD WIRTZ.

EXHIBIT 2

AFL–CIO,
Washington, D.C., December 26, 1967.

Hon. DEAN RUSK,
Secretary of State,
Washington, D.C.

DEAR MR. SECRETARY: I am informed that there is now pending before you an application brought by the Province of Ontario for the extradition of Mr. Harold Chamberlain Banks. I hope you will not grant this application.

I have followed the career of Mr. Banks for a considerable number of years, beginning with his initial involvement in Canadian trade union affairs which came about in response to a request, by the Canadian and American governments, for American trade union assistance in dealing with a serious problem of Communist subversion in the Canadian maritime industry. I believe that I am familiar with all the forces which have conspired to place Banks in his current predicament. Certainly no principle of real justice or equity would be served by his extradition.

In the first place, it is abundantly clear that the efforts to pursue Mr. Banks in the Canadian courts have been politically motivated. The original charge of conspiracy to commit assault grew out of the Norris Commission investigation, which was itself a part of an attack upon the Seafarers International Union at a time when it was embroiled in a bitter dispute with a major shipowner. Furthermore, the perjury charge for which extradition is now sought is premised upon Banks' compelled testimony before the same Norris Commission which was no more than an industrial investigating body.

Secondly, although the evidence upon which the present perjury charge is based has been available for four and a half years, no extradition move was made until this past August, on the occasion of another S. I. U. economic strike in Canada. The connection, and the revival of the political issue, is obvious.

Third, as you may be aware, the whole question of Banks' fate—although he is an American citizen—has been debated incessantly in the Canadian Parliament as a political issue between the two major Canadian parties. It seems to me that their political issues should not be resolved, or accentuated—at the expense of real justice to an American citizen—by the United States.

Banks was convicted of conspiracy to commit assault in Canada in 1964, stemming from an incident alleged to have occurred *six* years previously in 1958. This was the only grounds for legal action found after an exhaustive investigation into all of Banks' personal and official conduct, designed for the clear purpose of finding grounds for "getting" him. He fled the jurisdiction of Canada, after an extraordinary harsh sentence considering the nature of the alleged offense and the relatively light sentences imposed upon those found guilty of actually committing the alleged assault, before his appeal was heard, forfeiting a $25,000 bond. He has already paid a very high price for whatever misconduct may be charged to him. In addition to the money he forfeited, he cannot again hold a leadership position in the labor movement. He has been held in prison since September of this year.

Conspiracy, as you know, is not a crime for which anyone can be extradited under our treaty with Canada. The Province of Ontario, therefore, brought the perjury action in order to avoid the limitations of the treaty. The attempt to extradite him for perjury is an effort to do by indirection what could not be done directly.

I know Mr. Banks has been a controversial figure. He has his enemies and he has his friends. Whatever may be said about him as a product of the waterfront environment, there is no doubt in my mind that he has, in his career, rendered substantial constructive service to the labor movement and to working seamen.

At the time of his arrest for extradition proceedings, he was employed by the Henry Lundberg School of Seamanship, a non-governmental, labor-management supported training school. This enterprise is engaged in training young men of all races, most of whom are drawn from underprivileged and deprived backgrounds, to equip them as seamen and to give them an opportunity in a meaningful and rewarding seagoing career. The function of this undertaking in filling the manpower needs of the Merchant Marine necessitated by the present Viet Nam conflict is also worthy of mention.

Banks has severed all relations with the Canadian labor movement and has no impact on or connection, directly or indirectly, with the organization he formerly represented in Canada, its officials or its members.

For all of these reasons it is my firm conviction that it would serve the interests of neither the United States nor Canada, nor of future relations between them, to extradite Mr. Banks. On the contrary, it would be a gross miscarriage of justice and a great inequity to grant the application.

Sincerely yours,

GEORGE MEANY,
President.

[From the Telegram, Oct. 16, 1969]

"SECRET" NOTES REVEALED IN HAL BANKS CASE

(By Robert MacDonald)

A renewed demand for the extradition to Canada of former Seafarers International Union boss Hal Banks was made today after The Telegram obtained copies of two confidential messages to former U.S. Secretary of State Dean Rusk.

Both messages were dated Dec. 26, 1967. One was a memorandum sent to Mr. Rusk by then U.S. Secretary of Labor Willard Wirtz. The second is a three-page letter from AFL–CIO president George Meany.

Both urged Rusk not to sign an order for Banks' extradition to Canada to face a perjury charge—despite the fact a U.S. Commissioner had so ordered after hearing all evidence.

Meany, in his letter, claimed the perjury charge had been trumped up to "get" Banks and that the five-year jail term handed out to Banks for conspiracy to assault was "extraordinarily harsh."

Wirtz wrote that the extradition proceedings "were a small outcropping" from a wave of terrorism on the Great Lakes.

U.S. Senator Paul Fannin said he would make a further request to U.S. Secretary of State Williams Rogers for a decision on whether Banks should be extradited.

And in Ottawa, Conservative MP George Hees said the messages "confirm irrefutably the tremendous pressure that was brought to bear to prevent Banks' extradition."

Mr. Hees said he will "have some tough questions for External Affairs Minister Mitchell Sharp and Justice Minister John Turner when Parliament re-opens next Wednesday.

"There seems little doubt that Hal Banks has let it be known that he will sing like a nightingale about his work in political campaigns in Montreal if he is brought back to Canada," he said.

Fannin was reached in Washington for comment. He had been attempting for over a year to gain a copy of the memo, but had not known the Meany letter existed.

"The documents show that such unions exert tremendous political power and are prepared to pay for it," said the senator.

"I am aware of the pressure both within and without the Johnson administration that was brought to bear on behalf of Harold Banks," he said.

He claimed the SIU spent at least $150,000 last year in contributions to the Democratic party's presidential campaign chest. Of the total, $100,000 went to the fund within 10 days after Rusk finally decided not to sign the extradition order.

Secretary of State Rogers is still reviewing the decision of Mr. Rusk.

In his memo, former labor secretary Wirtz warned that "there is a possibility (which I cannot assess) of Banks' extradition reopening what has in the past been a disruptive situation."

Wirtz termed the extradition attempt "a small outcropping" of the wave of terrorism in Great Lakes shipping circles that surrounded the SIU tactics.

He failed to mention that Banks had been convicted of conspiring to assault a ship captain and had been assessed a five-year jail sentence. He had jumped $25,000 bail and escaped to his native U.S.

However, the letter to Rusk from labor czar Meany claimed Banks had been originally involved in the Canadian labor scene "in response to a request, by the Canadian and American governments, for American trade union assistance in dealing with a serious problem of Communist subversion in the Canadian maritime industry."

"It is abundantly clear that the efforts to pursue Mr. Banks in the Canadian courts have been politically motivated," wrote Mr. Meany.

He also charged that the Norris Royal Commission that investigated the labor terrorism (and from which the perjury charge came) "was itself a part of an attack upon the Seafarers International Union at a time when it was embroiled in a bitter dispute with a major shipowner."

He even claimed the Norris commission "was no more than an industrial investigating body."

Mr. Meany also told Rusk:

"The whole question of Banks' fate—although he is an American citizen—has been debated incessantly in the Canadian parties. It seems to me that their political issues should not be resolved, or accentuated—at the expense of real justice to an American citizen—by the United States."

The perjury charge was designed solely for "getting" Banks, said Meany. The five-year sentence for conspiracy to commit assault was "extraordinarily harsh," he wrote.

He noted Banks had forfeited his $25,000 bail. "He has already paid a very high price for whatever misconduct may be charged to him," he claimed.

"I know Mr. Banks has been a controversial figure," stated the letter. "He has his enemies and he has his friends. Whatever may be said about him as a product of the waterfront environment, there is no doubt in my mind that he has, in his career, rendered substantial constructive service to the labor movement and to working seamen."

[From the Washington Post, Oct. 16, 1969]

AFL–CIO RATES HAYNSWORTH FOR "SPECIAL" FIGHT

(By Murray Seeger)

Sen. Thomas J. Dodd (D-Conn.) received a telephone call a few days ago from an old friend, Jay Lovestone, director of international affairs for the AFL–CIO.

The two men usually discuss their common interest in fighting communism, but this recent conversation was different. Lovestone was trying to get a commitment from Dodd that he would vote against confirming Clement F. Haynsworth Jr. as an associate justice of the U.S. Supreme Court.

"We don't usually use Jay on something like this," an AFL–CIO staff man said this week. "But the Haynsworth case is special."

The special nature of the Haynsworth case that it represents the first occasion since 1930 that the labor federation has actively opposed a Supreme Court nomination.

That nominee was John J. Parker of North Carolina, the last court appointee to lose a Senate confirmation vote.

As one of the 10 Democrats on the majority side of the Senate Judiciary Committee, Dodd warranted special attention in the view of the AFL–CIO. He voted to send the Haynsworth nomination to the Senate floor, but may vote against confirmation.

Another Democratic member of the committee, Sen. Joseph D. Tydings of Maryland, had an unusual visit from Al Barkan, director of the AFL–CIO Committee on Political Education before voting "no" on the nomination.

Sen. Hugh D. Scott of Pennsylvania, the minority leader of the Senate who is still uncommitted on the nomination, has been pressured to vote "no" by the only Republican in the AFL–CIO heirarchy, Lee W. Minton, of Philadelphia, president of the Glass Bottle Blowers' Association, and the United Steelworkers, biggest union in his state.

Haynsworth has become the biggest single issue for the AFL–CIO in this session of Congress and represents the first serious break between the federation and the nine-months-old Nixon administration.

The campaign against Haynsworth has also renewed the alliance between the AFL–CIO and major civil rights organizations at a time when local unions and minority groups are battling in several cities.

"This has already become part of the 1970 congressional elections," one union source said.

When Haynsworth's name first came through the Washington rumor mill, Tom Harris, the AFL–CIO associate general counsel, and Andrew J. Biemiller, legislative director, met with Joseph L. Rauh Jr., well-known Washington lawyer representing several civil rights groups.

They alerted George Meany, president of the AFL–CIO, and Clarence Mitchell of Baltimore, top lobbyist for the NAACP and other civil rights organizations.

The AFL–CIO had a file on Haynsworth because of his involvement in the long, tangled legal case involving the Darlington Manufacturing Co. and Textile Workers Union, his participation in Carolina Vend-a-Matic Co., and his civil rights record as a judge on the Federal Court of Appeals.

Harris telephoned Daniel J. Moynihan, urban affairs specialist on the White House staff who was with the President in California, and Jerris Leonard, Assistant Attorney General, on Aug. 15 and warned them of what the AFL–CIO considered Haynsworth's anti-labor and anti-civil rights record as well as issues involving his ethical conduct while on the bench.

In addition, Meany sent a telegram directly to the President raising the same issues.

"The President didn't reply, he didn't reply at all," Meany said recently. "His reply came a few days later when he announced the appointment of Judge Haynsworth."

EXHIBIT 5

[From the Washington Daily News, Oct. 22, 1969]

BAYH THE WAY: HAYNSWORTH ATTACK LABOR OF LOVE

(By Dan Thomasson)

Sen. Birch Bayh, D-Ind., received more than $68,000 last year from organized labor which is now allied with him in the fight to prevent Senate confirmation of Supreme Court nominee Clement F. Haynsworth, Jr.

But Sen. Bayh denied today that union support of his 1968 campaign for re-election affected his decision to lead the battle against Judge Haynsworth, who is accused of being anti-labor.

And Sen Bayh argued that labor's contribution to his campaign was small in light of the nearly $800,000 he spent to defeat his Republican opponent, William D. Ruckelshaus, now an assistant attorney general in the Justice Department.

Sen. Bayh conceded, however, that AFL–CIO leaders did approach him shortly after Judge Haynsworth's nomination, but before any question of a possible conflict of interest was raised about the judge, and asked him to look into Judge Haynsworth's record.

The Hoosier Senator, a member of the Judiciary Committee, said he told the labor leaders he would examine the record, but if what he found was only a question of philosophical differences, the "benefit of a doubt" belonged to the President.

Sen. Bayh said today that he believes labor may have a "weak case" in its argument that Judge Haynsworth's decisions as a member of the Fourth U.S. Circuit Court of Appeals show he generally opposed unionism.

In fact, he said, there are cases in which Judge Haynsworth obviously ruled for labor.

Sen Bayh would not deny that labor representatives have been in and out of his office all during the Haynsworth fight.

And he acknowledged that labor had helped with some research into the judge's financial background, even helping Sen. Bayh compile his controversial "bill of particulars," against Judge Haynsworth.

Pro-Haynsworth forces charge that the "bill of particulars" was misleading and full of factual error. Sen. Bayh admits to one error and has apologized to the Judiciary Committee for it.

But Sen. Bayh bristled at further charges by Judge Haynsworth's backers that his efforts to sidetrack the nomination on "ethical" grounds are merely a smokescreen to hide the fact that as a liberal dependent upon traditional liberal money sources, he really opposes appointment of any conservative to the Supreme Court.

"I would be asking the same questions about the propriety of his stock dealings even if he were pro-labor," Sen. Bayh said.

Haynsworth backers, however, challenged this today—charging that Sen. Bayh would have no support from labor for his questions about Judge Haynsworth's financial dealings if the judge were considered pro-labor.

Those pushing Judge Haynsworth's confirmation to a showdown on the Senate floor also have been privately citing what they call Sen. Bayh's "debt" to labor.

This includes, according to records in the House Clerk's office, some $42,000 given the Senator last year by the United Auto Workers of America. Sen. Bayh concedes this is the largest amount from any single contributor.

Sen. Bayh also received contributions from the United Steelworkers; Machinists Nonpartisan Political League; Trainmens Political Education League; Oil Chemical and Atomic Workers; AFL–CIO Committee on Political Education (COPE); International Brotherhood of Electrical Workers; International Ladies' Garment Workers Union; Teamsters Union (Drive); Brotherhood of Painters, Firemen and Oilers Political Fund.

He also was given a $400 contribution by the Textile Workers Union of America (TWU). The TWU first raised the Haynsworth storm by charging the judge shouldn't have sat on a labor relations case involving a textile firm because he had a one-seventh interest in a vending machine company doing business with the textile concern.

EXHIBIT 6

A SUMMARY OF UNITED STATES *v.* UAW–CIO, 352 U.S. 567 (1957)

This case is noteworthy for two reasons:

The decision itself holds that the Corrupt Practices Act, 18 USCA 610, prohibiting corporations and labor organizations from making "a contribution or expenditure in connection with" any election for Federal office, covers any use of corporate or union money for political purposes within the scope of its proscription. More specifically it holds that the use of union dues to sponsor commercial television broadcasts designed to influence the electorate to select candidates for Federal office is within the ban of the statute. Thus the Court said on page 585:

'To deny that such activity, either on the part of a corporation or a labor organization, constituted an 'expenditure in connection with any [federal] election' is to deny the long series of congressional efforts calculated to avoid the deleterious influences on federal elections resulting from the use of money by those who exercise control over large aggregations of capital. More particularly, this Court would have to ignore the history of the statute from the time it was first made applicable to labor organizations. As indicated by the reports of the Congressional Committees that investigated campaign expenditures, it was to embrace precisely the kind of indirect contribution alleged in the indictment that Congress amended § 313 to proscribe 'expenditures.' It is open to the Government to prove under this indictment activity by appellee that, except for an irrelevant difference in the medium of communication employed, is virtually indistinguishable from the Brotherhood of Railway Trainmen's purchase of radio time to sponsor candidates or the Ohio C.I.O.'s general distribution of pamphlets to oppose Senator Taft. Because such conduct was claimed to be merely 'an expenditure [by the union] of its own funds to state its position to the world,' the Senate and House Committees recommended and Congress enacted, as we have seen, the prohibition of 'expenditures' as well as 'contributions' to 'plug the existing loophole.' "

In reaching this conclusion as to what constitutes political activity on the part of a union, the Court quoted the 1945 Report of the House Special Committee to Investigate Campaign Expenditures. In this connection the Court said at pages 580–1:

"The 1945 Report of the House Special Committee to Investigate Campaign Expenditures expressed concern over the vast amounts that some labor organizations were devoting to politics:

" 'The scale of operations of some of these organizations is impressive. Without exception, they operate on a Nation-wide basis; and many of them have affiliated local organizations. One was found to have an annual budget for "educational" work approximating $1,500,000, and among other things regularly supplies over 500 radio stations with "briefs for broadcasters." Another, with an annual budget of over $300,000 for political "education," has distributed some 80,000,000 pieces of literature, including a quarter million copies of one article. Another, repre-

senting an organized labor membership of 5,000,000, has raised $700,000 for its national organizations in union contributions for political "education" in a few months, and a great deal more has been raised for the same purpose and expended by its local organizations.' H.R. Rep. No. 2093, 78th Cong., 2d Sess. 3.

"Like the Senate Committee, it advocated extension of § 313 to primaries and nominating conventions, *id.*, at 9, and noted the existence of a controversy over the score of 'contribution.' *Id.*, at 11. The following year the House Committee made a further study of the activities of organizations attempting to influence the outcome of federal elections. It found that the Brotherhood of Railway Trainmen and other groups employed professional political organizers, sponsored partisan radio programs and distributed campaign literature. H.R. Rep. No. 2739, 79th Cong., 2d Sess. 36–37."

Thus it is clear from this decision that the Court regards expenditures for political education, the writing, printing and distribution of political literature, the supplying of briefs for broadcasters to radio stations, the employment of professional political organizers, the sponsorship of partisan radio and television programs, all constitute political activity. Moreover, the Court found that not only contributions for such purposes, but also expenditures for such purposes, are within the ban of the statute.

The Court, it is true, refused to pass upon the constitutionality of the statute as thus construed. Instead it remanded the case back to the District Court for trial. The Court declined to decide the constitutional questions since the decision was not necessary at that stage of the proceedings. It referred to the fact that the case was before it on an appeal from an order sustaining a motion to dismiss an indictment, and remarked that "an adjudication on the merits cannot provide a concrete factual setting that sharpens the deliberative process especially demanded for constitutional decision." It finally observed that "by remanding the case for trial it may well be that the Court will not be called upon to pass on the questions now raised." This last was a prophetic observation. Upon remand the case was tried before a jury in the District Court and the defendant was acquitted.

The opinion of the Supreme Court on the questions of law, however, still stands. It not only declares that expenditures as well as contributions for political activities are within the prohibition of the Corrupt Practices Act, but also rather clearly defines what are political activities. Since the definition of political activities is one of the most vitally important issues in *Allen* v. *Southern Railway*, it seems to me that the case is of great significance. It shows that all of the manifold activities of the various union organizations—Brotherhoods, Railway Labor Political League, Railway Labor Executive Association, COPE and AFL–CIO—all constitute political activities. Everything would seem to constitute such an activity if it should be politically motivated, or if it should tend to produce political effect. Political activity is not confined to political contributions to candidates and to their committees. It also embraces all the ramifications of political education and other assistance rendered to political causes and political candidates.

The second significant thing about this case lies in some of the concessions made by Mr. Joseph L. Rauh, attorney for the UAW, in attacking the constitutionality of the Act before the Supreme Court on December 4, 1955. Mr. Rauh is one of the leading labor lawyers in the country and was formerly President of Americans for Democratic Action. I am attaching certain pertinent excerpts from his argument.

First. Mr. Rauh conceded under questioning from the bench that the prohibitions of political contributions and expenditures by the Corrupt Practices Act apply equally to corporations and unions. At first he tried to maintain that there were distinctions but wound up by conceding that they did not mount to much. He conceded the illegality of contributions, but maintained that expenditures for the purpose of stating the political position of the union are legal because within the constitutional protection of free speech. The most pertinent parts of the colloquy will be found in Appendix A attached.

Second. Mr. Rauh contended that the question whether the funds in the union treasury used for political purposes came from dues paid voluntarily or dues involuntarily under a union shop contract is irrelevant because the statute attempts no distinction between them. The colloquy is reproduced as Appendix B.

Third. Mr. Rauh volunteered that the union used money from general treasury funds derived from dues for political purposes because it could not raise sufficient funds by appealing to the membership for voluntary contributions for political campaigns. This is the most important part of his concession, and it is set forth in Appendix C.

Fourth. Justice Frankfurter suggested from the bench that voluntary contributions from union members do not fall within the ban of the statute because the union is a mere conduit in transmitting the individual's contribution to the political candidate or committee. Mr. Rauh agreed and said that this result also follows from the legislative history of the Corrupt Practices Act. The pertinent extract will be found in Appendix D.

APPENDIX A

Mr. RAUH. * * *.

What we are asking for here is simply to have the right to say the same things outside the labor movement that we have been given the right by the CIO case to say inside.

Justice FRANKFURTER. Mr. Rauh, do you make a distinction between the provisions of the statute limiting the conduct of a corporation and a labor organization?

Mr. RAUH. We believe that under many circumstances a corporation would be the same. There are legal differences.

Justice FRANKFURTER. How?

Mr. RAUH. There are legal differences, there are factual differences.

Justice FRANKFURTER. But I mean for this purpose.

Mr. RAUH. We see no reason why a corporation should not state its views to the public on political issues.

Justice FRANKFURTER. Because the question of freedom of speech considerations are equally applicable?

Mr. RAUH. Yes, sir. One might draw a distinction. We are not urging such a distinction.

Justice BLACK. Suppose a corporation is to buy all the stock of a newspaper, could the newspapers get away from this act?

Mr. RAUH. Under the government's interpretation they could not. Under ours, our interpretation makes everybody equal, the newspaper stating its views and the union stating its views. What does the government say about the difference between this and CIO? The government refers to literal language but it is the same. It refers to legislative history but it is even clear they intend no such extension. It says we are emasculating the statute but as my answer to Justice Harlan, there is plenty left and finally this is really the crux of the case.

The government says at page 17 of their brief at the bottom of page 17 that what we are doing differs but little from a direct contribution, the distinction lies only in the fact that in one instance the candidate would apply contributed funds to purchase television time and in the other the union would buy it for him.

No, we are not making a contribution, we are stating our position. It may or may not benefit the candidate. It may or may not be what he wants said.

It has none of the corrupting influences of a contribution and finally I would like to return to Mr. Justice Frankfurter's question of yesterday. I agree on reflection that there are 2 motives that we share in stating our position.

There is the motive of wanting to win the election and there is the motive of wanting to state your position. But I say it is relevant that there is the motive of sating your position which may be protected by the Constitution more likely than the motive of handing over money. Therefore having the two motives is not a negative factor such as was suggested yesterday but a positive factor.

* * * * *

Justice HARLAN. Do you say that the statute is also unconstitutional as it applies to a business corporation?

Mr. RAUH. There are differences, sir, between the union and a business corporation. A union is a group of men with a common interest. A business corporation has its control in the man who owns the most stock. It gets its money from a public which is completely disparate in views.

Therefore, one can make a distinction between a corporation and a union, and the decision of the corporation will have to come here some day if that case is raised.

I personally raise none, and our union takes the position publicly that we feel that democracy is best protected by corporations having the same right to state their position on candidates that we have.

I can only say, sir, that there are differences between corporations and unions which might at some future time create a difference in results. I urge none.

Justice FRANKFURTER. As to the—I suppose you don't because you would have a hard time differentiating between the right of a corporation to urge economic interests which bind those disparate members together.

Mr. RAUH. We urge no differentiation.

For a hundred years, if Your Honors please, we have been engaged in political activity. Our own union constitution, from its first day, urges it. One cannot draw a line between bargaining and politics. Bargaining is supplemented by legislation, and legislation is supplemented by bargaining.

Justice FRANKFURTER. Would you put a limit as to the amount of expenditures?

Mr. RAUH. I would say reasonable limitations. It would depend on whether it was a reasonable limitation on free speech. No effort was made to do any of these things.

Justice FRANKFURTER. I understand that, but I am trying to test this proposition. Can Congress say "You shan't spend more than 'X' thousand or 'X' hundred dollars"?

Mr. RAUH. They might try that on individuals.

Justice FRANKFURTER. But not on unions?

Mr. RAUH. I say if you had a general regulatory statute limiting expenditures, I see no reason why we shouldn't be part of it.

Justice FRANKFURTER. You would have to treat the corporation or labor organization the same way that you treat an individual, is that it?

Mr. RAUH. I would think that if you had a—yes, basically I would say there are rights to speak here that ought to be protected. I hadn't thought about this sheer matter of money limitation, because——

Justice FRANKFURTER. But it is very relevant, I should think.

Mr. RAUH. But it sounds, I would only suggest, sir, that is sounds rather artificial.

Justice FRANKFURTER. Why? You say you can't spend more than a million, if you collect the fund for other purposes, and then go into politics. We have put limits on corporations, haven't we?

Mr. RAUH. On expenditures. Well, you have now a bar, the same bar we are under,

but there are no numerical limitations, sir. The limitations are on the candidates' expenditures, and it is absolutely historically a matter of record that they are not complied with. It is in the daily press that the expenditures——

Justice FRANKFURTER. That is a different problem.

Mr. RAUH. But there are no limitations of this type other than on candidates which have been placed.

Justice REED. There is a limitation on personal contributions.

Mr. RAUH. Yes, sir, of $5,000, which is avoided by giving to each committee.

Justice REED. To each committee.

Mr. RAUH. To each committee, yes, sir.

Now, you cannot split legislation from bargaining. At the bargaining table we get Blue Cross and Blue Shield, and at the Congress we ask for national health insurance to supplement it.

In Congress we get unemployment compensation, and at the bargaining table we supplement it with supplementary unemployment payment.

This is as one, what you have there, the bargaining and the legislative process.

APPENDIX B

The CHIEF JUSTICE. Mr. Rauh, before you get to constitutionality, would you mind elaborating just a little on what you said, to the effect that this was not a statute to protect the minority in the unions?

Mr. RAUH. Sir, it is——

The CHIEF JUSTICE. You stated it, but you didn't elaborate on it. Would you mind doing that?

Mr. RAUH. Sir, I will do that right at this moment as part of the constitutional argument.

The CHIEF JUSTICE. Oh. Well, if you are going to do it anyway, go right ahead in your own way.

Mr. RAUH. I can do it right now.

I was going to say, in the order that I was going to follow, I was going to say that the prime presentation of the Solicitor General yesterday can still be boiled down to that of a murder defendant who said, "We didn't do it, but we were justified in doing it."

I will leave aside "We didn't do it" for a moment, and come to "we were justified," because "we were justified" is based on this minority argument.

If Your Honor pleases, this statute has nothing whatever to do with minorities. This statute applies if every member of the union supports the expenditure. This statute applies if every member of the union supports the same candidate. This statute applies whether there is a union shop or not. This statute applies even if you have a contracting-out arrangement.

Now, by that I mean this, sir: Our union expends its funds in this area for political broadcasts out of a thing called the Citizenship Fund. We allow any member who wants to, to say he does not want this money spent for political activity, and it will go to some citizenship fund such as the American Heritage Society.

In other words, while the Government defends this statute on the ground that it was intended to protect minorities, it is not a protection of minorities, because you could have done that much simpler.

Why didn't they say, "Let the minorities, if they want to, have their right to contract out the fund," or why didn't they say "It is all right if there isn't any minority"?

Senator Taft made clear what they were doing. Senator Taft said the purpose of this bill was to take labor out of politics. And the Solicitor General yesterday, with commendable candor, said the purpose of the bill was to minimize the influence of labor at the time of an election. That was the purpose.

There was no purpose of protecting the minority, because the statute isn't aimed at the minority problem.

And in the area of free speech, where this Court has so many times made clear that the limitation on speech must be as narrow as the evil presented, if they were going to deal with the minority problem it was absolutely essential that they limit the matter to the minority problem instead of saying "Unions, you are out of political action."

And, as we say in our brief, and we have made a great deal of this point, "This statute was not aimed at minorities, because if it were unanimous, we can't act. If we have a contracting-out scheme, we can't act. If every member of the union wants to go for this, we can't act."

So that is what I meant by that, sir, when I said this does not deal with the minority problem.

Now, what we have here is a denial of access to the public of the collective views of union members, a denial of access to press, television, radio, magazines, public rallies, letter-writing campaigns.

What this statute does is to put in the hands of the opponents of labor the right to decide whether the voice of labor may be heard. If we want to put our position out, the decision then whether it shall be heard, if this statute is valid, becomes the decision of Hearst, Howard and Sarnoff. They control whether we get heard.

But if we can buy the time, then we decide whether we can be heard.

This statute, as I say, denies unions access to the media of communication except at the will of the opponents of labor, and it is a denial of free speech at the very heart of the democratic process.

The great decisions of this Court, in Stromberg, in Near, the great dissent in Whitney, are based upon the proposition that free government by free men depends upon full discussion of the great issues of political life.

APPENDIX C

Mr. RAUH. * * *.

In other words, what the Government was claiming was voluntary funds were perfectly clearly dues money. COPE, PAC, LLPE, was no substitute for dues money. No moneys have ever been raised for this kind of making actions, to the public mind, for making political actions of this kind.

This has never been a part of their work and, of course, we in the UAW have no such activity. Our activity in this field is carried out, and can only be carried out, with the dues money that we have available to us.

Now, the Government says they didn't do it, and I have answered that.

Justice REED. I don't understand that statement, the only way you can do this——

Mr. RAUH. The only funds available to the union are those that come from dues for the purpose of buying radio time, television time, and newspaper advertising. The small amount, sir, that has been able to be collected as voluntary dollars has all gone as contributions to the very small contributions to the candidate. We have never had the type of funds on voluntary dollars——

Justice REED. You can't get as much from voluntary dollars as you can from dues?

Mr. RAUH. Well, sir, a union man thinks he has paid, when he has paid his dues, he thinks he has paid for bargaining, for legislation, and for political activity. He doesn't feel he should pay a second time for political activity. That is why it is so hard to raise voluntary contributions.

Our constitution and the constitution of all unions set this up as a purpose, political action. When he pays his dues, he has paid for his political action. He may give another dollar or two to some candidate for an office, but he doesn't feel he is going to give another some more money.

We have collected a little, but never anything to do this job of making the public know our views.

Justice FRANKFURTER. Was it only the other day that unions went into politics? For years we had a great leader of labor who thought it was very bad to go into politics for the union.

Mr. RAUH. There was such a leader, sir.

Justice FRANKFURTER. So if you say a hundred years of history, there is a good deal of history the other way.

Mr. RAUH. There has been history the other way, but political life has—there is history back a hundred years. There was a period, as you suggest, when this was the view of some leading labor leaders. So what does the Government suggest that is justified?

It was trying to minimize the influence—these are the Solicitor General's commendable frankness—it was trying to minimize the influence of unions at elections.

APPENDIX D

Justice BLACK. What is the relevancy of the emphasis on the fact that it came out of union dues?

Mr. RAUH. Well, sir, if it came out of voluntary funds then everyone agrees that it is not a violation. There is nothing in the statute that says that.

For example, take COPE, that is the Committee on Political Education of the AFL–CIO. They get voluntary funds paid separately from union dues from a number of members. Everybody agrees that an expenditure or a contribution by COPE is legal. The reason everybody agrees to that is that I think the government is under some misunderstanding about the statute on this point but we agree as to the result.

They think the statute does not apply because COPE is not a labor organization. In my judgment COPE is clearly a labor organization under the statute but it does not apply if Your Honors please because Senator Taft made clear on the floor of the Senate that voluntary funds not part of dues could be used for any purpose and whether you use the government's interpretation or ours the fact is that there has never been an indictment for voluntary monies——

Justice FRANKFURTER. You don't need Senator Taft's statement to reach that conclusion. If you will just read the statute, any labor organization that makes a contribution—if you are just the conduit of other people's money, then you are not making the contribution.

Mr. RAUH. That would be another interpretation to reach the same answer.

Justice BLACK. Is there any other fact which attempts to regulate the way unions shall spend their dues? I don't quite understand the difference. It sounds as though the theory is that union members are to be protected on how their dues are to be expended.

Mr. RAUH. The government is contending, sir, that that is the justification for this statute, that it is a protection of the minority members of the union.

Justice BLACK. Is there any statute which has attempted to regulate the way the unions must spend its money or dues?

Mr. RAUH. No. When I come to this point I would like to point out that this statute is not directed to the minority but is to take unions out of politics.

Mr. FANNIN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MATHIAS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE STRATEGIC ARMAMENTS LIMITATION TALKS

Mr. MATHIAS. Mr. President, the administration's decision to begin negotiations with the Soviet Union on limiting strategic armaments launches the hopes of the world once again on the difficult but redemptive road to peaceful cooperation among men.

President Nixon and Secretary of State William Rogers should be commended for acting on their oft-expressed recognition that the United States and the Soviet Union have a mutual interest in restricting the arms race and reordering national priorities. As an observer at the 18-nation disarmament talks in Geneva, however, I became aware of another equally important consideration. Most of the disarmament talks in the past have chiefly affected the smaller nations. The Nuclear Test Ban Treaty, for example, had little effect on the military capabilities of the great powers, which could test underground; but it virtually precluded advanced nuclear development by lesser powers. Similarly the Nuclear Nonproliferation Treaty in effect was designed to preserve the nuclear oligopoly. It is being signed by other nations at least in part because it also pledges the major powers to negotiate further disarmament among themselves.

I believe nuclear proliferation poses the greatest single threat of nuclear war by accident or miscalculation. The great powers have their nuclear forces under effective control; they are experienced in dealing with nuclear technology. But the primitive nuclear contrivances of small countries could become a new and unpredictable catalyst of incalculable dangers.

Yet the nuclear powers cannot expect the nonnuclear countries to accept permanent nuclear privation in the face of great power determination to steadily expand their nuclear capability. The fact is that unless the great powers move to end the arms race the lesser powers will move to join it. This Damoclean reality will overshadow all the talk in Helsinki.

So I can only urge the administration to act with the greatest sense of urgency. I would, however, at the same time offer a warning. Though the talks are urgent, they will be frustrating; and though agreement is imperative, it will not end the arms race unless it is accompanied by prudent strategic policies on the part of both great powers. For no treaty can be devised that can anticipate the advance of technology and channel it into peaceful uses. In the end, the arms race will be disciplined not because both sides sign a piece of paper but because both sides have previously decided they have no interest in reopening the competition at a higher and more dangerous level.

We should understand that the present high level of defense spending—and the resulting disorder of our national priorities—is not caused only by our past failures to negotiate an agreement with the Soviet Union. The largest surge in U.S. strategic spending—the surge that precipitated the current Soviet increases—came at the very time that the Test Ban Treaty was negotiated. Those who might normally have opposed the enormous unilateral expansion of our forces after Eisenhower's year of sensible restraint were completely diverted by the test ban.

Thus the importance of the treaty was exaggerated and led to the spirit of euphoria that was so rudely interrupted by the Cuban missile crisis. Meanwhile, our defense spending soared; the balance maintained by Eisenhower was upset; and the Russians massively responded with spending of their own. That is our position today. We should understand it clearly.

I celebrate the new negotiations—the SALT talks. I praise the administration's decision and particularly the effective role of the Secretary of State in achieving it. But we should understand that the success or failure of the negotiations will be decided not in Helsinki or Geneva but in Washington and in the Pentagon and on the floor of the Congress where new systems will be debated. It will depend on all our foreign and defense policies and on our resolution in the international quest for peace. It will take more than a paper curtain to hem in the holocaust.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. HUGHES. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

VISIT TO WASHINGTON BY DELEGATION OF JAPANESE GOVERNORS AND VICE GOVERNORS

Mr. HUGHES. Mr. President, it is my pleasure today to announce the visit in the Capital City of this great country of ours a delegation of Japanese Governors and Vice Governors.

As Members of the Senate are aware, we have a Japanese-American Governors' Conference which has been going on since 1961, I believe. Over that period of time several delegations of American Governors have visited our very friendly neighbor Japan, where we have had joint conferences and discussed mutual problems that exist within both of our very friendly nations.

It was my honor in 1965, as Governor of the great State of Iowa, to be a member of the International Governors' Conference held in Tokyo that year. As a result we visited a number of the prefectures in the nation of Japan. In 1966 I had the pleasure of taking an Iowa trade mission to the great nation of Japan for the purpose of negotiating and discussing possible trade potentials between the nation of Japan and my State of Iowa.

I would like to call to the attention of Members of the Senate that my State of Iowa has a sister-State relationship with the prefecture of Yamanashi, Japan; and there is a sister-city relationship between the capital city of Des Moines, Iowa, and the capital city of Kofu.

Many Members of the Senate are former Governors of their States. As I look around the Chamber, I see that a vast majority of Senators now present were Governors of their States.

They have, in the proceedings of those years, as Governors of their States, participated in the ongoing conference between our two great nations. The conference in 1967 happened to be conducted in the capital city of my State, Des Moines, and was a beneficial and fulfilling conference for both countries.

I might add, in the conference this year, our former colleagues in Japan visited a number of American States, beginning in Hawaii, and then coming to California. I know they visited Nebraska and South Carolina. They held this year's annual conference in the city of Cincinnati in the great State of Ohio.

Mr. President, there are visiting in this country today eight Governors and Vice Governors and some of their ladies. We have been pleased to have the opportunity to host them today at a luncheon at which the Japanese Ambassador, the majority and minority leaders of the Senate, the Speaker of the House, and many Senators and Representatives have had the opportunity for friendly and neighborly discussions between the Japanese Governors and ourselves.

I merely want to announce that this ongoing relationship between our two great nations has cemented our friendship further, as it has assisted us in the past. From this level of political leadership, many times surfaces much of the national leadership of both of our two great nations and has resulted in friendly relations being established on a personal basis between the Governors of the prefectures in Japan and the Governors of the United States.

We have many ongoing and continuing friendly relationships that enable us not only in private and business generally, but in public affairs, further to cement the warmth and understanding between our two great nations.

I merely wanted to call to the attention of Members of the Senate that this delegation of visitors from Japan is among us, that they are among us in the Capital City of Washington today, and that we are deeply grateful to have the opportunity once again to be their host and bid them officially welcome to the United States of America and to hope that this relationship will continue in the years ahead.

Mr. President, I ask unanimous consent to have printed in the RECORD the names of the members of the traveling party of Japanese Governors now visiting the United States.

There being no objection, the names were ordered to be printed in the RECORD, as follows:

MEMBERS OF TRAVELING PARTY, VISIT OF GOVERNORS OF JAPAN TO UNITED STATES, OCTOBER 1969

Japanese Governors and Vice Governors (by order of precedence), and prefecture:

Governor Ryozo Okuda (Vice President of

the National Governors' Association and Leader of the Delegation), Nara.

Governor Shunkichi Takeuchi, Aomori.

Governor Satoru Tanaka and daughter, Masae, Mie.

Governor Gonichiro Nishizawa, Nagano.

Governor Saburo Kanemaru and wife, Sakae, Kagoshima.

Vice Governor Shigeichi Iwase, Aichi.

Vice Governor Tadashi Nakamura, Iwate.

Vice Governor Masaru Taki, Oita.

Aides to Japanese Governors: Mr. Ryoji Izuchi, Deputy Executive Secretary of National Governors' Association; Mr. Masakichi Ogawa, Chief, Foreign Affairs Division of National Governors' Association.

News Media: Mr. Takeshi Tagomori, Jijitsushin Press.

United States Department of State: Mr. Yukio Kawamoto, Escort Officer; Mr. Paul Tamura, Aide; Mrs. Paul Tamura, Aide.

National Governors' Conference: Mr. Brevard Crihfield, Secretary-Treasurer; Mr. Gene Minogue, Travel Consultant; Miss Lois Murphy, Assistant to Mr. Crihfield.

Mr. HUGHES. Mr. President, in conclusion, let me say that in the intervening years since the beginning of the Japanese-American Governors' Conference, as delegations of Governors have visited back and forth across the Pacific Ocean almost every year since the conferences began, we have had the opportunity to discuss issues such as juvenile delinquency in our respective countries, land recovery in our respective countries, air and water pollution, economic problems in our respective countries, as well as trade relationships between Japan and the United States.

I believe that such discussions are needed all over the face of the earth. This particular conference can serve as an example of what can be accomplished between two great nations, if we merely set about on a personal relationship basis between the executives of our States and the prefectures in Japan, as well as the congressional bodies of our two great countries, further continuing the warmth and sympathetic understanding of two great peoples—Japan and the United States of America.

ORDER OF BUSINESS

Mr. KENNEDY. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ADJOURNMENT

Mr. KENNEDY. Mr. President, if there is no further business to come before the Senate, I move, under the order previously entered, that the Senate stand in adjournment until 12 o'clock noon tomorrow.

The motion was agreed to; and (at 2 o'clock and 26 minutes p.m.) the Senate adjourned until tomorrow, Tuesday, October 28, 1969, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate October 27, 1969:

In the Coast Guard

The following-named regular officers of the Coast Guard for promotion to the grade of lieutenant (junior grade):

David A. Potter
Fred L. Ames
Walter F. Malec, Jr.,
William R. Hodges, Jr.
Normal V. Scurria, Jr.
Glenn J. Pruiksma
Thomas H. Jenkins
Larry V. Grant
Richard W. Schneider
James T. Ingham
Larry J. Olson
Richard J. Asaro
Terry R. Fondow
Normal C. Edwards
Nicholas Stramandi
Victor P. Primeaux
Michael J. Edwards
Joseph F. Olivo, Jr.
John T. Tozzi
Frank J. Scaraglino
Joseph E. Casaday
John H. Legwin, III
Dennis P. Purves
Mont J. Smith
Arthur W. McGrath, Jr.
Alexander T. T. Polasky
Kenneth B. Allen
Richard B. Meyer
Ralph W. Brown, Jr.
Michael E. Tovcimak
Ronald F. Schafer
James G. Soland
Stanley M. Phillips
Fedrick V. Minson
John A. Bastek
Robert J. Lachowicz
William F. Mueller
Kenneth J. McPartlin
John J. Mulligan, Jr.
Leighton T. Anderson
Peter A. Poerschke
William C. Hain III
James M. MacDonald
John R. Taylor
Daniel J. Schatte
Larry E. Parkin
Gregory T. Wilson
Brian P. M. Kelly
Dennis L. Bryant
Thomas S. Johnson III
Ronald K. Losch
Clifton K. Vogelsberg, Jr.
James T. Paskewich
William R. Johanek
David L. Powell
Stephen J. Delaney
Daniel B. McKinley
John R. Ryland
Theodore J. Sampson
Thomas H. Collins
Richard W. Hauschildt
George R. Perreault
Ronald S. Matthew
Stephen R. Welch
Ernest R. Riutta
Edmund I. Kiley
John A. Magiera
Peter M. A. Tennis
James W. Milas
Glendon L. Moyer
James L. Hested
Paul N. Fanolis
Edward C. Karnis
John K. Kastorff, Jr.
George H. Mercier
Richard L. Maguire
Walter R. Guest
James C. Haedt
Phillip J. Stager
James A. Smith
Juan T. Salas
Thomas E. Thompson
Paul Ibsen
Ronald L. Edmiston
Paul V. Gorman, Jr.
Robert B. Bower
John D. McDevitt
Richard R. Clark
James C. Clow
Douglas A. Macadam
Stephen L. Swann
Floyd W. Thomas
Victor E. Hipkiss
Robert P. Bender
Richard L. Swomley
Robert B. Vanasse
Arthur F. Shires
Michael F. Herman
Kenneth R. Riordan
Stanley C. Brobeck, Jr.
Kevin V. Feeney
Dennis M. Majerski
Peter D. Lish
Lonnie E. Steverson
Edward C. Cooke
Christopher F. John
Ronnie L. Sharp
Ronald F. Hough
Joel E. Karr
William J. Theroux
Graham J. Chynoweth
Robert E. Gronberg
Dennis R. Erlandson
Roger D. Mowery
Anthony H. Schieck
Jeffrey S. Wagner
Daniel A. Gary
Mark J. Costello
James L. Lambert
Frank P. Murray
Roy C. Samuelson, Jr.
Roger B. Streeter
Dennis L. McCord
Richard L. Cashdollar
Harold B. Dickey
Charles J. Hermann
Edward B. P. Kangter III
John R. Vitt, Jr.
Thomas D. Brennan
Kenneth D. Boyd
Jack W. Scarborough
Francis T. E. Marcotte
Bruce E. Weule
Terry L. Grindstaff
Wayne Young
John W. McBride
George T. Oakley
Wayne K. Six
Geoffrey M. Harben
David A. Fletcher
John A. Myntala, Jr.
Jay A. Creech
William F. Holt
John R. Hruska
Robert K. Jones
Olav R. Haneberg
Roger J. Beer
Michael W. Meehan
Ronald C. Hoover
William C. Eglit
Michael M. Storey
Robert B. Swart
Calvin F. Perkins, Jr.
Donald F. Walker
Theodore T. Musselman
Duane I. Preston
Richard A. Gelinas
Robert F. OToole
Paul J. McClendon
Gerald R. Murphy, Jr.
John S. Wenter
Stephen A. Dickerson
Robert A. Happel
William E. Pitt, Jr.
Jon C. Deichert
Harvey A. Hudson
Michael A. Haponik
Randall R. Winn

The following-named reserve officers to be permanent commissioned officers of the Coast Guard in the grade of lieutenant:

Alan B. Pell
Paul A. Dux
Michael J. Dewitt
Ican M. Lissauer
Edward B. Donnelly
Billy H. Baldwin
David F. Johnston
Daniel E. Struck

The following-named officers to be a member of the permanent commissioned teaching staff of the Coast Guard Academy as an assistant professor in the grade of lieutenant commander:

Louis K. Bragaw, Jr.
Bruce C. Skinner
Harlan D. Hanson

In the Marine Corps

The following-named officers of the Marine Corps for temporary appointment to the grade of major:

Peter F. Angle
Carl R. Ariola
Henry W. Austin
Willard F. Ayer
Thomas R. Baisley
Dennis D. Beckman
William D. Benner
Gale F. Benoit
Richard A. Blumenkrantz
Rodney W. Botelho
Gene W. Bowers
Philip S. Bradley
Frank D. Brady
David M. Brahms
Marx H. Branum
John P. Brickley
Richard L. Brown
Martin C. Brush
Elton N. Buesing Jr.
George Cadwalader
Charles S. Cahaskie
James F. Carney
David J. Cassady
Frank G. Castillo
John P. Caynak
Robert G. Clapp
David O. Clough
Charles W. Cobb Jr.
Edward M. Condra III
James J. Connell
James J. Coolican
Gary J. Cooper
Donald W. Dadisman
Paul G. Davenport
James M. Davis
Daniel G. Dempsey
John D. Dempsey
Donald H. Dewalt
Richard F. Diehl
James M. Driskell
Richard J. Dove
Michael P. Downs
James T. East
James D. Eckert
Richmond K. Ellis Jr.
Frank W. Evans
Joe B. Ezell
John J. Fallon Jr.
Frank E. Farmer
William D. Fish
Jon T. Flint
Kim E. Fox
Constantine Gofas
David B. Gregory
John J. Guenther
Allen C. Hadley
William A. Hall
Bartholomew G. Halliday
James G. Hanrahan
Myron C. Harrington Jr.
Phillip L. Harrington
Charles B. Hartzell
John H. Havel
Edward M. Healey
Thomas E. Hemingway
George F. Hoffman
Carl J. Horn
Arthur L. Houston Jr.
Gerald F. Humi
William F. Hurley
Lajon R. Hutton
Charles M. Isbell
Orville E. James Jr.
Kenneth W. Johnson
Donald W. Johnston
Raymond W. Kalm Jr.
Edmund M. Keefe Jr.
Thomas J. Kennedy
Richard T. Kerrigan
Philip R. Kruse
William P. Lakin
Raymond M. Lawseth
Otto J. Lehrack III
James W. Lent Jr.
James W. Livezey
Thomas J. Lyman Jr.
William D. Major
Frank Mann Jr.
Paul S. Marcani
Elliott R. Markell Jr.
Matt J. Marshall
Charles M. McCain
William O. McClellan Jr.
David J. McGraw
James P. McHenry
Kenneth A. McVay
Charles J. Mears Jr.
Antonio Mediavilla
Donald O. Meece

CONFIRMATIONS

Executive nominations confirmed by the Senate October 27, 1969:

IN THE MARINE CORPS

The nominations beginning Joseph C. Abrams, to be captain, and ending John D. Wright, to be first lieutenant, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on Sept. 25, 1969.

HOUSE OF REPRESENTATIVES—*Monday, October 27, 1969*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

The Lord will give strength to His people; the Lord will bless His people with peace.—Psalm 29: 11.

O Thou who art the Good Shepherd of our human hearts, restore our minds and renew our spirits as we wait upon Thee in this our morning prayer. We would linger silently and reverently in Thy presence until Thy spirit comes to new life within us. Then with courage, strength, and wisdom we would face the trying duties of this turbulent day.

To Thy loving care we commend our Nation. So guide our President, so bless our Speaker, so direct these Members of Congress that filled with Thy spirit they may lead our people in right paths, by just ways, and along the solid road that ultimately brings us to an honorable peace, an enduring good will, and a willingness to work for the welfare of all mankind.

"O Thou who dost the vision send
And givest each his task,
And with the task sufficient strength;
Show us Thy will we ask;
Give us a conscience bold and good;
Give us a purpose true,
That it may be our highest joy,
Our Father's work to do."

Amen.

THE JOURNAL

The Journal of the proceedings of Thursday, October 23, 1969, was read and approved.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Leonard, one of his secretaries.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate had passed without amendment bills of the House of the following titles:

H.R. 5968. An act to amend the act entitled "An act to provide for the establishment of the Frederick Douglass home as a part of the park system in the National Capital, and for other purposes", approved September 5, 1962;

H.R. 9857. An act to amend the provisions of the Perishable Agricultural Commodities Act, 1930, to authorize an increase in license fee, and for other purposes; and

H.R. 11609. An act to amend the act of September 9, 1963, authorizing the construction of an entrance road at Great Smoky Mountains National Park in the State of North Carolina, and for other purposes.

The message also announced that the Senate had passed bills of the following titles, in which the concurrence of the House is requested:

S. 232. An act to promote the economic development of the Trust Territory of the Pacific Islands;

S. 1455. An act to amend section 8c(2)(A) of the Agricultural Adjustment Act to provide for marketing orders for apples produced in Colorado, Utah, New Mexico, Illinois, and Ohio; and

S. 1968. An act to authorize the Secretary of the Interior to permit the removal of the Francis Asbury statue, and for other purposes.

The message also announced that the Vice President, pursuant to Public Law 83–420, appointed Mr. YARBOROUGH to be a member of the board of directors of Gallaudet College in lieu of Mr. Brewster.

THE LATE HONORABLE EDWARD H. REES

(Mr. SHRIVER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SHRIVER. Mr. Speaker, it is with a feeling of personal loss and sadness that I inform my colleagues in the House of the passing of a former distinguished Congressman, Edward H. Rees of Emporia, Kans., on Saturday, October 25, 1969. It was my privilege to succeed Ed Rees as Kansas' fourth district Congressman following his decision to retire in 1960 after 24 years of outstanding service in the House.

Funeral services for Ed Rees will be held this afternoon in his hometown of Emporia.

For 24 years he was a dedicated and courageous Member of this House. Ed Rees was a man of integrity and responsibility. He fought for what he believed in and for the people whom he represented. His belief in what was right was never subject to compromise.

Ed Rees was a warm and sympathetic person, interested in the problems of the people he served. He was deeply appreciated by his own people and everyone who knew him had a deep affection for him.

He was born on a farm near Emporia, Lyon County, Kans., and attended the public schools and the Kansas State College at Emporia.

Ed Rees' long career of public service began in 1912 when he became clerk of the court of Lyon County. He was later to be admitted to the bar. His legislative service began in 1925 when he was elected to the Kansas House of Representatives, and 4 years later became majority leader. He was elected to the Kansas Senate in 1933, and to Congress in 1936.

Ed Rees was a member of the Post Office and Civil Service Committee for 16 years, and twice was its chairman. He was responsible for many improvements in Government working conditions, particularly wage improvements.

He was sponsor of legislation signed by President Eisenhower establishing an annual Veterans' Day on November 11 to honor America's servicemen of all wars.

One of his final legislative achievements in Congress was the authorization of the Cheney Dam and Reservoir in Sedgwick County, Kans., which has provided much-needed water resources and development for the Wichita area.

Upon his retirement from Congress nearly 9 years ago, Ed Rees returned to his hometown of Emporia to practice law.

He will be greatly missed not only by all of us in Kansas who knew and admired him, but also by his friends here in Congress and the Nation as well.

Mrs. Shriver and I extend our heartfelt sympathy to his widow, Agnes; to his son, John; and his sister, Mary Jane Rees.

Mr. PELLY. Mr. Speaker, will the gentleman yield?

Mr. SHRIVER. I am glad to yield to the gentleman from Washington.

Mr. PELLY. Mr. Speaker, I am sure that all those of us who served with him will remember Ed Rees well. Everyone liked him. Everyone respected him. He was an able legislator.

I think of him as a gentle person; as kindly and helpful and patient.

Yet, I think of him as a person of great integrity and inward strength and firmness.

I have a group picture of some of us taken on the White House steps with President Eisenhower in 1953. It hangs on the wall of my office in the Rayburn Building. He is smiling, and that is the way many of us will remember him.

Meanwhile, history will record his public service and place him high in the ranks of those who served their country well.

Mr. RHODES. Mr. Speaker, will the gentleman yield?

Mr. SHRIVER. I yield to the gentleman from Arizona.

Mr. RHODES. Mr. Speaker, it is with a feeling of deep personal loss that I rise to join my colleagues in extending to Mrs. Rees and the family of Ed Rees our personal condolences and sympathy.

Mr. Speaker, I had the good fortune to grow up in the Fourth District of Kansas, and Ed Rees was my Congressman when I was growing up. I well remember the first campaign of his election—the primary campaign and the general election. I remember how impressed I was with this honest, sincere man who had offered himself to the people of Kansas as a Member of the House of Representatives. I was particularly attracted to him, because, having come from Emporia, as did my mother's family, he was an old family friend not only of mine but of my parents and grandparents. I watched him as a Member of the House grow in stature, and later, of course, it became my good fortune to join him here in the membership of the House of Representatives. He was always a kind man. He was particularly kind to me and solicitous of my welfare when I came here as a freshman. He was a distinguished Member of the House in every sense of the word; a true gentleman, and a man who took his legislative duties very seriously but never forgot the fact that the people of the 4th district of Kansas had sent him to this body. He was always a true representative of them and their beliefs.

The country will be a poorer place because of the loss of Ed Rees, but all of us who knew him and loved him can take comfort in the exemplary life that he led and the great heritage that he leaves not only to us but to his former constituents and family in the State of Kansas.

Mrs. Rhodes joins me in extending to Mrs. Rees and the family our very deepest condolences and personal sympathy.

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. SHRIVER. I am happy to yield to the gentleman from Oklahoma, the distinguished majority leader.

Mr. ALBERT. Mr. Speaker, the news which the gentleman from Kansas has brought to the House today saddens me very much. I had not previously known of the passing of my friend and former colleague, Ed Rees.

I first came to the Congress on January 3, 1947. Shortly after the organization of the House in the 80th Congress, Mr. Rees took over as chairman of the Committee on Post Office and Civil Service, and I was assigned to that committee. I worked closely with him during the time that I was a member of that committee.

I was always impressed with the qualities of this man. He was a Christian. He was a gentleman. He was a man of integrity. He was loyal to his country. He was true to his own principles. He was a devoted and dedicated legislator. He was my friend and I shall miss him. I shall remember as long as I live the many kindnesses he extended to me when I was a new Member of this House.

Mr. Speaker, I extend to his family and all of his loved ones my own deepest sympathies and the sympathy of Mrs. Albert who also knew him well.

Mr. SHRIVER. I thank the distinguished majority leader for those kind remarks.

Mr. SKUBITZ. Mr. Speaker, will the gentleman yield?

Mr. SHRIVER. I am glad to yield to the gentleman from Kansas.

Mr. SKUBITZ. Mr. Speaker, on November 11, all through this broad land of ours, Americans will pause for a moment to pay tribute to those living and dead who have nobly served their country.

In Kansas the day has added meaning because it was a Kansan who introduced the bill which expanded the significance of Armistice Day to Veterans Day.

That Kansan was Congressman Ed Rees, of Emporia, Kans. Ed Rees will not be with us this Veterans Day. He passed away Saturday night at his home in Emporia, leaving to mourn his passing his wonderful wife, Agnes, his son, John; three grandchildren and his sister, Mary.

For 24 years he served the Fourth District of Kansas ably and well. His was a dedicated life—dedicated to the country he revered, to the family he loved, and the people he respected and served. He was truly a Christian.

For me, the passing of Ed Rees is a personal loss. He was my friend in every sense of the word. I knew him long before I came to the Congress of the United States.

In 1962 when the State of Kansas was redistricted, Lyon County became a part of the Fifth District. That is the year that I decided to run for Congress. I asked his support and received it and through the years I sought his advice and counsel. I shall miss him as will his family and thousands of friends throughout Kansas and the Nation.

Ed Rees may have departed this earth but he is not dead. The spirit of Ed Rees will always be with us. Too much of what he did, what he stood for, what he believed in has become a part of us.

Thomas Curtis Clark said it much better than I when he wrote:

THE VICTOR

He is not dead. Why should we weep
Because he takes an hour of sleep,
A rest before God's greater Morn
Answers a new world is born;
A world where he may do the things
He failed in here; where sorrow stings
And disappointment yield to joy;
Where cares and fears cannot destroy?
He is not dead. He hurried on
Ahead of us to greet the dawn
That he might meet the loved who left
Us yesterday. We are bereft—
But weep not—hail him where, afar,
He waits for us on some bright star.
He is not dead. Beyond all strife
At last he wins the prize of life.

Mrs. Skubitz joins me in extending our sympathies to Mrs. Rees and the family.

Mr. GROSS. Mr. Speaker, I deeply regret to learn of the death last week of the Honorable Edward H. Rees, of Kansas, one of the most conscientious and dedicated Members of Congress it has been my privilege to know.

Mr. Rees was the first chairman of the House Post Office and Civil Service Committee, having served in that capacity in the 80th Congress. When I came to the House in the 81st Congress he was the ranking Republican member of this, the first committee to which I was assigned. In the 82d Congress he was again the committee chairman.

Through the years that I served on the committee, and until his retirement at the end of the 84th Congress, it was my privilege to have the benefit of his counsel and experience.

Ed Rees was a man of sterling character and a hard worker who had little time for the social life of Washington. He left his imprint on much legislation and in so doing was a credit to his State and Nation.

I join with my colleagues in the House in extending sympathy to Mrs. Rees and the members of their family in this time of bereavement.

Mr. DULSKI. Mr. Speaker, I join with my colleagues in expressing sincere sorrow at the passing of the Honorable Edward H. Rees, a distinguished former Member of this House for 24 years and a member of the Committee on Post Office and Civil Service for 16 years.

Mr. Rees was the ranking minority member of this committee when I was elected to Congress and was named to this committee at the outset of my own congressional career.

He had twice served our committee as its chairman and had compiled an enviable record of service and dedication over the years.

In particular, I believe it appropriate to cite his conscientious and productive effort to expand the merit system among Federal employees. When he began his effort, only about 60 percent were included in the merit system, but before his effort was concluded the number had exceeded 90 percent.

The Federal Club honored Mr. Rees in 1954 for his work in strengthening management and the civil service merit system.

Two weeks from tomorrow—Tuesday, November 11—is Veterans Day. It is appropriate to recall on the eve of this year's observance that it was Mr. Rees who changed the name of that observance from Armistice Day by his legislation in 1954.

Edward H. Rees was a distinguished and well-liked Member of this body. He served his district, his Nation and our committee well until his voluntary retirement in 1960. I join in extending my sincere condolences to his family.

Mr. Speaker, as a part of my remarks, I include the text of the obituary which appeared Sunday, October 26, in the Washington, D.C., Sunday Star:

EDWARD H. REES DIES—FORMER REPRESENTATIVE

Edward H. Rees, 81, who served 24 years as a Republican congressman from the 4th District of Kansas, died yesterday at his home in Emporia, Kan., after a long illness.

Mr. Rees retired from the House in 1960. He was a member of the Post Office and Civil Service Committee for 16 years, and twice was its chairman.

He was born on a farm in Lyon County, Kan., and attended Kansas State Teachers College. He became a lawyer in 1915, entered the Kansas House of Representatives in 1927, and four years later became majority leader.

He was elected to the state senate in 1933 and to Congress in 1936.

Mr. Rees was a conservative who fought for balanced budgets and the civil service merit system. For many years he favored a return to prohibition "on a much broader scope than before" and, in the 1950s, helped lead the congressional campaign to root alleged Communists out of federal jobs.

Mr. Rees often criticized the Civil Service Commission's waste and inefficiency" and the "low morale" he said it fostered. At various times he urged speedy dismissal of government wartime employees, proposed revision of the federal salary structure and charged the commission with callously displacing career employees.

He was known as a committee "peacemaker" who could persuade conservative and liberal lawmakers to compromise. The Federal Club here named him Man of the Year in 1954.

GENERAL LEAVE

Mr. SHRIVER. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days during which to extend their remarks on the passing of our late colleague, Ed Rees.

The SPEAKER. Is there objection to the request of the gentleman from Kansas?

There was no objection.

TRIBUTE TO B. J. SIGURDSEN, CHIEF CLERK, OFFICIAL REPORTERS OF DEBATES

(Mr. ROONEY of New York asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ROONEY of New York. Mr. Speaker, 30 years ago a young man named Bjarne Sigurdsen came to work here in the office of the Official Reporters of Debates in the House of Representatives. Today we salute him as he concludes a career marked by hard work and devotion. It is a bad day for us but a good one for Johnny and so let us be happy with him and his lovely wife and fine family who are watching so proudly from the gallery today. Born in Oslo, Norway, he arrived in New York in 1924 at the age of 11. Upon arrival in New York he became a resident of the Sunset Park section of Brooklyn which I represented for many years and where Eighth Avenue was known as Oslo Boulevard. Yet only 13 years after arriving in this country, in 1937, he went to work with the Government Printing Office. Two years later he was assigned to the Official Reporters of Debates office here in the House of Representatives. In 1955, by resolution of the House, he was made assistant clerk of that office and for the past 5 years he has been its chief clerk. Mr. Speaker, I take the liberty to speak in behalf of my colleagues in saying a fond farewell to Bjarne Sigurdsen and wishing him the happiness and contentment in his retirement that he has so justly earned in his years of faithful and loyal service in the United States House of Representatives.

Mr. WAGGONNER. Mr. Speaker, will the gentleman yield?

Mr. ROONEY of New York. I yield to the gentleman from Louisiana.

Mr. WAGGONNER. Mr. Speaker, I want to thank the gentleman from New York (Mr. ROONEY) for yielding to me, and I want to express my appreciation to the gentleman for bringing to the attention not only of this House of Representatives, but to the people of this country today, what Johnny Sigurdsen has meant to the House of Representatives and to this country.

But while thanking the gentleman from New York for bringing this to our attention, I also want to thank from the bottom of my heart Johnny Sigurdsen for what he has done for this Congress and for this country—his country—in these many years of service.

Mr. Speaker, I was not in the House of Representatives when Johnny Sigurdsen first came here, although there are some Members who were here when he came to the Hill, but it is with the utmost regret that I am here to see Johnny leave. We all appreciate what he has done for us. No one would envy his successor in the task he inherits because it is going to take a big man to fill Johnny's shoes.

Johnny has been a personal friend of mine, as he has of every other Member of this House, throughout these many years, and it is with deep regret that we say goodbye to him today—but we have had too much of his time, and his country has, and now it is time for Johnny and his family to enjoy some of the things that he has helped provide.

Mr. SAYLOR. Mr. Speaker, will the gentleman yield?

Mr. ROONEY of New York. I yield to the gentleman from Pennsylvania.

Mr. SAYLOR. Mr. Speaker, I thank my colleague for yielding, and take this opportunity to join with him in expressing my appreciation for the many extra services that Johnny Sigurdsen has rendered to me as a Member of the House. All too often we Members and the general public take the CONGRESSIONAL RECORD as a matter of course. It just does not come out of the Government Printing Office without a great deal of background preparation. If it had not been for the foresight and work over the years of Johnny Sigurdsen, the CONGRESSIONAL RECORD, insofar as the House of Representatives is concerned, would not have been the great publication that it is. We will all miss his presence and keen devotion to duty.

In addition to this background, John had some other attributes that many people do not know—he is a great cook. Let me tell you that with his Norwegian background he can do more things in preparing and cooking wild game than any person I know.

My genuine wish for John and the members of his family is the very best in the years to come.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. ROONEY of New York. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Speaker, I thank the gentleman from New York for yielding to me. I join the other Members in the many kind things that have been said about Johnny Sigurdsen; the deserved tributes for his good work and for his personal dedication.

Wherever Johnny may go and whatever he may do in his retirement we all wish him well. He will be missed at his usual place at the front desk in the House of Representatives and I hope that he will return often so that we may visit and keep contact with him.

Mr. RHODES. Mr. Speaker, will the gentleman yield?

Mr. ROONEY of New York. I yield to the gentleman.

Mr. RHODES. Mr. Speaker, I thank the gentleman from New York for yielding. I also thank him for informing the House of the imminent retirement of John Sigurdsen.

John has been a great public servant in every sense of the word. I am happy to have this opportunity to express to him my personal appreciation as well as the appreciation, I am sure, of all the Members of the House, both present and past, who have had the benefit of his intelligent public service. The House of Representatives will long miss him, but we certainly wish him the best of everything in his retirement.

Mr. HAYS. Mr. Speaker, will the gentleman yield?

Mr. ROONEY of New York. I yield to the gentleman.

Mr. HAYS. Mr. Speaker, I wish to say that this announcement took me by surprise. I am sorry to hear that John Sigurdsen will leave the service of the House of Representatives.

I think it is fair to say that when the gentleman from Iowa (Mr. GROSS) and I both praise somebody that he has got to be pretty good.

Mr. HAGAN. Mr. Speaker, will the gentleman yield?

Mr. ROONEY of New York. I yield to the gentleman.

Mr. HAGAN. Mr. Speaker, I would just like to add my accolade to this gentleman.

For 9 years now I have been somewhat close to him, worrying him from time to time. But if I had known he was such a good cook, I would have been a lot closer to him, I will tell you that. It is bad news when we learned of his imminent retirement and we hope for and wish him Godspeed from here out.

Mr. BURKE of Massachusetts. Mr. Speaker, will the gentleman yield?

Mr. ROONEY of New York. I yield to the gentleman from Massachusetts.

Mr. BURKE of Massachusetts. Mr. Speaker, our esteemed Official Reporter of Debates, John Sigurdsen, is retiring from public service at the end of this month. John Sigurdsen has been in the U.S. Government Service for 32 years. He was assigned to the position of Official Reporter of Debates in 1939. Our late beloved Speaker Sam Rayburn of Texas appointed him to the position of assistant clerk during 1954 and our distinguished Speaker JOHN W. MCCORMACK appointed John Sigurdsen to the position of chief clerk in 1963.

John has been a faithful and loyal public servant. Always on the job, very efficient, he always carried out his assignment in a graceful way. John is retiring to Cape May, N.J., with his lovely wife Louise. He has one son and one daughter and five grandchildren. I know I express the wishes of the entire membership when I wish him many years of happiness.

To John may I also say that I hope

he has many happy days with the sport of kings. As one who always had a deep and abiding interest in the development and breeding of horses I know he will have more time now to study this fascinating subject.

John does not look over 39 years of age. May he always remain young at heart and young in spirit. As a parting word may I use the Celtic expression and say to John, "God bless."

CITIES ANNOUNCED FOR GRASSROOTS HEARINGS ON THE U.S. ECONOMY

(Mr. PATMAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PATMAN. Mr. Speaker, the Domestic Finance Subcommittee of the Banking and Currency Committee will go into the field during the next few months to obtain grassroots testimony on economic problems.

Today, we are announcing the first three cities which we will visit. They are—

Newark, N.J., Monday, November 10, and Tuesday, November 11.

Los Angeles, Calif., Monday, December 1, and Tuesday, December 2.

Atlanta, Ga., Monday, December 8, and Tuesday, December 9.

Additional cities and dates will be announced just as soon as they can be worked out. We plan to cover all sections of the Nation.

Mr. Speaker, this is an attempt to take Government to the people, to learn what the people are thinking on the key economic questions of the day. Issues involving high interest rates and tight money, consumer prices, housing credit, and small business problems.

Mr. Speaker, I am convinced that these hearings will be of great value as the Congress seeks solutions to these tremendous problems. We have heard much from the so-called experts on these subjects; now it is time that we heard from the people who are directly affected.

CONTINUING APPROPRIATIONS RESOLUTION

(Mr. MAHON asked and was given permission to address the House for 1 minute.)

Mr. MAHON. Mr. Speaker, at my request, the leadership has scheduled consideration of the continuing resolution tomorrow.

Especially in view of the summer recess, the existing continuing resolution was made to extend over a period of 4 months. It expires this coming Friday, October 31. We therefore have to enact another continuing resolution to take care of necessary functions for which the regular bills have not been enacted.

A number of additional appropriation bills have been passed by the House since July 1 when the present resolution went into effect. The other body has also moved some of the bills since that time, and we are hopeful and confident that some of the remaining bills will also move along.

There has been some indication of a controversy in regard to an appropriation which will be offered as an amendment to the continuing resolution. I am going to put a fact sheet in the Extensions of Remarks section of today's RECORD with regard to just what is involved in order that there may be no doubt among the Members as to just what the situation is with respect to the continuing resolution.

Information in regard to the proposed continuing resolution is available in the committee report, the resolution having been reported out of the Committee on Appropriations on Thursday of last week, and also statistical data is available in the Committee on Appropriations to Members who may wish additional information before we meet tomorrow.

Mr. ROGERS of Colorado. Mr. Speaker, will the gentleman yield?

Mr. MAHON. I am glad to yield to the gentleman from Colorado.

Mr. ROGERS of Colorado. Do I correctly understand that the continuing resolution to which the gentleman has referred would continue appropriations at the lowest level set out in the Nixon administration budget?

Mr. MAHON. The resolution would continue appropriations at last year's level or at the House-passed level, whichever is lower. For example, in the field of education, in which many Members have shown their interest, on July 1 the Labor-HEW bill had not passed the House; so the lower amount between the budget and last year's amount was the budget. But now the lower level would be last year's appropriation, which, however, would be about $600 million above the currently authorized level under the resolution that has been in effect since July 1.

Mr. ROGERS of Colorado. Would there be any objection to putting the amount at the level at which the House has heretofore approved the appropriation for education?

Mr. MAHON. The continuing resolution is not an appropriation bill. It is merely an interim measure to provide for the functions of the Government until the Congress makes its decisions on the regular bills. The appropriation bill involving HEW is now before the other body, and I was told today that it would be reported within about two weeks by the other body. I would hope that this can be done.

Mr. ROGERS of Colorado. Would the gentleman yield further?

Mr. MAHON. If I have the time.

Mr. ROGERS of Colorado. Does the gentleman realize that the money is not coming forth under Public Law 874 as we intended for the assistance of federally impacted areas, and does the gentleman propose to cure that situation in the resolution which he proposes to offer tomorrow?

Mr. MAHON. The resolution which we propose to offer tomorrow will provide $319 million in excess of the present level for impacted areas. The resolution in my opinion does a good job of taking care of the program for aid to federally impacted school districts. It will authorize a total of $506 million effective next Saturday. Final action on the appropriation for the whole fiscal year on this important matter will have to await action on the regular bill.

The SPEAKER. The time of the gentleman from Texas has expired.

THE 23D ANNUAL REPORT ON U.S. PARTICIPATION AT UNITED NATIONS—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 91–118)

The SPEAKER laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, referred to the Committee on Foreign Affairs and ordered to be printed:

To the Congress of the United States:

In accordance with the provisions of the United Nations Participation Act of 1945, I am transmitting the 23d annual report, covering the calendar year 1968, on United States participation in the United Nations.

The large number of topics covered, the number of U.N. agencies involved, and the increasing contributions of the United States to U.N. programs all show how important the United Nations has become to the peace, security, and welfare of the world. In the United States, support of the United Nations and participation in its many activities have always been nonpartisan.

I therefore take pleasure in transmitting to the Congress this report of the President on our participation in the United Nations.

RICHARD NIXON.

THE WHITE HOUSE, *October 27, 1969.*

CALL OF THE HOUSE

Mr. PELLY. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 244]

Abbitt	Celler	Fountain
Adams	Chamberlain	Gallagher
Addabbo	Chisholm	Gettys

The SPEAKER pro tempore (Mr. BOGGS). On this rollcall 311 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

UNITED STATES MUST MAINTAIN SOVEREIGN RIGHTS OVER PANAMA CANAL

(Mr. HALL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HALL. Mr. Speaker, this afternoon under special orders heretofore agreed to, time will be taken on a bipartisan basis by the gentleman from Pennsylvania (Mr. FLOOD), and the gentlewoman from Missouri (Mrs. SULLIVAN), and the gentleman from Ohio (Mr. DEVINE), and me on a resolution having to do with ceding of our territory and real estate to the Republic of Panama.

Mr. Speaker, this is a repetition of the resolution of 1967 which more than 135 Members cosponsored. I hope Members will join in cosponsoring this resolution which says in part:

It is the sense of the House of Representatives that the Government of the United States maintain and protect its sovereign rights and jurisdiction over said canal and that the United States Government in no way forfeit, cede, negotiate, or transfer any of these sovereign rights or jurisdiction to any other sovereign nation or to any international organization.

Mr. Speaker, there are blank forms available for cosponsorship by those parties who wish to do so.

Real estate ceding and jurisdiction, and so on, pertain to the House of Representatives according to our U.S. Constitution, whereas treaties are advised and consented to by the other body. It is most appropriate, inasmuch as this involves a transfer of territory, that we get ourselves on record.

DISTRICT OF COLUMBIA BUSINESS

The SPEAKER pro tempore. This is District of Columbia day. The Chair recognizes the gentleman from South Carolina (Mr. MCMILLAN), chairman of the Committee on the District of Columbia.

Mr. MCMILLAN. Mr. Speaker, I yield to the gentleman from Florida (Mr. FUQUA), to call up bills considered by his subcommittee.

AMENDING THE DISTRICT OF COLUMBIA HEALING ARTS PRACTICE ACT

Mr. FUQUA. Mr. Speaker, by direction of the Committee on the District of Columbia, I call up the bill (H.R. 13837) to amend the Healing Arts Practice Act, District of Columbia, 1928, to revise the composition of the Committee on Licensure to Practice the Healing Art, and for other purposes, and ask unanimous consent that the bill be considered in the House as in Committee of the Whole.

The SPEAKER pro tempore (Mr. BOGGS). Is there objection to the request of the gentleman from Florida?

There was no objection.

The Clerk read the bill, as follows:

H.R. 13837

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. (a) Section 4 of the Healing Arts Practice Act, District of Columbia, 1928 (D.C. Code, sec. 2–103), is amended to read as follows:

"SEC. 4. (a) (1) There is established a commission to be known as the Commission on Licensure to Practice the Healing Art (hereafter in this Act referred to as the 'Commission'). The Commission shall be composed of eleven members. The Commissioner of the District of Columbia shall appoint nine members of the Commission as follows:

"(A) Three members shall be appointed from a panel of six physicians licensed under this Act who are in private practice in the District of Columbia and who are nominated by the Medical Society of the District of Columbia.

"(B) One member shall be appointed from a panel of two physicians licensed under this Act who are nominated by the dean of the Georgetown University Medical School.

"(C) One member shall be appointed from a panel of two physicians licensed under this Act who are nominated by the dean of the the George Washington University Medical School.

"(D) One member shall be appointed from a panel of two physicians licensed under this Act who are nominated by the dean of the Howard University Medical School.

"(E) One member shall be appointed from a panel of two osteopathic physicians licensed under this Act who are nominated by the Association of Osteopathic Physicians of the District of Columbia, Incorporated.

"(F) Two members shall be appointed from persons who are not physicians and who represent the community at large.

"(2) The Corporation Counsel of the District of Columbia (or his delegate) and the Director of the Department of Public Health of the District of Columbia (or his delegate) shall be ex officio members of the Commission.

"(3) A vacancy in the Commission shall be filled in the same manner as the original appointment was made.

"(b) (1) Except as provided in paragraphs (2) and (3) of this subsection, members of the Commission (appointed under paragraph (1) of subsection (a)) shall be appointed for terms of three years.

"(2) Of the members first appointed to the Commission under such paragraph (1)—

"(A) three members shall be appointed for terms of one year,

"(B) three members shall be appointed for terms of two years, and

"(C) three members shall be appointed for terms of three years,

as designated by the Commissioner of the District of Columbia at the time of appointment.

"(3) Any member of the Commission appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed only for the remainder of such term. A member of the Commission may serve after the expiration of his term until his successor has taken office.

"(c) The Commission shall elect a President and a Vice President from among its members. The Director of the Department of Public Health of the District of Columbia (or his delegate shall be the Secretary of the Commission.

"(d) The Commission shall make, and may alter, such rules as it deems necessary to conduct its business. The Commission shall adopt a common seal and from time to time may alter it. The courts shall take judicial notice of the seal."

(b) The Commissioner of the District of Columbia shall appoint the first nine members of the Commission on Licensure to Practice the Healing Art, established by section 4 of the Healing Arts Practice Act, District of Columbia, 1928 (as amended by this Act), not later than 90 days after the date of the enactment of this Act.

SEC. 2. (a) The Healing Arts Practice Act, District of Columbia, 1928, is amended by redesignating section 25(a) (D.C. Code, sec. 2–122a) as section 25A and by adding after that section the following new section:

"SEC. 25B. (a) The Commission may issue, without examination, temporary licenses to persons holding the degree of doctor of medicine or doctor of osteopathy who wish to pursue or participate in residency or fellowship training programs in the District of Columbia. An applicant for a temporary license shall furnish to the Commission satisfactory proof that—

"(1) he is at least twenty-one years of age and is of good moral character;

"(2) he is a graduate of a medical school or an osteopathic school registered under section 5(a) of this Act or is otherwise qualified after examination by the Educational Council for Foreign Medical Graduates;

"(3) he has been accepted or appointed for residency or fellowship in an accredited program;

"(4) he will limit his practice and training to the confines of the hospitals or other facilities within such accredited program; and

"(5) he will practice only under the supervision of the attending medical staff of such hospitals, facilities, or affiliated institutions within such accredited program.

Each applicant for a license under this section must be nominated by the institution in which he is serving as a resident or fellow. An institution which nominates an applicant for a license under this section shall notify the Commission of the beginning and ending dates of the period for which such applicant has been accepted or appointed.

"(b) A license issued under this section shall be valid for a period not to exceed one year. Such a license may be renewed upon application for a period not to exceed one year. A license issued under this section may not be renewed for periods aggregating more than four years.

"(c) The holder of a license under this section may sign birth and death certificates, prescriptions for narcotics, barbiturates, and other drugs, and other legal documents in compliance with existing laws, if the execution of such documents involves duties prescribed by or incident to his residency or fellowship program.

"(d) Within sixty days after appointment of any intern to any hospital or institution in the District of Columbia, such hospital or institution shall file with the Commission the name of each such intern and shall furnish such other information concerning such intern as the Commission may require."

(b) Sections 6 and 23 of such Act (D.C. Code, secs. 2–104, 2–119) are each amended by striking out "section 25(a)" and inserting in lieu thereof "section 25A".

SEC. 3. (a) Section 25 of the Healing Arts Practice Act, District of Columbia, 1928 (D.C. Code, sec. 2–121), is amended—

(1) by striking out in the first sentence "An applicant who desires to obtain a license

without examination" and inserting in lieu thereof "An applicant who desires to obtain a license by endorsement and without examination"; and

(2) by striking out the third and fourth sentences and inserting in lieu thereof "The Commission may issue a license by endorsement to an applicant under this section if it determines he has met the requirements of this section. A license issued to an applicant under this section shall correspond in scope as nearly as practicable to the license held by the applicant which is the basis for the issuance of a license under this section. No person may be licensed under this section who has been examined under authority of the Commission and who has failed."

(b) Sections 6, 11, and 23 of such Act (D.C. Code, secs. 2–104, 2–108, 2–119) are each amended by striking out "reciprocity" each place it appears in those sections and inserting in lieu thereof "endorsement".

SEC. 4. (a) (1) The first sentence of section 25A of the Healing Arts Practice Act, District of Columbia, 1928 (D.C. Code, sec. 2–122a) (as so redesignated by section 2 of this Act), is amended by striking out ": *Provided*, That the examination given by the national examining board" and inserting in lieu thereof the following: "or to anyone who has successfully completed the examination administered by the Federation of State Medical Boards of the United States if the Commission determines that the examination given by the national examining board or by such Federation, as the case may be,".

(2) The proviso in the last sentence of such section 25A is amended by inserting "or on the basis of successful completion of the examination administered by the Federation of State Medical Boards of the United States" immediately after "national examining board".

(b) (1) The second sentence of the first pargaraph of section 6 of such Act (D.C. Code, sec. 2–104) is amended by inserting "or by virtue of successful completion of the examination administered by the Federation of State Medical Boards of the United States as provided in such section," after "section 25A of this Act,".

(2) The sixth sentence of section 11 of such Act (D.C. Code, sec. 2–108) is amended by inserting "or by virtue of successful completion of the examination administered by the Federation of State Medical Boards of the United States." after "national examining board,".

(3) Clause (4) of the third sentence of section 23 of such Act (D.C. Code, sec. 2–119) is amended by inserting "or by virtue of successful completion of the examination administered by the Federation of State Medical Boards of the United States" after "national examining board."

(4) The fourth sentence of such section 23 is amended by inserting "or on the basis of successful completion of the examination administered by the Federation of State Medical Boards of the United States" immediately after "national examining board".

SEC. 5. (a) Section 50 of the Healing Acts Practice Act, District of Columbia, 1928 (D.C. Code, sec. 2–141), is repealed.

(b) The amendments made by this Act shall not be construed as affecting any provision of Reorganization Plan Number 3 of 1967, except that the Commissioner of the District of Columbia and the District of Columbia Council shall exercise their respective functions under the Healing Arts Practice Act, District of Columbia, 1928, through the Commission on Licensure to Practice the Healing Art established by section 4 of such Act (as amended by this Act).

(c) The members of the Commission on Licensure to Practice the Healing Art in office on the date of the enactment of this Act shall continue in office until at least four members have been appointed to that Commission under section 4(a)(1) of the Healing Arts Practice Act, District of Columbia, 1928 (as amended by this Act).

Mr. FUQUA. Mr. Speaker, I move to strike the last word.

Mr. Speaker, the purpose of H.R. 13837 is to amend the District of Columbia Healing Arts Practice Act in three respects, as follows:

First, to revise the make of the Commission on Licensure, increasing the number of members from five to 11 and assuring a broad representation of the medical profession and other areas of the community's professional skills;

Second, to provide for temporary licensure of physicians and osteopaths who are engaged in residency and fellowship training programs in the District of Columbia; and

Third, to broaden the use of endorsement as a method of licensure, by eliminating the application of reciprocity as a barrier to the admission of competent physicians to practice in the District of Columbia.

PROVISIONS OF THE BILL

1. COMMISSION ON LICENSURE

Section 4 of the District of Columbia Healing Arts Practice Act of 1928 (D.C. Code, sec. 2–103; 45 Stat. 1327) presently provides for a five-member Commission on Licensure to Practice the Healing Art in the District of Columbia, consisting of the Commissioner of the District of Columbia, the U.S. Commissioner of Education, the U.S. attorney for the District of Columbia, the Superintendent of Public Schools of the District of Columbia, and the Director of the District of Columbia Department of Public Health. This Commission is responsible for the licensing of physicians, osteopaths, and others who practice the healing art in the District of Columbia. They are aided in this function by an examining board, whose duty is to examine the applicants for such licensure as provided by law, and to report their findings with respect to the candidates' qualifications to the Commission.

It will be noted that this Commission, as presently constituted, includes only one physician in its membership. Also, the lay members of the Commission are all officials with a heavy burden of time-consuming duties and responsibilities in other areas, for which reason they cannot be expected to take any great interest in the operation of this Commission on Licensure or to have any particular training or expertise in its vitally important work.

Section 1 of the bill, H.R. 13837, will provide for an 11-member Commission on Licensure To Practice the Healing Art. Nine of these members shall be appointed by the Commissioner of the District of Columbia, as follows:

Three members from among six physicians in private practice in the District, and who are nominated by the Medical Society of the District of Columbia.

Four members, consisting of one physician from each panel of two nominated by the deans of the three local medical schools and by the Association of Osteopathic Physicians of the District of Columbia, Inc.

Two members who are not physicians, and who represent the community at large.

The remaining two members of the Commission will be the District of Columbia Corporation Counsel or his delegate, and the Director of the District of Columbia Public Health Department, both ex officio. The nine members appointed by the District of Columbia Commissioner shall serve 3-year terms. However, the terms of the original appointees will be staggered so as to provide a continuity of membership.

It is obvious that the membership of this newly created Commission, which will include seven physicians representing a broad spectrum of the city's medical community, as well as a representative of the District of Columbia Department of Public Health and a legal representative from the District of Columbia Corporation Counsel's office, will assure a high degree of professional interest and competence. Further, the two lay members will presumably be selected for their demonstrated special interest in the city's health problems, and their presence on the Commission will provide added balance in the public interest. For these reasons, it is the opinion of your committee that such a body will constitute a far more effective agency for the licensing of medical and osteopathic physicians in the District of Columbia than can the Commission as presently constituted.

Our committee believes also that the system of nominations for membership, from which the District of Columbia Commissioner will select the medical appointees to the Commission, will be invaluable to the Commissioner by assuring the high caliber of his appointees and their proper distribution among the various segments of the medical community.

2. TEMPORARY LICENSURE FOR RESIDENTS AND FELLOWS

Section 2 of the bill authorizes the Commission to issue, without examination, temporary licenses to persons holding the degree of doctor of medicine or doctor of osteopathy who wish to participate in residency or fellowship trainship programs in the District of Columbia. These temporary licenses shall be valid for 1 year, and renewable for additional 1-year periods not exceeding a total of 4 additional years.

These residents and fellows will have completed their internship, and hence will be advanced trainees in the medical profession. However, they will be limited in their practice and training under this temporary license to the confines of the hospitals or other medical facilities in which they are employed, and will be permitted to practice only under the supervision of the attending medical staffs of these institutions. Thus, they will not be licensed to engage in the general practice of medicine.

The purpose of the temporary license is to enable these residents and fellows, in the course of their service as trainees, to sign birth and death certificates, prescriptions for narcotics, barbiturates, and other drugs, and other documents, all of which functions require medical licensure in the District of Columbia. This

authority will of course greatly enhance the contribution of these residents and fellows to the institutions and to the attending medical staffs under whose supervision they will serve.

Our committee is informed that 37 States now require residents serving in hospitals to be licensed or registered, and seven of these require full licensure to practice medicine. It is the committee's opinion that the temporary license for limited practice, as provided in H.R. 13837, is desirable and appropriate for the District of Columbia.

The bill does not provide for the licensing of interns in the city's medical institutions, but it does require that the names of such interns be filed with the Commission.

3. WIDER USE OF LICENSE BY ENDORSEMENT

Section 25 of the District of Columbia Healing Arts Practice Act (D.C. Code, sec. 2–121; 45 Stat. 1335) presently provides for licensing by endorsement, without examination, of physicians or osteopaths who are licensed in other jurisdictions of the United States or in foreign countries, and who possess the qualifications required for licensure in the District of Columbia—provided, however, that the State in which the candidate is licensed maintains a policy of reciprocity with the District with respect to such licensure by endorsement. This limitation does not apply in the case of physicians licensed in foreign countries.

At this time, all State and territorial medical licensing boards do have such a reciprocal relationship with the District of Columbia, except for Florida, Hawaii, and the Virgin Islands. Hence, under existing law, a physician or an osteopath licensed in these jurisdictions and who wishes to practice in the District may obtain a license to do so only by taking the written examination, even though he may have been out of school for some years. All such applicants have previously been required to pass such examinations, of course.

Section 3 of the bill, H.R. 13837, remove this unrealistic barrier to the licensing, by endorsement and without examination, of applicants who meet all the requirements for a license to practice the healing art in the District of Columbia, with no limitation as to reciprocity between the District and other jurisdictions.

This section provides further however, that licensure by endorsement may not be allowed in the case of any applicant who has previously been examined under the authority of the Commission and failed. Thus, there will be no lowering of the present standards for licensure to practice the healing art in the District of Columbia.

PREVIOUS LEGISLATION

Public Law 115 of the 90th Congress, approved October 24, 1967 (81 Stat. 336; D.C. Code, sec. 2–133), waived the requirement of licensure to practice the healing art in the District of Columbia in the case of physicians or osteopaths practicing entirely within the confines of hospital or other medical facilities under the jurisdiction of the District of Columbia Department of Public Health. This proposed legislation, H.R. 13837, will not affect that provision of law in any way.

SUPPORT FOR THE BILL

At a public hearing conducted on September 4, 1969, spokesmen for the Medical Society of the District of Columbia expressed that group's unqualified endorsement of H.R. 13837 as reported by your committee. The bill is endorsed also by the respective deans of Howard University College of Medicine, Georgetown University School of Medicine, and George Washington University School of Medicine, and by the Osteopathic Association of the District of Columbia, Inc.

CONCLUSION

It is the opinion of our committee that the amendments to the District of Columbia Healing Arts Practice Art contained in H.R. 13837 will provide for a more realistic, effective, and desirable administration of that act, and that the enactment of this proposed legislation is therefore in the public interest.

Mr. NELSEN. Mr. Speaker, will the gentleman yield?

Mr. FUQUA. I am happy to yield to the gentleman from Minnesota.

Mr. NELSEN. This bill seemed to be a very needed piece of legislation. Recommendations came to the committee to put licensing procedures and authorities in the hands of the city council. It was the feeling of the committee that there needed to be some revision of our licensing provisions here in the District of Columbia patterned pretty much after the provision of the States.

I checked with my good colleague, Dr. HALL, who should know more about it than I. He indicated to me it was a good bill. I am sure he will want to comment about it, and I hope the gentleman will yield to him.

Mr. FUQUA. I am happy to yield to the gentleman from Missouri.

Mr. HALL. Mr. Speaker, I appreciate the gentleman's yielding and the remarks of my colleague from Minnesota.

I have studied the committee's report in detail on this bill, and I certainly would like to compliment the committee for the work it has done in presenting what should be an almost ideal Healing Arts Practice Act for the District of Columbia.

As the gentleman from Minnesota says, I have long been interested in this. Actually, I interned here—in the District of Columbia—some 35 or 36 years ago, and I was at that time personally interested in the Healing Arts and Registration Act of the District of Columbia; as a matter of fact, I took the Maryland exam in competition with the Johns Hopkins graduates in the wintertime of 1935, in lieu thereof because of the always present question of interstate reciprocity, expense, and so forth.

I am glad we are actually getting the District Healing Arts Practice Act straightened out. I believe the committee should be particularly commended on the perception and depth to which it has gone about getting actual practitioners who do know the problems of serving and selling their trained category of personal services in the quality care of human beings to the people of the District of Columbia.

I believe it is a good bill. I recommend it be passed.

Again I commend the committee for the report and the legislation.

Mr. BROYHILL of Virginia. Mr. Speaker, I rise to commend to my colleagues for their favorable action the bill H.R. 13837, which I was pleased to cosponsor with my colleague from Florida (Mr. FUQUA).

This bill will amend the District of Columbia Healing Arts Practice Act in three major respects, as follows:

First. Establish new requirements for the appointment of a Commission on Licensure to Practice the Healing Art, which will increase the number of members of this Commission from 5 to 11, and also will provide broad representation of the healing arts profession and other areas of professional skill and interest in the city;

Second. Provide for temporary licensing, without examination but with certain requirements, of doctors of medicine or osteopathy who seek to participate in residency or fellowship training programs in medical institutions in the District; and

Third. Establish broader and more realistic criteria for licensing, by endorsement and without examination, of applicants who are licensed in other jurisdictions or have successfully passed standard examinations for such licensure, and who meet all the requirements for licensing as specified in the District of Columbia Healing Arts Practice Act.

Under existing law, the Commission on Licensure to Practice the Healing Art in the District of Columbia has only one physician in its membership, the Director of the District of Columbia Department of Public Health. The other members are the Commissioner of the District of Columbia, the U.S. Commissioner of Education, of the District of Columbia Superintendent of Schools, and the U.S. Attorney for the District of Columbia. It is obvious that the lay members of this Commission as presently constituted can have little interest in its operation, and because of their heavy burden of other duties and responsibilities can have little or no time to devote to its operation.

By contrast, the proposed new Commission on Licensure will include three physicians in private practice in the District of Columbia, three physicians representing each of the three local medical schools, one osteopathic physician in practice in the District, and a representative of the District of Columbia Health Department. In addition, there will be two nonphysician members representing the community at large, whom the Congress will expect to be appointed by reason of their special interest in the health problems of the city, and an attorney from the office of the District of Columbia Corporation Counsel.

There is no question that this new Commission, by virtue of its much greater representation from the medical profession itself, will provide a much more effective administration of licensure of medical and osteopathic practitioners in the District.

The bill will further modernize and update the District of Columbia Healing Arts Practice Act by authorizing the issuance of temporary licenses to physicians and osteopaths who wish to participate in residency and fellowship training programs in the various medical institutions in the District of Columbia. These licenses will be issued for a 1-year period, and will be renewable for additional 1-year periods not to exceed 4 years in the aggregate.

These temporary licenses will not permit these physicians to engage in the general practice of medicine. Instead, they will be restricted to practice only in the hospital or other medical institution in which they are engaged, and only under the supervision of the medical staffs of those institutions. The purpose of the temporary license is to enable these advanced trainees in the medical profession to perform such duties as signing birth and death certificates, prescriptions for narcotics—within the restrictions of the Federal Narcotics Act—barbiturates, and other drugs, as well as other legal documents incident to their training work. These residents and fellows are thoroughly capable of assuming these responsibilities, and by doing so will not only increase the scope of their own medical experience but also will be of greater service to the hospitals and the medical staffs by whom they are employed.

I am informed that temporary licensing of residents and fellows in training is now required by 37 medical licensing boards throughout the country, and it is obvious that this is a growing practice which is definitely in the public interest. The bill will not provide for such temporary licensing for interns, but will require that they be registered with the Commission by name.

The final major provision of H.R. 13837 will remove a legal impediment existing in present law, with respect to the licensing of physicians and osteopaths who are licensed in other jurisdictions, and who meet all the requirements of licensure prescribed in the District of Columbia Healing Arts Practice Act, by endorsement and without examination. At present, this licensure by endorsement is restricted to those applicants who can submit proof that the licensing agency of the jurisdictions from whence they come grants, without examination, to physicians licensed in the District of Columbia, licenses to practice within its jurisdiction. In other words, such licensure is granted to physicians only from jurisdictions which maintain a policy of reciprocity with the District of Columbia in this respect.

At the present time, all jurisdictions within the United States do maintain such a reciprocal relationship with the District of Columbia with the exception of Florida, Hawaii, and the Virgin Islands. Thus, physicians licensed to practice in those States and who wish to practice in the District of Cclumbia, cannot be licensed to do so without taking the written examination. Inasmuch as many of these applicants have been out of medical school for many years, and yet have a record of proven competency in the practice of the healing art, I regard this situation as ridiculous.

This proposed legislation will correct this inequity by abolishing this unrealistic barrier to the proper application of the issuance of licenses by endorsement to qualified physicians from other jurisdictions regardless of reciprocity. There is no reason whatever, in my judgment, to maintain the present ban on such licensure by endorsement for physicians or osteopaths who happen to be licensed in Florida, Hawaii, the Virgin Islands, or anywhere else.

I wish to point out that inasmuch as the bill will not permit licensing by endorsement, and without examination, to any candidate who has taken the written examinations required by the Commission and failed such examination, this amendment will in no way lower the standards now existing for the practice of the healing art in the District of Columbia.

This proposed legislation has the endorsement of the Medical Society of the District of Columbia, and also of all the local medical colleges. It is definitely in the public interest, and I solicit the support of my colleagues in behalf of its enactment.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

TO AUTHORIZE TRANSFER OF BLOOD COMPONENTS WITHIN THE DISTRICT OF COLUMBIA

Mr. FUQUA. Mr. Speaker, by direction of the Committee on the District of Columbia, I call up the bill (H.R. 12673) to authorize the transfer by licensed blood banks in the District of Columbia of blood components within the District of Columbia.

The Clerk read the bill, as follows:

H.R. 12673

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That any blood bank in the District of Columbia, holding an unsuspended and unrevoked license issued under section 351 of the Public Health Service Act, may transfer, for use in the District of Columbia, platelets and other components of blood in general use in the States (as determined by the Commissioner of the District of Columbia), produced in such blood bank, to physicians licensed under the Healing Arts Practice Act, District of Columbia, 1928 (D.C. Code, sec. 2–101 et seq.), to District of Columbia hospitals, and to licensed private hospitals and other medical facilities in the District of Columbia.

(b) Section 351 of the Public Health Service Act shall not apply with respect to any transfer made in accordance with the first section of this Act.

The SPEAKER. The gentleman from Florida is recognized.

Mr. FUQUA. Mr. Speaker, the purpose of H.R. 12673 is to authorize the Commissioner of the District of Columbia to determine that blood platelets and other blood components in general use in the States may be transferred from local licensed blood banks in which they are produced to licensed physicians, to District of Columbia hospitals, and to licensed private hospitals and other medical facilities within the District of Columbia. This authority will place the District of Columbia in the same position as the States, all of which permit the intrastate transfer of blood components within their borders.

NEED FOR LEGISLATION

Section 351 of the Public Health Service Act (58 Stat. 702), as amended (42 U.S.C. 262), prohibits the transfer in interstate or foreign commerce, or within the boundaries of the District of Columbia, of certain biological products including blood platelets and other blood components, unless both the establishment in which these components are prepared and the products themselves are licensed under standards prescribed by the Secretary of Health, Education, and Welfare. Transfer of unlicensed such products is permitted, however, within the boundaries of the various States, for use in those States, whereas these same products cannot be exchanged between medical facilities in the District of Columbia.

At present, there are no acceptable standards in existence for many of the components of human blood, and therefore the license required under section 351 of the Public Health Service Act is not available. The basic problem involved, your committee is informed, is that no means has been developed for the preservation of certain blood components in such a condition that they may be used safely and effectively after an appreciable period of time following their preparation. Blood platelets, for example, will remain in a usable condition for not more than 6 to 8 hours. Until some solution to this problem is discovered, the transfer of these components in interstate or foreign commerce cannot safely be approved. The shortness of the shelf life of these products, however, even though it makes their use after long-distance transfer questionable, still is long enough to permit their successful local use where they can be utilized within a short time after their production in a blood bank. Such local uses are recognized by the American Association of Blood Banks in their brochure, "Technical Methods and Procedures of the Association of Blood Banks" (1966).

EFFECT OF LEGISLATION

The major blood components whose use will immediately be affected by the enactment of this proposed legislation are platelet concentrates, cryo-precipitates, and frozen red blood cells. It is known also that other blood components will become available from time to time. Also, it appears likely that in time some or all of these products will become licensed. However, the present legal barrier to such licensing prevents the proper treatment of patients in the District of Columbia with unlicensed blood components which are now in general use.

Many of these blood components are vital to proper patient care in a variety

of blood disorders. For example, platelet concentrates are a valuable adjunct in the treatment of leukemia patients under chemotherapy, to prevent major bleeding. Also, cryo-precipitates are the accepted form of treatment for hemophilic patients, and frozen red blood cells are currently the best known method of storing blood for the rare blood types.

Our committee is informed that these blood products will probably be prepared locally by the American Red Cross or in blood banks which have been certified by the National Institutes of Health or the American Association of Blood Banks. At present, 59 Red Cross Blood Centers throughout the United States follow accepted procedures in the preparation of both licensed and unlicensed blood and blood components. These procedures are on file with the Division of Biologics Standards of the National Institutes of Health, which is the licensing agent for all blood banks under section 351 of the U.S. Public Health Service Act.

HEARING

A public hearing on this bill was conducted on September 4, 1969, at which time approval of the proposed legislation was expressed by or on behalf of the Commissioner of the District of Columbia, the District of Columbia Department of Public Health, the Committee on Blood of the Medical Society of the District of Columbia, the Division of Biological Standards of the National Institutes of Health, and the Washington Regional Chapter of the American Red Cross. No opposition to the enactment of the bill was expressed.

CONCLUSION

It is the opinion of our committee that this legislation is clearly needed to allow patients in the District of Columbia to enjoy the same advantages in the use of these unlicensed products as do patients in all the States, and thus to assure them the benefits of treatment with the most effective tools known to modern medical science. For this reason, we unanimously endorse its passage.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

AMENDING THE DISTRICT OF COLUMBIA LAW WITH RESPECT TO COMMERCIAL FACILITIES FOR THE PARKING OR STORAGE OF MOTOR VEHICLES

Mr. FUQUA. Mr. Speaker, by direction of the Committee on the District of Columbia, I call up the bill (H.R. 9257) to amend the code of laws of the District of Columbia with respect to facilities for the parking or storage of motor vehicles.

The Clerk read the bill, as follows:

H.R. 9257

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That title 40 of the code of laws of the District of Columbia is amended by the addition of the following sections:

"218. (a) Any person who shall offer to park or store for a fee motor vehicles within the District of Columbia shall be required to post conspicuously, in a manner visible from street, sidewalk, or other public space at each place at which such offer is made, a sign setting forth the address and telephone number at which an agent or such person shall be available, at all hours of the day and night, to release, on reasonable identification of ownership, or of status as agent or servant of the owner, any vehicle parked or stored on the premises, upon payment of the published fee for such parking or storage.

"(b) It shall be the responsibility of the person described in subsection (a) of this section to insure that his agent will be available at the location described in the public notice required by subsection (a) of this section at all hours of the day and night during which the premises are not open, for dealing with the public.

"(c) The provisions of this section shall apply to any motor vehicle parking or storage facilities of the District of Columbia, or any instrumentality, for which a fee is charged, and to any person contracting with the District of Columbia for the operation on public space of facilities for the parking or storage of motor vehicles for a fee."

With the following committee amendments:

Page 1, strike out lines 3 through 5 and insert in lieu thereof the following: "That the District of Columbia Motor Vehicle Parking Facility Act of 1942 (District of Columbia Code, secs. 40–801—40–809a) is amended by redesignating section 11 as section 12 and by adding after section 10 the following new section:

" 'SEC. 11. (a) Any person who shall offer to park or store".

Page 2, strike out the quotation mark at the end of line 17, and after line 17 insert the following:

" '(d) Any person who violates this section shall be fined not more than $100. If such violation is a continuing one, each day of such violation shall constitute a separate offense.' "

The committee amendments were agreed to.

Mr. FUQUA. Mr. Speaker, the purpose of the bill H.R. 9257, as amended and reported by our committee, is to require the owner or operator of a commercial facility for the parking or storage of automobiles to post conspicuously on the premises a sign setting forth the address and telephone number at which an agent of such owner or operator shall be available, at any hour when the facility is not open for business, to release any vehicle parked or stored on the premises, upon adequate identification of the claimant and the payment of any legitimate charges due.

Our committee is informed that most operators of motor vehicle parking facilities in the District of Columbia do post signs on the premises advising customers as to how they may reclaim their cars during the times when the facility is not open for business, and thus are in substantial voluntary compliance with the provisions of this bill. However, there are other such operators who apparently have not felt it necessary to display this concern for their customers' welfare, and this neglect sometimes poses serious inconvenience for the owners of the vehicles.

Examples of situations involving such inconvenience which have come to the attention of members of this committee, include the following:

1. That of the motorist who is delayed in the downtown area until after the closing hour of a parking facility, which may be earlier than that to which he has been accustomed.

2. That of the motorist who leaves his automobile at a parking facility overnight by intent, without realizing that the facility will not be open for business on the following day which happens to be a Saturday, a Sunday, or a holiday. Also in such circumstances, even though the motorist was aware of this, he may find an unexpected need for his car on that day.

Our committee is advised of one particular instance when a Member of Congress found it necessary to enlist the aid of the Metropolitan Police Department in freeing the automobile of a constituent who found it impossible to reclaim his car from a locked and unattended commercial parking facility. In this instance, the owner had left his car in the parking garage on a Friday, and when he returned the following day he found the premises closed. The operator of this garage also operated some other parking facilities, which were open for business on weekends. However, he had left no instructions with the attendants at any of those other facilities as to how he might be located by patrons in such emergencies, and in addition he had an unlisted telephone number at his residence.

Such incidents as these must be of particular concern to Members of Congress, by reason of the flow of visitors from their districts to the Nation's Capital each year, many of whom are not familiar with the local customs and practices involved in the commercial parking of motor vehicles here. This can lead to considerable inconvenience and distress, as in the case described above when all of this constituent's luggage and clothing were in his car.

Our committee has also heard reports of similar situations when area physicians have had difficulty in reclaiming their cars from parking facilities which they unexpectedly found locked, leaving them without prompt access to their medical kits.

IMPOUNDING OF VEHICLES

At a public hearing on this bill conducted on October 15, 1969, some questions arose as to whether under the provisions of section 40–810 of the District of Columbia Code, it would be legally possible for the operator of a commercial parking facility to have a customer's car impounded if left in the garage or lot after closing hours, to circumvent the new responsibility placed upon him by the enactment of this proposed legislation.

The above-cited section of the District of Columbia Code provides for, among other things, the impoundment by the police of motor vehicles which are parked on private property without the consent of the owner thereof.

Our committee wishes to make clear its intention that the provisions of section 40–810 of the District of Columbia Code shall not be used in any way to thwart the intended effect of this proposed new legislation.

COMMITTEE AMENDMENTS

The only substantive amendment to the bill is the addition of a provision for a penalty, not to exceed $100, for any violation of the provisions of the bill. It is further provided that if the

violation is a continuing one, each day of such violation shall constitute a separate offense.

The other amendment is purely technical in nature.

CONCLUSION

It is the view of our committee that regardless of the hours of operation of a commercial parking facility, the parked or stored motor vehicle remains the property of the owner, and it should be returnable to the lawful owner at any time, upon the payment of the legitimate parking or storage charges due. Accordingly, the committee unanimously endorses the bill.

(Mr. MARSH asked and was given permission to revise and extend his remarks.)

Mr. MARSH. I am grateful to the committee, Mr. Speaker, for giving attention to the circumstances which prompted me to offer this bill.

This is not major legislation, but the situation it proposes to alleviate certainly is major to the citizen who encounters it.

It merely seeks to insure that the owner of a motor vehicle have access to his vehicle at all times convenient to him, irrespective of the hours of operation of a commercial parking facility to which he had entrusted the vehicle temporarily.

As set forth in the committee report, the bill would require that the operator of the commercial facility post a notice as to where the owner of the vehicle might find a person with authority to release his automobile during times in which the garage or lot is closed.

I should emphasize that there would be no requirement that an attendant be kept on duty at all times at the premises in question—an arrangement to permit reaching such a person by telephone would be sufficient.

It should be recognized that many garages and parking lots already are in substantial compliance with the provisions of the bill.

Additionally, the owner of the vehicle obviously would be expected to pay parking charges due when obtaining the release of the automobile.

I believe this bill would prove helpful, particularly, Mr. Speaker, to visitors to the Nation's Capital who might not take pains to ascertain the operating hours of a parking facility when leaving their vehicles.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

TO ELIMINATE STRAW PARTY DEEDS IN JOINT TENANCIES

Mr. FUQUA. Mr. Speaker, by direction of the Committee on the District of Columbia, I call up the bill (H.R. 13564) to provide that in the District of Columbia one or more grantors in a conveyance creating an estate in joint tenancy or tenancy by the entireties may also be one of the grantees.

The Clerk read the bill, as follows:

H.R. 13564

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 1031 of the Act entitled "An Act to establish a code of law for the District of Columbia", approved March 3, 1901 (D.C. Code, sec. 45–816), is amended (1) by adding at the end thereof the following: "An estate in joint tenancy or tenancy by the entireties may be created by a conveyance in which one or more of the grantors in the conveyance is also one of the grantees.", and (2) by striking out "and joint tenancies" in the side heading of such section and inserting in lieu thereof the following: ", tenancies by the entireties, and joint tenancies".

Mr. FUQUA. Mr. Speaker, the purpose of H.R. 13564 is to eliminate to the common law requirement, which is presently applicable in the District of Columbia; namely, that creation of a joint tenancy in real property by act of one of the parties thereto, must be accomplished through a third, a so-called "straw," party.

BACKGROUND

The Code of the District of Columbia makes no provision relating to the creation of joint tenancies in real property; consequently, the common law applies in such conveyances involving real property located in the District. A joint tenancy in real property is one in which the owners hold undivided interests which pass to the surviving tenants until the last surviving tenant takes the entire interest. A tenancy by the entirety is a joint tenancy between husband and wife.

Under the common law, a basic element of joint tenancy is that the interests of the grantees must arise *at the same time,* by the same purchase or grant, thus precluding the owner of real property from directly conveying a joint interest therein to another. It is necessary under this concept that a conveyance creating a joint tenancy be granted through a third party. To comply with the provisions of the common law, for example, a man wishing to give his wife such an interest in property owned by himself individually must first deed the property to another person, referred to as a straw party, who in turn deeds it back to the husband and wife.

PROVISIONS OF THE BILL

H.R. 13564 amends the act of March 3, 1901 (D.C. Code, sec. 45–816) to provide by statute that a joint tenancy in real property may be created by an owner's directly conveying title to himself and another or others in joint tenancy.

The bill also amends the heading of this section so that it properly indicates that tenancies by the entireties is also treated in the section.

REASONS FOR THE LEGISLATION

The use of a third person, the straw party, in the creation of a joint tenancy is a legal fiction. It involves a record holder of title who is actually a stranger to the intended chain of title, solely to meet a technical requirement of the law. The transaction under common law is encumbered by an additional deed and recording thereof. It has an additional disadvantage: the straw party may have filed against him a judgment or lien which may attach to and cloud the title of the property in which the straw is merely a conduit of title. This bill will protect the true interests of innocent parties in such situations.

The bill will eliminate the unnecessary intermediary and permit the owner of real property to create a joint tenancy with a single deed, granting an interest directly to a joint tenant or joint tenants.

HEARING

A public hearing on this proposed legislation was conducted on October 15, 1969. Testimony in favor of the bill was presented by representatives of the District of Columbia government and of local title companies. No opposition was expressed to the passage of the bill.

Mrs. SULLIVAN. Mr. Speaker, will the gentleman yield?

Mr. FUQUA. I yield to the gentlewoman from Missouri.

Mrs. SULLIVAN. Mr. Speaker, I wish to ask the chairman of the subcommittee or the chairman of the full committee some questions pertaining to this bill.

Can either one of them tell me whether the District law now requires the use of straw parties in connection with a joint tenancy?

Mr. FUQUA. Yes. it does.

Mrs. SULLIVAN. Then, if this bill passes, it will no longer be necessary for the parties to engage in a phantom or ghost transaction with a person who never actually owns the property?

Mr. FUQUA. Let me say that the gentlewoman is eminently correct. Many times ghost parties tend to cloud the deeds later on.

Mrs. SULLIVAN. Would there, if this bill is enacted, be any further legitimate need for straw parties in any other type of real estate transaction in the District?

Mr. FUQUA. To my knowledge, there would not be any other need. Of course, this particularly relates to joint tenancies between parties.

Mrs. SULLIVAN. I realize that this particular bill is restricted to joint tenancies in which straw parties are now required. But would the gentleman object to outlawing straw party deals in the District of Columbia altogether?

Mr. FUQUA. I see no real reason for them to exist. I think they are a nuisance and personally at this time I must say we have not held any hearings going that far particularly. However, as it related to joint tenancies we held hearings on it. I would be happy if the gentlewoman has a bill which we can have considered by the committee.

Mrs. SULLIVAN. The reason I have asked these questions is that in an investigation by an ad hoc subcommittee of the Committee on Banking and Currency we went into the question of speculative real estate deals in the Washington, D.C., area and we discovered that the straw party was the principal and essential ingredient in artificially marking up—kiting—the value of a house to provide a fictitiously high sales price on which a higher mortgage could then be based. This has been a vicious and unconscionable practice here in the District.

Did the gentleman's committee consider going into that aspect of it in considering this bill?

Mr. FIQUA. No, madam, we did not go that far. I assume this is a situation which probably is not confined alone to the District of Columbia, the straw party

deals. This would be a national problem and not restricted solely to the District of Columbia.

Mrs. SULLIVAN. Mr. Speaker, I would like to say to the gentleman further, that if this ad hoc investigation on which we have yet to file our report should find this to be a bad situation as all the evidence indicates, perhaps we should delay action on this measure today until amendments could be prepared dealing with the general use of straw parties. If you do not wish to do that, I wonder if you would assure us that you will go into that aspect of it, in the District Committee, if our study finds that it is primarily a local problem rather than a national one. Straw parties are being used here in many transactions and they are never shown to be straws. The speculators transfer property to the straw party and sometimes from one straw to another, and nothing is ever shown on the deed that the property has changed hands in fictitious deals. This practice is artificially pushing up the sales prices on which higher mortgages can then be based. This practice virtually destroyed one savings and loan in the District.

Mr. FUQUA. I would say to the distinguished gentlewoman from Missouri that after the ad hoc committee completes its investigations and findings, certainly it would be an appropriate time when we could look into this matter and if legislation is needed I feel as though we could get proper hearings to do it and eliminate that, if it does represent a problem in the District of Columbia.

However, I would hope that we could go ahead with this bill as it relates to joint tenancies.

Mrs. SULLIVAN. I realize that this bill just deals with joint tenancies, but I will call the chairman's attention to this matter again when we have completed the work of the ad hoc subcommittee in the Committee on Banking and Currency on real estate speculation involving straw party transactions.

PROCEDURES FROM MIDDLE AGES

While I do not profess to be a real estate expert I believe we can simplify the transfer of real property. It has always been a source of wonderment to me that many of the procedures utilized in our modern mobile economy for the simple transfer of real estate, according to experts I have consulted, date back to the Middle Ages and the antiquated rules of the English common law.

It makes a great deal of sense to permit the joint owners of real estate to change title to that real estate through a simple single transfer, as H.R. 13564 would do, rather than go through all of the expense and confusion that results from transfer of the property to a straw party and then retransfer to the party intended to be the owner.

Therefore, I support H.R. 13564 as written.

But if we are going to address ourselves to the problem of eliminating abuses in residential property transfers, we should give serious thought to eliminating entirely the use of straw parties. This is where the evil exists.

Many of the members may recall a series of articles which appeared in the Washington Post last January, "Mortgaging the Ghetto." The articles outlined shocking and widespread real estate speculation in the District of Columbia where real estate operators would buy up properties at market, or below market, prices and then through a series of transactions using straw parties, fictitiously drive up the price of the property before unloading it on a poor family with a mortgage far more than the property was worth.

STRAW PARTY WAS ESSENTIAL INGREDIENT

The straw party device was an essential ingredient in all these transactions.

Shortly after this session of Congress convened, Chairman PATMAN of the House Banking Committee appointed me as chairman of a special ad hoc subcommittee consisting of five members of the full committee to inquire into the questions raised by these articles. The other members appointed were Representatives HANLEY, BRASCO, MIZE, and BEALL of Maryland.

The subcommittee held 5 days of hearings on real estate speculation in the District of Columbia, as part of our overall assignment. I can assure you that some of these things we found were scandalous.

Lusk's Real Estate Directory publishes all real estate transfers in the District of Columbia on a monthly, and on an annual, basis. You can pick up any of the annual volumes of this directory for the last 8 years and, with the help of a knowledgeable District of Columbia real estate man, you can pick out any number of these speculative deals. They were part and parcel of certain types of real estate activities in the inner city area of the District of Columbia.

The real estate speculator used a number of other devices or persons in accomplishing his objective of a quick and easy profit at the expense of the homeowner. He needed a cooperating appraiser for his phony appraisal, he needed a cooperating lending institution willing to lend money on the property on the basis of an inflated appraisal. He sometimes needed the cooperation of a settlement house, and sometimes a settlement company, perhaps to hold a worthless check or to provide an employee to serve as his straw party. These practices can occur, generally, only when there is a surplus of mortgage funds available, not during a period of tight money. So they are not going on now to any appreciable extent.

"TRUTH IN SETTLEMENT LAW" NEEDED

But when the subcommittee makes its report it will make a number of recommendations, I hope, which will deal effectively with the questions involved in real property transfer procedures, at least where the Federal Government is involved, and also here in the District where the local laws depend upon congressional action.

We should outlaw the use of straw parties altogether. Why should not the buyer of real estate, particularly the homeowner, know exactly who he is purchasing the property from, and how much the seller actually paid for it?

It used to be the case that the purchase price of a property could be roughly ascertained through a mathematical calculation based on the revenue stamps appearing on the deed. A recent revision of the revenue laws has made this all but impossible. Commonsense and fairness would dictate that the money paid for the property involved be set forth on the deed.

During our hearings one of our witnesses, in criticizing the vague, complex and confusing real estate procedures here, called for a "truth in settlement law." The District of Columbia is certainly in need of such a law.

I do not oppose this bill today but I wish it covered more of the problems of straw parties than it does.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

VALIDATION OF DEFECTS IN LAND RECORDS

Mr. FUQUA. Mr. Speaker, by direction of the Committee on the District of Columbia, I call up the bill (H.R. 13565) to validate certain deeds improperly acknowledged or executed—or both—that are recorded in the land records of the Recorder of Deeds of the District of Columbia, and ask unanimous consent that the bill be considered in the House as in Committee of the Whole.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

Mr. SAYLOR. Mr. Speaker, reserving the right to object, I would say to my colleague from Florida, Mr. FUQUA, that certain questions have been raised by a number of lawyers with reference to this particular bill. I think it would be the better part of wisdom to pass this bill over until the next District Day. The reasons for it are very simple. First, a number of lawyers disagree violently with the statement in the committee report saying:

> The instruments comprising such records serve not to vest legal title in property but to constitute notice to the public.

Many lawyers here in the District say that the deed itself conveys title.

Second, many of the lawyers are afraid that bringing this bill up to January 1, 1969, will eliminate many defects that could and should be corrected if notice was served that deeds on record are defective.

Therefore, if this bill is called up, it will be necessary for me to offer an amendment making the perfecting date several years earlier.

Mr. FUQUA. Mr. Speaker, if the gentleman will yield, I might state that we had open public hearings and the Title Association in the District of Columbia supported the legislation and we were told that the District of Columbia Bar Association supported this legislation. No one from the District of Columbia Bar appeared in opposition. The District of Columbia government supported this legislation with certain amendments which were incorporated into the bill.

We were not aware of any problems that had developed or may be caused by the passage of this. I understand that

this is not unprecedented; that many States do this every so often, and pass a general law correcting errors that were made, and certainly not with criminal intent or illegal provisions, but honest errors that were made, and just correct them and remove those clouds that may exist on certain land transaction deeds.

Mr. SAYLOR. Mr. Speaker, I must say that I commend the committtee for the amendments that they offered. However, one of the objections is that it brings it up to January 1, 1969. The last bill was 1902. There are a lot of people who think that this bill, or a bill of this type, should be passed, but that it should not be brought up to January 1 of this year. I would suggest a date of January 1, 1962.

Mr. HUNGATE. Mr. Speaker, if the gentleman would yield, I think the gentleman from Pennsylvania raises some very valid problems that are inherent in this, and as one who was a practicing lawyer I agree with the gentleman from Florida that it would be wise to bring it up from 1902 or 1909, whatever date it is, but I would confirm the fear of the gentleman from Pennsylvania on bringing it up to 1969. For example, sometimes, as has happened in validating deeds, they have been incorrectly recorded without the seal of the notary public. Sometimes the notary public might say the deed did not have any seal because the grantor never came before me. So I think the suggestion of the gentleman from Pennsylvania is correct, that we should bring it up considerably, but maybe not up to yesterday, would be wise.

Mr. FUQUA. Mr. Speaker, if the gentleman would yield further, if the gentleman would offer such an amendment to change it to 1962 it will certainly be acceptable to me.

Mr. SAYLOR. Mr. Speaker, with that statement I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

The Clerk read the bill, as follows:

H.R. 13565

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled. That section 515 of the Act entitled "An Act to establish a code of law for the District of Columbia", approved March 3, 1901 (D.C. Code, sec. 45–408), is amended—

(1) by striking out "prior to the adoption of this code" and inserting in lieu thereof "prior to January 1, 1968,", and

(2) by inserting "(1)" immediately after "in the District" in the paragraph of such section designated "Seventh" and by adding before the period at the end of such paragraph the following: ", (2) which may have been recorded without the seal of the notary public before whom the acknowledgment was taken having been first attached, (3) in which the certificate of acknowledgment is not in the prescribed form, (4) which may not have been acknowledged before a proper officer, or (5) in which the official character of the officer taking the acknowledgment is not set out in the body of the certificate".

With the following committee amendment:

Page 1, line 8, strike out "1968" and insert "1969" and strike out "and".

AMENDMENT TO THE COMMITTEE AMENDMENT OFFERED BY MR. SAYLOR

Mr. SAYLOR. Mr. Speaker, I offer an amendment to the committee amendment.

The Clerk read as follows:

Amendment to the committee amendment offered by Mr. SAYLOR: On page 1, line 8, strike out "1969" and insert "1962".

The amendment to the committee amendment was agreed to.

The committee amendment, as amended, was agreed to.

COMMITTEE AMENDMENTS

The SPEAKER. The Clerk will report the remaining committee amendments.

The Clerk read as follows:

Committee amendments: Page 2, line 7, strike out "not" and immediately after "before" insert "a person who was not".

Page 2, line 10, strike out the period and insert a comma and "and".

Immediately following line 10 on page 2, insert the following:

"(3) By inserting '(a)' immediately after 'Defective acknowledgments.—' and by adding at the end of such section the following new subsection:

"'(b) This section shall not be construed to validate any deed with respect to which there was any misrepresentation, fraudulent act, or illegal provision in connection with its execution or acknowledgment.'"

The committee amendments were agreed to.

Mr. FUQUA. Mr. Speaker, the purpose of H.R. 13565 is to validate certain deeds and acknowledgments recorded in the land records of the District of Columbia prior to January 1, 1969.

Land records for the District of Columbia are kept by the Recorder of Deeds. The instruments comprising such records serve not to vest legal title in property but to constitute notice to the public. There are technical requirements for recordation, including acknowledgments and execution in prescribed form. A defect in either is a basis for objection to title.

Under present law, certain defective acknowledgments and executions in documents recorded prior to January 1, 1902, have been validated (D.C. Code, sec. 45–408). The seven classes of defects so validated include executions or acknowledgments by married women, by attorneys in fact, and before specified officials in foreign jurisdictions, as well as those wherein certain agents fail to declare the execution to be the act of the grantor; and those not having certain technicalities of acknowledgment.

There has been no curative legislation of defective acknowledgments and executions in the District of Columbia since 1902.

PROVISIONS OF THE BILL

H.R. 13565 provides for validation of the seven categories of defective acknowledgments and executions enumerated in existing law and recorded in the District of Columbia prior to January 1, 1968. In addition, it amends the category dealing with technicalities of acknowledgment. The present law in this respect relates only to omission of the legal certificate as to the official character of the person taking the acknowledgment. This provision is amended to include also omission of the seal of the notary public before whom the acknowledgment was taken; failure to follow the prescribed form in the certificate of acknowledgment; acknowledgment before persons not properly authorized; and omission of official designation of the person taking the oath.

The bill also provides a safeguard against abuse of such validations. An amendment to the bill as recommended by our committee specifically denies validation to misrepresentations or fraud in the acknowledgment or execution of a deed.

REASONS FOR THE LEGISLATION

Innocent parties to deeds or acknowledgments may offer for recording an instrument which is assumed to be properly acknowledged and executed, but which through inadvertence or misleading information fails to meet the prescribed technicalities for recordation. Defects may not be discovered for 10, 15, or 20 years, and when title is then challenged, it is costly, time consuming, and, in some cases, impossible to validate the instrument, as in the event of the death of one of the parties.

Although our committee believes that the Office of the Recorder of Deeds is careful in examination of documents offered for recordation, and regardless of the attention to detail given by persons preparing deeds, technical defects are occasionally overlooked and not found until someone is making a title search years later. Such defects may be minute—a misspelled or omitted word, or an illegible signature.

It is in the public interest that such defects not remain as a cloud on title to real property and that they be cured by appropriate legislation, such as the reported bill which follows the practice in many of the States.

HEARING

A public hearing on this proposed legislation was conducted on October 15, 1969. Testimony in favor of the bill was presented by representatives of the District of Columbia government and of a local title association. The District of Columba government proposed two amendments which are recommended by your committee. No opposition was expressed to the passage of the bill. Our committee is advised that both neighboring States, Maryland and Virginia, periodically and as often as every 2 years, enact similar curative legislation.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. FUQUA. Mr. Speaker, I ask unanimous consent that all Members may be permitted to extend their remarks in explanation of the bill just passed and the other bills considered today from the Committee on the District of Columbia.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

PROVIDING FOR CONSIDERATION OF H.R. 13950, FEDERAL COAL MINE HEALTH AND SAFETY ACT OF 1969

Mr. YOUNG. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 584 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 584

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 13950) to provide for the protection of the health and safety of persons working in the coal mining industry of the United States, and for other purposes, and all points of order against section 401(c)(1) of said bill are hereby waived. After general debate, which shall be confined to the bill and shall continue not to exceed three hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Education and Labor, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit. After the passage of H.R. 13950, it shall be in order in the House to take from the Speaker's table the bill S. 2917 and to move to strike out all after the enacting clause of the said Senate bill and insert in lieu thereof of the provisions contained in H.R. 13950 as passed by the House.

The SPEAKER. The gentleman from Texas (Mr. YOUNG) is recognized for 1 hour.

Mr. YOUNG. Mr. Speaker, I yield 30 minutes to the distinguished gentleman from Tennessee (Mr. QUILLEN), pending which I yield myself such time as I may require.

Mr. Speaker, House Resolution 584 provides an open rule with 3 hours of general debate for consideration of H.R. 13950, the Federal Coal Mine Health and Safety Act of 1969. After passage of the House bill, it shall be in order to take S. 2917 from the Speaker's table, move to strike all after the enacting clause of the Senate bill and amend it with two House-passed language.

All points of order are waived against section 401(c)(1) of the bill because that particular section contains an appropriation.

The purpose of H.R. 13950 is to protect the health and safety of coal miners and to combat the steady toll of life, limb, and lung.

The bill establishes procedures for the promulgation of mandatory health and safety standards by the Secretary of the Interior, who is responsible for developing and revising only mandatory safety standards. The Secretary of Health, Education and Welfare is responsible for developing and revising mandatory health standards.

Health and safety requirements are set forth in detail in titles II and III of the bill.

The bill authorizes and requires that an underground mine be inspected at least four times a year, with no advance notice being given.

Procedural mechanisms are established for finding dangerous conditions or violations and for the issuance of notices and orders with respect to them. Application for review of an order may be made within 30 days of its receipt.

A Board of Review is established whose functions are: Review of violations of mandatory health and safety standards; review of penalties; review of proposed mandatory health and safety standards; establish research objectives; conduct special study into possible Federal-State cooperative arrangement.

The Board shall be subject to judicial review by the U.S. Circuit Court of Appeals.

An operator found in violation of a health or safety standard, or any provision of the act, shall be assessed a civil penalty of not more than $10,000 for each violation. Anyone convicted of violating any order shall be subject to a penalty of not more than $10,000 or 6 months, or both. The penalty for a repeat conviction is not more than $20,000 or 1 year, or both. Anyone convicted of making a false statement or representation relative to the act shall be subject to a penalty of not more than $10,000 or 6 months, or both. These provisions apply to directors, officers, or agents of corporate operators, as well as operators.

Pay guarantees are provided to miners idled by a closure order and to miners disabled from pneumoconiosis or their widows.

Title II of the bill sets out interim mandatory health standards with regard to dust and provides for medical examinations for the miners.

Title III of the bill sets out interim mandatory safety standards for underground mines and covers roof support, ventilation, electrical equipment, fire protection, maps, blasting and explosives, hoisting and mantrips, emergency shelters, communication, and miscellaneous requirements.

The bill would impose on the owner of every coal mine a royalty of 2 cents on each ton of coal produced for use or sale, to be used to finance the medical examinations for miners and for the research activities provided in the bill.

The bill would authorize an appropriation equal to 2 cents for each ton of coal produced for use or sale during the preceding fiscal year. In addition, there is authorized to the Board an amount equal to any amount granted by any State to the Board except the appropriation based on the State's grant may not exceed more than 1 cent per ton of coal produced for use or sale in such State during the preceding year.

Mr. Speaker, I urge the adoption of House Resolution 584 in order that H.R. 13950 may be considered.

Mr. HALL. Mr. Speaker, will the gentleman yield?

Mr. YOUNG. I am glad to yield to the gentleman from Missouri.

Mr. HALL. Mr. Speaker, again we have all points of order waived against a specified section in a bill. I was listening but I apologize if I did not understand the gentleman from the Committee on Rules explanation for waiving points of order. Would the gentleman repeat that for Members now on the floor?

Mr. YOUNG. I will be glad to, Mr. Speaker. All points of order are waived against section 401(c)(1) of the bill because that particular section contains an appropriation, which makes this necessary.

Mr. HALL. In other words, that would be an appropriation on a legislative bill?

Mr. YOUNG. That is correct, Mr. Speaker.

Mr. HALL. I thank the gentleman.

The SPEAKER. The gentleman from Tennessee (Mr. QUILLEN) is recognized.

Mr. QUILLEN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, as the gentleman from Texas (Mr. YOUNG) has ably stated, House Resolution 584 makes in order for consideration H.R. 13950 under an open rule with 3 hours of general debate. Additionally, a waiver of all points of order was granted by the committee upon request of the Education and Labor Committee. This specific waiver covers the language of section 401(c)(1) of the bill on pages 108 and 109. This waiver was granted because this paragraph contains appropriating language in violation of the rules of the House.

The purpose of the bill is to improve the operations of the coal mines in the United States from two standpoints: the safety of operations and the health of those employed in the mines.

The bill authorizes the Secretary of the Interior to promulgate mandatory health and safety standards. He is responsible for developing only the mandatory safety standards. The Secretary of Health, Education, and Welfare is responsible for developing the health standards which shall be submitted to the Secretary of the Interior for promulgation.

The bill further authorizes the Secretary of the Interior, through his investigators, to inspect each underground coal mine at least four times a year without advance notice to the operator and to take whatever action he deems necessary consistent with section 104 of this bill to insure compliance with the mandatory health and safety standards.

Section 104 establishes procedural mechanisms for the finding of dangerous conditions or violations of the mandatory health and safety standards applicable to all underground coal mines, and the issuance by the Secretary of notices and orders with respect to such violations. In this area the Secretary will act through the Bureau of Mines, an agency within the Department of the Interior.

Upon the finding of a condition of imminent danger, the investigator shall immediately issue an order requiring the mine operator to withdraw all personnel until the danger is abated. Upon the finding of a violation of mandatory health or safety standard by the investigator, he shall immediately issue a notice fixing a reasonable time for the removal of the condition which gives rise to the violation. If such violation is not abated within the time period fixed, the investigator shall issue an order requiring the withdrawal of all persons until the viola-

tion has been abated. If the investigator finds a failure of an operator to comply with a mandatory health or safety standard, he shall issue a notice of the finding of the violation. Within 90 days the investigator shall reinspect the mine and if the violation is found to continue, he shall issue an order requiring the operator to withdraw all personnel until the violation has been abated.

Finally, section 104 provides for the finding of a violation of a health standard by atmospheric samples used to determine the amount of coal dust in the mine. Upon such a finding, the investigator shall fix a reasonable time within which to take corrective action. If, at the expiration of such time limit, the violation has not been abated, the investigator shall issue a withdrawal order of all personnel until the violation has been abated.

With respect to all orders mentioned previously, any operator or miner affected by such order may apply to the Secretary of the Interior for a review of such order within 30 days of its receipt. The Secretary shall make an investigation and provide an opportunity for a hearing; he is empowered to affirm, vacate, modify, or terminate orders.

The bill establishes the Federal Coal Mine Health and Safety Board of Review. Current members of the existing Federal Coal Mine Safety Board are retained until the expiration of their terms. New and additional members shall be appointed by the President with the advice and consent of the Senate. There will be five permanent members; one representing small mine operators, one representing large mine operators, one representing workers in small mines, one representing workers in large mines, and a chairman representing the general public. The Chairman shall have had no interest or association with the coal industry for the previous five years. When The Board if reviewing proposals for health and safety standards or carrying out its responsibilities under section 401—research programs—three additional members are added; one with a background in public health and two having backgrounds in coal mining technology.

Any operator served with an order section 104 may appeal directly to the Board for a review or, if he has appealed to the Secretary, he may ask the Board to review the decision of the Secretary. Applications for review must be made within 30 days of the receipt of the order by the investigator or the decision of the Secretary. Any decision issued by the Board is subject to judicial review by the U.S. Circuit Court of Appeals for the circuit in which the affected coal mine is located. The decision of the court is subject to the review by the Supreme Court.

The bill sets forth a series of penalties for a mine operator found in violation of a mandatory health and safety standard. He may be assessed a civil penalty of not more than $10,000 for each violation. Whoever knowingly violates or refuses to comply with an imminent danger withdrawal order issued by an inspector or with any other final decision shall be fined not more than $10,000 or imprisoned for 6 months, or both. The penalty for a repeat conviction is a fine of not more than $20,000 or imprisonment for not more than 1 year, or both. Anyone knowingly making any false statements or representations shall be fined not more than $10,000 or imprisoned for not more than 6 months, or both.

The bill requires each coal mine operator to take accurate samples of the amount of respirable dust in the mine atmosphere to which miners are exposed and to transmit such samples to the Secretary. The bill establishes standards covering the amount of dust permissible in the mine. Effective upon enactment each mine operator shall maintain an average concentration of respirable dust in the mine atmosphere at or below 4.5 milligrams per cubic meter of air. Effective 6 months after enactment the limit on the level of dust is reduced to 3 milligrams per cubic meter of air. The Secretary of Health, Education, and Welfare is authorized to further reduce the limit if he determines such reduction to be technologically feasible. The Secretary of the Interior may grant an extension of no more than 90 days with respect to the 4.5 milligram limit and no more than 6 months with respect to the 3 milligram limit. The committee believes these standards to be realistic although they are substantially below the limits which prevail in the British mines which the committee visited earlier this year.

The bill provides that each miner shall have an opportunity to have taken at least once every 5 years a chest roentgenogram to be paid for by the Federal Coal Mine Health and Safety Board. Any miner, who, in the judgment of the Secretary of Health, Education, and Welfare, has substantial evidence of the development of pneumoconiosis shall, at the option of the miner, be assigned by the coal mine operator in a relatively dust free area, and shall receive his regular rate of pay.

The measure provides for the setting of both interim and permanent mandatory health and safety standards in a number of categories. In addition to the dust level, they include such areas as roof support, ventilation, use of electrical equipment, fire protection, use of explosives and escape ways.

A system of payments to miners totally disabled from complicated pneumoconiosis is provided as well as to widows of miners who suffered from the disease at the time of their deaths. Payments are based upon a minimum monthly payment to a Federal employee in grade GS–2, at present this is approximately $136 per month.

The bill also requires the Board to establish objectives for the conduct of appropriate studies, research, experiments and demonstrations in the area of coal mine health to be carried out by the Secretary of Health, Education, and Welfare. Funds for such research as well as for the required chest roentgenogram are generated from payments required of the coal mine operators. Each operator is required to contribute an amount equal to 2 cents for each ton of coal he produces. This amount may be reduced by the Board if it determines it has sufficient funds from other sources with which to carry out its activities. Additionally, the Government will contribute an amount equal to 2 cents for each ton of coal and the States may also contribute.

Minority views are filed by the gentleman from Ohio (Mr. ASHBROOK), the gentleman from Iowa (Mr. SCHERLE), the gentleman from Texas (Mr. COLLINS), and the gentleman from Indiana (Mr. LANDGREBE). They oppose the bill because of two provisions: First, imposing on the owner of every coal mine a tax of 2 cents for every ton of coal he produces; and, second, establishing a system of Federal workmen's compensation for a relatively small group of workers. In the first instance they believe the Education and Labor Committee does not have jurisdiction to report a tax bill. As to the second, they do not believe the Federal Government should intrude upon the workmen's compensation programs now successfully operated by the several States.

Supplemental views are filed by the gentleman from Ohio (Mr. AYRES), the gentleman from Minnesota (Mr. QUIE), the gentleman from Illinois (Mr. ERLENBORN), the gentleman from Pennsylvania (Mr. ESHLEMAN), the gentleman from Indiana (Mr. LANDGREBE), and the gentleman from North Carolina (Mr. RUTH). They support the concept of the bill but find a number of weaknesses in it. They intend to propose a number of amendments. They do not believe that HEW should develop the health standards but rather that the Secretary of the Interior through the Bureau of Mines, which has experience in the field, should promulgate mine health standards. Nor do they believe that the bill should provide for the closing of mines for health standard violations when no imminent risk or danger is present. Since lung diseases due to dust in coal mines takes a number of years to develop, it seems wrong to them to permit a mine to be closed when the dust content of the atmosphere is at a high level at a particular time. They also point out that the dust levels set by the bill are substantially higher than those applicable in British mines. I might note that the reason the Education and Labor Committee went to Great Britain this year was to examine this very point and get information on what they considered to be the excellent British system. They also question the imposition of 2 cents on the owners for each ton of coal mined. It applies to all mines, underground as well as strip, taking no account of past health or safety records. They point out that other imminent danger industries are not so discriminated against—nuclear power—and that the bill will, in effect, discourage industries from conducting research and development by requiring the owners to pay for such Government projects.

Finally, they question whether the Government should enter the workmen's compensation field, now the exclusive prerogative of the several States.

Separate views are filed by the gentleman from California (Mr. BELL) and the gentleman from Idaho (Mr. HANSEN).

They support the supplemental views except with respect to the compensation provisions of the bill.

I have no further requests for time, but I reserve the balance of my time.

I urge the adoption of the rule.

Mr. YOUNG. Mr. Speaker, I yield 5 minutes to the gentleman from West Virginia (Mr. HECHLER) for purposes of debate.

Mr. HECHLER of West Virginia. Mr. Speaker, with the adoption of this rule we shall have an opportunity to vote the first comprehensive revision of the coal mine safety law since 1952. For the first time in history we have before Congress legislation relating to health.

I would like to commend the chairman of the full Committee on Education and Labor, the gentleman from Kentucky (Mr. PERKINS), and the chairman of the subcommittee, the gentleman from Pennsylvania (Mr. DENT), for the leadership which they have exerted in coal mine health and safety legislation, and particularly for bringing this bill to the floor in the light of the many pressures which have come from outside.

Every Member of Congress received a scare letter from the National Coal Association, dated October 21, the complete text of which follows:

NATIONAL COAL ASSOCIATION,
Washington, D.C., October 21, 1969.

Re Federal coal mine health and safety legislation.

DEAR MR. CONGRESSMAN: The coal industry supports strong, workable legislation to protect the health and safety of coal miners. But the public health and safety is also important, and if Congress enacts a bill which closes many coal mines it will jeopardize the public welfare by bringing on a nationwide power and steel shortage. This is one of the hidden issues before you this week as you consider HR 13950.

The bill imposes increasingly rigid limits on the average dust content of mine atmosphere, and a critically short timetable for mines to attain these levels or be closed. Some mines may be able to reach these standards, but for hundreds—perhaps thousands—of others the technology simply will not be available.

Though the industry is operating at capacity, the nation faces a serious coal shortage—and coal generates more than half of the nation's electricity. Utility stockpiles are shrinking. Press reports say the Tennessee Valley Authority is beginning this week to truck coal supplies from one plant to another. Some TVA plants, we understand, are down to about one week's supply. If Congress forces the closing of coal mines, a serious shortage can become critical and the nation will face power blackouts.

This need not happen. There need not be *an either/or choice* between miners' health and adequate coal supply. The Congress should make clear that the Government need not close a mine in which the operator is doing his utmost to meet the dust standards but is unable to do so for lack of technology. The bill already requires that miners wear respirators or other equipment to protect their health when dust exceeds the standard. Giving the Government discretion to keep a mine open would be a reasonable provision, since the operator would be compelled to meet the dust standard when technology is available, since respirators and other equipment are now available to protect the health of the wearer, and since the health effects of coal dust are the cumulative result of years of exposure, not short-term highs.

Because mine operations vary from day to day, the dust reading should be averaged over several shifts. The multi-shift average is used by both Britain and Germany which have had dust standards for many years.

Britain has made remarkable progress in reducing the incidence of pneumoconiosis, but it has never closed a coal mine for excessive dust and its dust standard is an average of 5.7 milligrams per cubic meter—almost twice the standard which H.R. 13950 would impose one year after enactment. The British recognize that a higher dust level is not an imminent danger requiring quick action, simply an unsatisfactory condition to be corrected in an orderly fashion.

There are other important provisions in H.R. 13950. Its provisions are so far reaching that there must be recognition of the need for administrative and judicial appeal for all interested parties.

It also requires non-gassy mines to install permissible electrical equipment, which will be a great burden on many operators. If this provision is retained, the Congress should at least provide adequate time for obtaining the equipment; closing mines because of a bottleneck at a machinery factory would—again—intensify the critical shortage of coal.

The coal industry has been accused of crying "Wolf" about the threat of closed mines. We dont think we have been guilty of this in the past—but the point of the old story is that nobody believed the boy when the wolf finally showed up. Gentlemen, the wolf is here. The coal industry will not close its mines—it sincerely hopes that Congress will *not* do so!

Sincerely,

STEPHEN F. DUNN,
President.

Mr. Speaker, I would just like to point out that prior to the 1941 Federal law, Bureau of Mines inspectors had no power to enter any mine without the express permission of the owner. After years of going up to mines, hat in hand, asking if they could not please go in and inspect safety conditions, inspectors were finally authorized, in 1941, by that law to enter and inspect all coal mines. And yet this very simple provision was bitterly fought by the coal operators, who made all kinds of predictions of gloom and doom and disaster if this simple authority were granted.

Listen to the statement that was made before a Senate committee in June of 1939, 30 years ago, by the executive secretary of the National Coal Association. He said, in 1939:

I predict now that whatever bureau should inherit this job as now prescribed in the bill, should it become law, will multiply itself by a hundred within a few years. Another bureau, another thousand jobs, more red tape, more reports, a higher cost of doing business, less tonnage produced, less work for all concerned in the mines and more relief funds, more unemployment. That is where this measure leads . . . The coal industry needs help from the Government rather than a law to further increase cost. . . Any increase in coal-mining costs will further reduce production and injure labor along with the coal-mine owners.

I would like to point out, Mr. Speaker, that the coal industry has never been as profitable as it is today. The prospects of the coal industry have never been as bright. The predictions of the National Coal Association are that production will increase 12.8 percent by 1973. Many new mines are opening up. There is no danger of the gloom and doom that is predicted every time a bill like this comes up.

I include articles from Barron's and the Magazine of Wall Street, and also a special report of the National Coal Association which dramatically illustrate the prosperity and bright future prospects in the coal industry:

[From Barron's, July 8, 1968]

FUEL OF THE FUTURE: LONG-RANGE PROSPECTS FOR COAL HAVE NEVER LOOKED BRIGHTER

(By Joseph V. Sherman)

Less than a decade ago, it was widely predicted that mounting competition from oil and natural gas had doomed the coal industry. But its demise, like the celebrated report of Mark Twain's death, has been highly exaggerated. In fact, oil companies, along with others, are rushing to get into the business via acquisitions and mergers. Within the past two years alone, the nation's three biggest coal producers have been taken over by outsiders: in 1966, Continental Oil Corp. acquired the No. 2 producer, Consolidation Coal Co.; last January, Occidental Petroleum Corp. bought Island Creek Coal Co., which ranks No. 3; and, in March, Kennecott Copper Corp. absorbed the leading producer, Peabody Coal Co.

BIGGER STAKE

A number of other firms are boosting their stake in coal. Proposed acquisitions include Old Ben Coal Corp. by Standard Oil Co. (Ohio); Hawley Fuel Corp. by Belco Petroleum Corp.; and Bear Coal Co. by Atlantic Richfield Co. Others either have acquired coal properties or rights or are developing or planning to develop such interests. Among them are Humble Oil & Refining Co., a wholly owned affiliate of Standard Oil Co. (New Jersey); Kerr-McGee Corp.; Shell Oil Co.; Sun Oil Co.; FMC Corp.; Bethlehem Steel Corp.; Jones & Laughlin Steel Corp.; and Reynolds Metals Co.

A big attraction for newcomers and older hands alike is rising demand from the electric utility industry, the No. 1 outlet for coal. The utilities have been doubling their output of power every 10 years and their fuel consumption almost as fast. Coal's second-largest customer is steel, which also stepped up consumption of the versatile mineral in recent years to make coke for blast furnaces as well as to generate steam and electric power for plant operations. Many other industries, including cement, chemical, food, paper, automobile, textile, ceramics and rubber, eat up large tonnages. Finally, U.S. exports of coal have been picking up, particularly to Japan and other industrialized countries which are short of the mineral.

The overall result is that coal consumption, which had been declining through 1961, has racked up a gain each year since then. U.S. production of 551 million tons in 1967 rose 3.2% above the previous year. Although output of 135 million tons in the first quarter of 1968 slightly lagged the corresponding year-earlier span, both domestic consumption and exports topped the level of March quarter of 1967 and are likely to continue to run ahead for the year as a whole.

SUSTAINED GROWTH

In short, the bituminous coal industry has made "a complete turnaround in recent years," Eastern Gas & Fuel Associates asserts, and "now looks forward to its greatest period of sustained growth in the next 20 years." While coal will face rising competition from the atom, such rivalry is not expected to hobble future growth. Kennecott, which made a careful study of the outlook before it took over Peabody Coal, is confident that "while a major portion of the new electric generating plants may be nuclear-powered, there will be a significant increase in the use of coal in electric power generating as well."

The roster of major producers of coal, with their 1967 output in thousands of tons, encompasses besides Peabody, 60,152, Consolidation, 48,700 and Island Creek, 25,880, Pitts-

ton Co., 19,681; Eastern Associated Coal Corp. (subsidiary of Eastern Gas & Fuel Associates), 12,250; Old Ben Coal, 10,521; Pittsburgh & Midway Coal Mining Co. (subsidiary of Gulf Oil Corp.), 8,974; Ayrshire Collieries Corp., 8,726; North American Coal Corp., 8,700; Westmoreland Coal Co., 6,337; Zeigler Coal & Coke Co., 4,063; and Rochester & Pittsburgh Coal Co., 3,873.

Rounding out the list are Elk Horn Coal Corp., Maust Coal & Coke Corp., Cannelton Coal Co. (subsidiary of Algoma Steel Corp. Ltd.), and Freeman Coal Mining Corp. and United Electric Coal Cos. (both subsidiaries of General Dynamics Corp.). Pickands Mather is important, too, and U.S. Steel Corp. mined 19 million tons of coal in 1967, almost all of which was used to make coke for its own use.

MORE STABLE

The importance of the acquisition of Peabody to Kennecott is evident from the fact that Peabody's 1967 revenues totaled $260 million and net income, $28 million. Moreover, Peabody promises to add stability to the rather volatile operations of Kennecott. Last year, for example, labor stoppages pared Kennecott's sales 37%, to $489.3 million, and net by 27%, to $3.35 a share.

The business and assets of Peabody were purchased, subject to a $300 million production payment, by a wholly owned Kennecott subsidiary, Peabody Coal Co. (Delaware) for approximately $285 million in cash, plus the assumption of certain liabilities of about $36.5 million. Peabody hopefully will contribute "substantially" to Kennecott's earnings, particularly after the liquidation of the production payment, which is expected to take about seven years.

Similarly, Island Creek Coal stands to add significantly to Occidental Petroleum. During the past five years, Island Creek doubled its tonnage of coal output and more than tripled operating earnings. In 1967, gross reached an all-time high of $140 million, up 2.4% over 1966. Net before federal income taxes amounted to $8.9 million, 14% ahead of the previous year. Cash flow exceeded $15 million last year, while the company spent $25 million for new equipment and construction of its five new mines.

Consolidation Coal (Consol) "greatly" hiked its coal output and capacity during 1967—its first full year of operation under the aegis of Continental. Consol turned out 48.7 million tons, up 13.2% from 1966. Moreover, Continental reported that profits from its coal operations rose during the first quarter of 1968, thanks to a gain in production and "slightly" higher prices.

A GOOD START

Pittston, which derived 55% of its net from coal in 1967, posted new highs in consolidated revenues and earnings for the fourth year in a row. Revenues of $387 million ran 23% ahead of 1966, while earnings rose to $3.50 a share, from $2.79. Moreover, the company is off to a good start this year: first quarter net advanced to 98 cents a share, from 95 cents (adjusted stock basis) as sales climbed $15 million, to $127.3 million. Over the past decade, Pittston's coal output has doubled, compared with a rise of 34% for the industry.

Eastern Gas & Fuel, which garners slightly more than half of its revenues from coal, also enjoyed higher sales and earnings in 1967, and in the opening three months of this year. Coal chipped in $103 million of last years total volume of $203 million and $7.7 million of the $9 million gain in sales over 1966. Adjusted for the 2-for-1 stock split this year, earnings amounted to $1.76 a share, comfortably above the $1.46 of 1966. Net in January-March advanced to 53 cents a share, from 50 cents a year earlier.

RED AND BLACK

Also scoring year-to-year gains in both sales and profits in 1967 were North American Coal Corp. and Westmoreland Coal Co. Zeigler Coal & Coke Co. reported higher earnings on lower sales. Maust Coal & Coke Corp. remained mired in the red in the fiscal year ended March 31, 1968. Rochester & Pittsburgh Coal Co. also suffered a loss in 1967, but sharply reduced its deficit in the first quarter of 1968: to $39,754, from $318,369.

A highly important development for the industry has been the rapid and widespread acceptance of long-term purchase contracts, both by electric utilities and by domestic and foreign steel concerns. As recently as five years ago, some utilities bought coal on a year-to-year basis from as many as 25 producers. Today, nearly all major power companies buy coal on long-term contracts—some stretching over 30 years—and often from only one or two suppliers.

As a result, the business has gained considerable stability. Long-term contracts have permitted debt financing of part of the cost of the new mines, substantial investment in modern production equipment and the training and organization of a stable work force.

While the aforementioned mergers and consolidations have removed some coal producers from the field of direct investment, their places have been taken by larger, stronger and more diversified firms. There are fewer publicly owned concerns deriving all of their sales from coal today but a greater number with interests in the mineral than ever before.

A basic reason for the long-term bullishness in the industry is that reserves of coal—estimated at 3.2 trillion tons for the U.S.—are greater in energy content that those of any other fuel. They represent four-fifths of the nation's storehouse of fuel in proved reserve and 75% of all the fuel believed likely to be found and recovered. Indeed, the National Coal Association calls coal "the fuel of the future," because "no other energy source now known is abundant enough to meet the future's demands."

GASOLINE FROM COAL

Moreover, research efforts are under way to convert coal into other fossil fuels—oil and gas. At Cresap, W. Va., Consolidation is working on a gasoline-from-coal process under a $20 million contract with the Department of Interior's Office of Coal Research. The plant is designed to process 20 to 25 tons of coal daily to produce 50 to 75 barrels of synthetic crude liquids ready for the refinery. Similar research is being carried on by at least two oil companies with coal interests: Humble Oil & Refinery Co. and Atlantic Richfield. Other research, backed by the natural gas industry, shows "great promise" of converting coal to pipeline-quality gas to supplement dwindling supplies of the latter.

As Kennecott points out, the coal business is becoming part of a much bigger energy industry committed to the most efficient utilization of all fuels—oil, gas and uranium as well as coal. Meanwhile, great strikes in production, transportation and marketing in recent years have created, in effect, a "new" coal industry.

An important factor in the growing use of coal by the electric utilities has been the development of minemouth generating stations. They receive coal by conveyor belt, truck or short barge hauls, convert it into electricity and then transmit it to distant cities over high-voltage lines, some carrying more than half a million volts. Several of these huge mine-mouth plants are located in the Appalachian coal fields and serve the heavily populated areas of the East. Similar plants are being developed to serve the burgeoning populations of the West, particularly Southern California.

A project which is expected to demonstrate the ability of the coal industry and the railroads to improve operating efficiency and lower costs in competition with other fuels is scheduled for completion in late 1971. Consolidation will supply West Virginia coal, under a 25-year contract, to a 1.5 million-kilowatt power plant under construction at Monroe, Mich. Initially, about four million tons annually will be transported by unit trains, each consisting of 130 specially designed cars and a power unit. Each train will carry 13,000 tons and make the 720-mile round trip between West Virginia and Michigan in three days, a significant reduction from previous coal-hauling schedules.

In another project, also slated for 1971, Peabody will begin using a coal slurry pipeline 275 miles long to carry crushed coal from northeastern Arizona to a generating plant to be built near Davis Dam, Nev. Peabody will supply a minimum of 117 million tons of coal over a 35-year period to that plant.

GIANT SHOVELS

Comparable advances have been made in mining coal. In strip mining for example, giant shovels now boast 140-cubic-yard capacity, twice the size of the largest ones available just a few years ago. Peabody Coal uses one piece of stripping equipment that stands as high as a 20-story building.

Although the long-pull outlook for the industry is bright, the expiration on September of the present United Mines Workers contract poses uncertainties over the near term. Producers differ as to the likelihood of a strike. One company expects a walkout before agreement is reached on a new contract and fears that profits will be affected. But another discounts the probability of a strike and believes that any wage boosts would be passed on to customers.

At any rate, strikes aside, the industry has high hopes for the future. Thus, the National Coal Association's Economics Committee estimates that by 1972 total consumption of U.S. bituminous coal will reach 643 million tons, of which the utilities will take 367 million tons. Others predict even greater gains.

Island Creek Coal Co., for instance, cites estimates that coal consumption nationally will rise by roughly 100 million tons at five-year intervals, and will exceed 800 million tons by 1980. Most of this gain will come in the electric utility market, which historically has grown at a rate of 7%–8% a year. This forecast, moreover, does not include any estimate for sales which may be generated by the development of entire new markets for coal, such as the commercial production of gasoline, pipeline gas and other hydrocarbons, although Island Creek believes such developments are "bound to come."

The successful completion of such projects could provide a substantial lift for the coal business. Trade sources point out that if coal captures 10% of the estimated 1980 market for gasoline, 175 million tons of coal would be required annually. To take over the same share of the 1980 natural gas market would require an additional 138 million tons of coal. If these potential new outlets are added to the projected 800 million tons for 1980, the total would run to 1.1 billion tons—twice the 1967 output. Even at that accelerated rate, U.S. coal reserves would last nearly 3,000 years.

[From the Magazine of Wall Street, Feb. 15, 1969]

COAL: ITS FUTURE IS ANYTHING BUT BLACK

(By Harvey Ardman)

(NOTE.—Dramatic changes in technology and the economy have caused experts to reappraise the future of the industry. With unprecedented stability, borrowing power and modernization, coal looks very hot.)

The aura of doom that once characterized the coal industry has reversed totally—all because of some technological and economic developments that turned coal into the most modern fuel of all.

Time was, in the early 1960s, that the coal industry, viewed either by investors or by the producers themselves, was thought to be nearing the bottom of the pit.

In those days it seemed a sure bet that coal would sooner or later—and probably sooner—be blasted out of existence by nuclear power or some other, more modern fuel. (That was when the electric utilities, the main users of coal, had—with the help of the government and nuclear power plant makers—finally brought down the cost of atomic energy to a competitive level.)

Even earlier, of course, coal had lost almost all of its residential heating market to natural gas and oil.

Today, however, things have changed dramatically.

In the last five years, coal consumption in this country has risen at a rate of 4.4 per cent a year—after a long, steady decline. And industry officials and independent observers are predicting a long, glorious, growth-filled future for coal.

Not only are investors beginning to believe these predictions, so are officials of other energy-producing industries.

A STATISTICAL TURNABOUT

After World War II, coal production declined through 1961, when it bottomed out at 403 million short tons. Since then, the gains have been steady. In 1967, the last year for which complete figures are available, U.S. producers mined more than 550 million short tons of coal. Preliminary 1968 figures show a similar increase, and the National Coal Association's Economics Committee estimates that by 1972, total consumption of U.S. soft coal will reach 643 million tons. Many authorities predict even more.

Coal sales in this country now amount to more than $2.5 billion yearly, as compared to about $1.09 billion in 1940. More than 90 per cent of these sales are accounted for by soft, or bituminous coal.

During the same period, U.S. coal exports have risen from 16.5 million short tons to 49.3 million short tons, about 9 per cent of this country's total production.

STEEL USAGE

Although soft coal is still used to some extent in industrial heating, mainly it's used in making electricity and in the production of pig iron (one of the steps in the manufacture of steel). In 1940, utilities used about 49 million tons of coal. By 1967, they were using 264 million tons a year. The steel industry's usage during that period has remained relatively steady.

During this time, the average number of miners in soft-coal mines has dropped from 439,000 to 131,000. Simultaneously, output per man has risen from 5.19 tons a day in 1940 to nearly 19 tons a day in 1967.

SOME ECONOMIC FACTORS

Coal's bright future rests on several pillars. The first is the tremendous increase in the consumption of energy—from all sources—in this country. The electric utilities, for example, have been doubling their output of power every 10 years and, correspondingly, their consumption of fuel.

In the last 20 years of industrial expansion, many other industries have stepped up their demands for energy. This continuing increase in demand has caused experts to look at fuel reserves to see how future increases will be supplied. What they found is part of the reason the coal industry is so optimistic.

U.S. coal reserves, estimated at 3.2 trillion tons, are greater in energy content than those of any other fuel (including uranium). Further, they account for 80 per cent of America's proven energy reserves and at least 75 per cent of all the remaining fuel expected to be found and recovered in North America.

This means that at the current rate of consumption, the U.S. has enough coal to last for 1,500 years, enough natural gas for 16 years, enough untapped crude oil and easily recovered uranium for 11 years each.

Meanwhile, despite the attractions of nuclear power, the major users of coal were finding ways to increase efficiency of its use. For example, electric utilities now consume about .87 lbs. of coal per kilowatt hour of electricity—a 6 per cent decrease in 10 years. And, in 1967, the steel industry used an average of 1,262 lbs. of coal to make a ton of pig iron, a 25 per cent reduction since 1957.

The reserves and the increased efficiency lead to the most important economic advance in the history of the U.S. coal industry—the long-term contract. Just five years ago, electric utilities usually bought coal on a year-to-year basis and from a score of producers. Since then, the coal industry has convinced both the utilities and the major steel makers to sign contracts as much as 30 years in duration.

This has given the coal industry an unprecedented stability—plus the borrowing power, for the first time, to modernize mining operations and to develop a program of technological advance to assure the future of the industry. (It has also proved a bonanza for manufacturers of mining equipment, who have record backlogs.)

TECHNOLOGICAL ADVANCES

The industry has made many important technological advances, both to improve its profit possibilities and to keep competitive. It has automated and mechanized a large number of mining operations, increasing the productivity of the individual miner—which allows the industry to slash its work force while producing more coal. Much of this is recent; for example, in strip mining, giant shovels that can scoop out 140 cubic yards in one load are now available—twice the size of the biggest ones in use only a few years ago.

The industry has reduced its largest single nonmining expense: transportation. So-called *unit* trains, that do nothing but shuttle back-and-forth from mine mouth to user (usually a utility), may be replaced because some larger coal producers are experimenting with the *integral* train. This contains specially designed, permanently coupled cars that can carry as much as five times the ordinary load, that can be loaded and unloaded quickly and that have exceptionally powerful engines, to keep trip time to a minimum.

In addition, Peabody has revived the slurry pipeline concept. They're building a 275-mile pipeline to run from the coal fields in Arizona to a utility in Nevada.

Equally important, utilities now can be built near coal mines, and the power, rather than coal, can be transported.

COAL CONVERSION

Converting coal to oil is not a new idea: The Germans built the first such commercial plant in the late 1920s; and during World War II, cut off from natural crude, the Luftwaffe flew on synthetic gasoline. South Africa is still making oil from coal. But these processes had one tremendous drawback: oil so produced cost two to three times as much as natural oil drawn from the ground.

Still, considering the relative supplies of coal and oil in this country, it is worth working on the conversion process.

Probably the major impetus for coal-to-oil conversion experiments came from the Department of the Interior's Office of Coal Research (OCR), founded in 1961. Today, a number of companies are working vigorously on this problem:

At Cresap, W. Va., Consolidation Coal is working under a $20 million OCR contract; the plant has been designed to turn 20–25 tons of coal a day into 50–75 barrels of crude oil.

Hydrocarbon Research, now a subsidiary of Dynalectron Corp. of Washington, D.C., has been operating a three-ton-a-day plant for several years.

Humble Oil, a subsidiary of Standard of New Jersey, has invested some $20 million in coal research and coal reserves, backing up its stated belief that "coal can and will play a significant role in meeting the nation's future energy needs, both as a source of raw material for synthesis operations and as a direct fuel."

Esso Research and Engineering, another Standard Jersey affiliate, has formed a synthetic fuels research department. Its goal: to develop, within 10 years, a commercial conversion technique.

The FMC Corp. is building a 25-ton-a-day pilot plant for its Project COED (Char-Oil-Energy-Development).

Several of these processes are reaching the 11.5-cent-per-gallon figure needed for coal-oil to be competitive with natural oil.

OCR figures that the first major coal-to-oil plants will turn out 100,000 barrels of oil per day, or 33 million per year, from a total of 11.5 million tons of coal. Today, about 10 million barrels of oil are refined in the U.S. daily; therefore, one of these coal-to-oil conversion plants will account for 1 per cent of the nation's refining capacity.

CHEMICALLY SPEAKING

The concept is not scientifically complex. Coal is high in carbon molecules and low in hydrogen molecules; crude oil is just the opposite. Therefore, to create oil, just add hydrogen to coal at high temperatures and pressures. So hydrogen gas is pushed into coal at about 3,000 lbs. per square inch, at 800° F. in one promising process. The resulting liquified coal is distilled, where less volatile products are separated; these fractions can be further refined into gasoline, jet fuel, fuel oil, furnace oil and diesel oil.

In some conversion processes, it is possible to get natural gas as a by product; another very useful side effect is that sulfur is usually removed from the coal. Sulfur is the main cause of the pollution resulting from coal being burned: This year, about 27 million tons of sulfur dioxide will pollute the air, half of it as a direct result of burning coal.

For this reason, the industry is developing two processes to remove sulfur. The first—and seemingly most practical—is to remove the noxious chemicals in the smokestack, after the coal has been burned. Progress has been made—so much so in fact, that the removed sulfur can be sold at a net profit.

At the same time, OCR is spending $1.5 million a year to explore removing sulfur from unburned coal. Such coal would have a higher heating value, be pulverized and produce less ash. However, most existing methods are still too expensive, regardless of benefits.

Perhaps the last obstacle to successful commercial coal conversion is the cost of the equipment and the plants. Most authorities feel that only the largest firms will be able to handle the capital costs.

THE MERGER GAME

Fortunately, through a remarkable series of mergers, the coal industry has been positioning itself to be able to handle such costs. As of last year, these are the major American coal producers: 1. Peabody—60 million tons; 2. Consolidation—48.7 million; 3. Island Creek—25.8 million; 4. Pittston—19.6 million; 5. Eastern Associated Coal—12.2 million; 6. Old Ben Coal—10.5 million; 7. Pittsburgh & Midway—8.9 million; 8. Ayrshire Collieries—8.7 million; 9. North American Coal, 8.7 million; 10. Westmoreland Coal—6.3 million; 11. Ziegler Coal and Coke—4 million; 12. Rochester & Pittsburgh Coal—3.8 million.

Other important mining outfits include Elk Horn Coal, Maust Coal and Coke, Channelton Coal, Freeman Coal Mining, United Electric Coal—and U.S. Steel, which mines about 19 million tons of coal a year, for its own use.

A surprisingly large number of these companies have been involved in mergers. In 1966, Continental Oil bought Consolidation Coal. In January 1968, Occidental Petroleum bought Island Creek. In March 1968, Kennecott Copper bought Peabody Coal.

Eastern Associated Coal is owned by Eastern Gas and Fuel Associates. Pittsburgh & Midway is a subsidiary of Gulf Oil. Channelton is owned by Algoma Steel Corp. Ltd. General Dynamics owns both Freeman Coal and United Electric Coal. Standard of Ohio recently purchased Old Ben Coal. Atlantic Richfield took a one-year option to buy Bear Coal. Shell Oil has won exploratory rights to Crow Indian lands in Montana.

In addition, Humble Oil has purchased most of the coal lands in Southern Illinois, Air Reduction is buying Maust Coal, Kerr-McGee has been developing fairly extensive coal lands in Oklahoma, and Sun Oil, FMC, Bethlehem Steel, Jones & Laughlin Steel and Reynolds Metals are all reportedly interested in either coal companies or coal fields.

Of the some 6,800 coal mining companies in the U.S. today, four companies alone accounted for 26 per cent of this country's total coal output: Kennecott Copper (Peabody), 10.4 per cent; Continental Oil, 8.8 per cent; Pittston, 3.6 per cent and U.S. Steel, 3.4 per cent.

While these mergers and consolidations have removed some coal producers from the field of direct investment, they have been replaced by larger, stronger and more diversified firms.

THE OUTLOOK

"Coal may not look like a glamor industry," says Continental Oil President Andrew W. Tarkington, "but it has a growth potential that few other industries its age can match."

According to Eastern Gas and Fuel Associates, coal has made "a complete turnaround in recent years and now looks forward to its greatest period of sustained growth in the next 20 years."

Kennecott Copper, which made a careful study of the industry before acquiring Peabody, says that "while a major portion of new electric generating plants may be nuclear-powered, there will be a significant increase in the use of coal in electric power generating as well."

Island Creek Coal, now owned by Occidental Petroleum, estimates that coal consumption nationally will rise by roughly 100 million tons at five-year intervals, and will exceed 800 million tons by 1980. Most of this gain will come in the electric utility market, the firm says.

If coal conversion is commercially successful, it could easily capture 10 per cent of the 1980 gasoline market. If it does, an additional 175 million tons of coal would be required annually. If the same thing happens with natural gas, another 138 million tons of coal will be needed. All of this new production would be added to production now growing through conventional markets.

When all factors are taken into account, the coal industry will probably write itself a notable success story. For this reason, it is well worth close investigation by investors interested either in long- or short-term gains.

A 12.8 PERCENT HIKE IN COAL USE SEEN BY 1973

WASHINGTON.—Annual consumption of U.S. bituminous coal during the next five years will climb from 571 million tons to 644 million tons—an increase of 12.8 per cent, the National Coal Association has forecast.

Coal consumption in 1968 was estimated at 552 million tons.

The five-year 1969–1973 forecast was released by Lester E. Langan, chairman of National Coal Association's 12-member Economics Committee, who said use of coal in 1969 was forecast at 571 million tons, up 13 million tons, or 3.4 per cent, over 1968. Bituminous coal consumption by 1973 will reach 644 million tons, a 73-million ton increase from 1969, he said.

The forecast showed substantial increases in most major coal markets. Total consumption was predicted at 594 million tons in 1970, 614 million tons in 1971, 630 million tons in 1972 and 644 million tons in 1973.

The greatest percentage increase in coal use during the five-year period was forecast for electric utilities which already burn more than half of all coal mined, NCA said. The utilities' use of coal will jump from 312 million tons in 1969 to 375 million tons by 1973—an increase of 20.2 per cent.

Use of coal to make coke—principally for the steel industry—is to increase from 93 million tons in 1969 to 97 million tons in 1973—an increase of 4.2 per cent. Other industries will use 99 million tons this year, and 102 million tons in 1973—a rise of 3 per cent.

Sale of coal in the retail market—mostly to heat homes and buildings—is expected to decline from 15 million tons this year to 13 million tons by 1973.

Coal exports, in which the U.S. leads the world, this year will remain constant with 1968 figures—17 million tons to Canada and 35 million overseas, NCA said. However, by 1973 these markets are forecast to climb to 20 million tons to Canada and 37 million tons overseas.

NCA does not forecast production of U.S. bituminous coal, however, under normal conditions production trends follow closely those of consumption.

The forecast did not allow for new markets from converting coal into gas and oil. Langan said the committee believes these processes now in pilot plant stage, will "involve substantial tonnages in the not too distant future."

The consumption forecast is based on economic trends and statistical data and a tolerance of 1 or 2 per cent should be allowed, Langan said.

ESTIMATED CONSUMPTION OF BITUMINOUS COAL, 1969–73

[Millions of net tons]

	1969	1970	1971	1972	1973	Percent increase 1973–1969
Electric utilities	312	332	349	364	375	20.2
Coking coal	93	94	95	96	97	4.3
General industry	99	100	101	101	102	3.0
Retail deliveries	15	15	14	13	13	(13.3)
Domestic consumption	519	541	559	574	587	13.1
Canada	17	17	18	19	20	17.6
Overseas	35	36	36	37	37	5.7
Total consumption	571	594	613	630	644	12.8

Therefore, I would hope that when this bill is debated and after this rule is passed, we concentrate not on the production and profits and how much this may cost, but rather on what it has cost in human life to the coal miners of this Nation and what we need to do in order to protect the lives of the coal miners. Let us begin with the premise that we must do everything necessary to protect the health and safety of the coal miner. No coal operator has any vested right to continue to kill, maim, gas and crush human beings.

Again I would like to add my commendation to all the members of the Committee on Education and Labor, to the chairman of the full committee, the gentleman from Kentucky (Mr. PERKINS), and to the chairman of the subcommittee, the gentleman from Pennsylvania (Mr. DENT), as well as the members on the minority side, all of whom have worked so hard to bring this bill out.

Mr. YOUNG. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

APPOINTMENT OF CONFEREES ON S. 2864, AMENDING AND EXTENDING LAWS RELATING TO HOUSING AND URBAN DEVELOPMENT

Mr. PATMAN. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (S. 2864) to amend and extend laws relating to Housing and Urban Development, and for other purposes, with a House amendment thereto, insist on the House amendment and request a conference with the Senate thereon.

The SPEAKER. Is there objection to the request of the gentleman from Texas? The Chair hears none, and appoints the following conferees: Messrs. PATMAN and BARRETT, Mrs. SULLIVAN, Messrs. ASHLEY and WIDNALL, Mrs. DWYER, and Mr. BROWN of Michigan.

PROVIDING FOR CONTINUATION OF AUTHORITY FOR REGULATION OF EXPORTS

Mr. PATMAN. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 4293) to provide for continuation of authority for regulation of exports, with a Senate amendment thereto, disagree to the Senate amendment, and request a conference with the Senate thereon.

The SPEAKER. Is there objection to the request of the gentleman from Texas? The Chair hears none, and appoints the following conferees: Mr. PATMAN, Mrs. SULLIVAN, Messrs. REUSS, ASHLEY, WIDNALL, MIZE, and BROWN of Michigan.

CALL OF THE HOUSE

Mr. GRAY. Mr. Speaker, the Coal Mine Safety Act is a very important piece of legislation. Therefore, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. STEED. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 245]

Abbitt	Dickinson	Mann
Adams	Diggs	Michel
Anderson, Calif.	Downing	Mink
	Edwards, La.	Monagan
Anderson, Tenn.	Fallon	Moorhead
	Fascell	Morton
Andrews, N. Dak.	Findley	Moss
	Fish	Murphy, N.Y.
Arends	Ford, Gerald R.	Nix
Ashbrook	Ford, William D.	O'Konski
Ashley		O'Neal, Ga.
Aspinall	Fulton, Tenn.	O'Neill, Mass.
Baring	Gettys	Ottinger
Barrett	Green, Oreg.	Pepper
Bell, Calif.	Haley	Pettis
Bevill	Halpern	Pirnie
Biaggi	Hanna	Powell
Bingham	Hansen, Wash.	Price, Tex.
Boland	Harrington	Reid, N.Y.
Bolling	Harvey	Reifel
Brasco	Hébert	Robison
Burton, Utah	Hogan	Rooney, Pa.
Bush	Horton	Roudebush
Byrne, Pa.	Hosmer	St Germain
Byrnes, Wis.	Howard	Sandman
Cahill	Hull	Satterfield
Carey	Jarman	Scheuer
Cederberg	Jones, N.C.	Smith, Calif.
Celler	King	Smith, Iowa
Chamberlain	Kirwan	Stephens
Chisholm	Kleppe	Symington
Clancy	Kluczynski	Teague, Calif.
Clark	Kyros	Thompson, N.J.
Clay	Leggett	Tunney
Colmer	Lipscomb	Udall
Conte	Long, La.	Ullman
Corbett	Lowenstein	Watkins
Culver	McCarthy	Watson
Cunningham	McClory	Whalley
Daddario	McCulloch	Wiggins
Daniel, Va.	McDonald, Mich.	Wilson, Charles H.
Davis, Ga.		
Davis, Wis.	McKneally	Wydler
Dawson	MacGregor	Yatron
Denney	Madden	Zablocki

The SPEAKER. On this rollcall 302 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

FEDERAL COAL MINE HEALTH AND SAFETY ACT OF 1969

Mr. PERKINS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 13950) to provide for the protection of the health and safety of persons working in the coal mining industry of the United States, and for other purposes.

The SPEAKER. The question is on the motion offered by the gentleman from Kentucky.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 13950, with Mr. STEED in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from Kentucky (Mr. PERKINS) will be recognized for 1½ hours, and the gentleman from Illinois (Mr. ERLENBORN) will be recognized for 1½ hours.

The Chair recognizes the gentleman from Kentucky.

Mr. PERKINS. Mr. Chairman, I yield myself 10 minutes.

Mr. Chairman, H.R. 13950, a bill to provide for the protection of the health and safety of persons working in the coal mining industry in this country, to my way of thinking, is one of the most important health safety measures ever brought before this Congress, if not the most important.

I certainly would be derelict in my responsibility if I did not pay tribute to the distinguished gentleman from Pennsylvania (Mr. DENT) and his entire subcommittee. Never in my time have I seen a committee work so untiringly and diligently and persevere on subject matter day in and day out as did JOHN DENT and his General Labor Subcommittee.

Mr. Chairman, in taking up H.R. 13950—the Federal Coal Mine Health and Safety Act of 1969—we are considering major legislation which deals comprehensively with the health and safety problems of the Nation's most dangerous occupation.

As we proceed with our deliberations today, the safety and health of the men who work in the mines must at all times remain our prime consideration.

I envision ever expanding job opportunities for miners in the eastern Kentucky congressional district it is my privilege to represent. I have growing concern, however, that the people of this area and particularly the young people may not look upon work in the coal mines as an attractive opportunity because of the risks involved.

The work of the miner should be a highly rewarding lifetime occupation, one in which the worker in addition to a good income could take pride in making an important and substantial contribution to the growth and development of this Nation. The production of energy is basic to our wealth and economic growth and coal, a major source of that energy, must continue to play a significant role in the increasing productivity of this Nation. If the miner were not constantly faced with danger from roof falls, explosions, fires, and all manner of accidents, if each day in the mine did not increase the likelihood that his life would be choked off by the dreaded "black lung" disease, if, in short, his work could be made tolerably safe, more miners would stay with mining, and more importantly, miners and their wives will stop discouraging their sons from working in the mines.

Mr. Chairman, I believe that the legislation we consider today will make mining a safer and a healthier occupation. It will make mining more attractive particularly to the young people. It will increase the likelihood that experienced miners will remain in the industry. It will increase the likelihood that young people will enter it. If, on the other hand, we fail in the task we have set for ourselves, if coal mines are permitted to remain unhealthy and unsafe then the average age of miners will continue to rise and eventually there will be no men to work the mines. That would be a tragedy—for the miners, for the operators, and for the Nation.

HISTORY OF MINE SAFETY LAW

Like almost all legislation on this subject, the bill before us was triggered by a coal mine disaster—one in which 78 men lost their lives. Every significant advance in Federal coal mine safety law has required that men die—that they die dramatically and in substantial numbers—before the Congress would undertake to afford them a greater measure of protection.

The majority of coal miners killed on the job, however, do not lose their lives in dramatic disasters. They die by ones and twos in accidents that do not generate national headlines. And more, many more, are killed not on the job but by the job, victims of the insidious "black lung" disease that results from the daily breathing of coal dust.

Since the 78 miners died at Farmington, W. Va., last November—less than a year ago—another 144 have lost their lives in day-to-day, undramatic accidents. No one knows how many more have died, or will die, from black lung.

It took the deaths of more than 3,100 miners between 1900 and 1910 to move Congress to authorize the establishment of a Federal Bureau of Mines. Even then, for three full decades, the Bureau was equipped only with advisory powers. It was denied the most basic authority—to enter and inspect coal mines. When the right of entry finally was provided by law in 1941, it was not accompanied by any authority to establish safety standards, or to require compliance with an inspector's safety recommendations.

Even limited enforcement powers were not given to the Bureau until 1952, and, again, only after a major disaster in which 119 miners died. The law that gave those powers, once amended in 1966, is the law under which the Bureau operates today. When he signed it, former President Truman pointed out its glaring deficiencies. "A sham," he called it.

Those same deficiencies exist today.

The 1952 law was directed only at the prevention of major disasters. The day-to-day accidents, which still cause roughly 90 percent of all coal mine fatalities, were not to be a concern of the Federal Government. Despite a record which showed that the States were not discharging their responsibilities and were unlikely to do so, despite their weak standards and weaker enforcement, the chief responsibility for mine safety was left with the States.

Because of the procedural complexities with which it is burdened relating to inspections, orders, and appeals, the law has proved to be extremely difficult to administer.

In the law's favor it may be said, however, that for the first time the Bureau could require that specific hazardous conditions be corrected, and that men be withdrawn from a mine if there were "imminent danger" of a disaster.

In 1966, the 1952 law was extended to cover small coal mines, which until then had been exempted from its mandatory provisions. The Bureau also received additional enforcement powers for use in instances where there was "unwarrant-

able failure" of an operator to comply with those provisions.

In spite of almost 60 years of periodic congressional concern, however, and in spite of past legislative efforts, all of us are painfully aware of the poor safety record of the coal mining industry in this country. From 1952 through 1968 nearly 5,000 men were killed and 200,000 injured in underground coal mines.

For much too long the cliche "coal mining is a dangerous business" has served as an excuse for inaction on the part of the industry and the States. It must no longer serve as an excuse for inaction on the part of the Congress. When the fatality rate for one industry is 10 or more times the rate for all industry, improvement must be considered not only desirable but mandatory. And that is the case with underground coal mining.

THE 1969 ACT

The Federal Coal Mine Health and Safety Act of 1969 which we are considering today deals comprehensively with both the health and safety problems of the mines. It corrects the deficiencies of the 1952 act, takes account of past experience and provides for the development and implementation of safeguards against hazards that may develop in the future.

The bill, H.R. 13950, establishes an extensive array of interim mandatory health and safety standards. The standards included in the bill are minimum standards. Necessary changes need not await statutory amendments for the bill permits and encourages administrative changes where experience proves them necessary and desirable. The bill expands coverage of the law to afford protection against all hazards to the miners—not just against those likely to kill five or more at a time.

Adequate enforcement is assured by provision of administrative and judicial processes of both civil and criminal nature. The rights of the operator and the miners are protected.

The bill also requires an expansion of the sadly deficient Bureau of Mines' safety and health research program.

INTERIM SAFETY STANDARDS

The bill would establish a set of interim safety standards, technical and detailed minimum and interim specifications dealing with such things as roof support, ventilation, combustible materials, rock-dusting, electrical equipment, trailing cables, fire protection, maps, explosives, and so forth.

Many of these standards contained in title III of the bill for years have been included in the voluntary Federal mine safety codes for bituminous coal and lignite and anthracite mines. Many of the suggestions of the industry, the union, and State experts on mines and mine safety have been included in this bill. These interim standards should be regarded as the minimums on the basis of which new and improved standards will be promulgated as a changing technology makes improvements in safety desirable or necessary. These interim standards will provide guidelines for planning and operation during the period of transition from the existing law to the time when new standards can be issued under the procedures prescribed in this bill.

Three features of the interim standards will serve as examples to members of the provisions of title III. Like other of the interim standards they are directed toward reducing the frequency of accidents and fatalities from the most common causes.

ROOF CONTROL

The standards require that a roof control plan be submitted by each operator and that each such plan be approved by the Secretary of the Interior. This provision, along with the other requirements for roof support contained in this bill, has been expressly designed to reduce fatalities from roof falls—the No. 1 killer in underground coal mines. The provisions of this bill, strictly enforced, should help greatly in controlling this hazard which each year causes more than half the fatalities in the industry.

The roof control plan which the Secretary will require will be adopted within 5 months after this bill is passed and will show the type of support and spacing that has been approved by the Secretary. To insure that the plans will continue to provide safe roof conditions in the mine they will be reviewed at least every 6 months.

The bill further provides that no person may go beyond the last roof supports since this is the area of the mine in which 70 percent of the roof fall fatalities occur. In order to insure that the miner can work under a safe roof the operator is required to provide an ample supply of the materials needed to make the roof secure. When roof bolts are permitted under the mining plan they must be tested according to that plan and may be recovered only under carefully prescribed rules, that are a part of this bill, in order to be certain that their recovery will not result in extra hazards to miners.

Finally the bill provides that the roof, face, and ribs will be thoroughly inspected before any work or machine is started and they will be inspected frequently thereafter as may be necessary to insure that dangerous conditions are corrected.

VENTILATION

Mine ventilation requirements have been greatly upgraded over the standards in the current law. For example, the minimum air flow required in the last open cross cut has been increased 50 percent, and line brattice must be used unless a specific exemption is granted by an authorized representative of the Secretary of the Interior. Such standards are necessary to reduce dangers from accumulations of explosive methane gas or to guard against adverse health effects from high concentrations of respirable coal dust.

ELECTRICAL EQUIPMENT

New and improved standards have been provided to reflect the growing sophistication of electrical systems in underground coal mining and the higher voltages used on machines that become larger each year. These new standards should help significantly to reduce electrocution accidents, which have been occurring in increasing numbers.

INTERIM HEALTH STANDARDS

The bill takes another major step forward. For the first time in any legislation concerning coal mining in the United States, we have prescribed health standards that will ultimately eliminate the insidious black lung disease.

For years there has been controversy as to whether coal dust was the cause of certain pulmonary disorders found among coal miners. There can no longer be any doubt that it is. Coal dust in the respirable-size range, breathed over many years, causes black lung. The clinical evidence is overwhelming. Furthermore, as productivity continues to rise—as it has so dramatically over the past 20 years—the dust exposure of miners will be even greater, with even more deadly consequences.

There is no cure for this disease. Prevention, by reducing the exposure levels, is the only known protective measure.

The statistical evidence that we have indicates that the likelihood of death from black lung is twice as great as that of being fatally injured in an underground coal mine accident. This bill will establish dust standards that can dramatically reduce the fatality rate from black lung. Dust concentration levels will be reduced to less than half the level now encountered by the average miner working at the face in an underground mine.

The bill would establish a statutory maximum level of coal dust permitted in a mine. That level would be reduced over time.

Title II thus provides that the average concentration of respirable coal dust to which each miner is exposed would be kept at or below 4.5 milligrams per cubic meter of air. Six months after the date of enactment that level is reduced to 3 milligrams per cubic meter of air. The operator will be granted a limited extension where he can prove he is doing his best to comply, but cannot for technical reasons beyond his control.

On the basis of British X-ray evidence, a coal miner exposed to the high concentrations of dust found in coal mines today has almost a 35 percent probability of contracting simple black lung during a 35-year working life. This bill can make it possible to reduce that probability to less than 10 percent.

Further reduction to a much lower probability level will be attainable with the X-ray program provided for in the bill. Such a program will permit the identification of miners who show susceptibility to black lung, so they can be relocated in parts of a mine where dust concentrations are lower.

Although the dust standard incorporated in the bill is designed to give the lowest concentrations possible with today's technology, we realize that even lower concentrations must be achieved if black lung is to be eliminated. We have left to the discretion of the Secretary of Health, Education, and Welfare the times when lower levels of dust concen-

tration shall become mandatory. We have made it clear, however, that these lower levels shall be attained as quickly as possible.

ESTABLISHMENT OF MANDATORY HEALTH AND SAFETY STANDARDS

A major advance contained in this legislation is the authority given the Secretary of the Interior and the Secretary of Health, Education, and Welfare to develop, promulgate, and establish new standards for health and safety as they are needed.

For the first time, safety and health standards will be kept abreast of a constantly changing mining technology. Standards can be changed and updated as necessary to reflect new developments in mine technology, new methods and perhaps new hazards. Just as important, it will now be possible to speed up use of the latest and best in safety and health technology as it becomes available.

The flexibility afforded in the establishment of mandatory health and safety standard by title I of the bill is not accomplished at the expense of either the operator or the miner. An elaborate system of development, consultation, publication, notice, hearings, and review—administrative and judicial—is provided.

No standard promulgated through the process provided in title I may reduce the protection afforded miners by the interim mandatory health and safety standards provided in titles II and III.

ENFORCEMENT OF STANDARDS

Establishment of rigorous standards would be a meaningless gesture unless effective means for enforcing them were provided. The bill, therefore, authorizes both the Secretaries of Interior and Health, Education and Welfare, and their representatives to enter and inspect coal mines. Inspections would, in fact, occur at least four times a year and without notice.

A mine or portions of a mine may be closed down where an imminent danger exists or where violations of health and safety standards exist and persist.

Orders and directives relating to closures or violations are subject to review by the Secretary, the Board, and the courts.

The Secretary is authorized to seek injunctions against any who refuse to comply with the standards.

The bill also provides for fines for failures to adhere to the standards. Both fines and imprisonment may result from knowing violations of orders to withdraw men where an imminent danger exists or knowing refusal to obey other final orders.

ASSISTANCE TO THE OPERATORS

Because of possible economic hardship to mine operators that might result from the law's requirements with respect to the type of equipment that can be used underground and the possible economic dislocations in areas already depressed, the bill provides for loans to mine operators under favorable conditions. A loan would be made at the lower interest rates that are generally available to the Federal Government, and repayment may be scheduled over periods as long as 20 years.

COMPENSATION

Existing State compensation laws are in most instances inadequate to meet the real needs of miners disabled by black lung. Even where compensation payments are made, they are frequently below the minimum subsistence level, or miners disabled by the disease are ineligible on the basis of some technicality. For example, they may have worked in a State other than that in which they reside when the disease catches up to them, or the number of employers they worked for makes it difficult to assign the costs of compensation to those who might be held legally responsible for the disability.

One thing is clear, however. The coal produced by these victims of black lung was sold throughout the United States at prices lower than it could have been if compensation costs had been paid at the time that the disability was incurred. Consequently, compensation for past damage to a coal miner's health can, we believe, logically be considered a national responsibility. The bill provides for payments to miners where the State does not assume responsibility or where the payments are inadequate.

The level of benefits are low but they will be a help. A miner disabled by "black lung" would receive a benefit equal to one-half the amount paid a totally disabled Federal employee at a GS–2 rate—$136 per month. This amount would be offset by other income by way of State workmen's compensation, unemployment compensation, social security disability benefits, and so forth.

This bill provides for another essential complement to law, which is research and development aimed at eliminating hazards from the coal mining environment.

Historically, neither the coal industry nor the Federal Government has spent large sums of health and safety research. In fiscal year 1969 the Bureau of Mines was authorized to spend less than $3 million on all types of health and safety research, including that on metal and nonmetal mining operations. Moreover, much of this effort was devoted to relatively routine testing. At the same time the Department of the Interior was spending over $20 million in developing new uses for coal and on studies aimed at a better definition of the domestic coal resource base.

I would be among the first to agree that $20 million for mining and utilization research is less than is needed to bring the coal industry to the point where it can serve this Nation as it should. But, compared to that $20 million, the pitiful sums spent on research and development in health and safety would have to be considered ludicrous—if the results were not so tragic.

To assure that Federal research and development in this vital area are not starved for funds in the future, the bill that we are proposing provides for the assessment of up to 2 cents per ton on each ton of coal used or sold, and authorizes the appropriation from Federal funds, for each fiscal year, of an additional 2 cents per ton, along with an amount—up to 1 cent per ton—equal to that granted by any State for the support of Federal research and development. Under the bill, the sums appropriated and those paid by the industry will be administered by the Federal Coal Mine Health and Safety Board of Review to support Federal research and development.

The bill is long and complex, largely because of the numerous interim health and safety standards. I would like to emphasize, however, that legislation, no matter how well written and how rigorous, is only one of the means of achieving improved health and safety in this Nation's coal mines. The road to reduced injuries and fatalities is through the cooperation and motivation of both management and labor to work safely. Until there is an awareness that safety must always come first there can be no real and lasting improvement in safety records.

The coal industry must improve its health and safety record if it is to attract the manpower it needs. The industry no longer has a surplus of labor on which to draw. There are shortages of manpower at every level—the miner at the face, the foreman, the superintendent, and the mining engineer. Competition with other industries for manpower will become more keen. A continuation of the industry's poor safety record will not attract the needed workers. Unless there is a change in attitudes, based on a better image and record in the coal industry, this manpower shortage will continue. This as I have indicated, earlier could lead to serious economic consequences for the country. Economics and humanity alike dictate passage of H.R. 13950.

Mr. Chairman, at the appropriate time I shall offer a series of amendments relating to deletion of the Federal Coal Mine Health and Safety Board of Review. For the information of Members, the text of these amendments follows:

Page 5, strike out lines 5 and 6, and insert the following:

"(m) 'Panel' means the Interim Compliance Panel established by this Act."

Page 5, after line 13, insert the following:

"INTERIM COMPLIANCE PANEL

"SEC. 5. (a) There is hereby established the Interim Compliance Panel, which shall be composed of five members as follows:

"(1) Assistant Secretary of Labor for Labor Standards, Department of Labor, or his delegate;

"(2) Director of the Bureau of Standards, Department of Commerce, or his delegate;

"(3) Administrator of Consumer Protection and Environmental Health Service, Department of Health, Education, and Welfare, or his delegate;

"(4) Director of the Bureau of Mines, Department of the Interior, or his delegate;

"(5) Director of the National Science Foundation, or his delegate.

"(b) Members of the Panel shall serve without compensation in addition to that received in their regular employment, but shall be entitled to reimbursement for travel, subsistence, and other necessary expenses incurred by them in the performance of duties vested in the Panel.

"(c) Notwithstanding any other provision of law, the Secretary of Health, Education, and Welfare, Secretary of Commerce, the Secretary of Labor, and the Secretary of the Interior shall, upon request of the Panel, provide the Panel such personnel and other assistance as the Panel determines necessary to enable it to carry out its functions under this Act.

"(d) Three members of the Panel shall constitute a quorum for doing business. All decisions of the Panel shall be by majority vote. The chairman of the Panel shall be selected by the members from among the membership thereof.

"(e) The Panel is authorized to appoint as many hearing examiners as are necessary for proceedings required to be conducted in accordance with the provisions of this Act. The provisions applicable to hearing examiners appointed under section 3105 of title 5 of the United States Code shall be applicable to hearing examiners appointed pursuant to this subsection.

"(f)(1) It shall be the function of the Panel to carry out the duties imposed on it pursuant to sections 202 and 305 of this Act and to provide an opportunity for a hearing, after notice, at the request of an operator of the affected mine or the representative of the miners of such mine. Any operator or representative of miners aggrieved by a final decision of the Panel under this subsection may file a petition for review of such decision under section 106 of this Act. The provisions of this section shall terminate upon completion of the Panel's functions as set forth under sections 202 and 305 of this Act. Any hearing held pursuant to this subsection shall be of record and the Panel shall make findings of fact and shall issue a written decision incorporating its findings therein in accordance with section 554 of title 5 of the United States Code.

"(2) The Panel shall make an annual report, in writing, to the Secretary for transmittal by him to the Congress concerning the achievement of its purposes, and any other relevant information (including any recommendations) which it deems appropriate."

On page 6, line 4, strike "the Board, other".

On page 8, line 3, strike "by the Board".

On page 8, line 7, change the comma to a period and strike out all thereafter through the period of line 9.

On page 8, line 10, strike all through page 9, line 6, and substitute the following:

"(f) Promptly after any such notice is published in the Federal Register by the Secretary under subsection (e) of this section, the Secretary, in the case of mandatory safety standards, or the Secretary of Health, Education, and Welfare, in the case of mandatory health standards, shall issue notice of, and hold a public hearing for the purpose of receiving relevant evidence. Within sixty days after completion of the hearings, the Secretary who held the hearing shall make findings of fact which shall be public. In the case of mandatory safety standards, the Secretary may promulgate such standards with such modifications as he deems appropriate. In the case of mandatory health standards, th Secretary of Health, Education, and Welfare may direct the Secretary to promulgate the mandatory health standards with such modifications as the Secretary of Health, Education, and Welfare deems appropriate and the Secretary shall thereupon promulgate the mandatory health standards. In the event the Secretary or the Secretary of Health, Education, and Welfare determines that a proposed mandatory standard should not be promulgated or should be modified, he shall within a reasonable time publish his reasons for his determination."

Page 19, line 20, insert "(1)" after "(a)".

Page 20, after line 10, insert the following:

"(2) The operator and the representative of the miners shall be given written notice of the time and place of the hearing at least five days prior to the hearing. Any such hearing shall be of record and shall be subject to section 554 of title 5 of the United States Code."

Beginning with line 15 on page 21, strike out everything down through line 24 on page 27.

And renumber the sections which follow accordingly.

Beginning with line 1 on page 28, strike out everything down through line 19 on page 30.

And renumber the sections which follow accordingly.

Beginning with page 30, line 21, strike all through page 31, line 14, and substitute the following:

"SEC. 108. (a) Any decision issued by the Panel under section 5 or the Secretary under section 105 of this Act shall be subject to judicial review by the United States court of appeals for the circuit in which the affected mine is located, upon the filing in such court within thirty days from the date of such decision of a petition by the operator or a representative of the miners aggrieved by the decision praying that the decision be modified or set asde in whole or in part. A copy of the petition shall forthwith be sent by registered or certified mail to the other party and to the Secretary of the Panel, as appropriate, and thereupon the Secretary or the Panel, as appropriate, shall certify and file in such court the record upon which the decision complained of was issued, as provided in section 2112, title 28, United States Code.

"(b) The Court shall hear such petition on the record made before the Secretary or the Panel, as appropriate. The findings of the Secretary or the Panel, as appropriate, if supported by substantial evidence on the record considered as a whole, shall be conclusive. The court may affirm, vacate, or modify any such decision or may remand the proceedings to the Secretary or the Panel, as appropriate, for such further action as it may direct."

Page 31, line 18, after "appeal" insert the following: "from a decision of the Secretary or the Panel, as appropriate, except a decision from an order issued under section 104(a) of this title,".

Page 32, line 2, strike out "Board's" and insert "Secretary's or Panel's".

Page 36, line 3, strike out "Board" and insert "Secretary".

Page 44, line 25, strike out "sections 105, 107, and 108 of".

Page 117, line 15, strike out "Board" and insert "Secretary".

Page 117, line 16, strike "its" and insert "his".

Mr. Chairman, these amendments strike the Board of Review from the bill and make the following other related changes in the bill:

An Interim compliance panel would be created for the purpose of reviewing and acting upon requests by mines for waiver of dust standards and the use of permissible—nonspark—mining equipment.

REVIEW OF STANDARDS

Under the amendment, once objections are received from any person, the Secretary must hold a public hearing. Within 60 days after the hearing is completed, the Secretary must publicize his findings in the Federal Register. As in the bill, the Secretary, in the case of safety standards, may promulgate them finally with such modifications as he deems appropriate, and, in the case of health standards, these are developed by the Secretary of Health, Education, and Welfare who then transmits to the Secretary to promulgate them formally.

The standards, of course, are subject to review in court as part of any appeal in an enforcement proceeding.

REVIEW OF CLOSING ORDERS

The amendment provides for an appeal from any closing order issued by a Federal inspector to the Secretary or on the modification or termination of an order at the request of either the operator or the representative of the miners. The amendment specifically makes the adjudication provisions of title 5 of the United States Code, formally known as the Administrative Procedures Act, applicable to this appeal and the hearing on the appeal. Under title 5, hearing examiners would be appointed to adjudicate these appeals promptly.

After the hearing, the Secretary must issue his findings of fact which are incorporated in his decision vacating, affirming, modifying, or terminating the appealed order.

TEMPORARY RELIEF PENDING APPEALS

Finally, the amendment permits, on a very limited basis, temporary relief from any closing order, except imminent danger closing orders while an appeal is being taken. H.R. 13950, on the other hand, permits the Board to grant temporary relief from imminent danger orders, as well as other orders, with no specified safeguards.

I want my colleagues to understand what the implications of this provision are. Remember, imminent danger orders are only issued when, in fact, conditions in a mine are so serious that, unless the miners are withdrawn immediately, disaster will strike.

JUDICIAL REVIEW

Under the amendment, an operator or the representative of the miners may appeal to the U.S. Court of Appeals in the circuit in which the mine is located, or for the District of Columbia, from any decision of the Secretary relative to a closing order. As in the case of appeals from Board decisions under H.R. 13950, the findings of the Secretary, if supported by substantial evidence on the record considered as a whole, shall be conclusive. The court may affirm, vacate, or modify the Secretary's decision or remand the proceedings to the Secretary. The court may, on request, grant temporary relief for limited purposes from such decisions, except those pertaining to an imminent danger order.

CIVIL PENALTIES

Under H.R. 13950, with the amendment, the Secretary is directed to assess civil penalties for violations of the mandatory standards. On request, under my amendment, the Secretary must hold a public hearing on the violation and the amount of the penalty and issue a decision thereon. If the operator, under the bill and the amendment, fails to pay the penalty, the Secretary would have to institute a civil action in the U.S. district court to collect the penalty. The record of the proceedings before the Secretary or his decision are not binding on the court. The trial in the court is de novo—that is, the court hears all the evidence afresh. Thus, the operator is fully protected.

OTHER MATTERS

Under the amendment, the Secretary of Health, Education, and Welfare would oversee the X-ray program and both the Secretary and the Secretary of Health, Education, and Welfare shall carry out the health and safety research program prescribed in the bill. The royalty payments would be available to both Secretaries for the X-ray program and research. Finally, the study required by section 412 of the bill would be carried out by the Secretary.

Mr. Chairman, at this point I would like to insert in the RECORD amendments to title III of H.R. 13950, that I am advised by the distinguished chairman of the subcommittee, the gentleman from Pennsylvania (Mr. DENT) will offer at the appropriate time. The insertion which follows is in such form that language not changed by the amendment is shown in roman type, the portions which the amendments would eliminate are enclosed in black brackets, and new language is shown in italic. These amendamendments are acceptable to me and it is my understanding that they are likewise acceptable to Members on both sides of the aisle:

PROPOSED AMENDMENTS TO BE OFFERED TO TITLE III H.R. 13950 (THE FEDERAL COAL MINE HEALTH AND SAFETY ACT OF 1969) SHOWING CHANGES MADE IN THE BILL AS REPORTED BY THE COMMITTEE ON EDUCATION AND LABOR

TITLE III—INTERIM MANDATORY SAFETY STANDARDS FOR UNDERGROUND COAL MINES

COVERAGE

SEC. 301. (a) The provisions of sections 302 through 317 of this title shall be interim mandatory safety standards applicable to all underground coal mines until superseded in whole or in part by mandatory safety standards promulgated by the Secretary under the provisions of section 101 of title I of this Act, and shall be enforced in the same manner and to the same extent as any mandatory safety standard promulgated under title I of this Act. Any orders issued in the enforcement of the interim standards set forth in this title shall be subject to review as provided in sections 105, 107, and 108 of title I of this Act.

(b) The Secretary may, upon petition by the operator, waive or modify the application of any mandatory safety standard to a mine when he determines such application will result in a diminution of safety to workers in such mine, but any action taken by the Secretary under this subsection shall be consistent with the purposes of this Act and shall not reduce the protection afforded miners by it.

(c) Upon petition by the operator, the Secretary may modify the application of any mandatory safety standard to a mine. Such petition shall state that an alternative method of achieving the result of such standard exists which will at all times guarantee no less than the same measure of protection afforded miners by such standard. Upon receipt of such petition the Secretary shall publish notice thereof and give notice to the representative, if any, of persons working in the affected mine and shall cause such investigation to be made as he deems appropriate. Such investigation shall provide an opportunity for a hearing, at the request of such representative or other interested party, to enable the applicant and the representative of persons working in such mine or other interested party to present information relating to the modification of such standard. The Secretary shall make findings of fact and publish them in the Federal Register.

ROOF SUPPORT

SEC. 302. (a) Each operator shall undertake to carry out on a continuing basis a program to improve the roof control system of each mine and the means and measures to accomplish such system. The roof and ribs of all active underground roadways, travelways, and working places shall be supported or otherwise controlled adequately to protect persons from falls of the roof or ribs. A roof-control plan and revisions thereof suitable to the roof conditions and mining system of each mine and approved by the Secretary shall be adopted and set out in printed form within sixty days after the operative date of this title. The plan shall show the type of support and spacing approved by the Secretary. Such plan shall be reviewed periodically, at least every six months by the Secretary, taking into consideration any falls of roof or ribs or inadequacy of support of roof or ribs. No person shall proceed beyond the last permanent support unless adequate temporary support is provided or unless such temporary support is not required under the approved roof control plan. A copy of the plan shall be furnished the Secretary or his authorized representative and shall be available to the miners or their authorized representatives.

(b) The method of mining followed in any mine shall not expose the miner to unusual dangers from roof falls caused by excessive widths of rooms and entries or faulty pillar recovery methods.

(c) The operator shall provide at or near the working face an ample supply of suitable materials of proper size with which to secure the roof of all working places in a safe manner. Safety posts, jacks, or other approved devices shall be used to protect the workmen when roof material is being taken down, crossbars are being installed, roof boltholes are being drilled, roof bolts are being installed, and in such other circumstances as may be appropriate. Loose roof and overhanging or loose faces and ribs shall be taken down or supported. Supports knocked out, except in recovery, shall be replaced promptly.

(d) When permitted, installed roof bolts shall be tested in accordance with the approved roof control plan. Roof bolts shall not be recovered where complete extractions of pillars are attempted, where adjacent to clay veins, or at the locations of other irregularities whether natural or otherwise that induce abnormal hazards. Where roof bolt recovery is permitted, it shall be conducted only in accordance with methods prescribed in the approved roof control plan, and shall be conducted by experienced miners and only where adequate temporary support is provided.

(e) Where miners are exposed to danger from falls of roof, face, and ribs the operator shall require that examinations and tests of the roof, face, and ribs be made before any work or machine is started, and as frequently thereafter as may be necessary to insure safety. When dangerous conditions are found, they shall be corrected immediately.

VENTILATION

SEC. 303. (a) All coal mines shall be ventilated by mechanical ventilation equipment installed and operated in a manner approved by an authorized representative of the Secretary and such equipment shall be examined daily and a record shall be kept of such examination.

(b) All active underground workings shall be ventilated by a current of air containing not less than 19.5 volume per centum of oxygen, not more than 0.5 volume per centum of carbon dioxide, and no harmful quantities of other noxious or poisonous gases; and the volume and velocity of the current of air shall be sufficient to dilute, render harmless, and to carry away, flammable or harmful gases and smoke and fumes. The minimum quantity of air in any mine reaching the last open crosscut in any pair or set of developing entries and the last open crosscut in any pair or set of rooms shall be nine thousand cubic feet a minute, and the minimum quantity of air reaching the intake end of a pillar line shall be nine thousand cubic feet a minute. *The minimum quantity of air in any mine reaching each working face shall be three thousand cubic feet a minute and, in the case of a mechanized mine, there shall also be a minimum velocity of one hundred feet per minute passing over any miner operating electrical equipment at the working face.* The Secretary or his authorized representative may require in any coal mine a greater quantity *and velocity* of air when he finds it necessary to protect the *health and* safety of miners. *Within three years after the operative date of this title, the dust level in intake aircourses shall not exceed 0.25 milligrams per cubic meter of air.* In robbing areas of anthracite mines, where the air currents cannot be controlled and measurements of the air cannot be obtained, the air shall have perceptible movement.

(c)(1) Properly installed and adequately maintained line brattice or other approved

devices shall be used from the last open crosscut of an entry or room of each working section to provide adequate ventilation to the working faces for the miners and to remove [gases, dust, and expolsive fumes,] *flammable, explosive, and noxious gases, dust, and explosive fumes,* unless the Secretary or his authorized representative permits an exception to this requirement. When damaged by falls or otherwise, they shall be repaired promptly.

(2) The space between the line brattice or other approved device and the rib shall be large enough to permit the flow of a sufficient volume of air to keep the working face clear of flammable, *explosive,* and noxious gases, *dust and explosive fumes.*

(3) Brattice cloth used underground shall be of flame-resistant material.

(d)(1) Within three hours immediately preceding the beginning of a coal-producing shift, and before any workmen in such shift enter the underground areas of the mine, certified persons designated by the operator of the mine shall examine a definite underground area of the mine. Each such examiner shall examine every underground working place in that area and shall make tests in each such working place for accumulations of explosive gases with means approved by the Secretary for detecting explosive gases and shall make tests for oxygen deficiency with a permissible flame safety lamp or other means approved by the Secretary; examine seals and doors to determine whether they are functioning properly; examine and test the roof, face, and rib conditions in the underground working places; examine active roadways, travelways, and all belt conveyors on which men are carried, approaches to abandoned workings, and accessible falls in sections for hazards; examine by means of an anemometer or other device approved by the Secretary to determine whether the air in each split is traveling in its proper course and in normal volume; and examine for such other hazards and violations of the mandatory health safety standards, as an authorized representative of the Secretary may from time to time require. Belt conveyors on which coal is carried shall be examined after each coal-producing shift has begun. Such mine examiner shall place his initials and the date at all places he examines. If such mine examiner finds a condition which constitutes a violation of a mandatory health or safety standard or any condition which is hazardous to persons who may enter or be in such area, he shall indicate such hazardous place by posting a "DANGER" sign conspicuously at all points which persons entering such hazardous place would be required to pass, and shall notify the operator of the mine. No person, other than an authorized representative of the Secretary or a State mine inspector or persons authorized by the mine operator to enter such place for the purpose of eliminating the hazardous condition therein, shall enter such place while such sign is so posted. Upon completing his examination such mine examiner shall report the results of his examination to a person, designated by the mine operator to receive such reports at a designated station on the surface of the mine, before other persons enter the underground areas of such mine to work in such coal-producing shift. Each such mine examiner shall also record the results of his examination with ink or indelible pencil in a book approved by the Secretary kept for such purpose in an area on the surface of the mine chosen by the mine operator to minimize the danger of destruction by fire or other hazard.

(2) No person (other than certified persons designated under this subsection) shall enter any underground area, except during a coal-producing shift, unless an examination of such area as prescribed in this subsection has been made within eight hours immediately preceding his entrance into such area.

(e) At least once during each coal-producing shift, or more often if necessary for safety, each underground working section shall be examined for hazardous conditions by certified persons designated by the mine operator to do so. Such examination shall include tests with means approved by the Secretary for detecting explosive gases and with a permissible flame safety lamp or other means approved by the Secretary for detecting oxygen deficiency.

(f) Examination for hazardous conditions, including tests for explosive gases, and for compliance with the standards established by, or promulgated pursuant to, this title shall be made at least once each week, by a certified person designated by the operator of the mine, in the return of each split of air where it enters the main return, on pillar falls, at seals, in the main return, at least one entry of each intake and return aircourse in its entirety, idle workings, and, insofar as safety considerations permit, abandoned workings. Such weekly examination need not be made during any week in which the mine is idle for the entire week; except that such examination shall be made before any other miner returns to the mine. The person making such examinations and tests shall place his initials and the date at the places examined, and if hazardous conditions are found, such conditions shall be reported promptly. Any hazardous conditions shall be corrected immediately. If a hazardous condition cannot be corrected immediately, the operator shall withdraw all persons from the area affected by the hazardous condition except those persons whose presence is required to correct the conditions. A record of these examinations, tests, and actions taken shall be recorded in ink or indelible pencil in a book approved by the Secretary kept for such purpose in an area on the surface of the mine chosen by the mine operator to minimize the danger of destruction by fire or other hazard, and the record shall be open for inspection by interested persons.

(g) At least once each week, a qualified person shall measure the volume of air entering the main intakes and leaving the main returns, the volume passing through the last open crosscut in any pair or set of developing entries and the last open crosscut in any pair or set of rooms, the volume being delivered to the intake end of each pillar line, and the volume at the intake and return of each split of air. A record of such measurements shall be recorded in ink or indelible pencil in a book approved by the Secretary kept for such purpose in an area on the surface of the mine chosen by the mine operator to minimize the danger of destruction by fire or other hazard, and the record shall be open for inspection by interested persons.

(h)(1) At the start of each coal-producing shift, test for explosive gases shall be made at the face of each working place immediately before electrically operated equipment is energized. Such tests shall be made by qualified persons. If more than 1.0 volume per centum *or more* of explosive gas is detected, electrical equipment shall not be energized, taken into, or operated in, such working place until such explosive gas content is [no more] *less* than 1.0 volume per centum of explosive gas. Examinations for explosive gases shall be made during such operations at intervals of not more than twenty minutes during each shift, unless more frequent examinations are required by an authorized representative of the Secretary. In conducting such tests, such person shall use means approved by the Secretary for detecting explosive gases.

(2) If the air at an underground working place, when tested at a point not less than twelve inches from the roof, face, or rib, contains [more than] 1.0 volume per centum *or more* of explosive gas, changes or adjustments shall be made at once in the ventilation in such mines so that such air shall [not] contain [more] *less* than 1.0 volume per centum of explosive gas. While such ventilation improvement is underway and until it has been achieved, power to face equipment located in such place shall be cut off, no other work shall be permitted in such place, and due precautions will be carried out under the direction of the agent of the operator so as not to endanger other active workings.

If such air, when tested as outlined above contains 1.5 volume per centum *or more* of explosive gas, all persons shall be withdrawn from the portion of the mine endangered thereby, and all electric power shall be cut off from such portion of the mine, until the air in such working place shall [not] contain [more] *less* than 1.0 volume per centum of explosive gas.

(i) If, when tested, a split of air returning from active underground workings contains [more than] 1.0 volume per centum *or more* of explosive gas, changes or adjustments shall be made at once in the ventilation in the mine so that such returning air shall [not contain more] *contain less* than 1.0 volume per centum of explosive gas. Such tests shall be made at four-hour intervals during each shift by a qualified person designated by the operator of the mine. In making such tests, such person shall use means approved by the Secretary for detecting explosive gases.

(j) If a split of air returning from active underground workings contains 1.5 volume per centum *or more* of explosive gas, all persons shall be withdrawn from the portion of the mine endangered thereby, and all electric power shall be cut off from such portion of the mine, until the air in such split shall [not contain more] *contain less* than 1.0 volume per centum of explosive gas. In virgin territory, if the quantity of air in a split ventilating the active workings in such territory equals or exceeds twice the minimum volume of air prescribed in subsection (b) of this section, if the air in the split returning from such workings does not pass over trolley or power feeder wires, and if a certified person designated by the mine operator is continually testing the explosive gas content of the air in such split during mining operations in such workings, it shall be necessary to withdraw all persons and cut off all electric power from the portion of the mine endangered by explosive gases only when the air returning from such workings contains [more than] 2.0 volume per centum *or more of explosive gas.*

(k) Air which has passed by an opening of any abandoned area shall not be used to ventilate any active working place in the mine if such air contains 0.25 volume per centum or more of explosive gas. Examinations of such air shall be made during the pre-shift examination required by subsection (d) of this section. In making such tests, a certified person designated by the operator of the mine shall use means approved by the Secretary for detecting explosive gases. For the purposes of this subsection, an area within a panel shall not be deemed to be abandoned until such panel is abandoned.

(l) Air that has passed through an abandoned panel or area which is inaccessible or unsafe for inspection shall not be used to ventilate any active working place in such mine. No air which has been used to ventilate an area from which the pillars have been removed shall be used to ventilate any active working place in such mine, except that such air, if it does not contain 0.25 volume per centum or more of explosive gases, may be used to ventilate enough advancing working places immediately adjacent to the line of retreat to maintain an orderly sequence of pillar recovery on a set of entries.

(m) A methane monitor approved by the Secretary shall be installed and be kept operative and in operation on all electric face cutting equipment, continuous miners, longwall face equipment, and loading machines, and such other electric face equipment as an authorized representative of the Secretary may require. Such monitor shall be set to deenergize automatically any electric face equipment on which it is required when such monitor is not operating properly. The sensing device of any such monitor shall be installed as close to the working face as possible. An authorized representative of the Secretary may require any such monitor to be set to give a warning automatically when the concentration to explosive gas reaches 1.0 volume per centum and automatically to deenergize equipment on which it is installed when such concentration reaches 2.0 volume per centum.

(n) Idle and abandoned areas shall be inspected for explosive gases and for oxygen deficiency and other dangerous conditions by a certified person with means approved by the Secretary as soon as possible, but not more than three hours, before other employees are permitted to enter or work in such areas. However, persons, such as pumpmen, who are required regularly to enter such areas in the performance of their duties, and who are trained and qualified in the use of means approved by the Secretary for detecting explosive gases and in the use of a permissible flame safety lamp or other means for detecting oxygen deficiency are authorized to make such examinations for themselves, and each such person shall be properly equipped and shall make such examinations upon entering any such area.

(o) Immediately before an intentional roof fall is made, pillar workings shall be examined by a qualified person designated by the operator to ascertain whether explosive gas is present, such person shall use means approved by the Secretary for detecting explosive gases. If in such examination explosive gas is found in amounts of more than 1.0 volume per centum *or more,* such roof fall shall not be made until changes or adjustments are made in the ventilation so that the air shall not contain more *contain less* than 1.0 volume per centum of explosive gas.

(p) [Within six months after the operative date of this title, and thereafter, all areas in all mines in which the pillars have been extracted or areas which have been abandoned for other reasons shall be effectively sealed or shall be effectively ventilated by bleeder entries, or by bleeder systems or an equivalent means. Such sealing or ventilation shall be approved by an authorized representative of the Secretary.] *A ventilation system and explosive gas—and dust-control plan and revisions thereof suitable to the conditions and the mining system of the mine and approved by the Secretary shall be adopted by the operator and set out in printed form within ninety days after the operative date of this title. The plan shall show the type and location of mechanical ventilation equipment installed and operated in the mine and such other information as the Secretary may require. Such plan shall be reviewed by the operator and the Secretary at least every six months.*

[(q) Pillared areas ventilated by means of bleeder entries, or by bleeder systems or an equivalent means, shall have sufficient air coursed through the area so that the return split of air shall not contain more than 2.0 volume per centum of explosive gas before entering another split of air.]

(q) Each operator of a coal mine shall provide for the proper maintenance and care of the permissible flame safety lamp by a person trained in such maintenance and before each shift care shall be taken to insure that such lamp is in a permissible condition.

(r) Where areas are being pillared on the operative date of this title without bleeder entries, or without bleeder systems or an equivalent means, pillar recovery may be completed in the area to the extent approved by an authorized representative of the Secretary if the edges of pillar lines adjacent to active workings are ventilated with sufficient air to keep the air in open areas along the pillar lines below 1.0 volume per centum of explosive gas.

(s) Each mechanized mining section shall be ventilated with a separate split of intake air directed by overcasts, undercasts, or the equivalent, except an extension of time, not in excess of six months may be permitted by the Secretary, under such conditions as he may prescribe, whenever he determines that this subsection cannot be complied with on the operative date of this title.

(t) In all underground areas of a mine, immediately before firing each shot or group of multiple shots and after blasting is completed, examinations for explosive gases shall be made by a qualified person with means approved by the Secretary for detecting explosive gases. If explosive gas is found in amounts of [more than] 1.0 volume per centum *or more,* changes or adjustments shall be made at once in the ventilation so that the air shall [not contain more] *contain less* than 1.0 volume per centum of explosive gas. No shots shall be fired until the air contains [not more] *less* than 1.0 volume per centum of explosive gas.

(u) Each operator of a coal mine shall adopt a plan within sixty days after the operative date of this title which shall provide that when any mine fan stops, immediate action shall be taken by the operator or his agent (1) to withdraw all persons from the working sections, (2) to cut off the power in the mine in a timely manner, (3) to provide for restoration of power and resumption of work if ventilation is restored within a reasonable period as set forth in the plan after the working places and other workings where explosive gas is likely to accumulate are reexamined by a certified person to determine if explosive gas in amounts of [more than] 1.0 volume per centum *or more* exists therein, and (4) to provide for withdrawal of all persons from the mine if ventilation cannot be restored within such reasonable time. The plan and revisions thereof approved by the Secretary shall be set out in printed form and a copy shall be furnished to the Secretary or his authorized representative.

(v) Changes in ventilation which materially affect the main air current or any split thereof and which may affect the safety of persons in the coal mine shall be made only when the mine is idle. Only those persons engaged in making such changes shall be permitted in the mine during the change. Power shall be removed from the areas affected by the change before work starts to make the change and shall not be restored until the effect of the change has been ascertained and the affected areas determined to be safe by a certified person.

(w) The mine foreman shall read and countersign promptly the daily reports of the preshift examiner and assistant mine foremen, and he shall read and countersign promptly the weekly report covering the examinations for hazardous conditions. Where such reports disclose hazardous conditions, the mine foreman shall take prompt action to have such conditions corrected. The mine superintendent or assistant superintendent of the mine shall also read and countersign the daily and weekly reports of such persons.

(x) Each day, the mine foreman and each of his assistants shall enter plainly and sign with ink or indelible pencil in a book provided for that purpose a report of the condition of the mine or portion thereof under his supervision which report shall state clearly the location and nature of any hazardous condition observed by them or reported to them during the day and what action was taken to remedy such condition. Such book shall be kept in an area on the surface of the mine chosen by the operator to minimize the danger of destruction by fire or other hazard.

(y) Before a mine is reopened after having been abandoned, the Secretary shall be notified and an inspection made of the entire mine by an authorized representative of the Secretary before mining operations commence.

(z) *(1)* In any coal mine opened after the operative date of this title, the entries used as intake and return air-courses shall be separated from belt [and trolley] haulage entries, and each operator of such mine shall limit the velocity of the air coursed through belt [and trolley] haulage entries to the amount necessary to provide an adequate supply of oxygen in such entries, and to insure that the air therein shall [not] contain [more than 1.0 volume per centum of explosive gas.] *less than 1.0 volume per centum of explosive gas, and such air shall not be used to ventilate active working places.* Whenever an authorized representative of the Secretary finds, in the case of any coal mine opened on or prior to the operative date of this title which has been developed with more than two entries, that the conditions in the entries, other than *belt* haulage entries, are such as to adequately permit the coursing of intake or return air through such entries, (1) the belt [and trolley] haulage entries shall not be used to ventilate, unless such entries are necessary to ventilate active working places, and (2) when the belt [and trolley] haulage entries are not necessary to ventilate the active working faces, the operator of such mine shall limit the velocity of the air coursed through the belt [and trolley] haulage entries to the amount necessary to provide an adequate supply of oxygen in such entries, and to insure that the air therein shall [not] contain [more] *less* than 1.0 volume per centum of [methane] *explosive gas.*

(2) In any coal mine opened on or after the operative date of this title, or in any new working section of a coal mine opened prior to such date, where trolley haulage systems are maintained and where trolley or trolley feeder wires are installed, an authorized representative of the Secretary shall require a sufficient number of entries or rooms as intake air courses in order to limit, as prescribed by the Secretary, the velocity of air currents on such haulageways for the purpose of minimizing the hazards associated with fires and dust explosions in such haulageways.

COMBUSTIBLE MATERIALS AND ROCK DUSTING

SEC. 304. (a) Coal dust, including float coal dust deposited on rock-dusted surfaces, loose coal, and other combustible materials, shall be cleaned up and not be permitted to accumulate in active underground workings or on electric equipment therein.

(b) Where underground mining operations create or raise excessive amounts of dust, water, or water with a wetting agent added to it, or other effective methods approved by an authorized representative of the Secretary, shall be used to abate such dust. In working places, particularly in distances less than forty feet from the face, water, with or without a wetting agent, or other effective methods approved by an authorized representative of the Secretary, shall be applied to coal dust on the ribs, roof, and floor to reduce dispersibility and to minimize the explosion hazard.

(c) All underground areas of a mine, except those areas in which the dust is too wet or too high in incombustible content to propagate an explosion, shall be rock dusted to within forty feet of all faces, unless such areas are inaccessible or unsafe to enter or

unless an authorized representative of the Secretary permits an exception. All crosscuts that are less than forty feet from a working face shall also be rock dusted.

(d) Where rock dust is required to be applied, it shall be distributed upon the top, floor, and sides of all underground areas of a mine and maintained in such quantities that the incombustible contents of the combined coal dust, rock dust, and other dust shall be not less than 65 per centum, but the incombustible content in the return aircourses shall be no less than 80 per centum. Where explosive gas is present in any ventilating current, the per centum of incombustible content of such combined dusts shall be increased 1 and 0.4 per centum for each 0.1 per centum of explosive gas, where 65 and 80 per centum, respectively, of incombustibles are required.

(e) Subparagraphs (b) through (d) of this paragraph shall not apply to underground anthracite mines subject to this Act.

ELECTRICAL EQUIPMENT

SEC. 305. (a) One year after the operative date of this title—

(1) all electric face equipment used in a coal mine shall be permissible and shall be maintained in a permissible condition, except that the Secretary may permit, under such conditions as he may prescribe, nonpermissible or open-type electric face equipment in use in such mine on the date of enactment of this Act, to continue in use for such period (not in excess of one year) as he deems necessary to obtain such permissible equipment: *Provided, however,* That the provisions of this paragraph shall not apply to any mine which is not classified as gassy; and

(2) only permissible junction or distribution boxes shall be used for making multiple power connections inby the last open crosscut or in any other place where dangerous quantities of explosive gases may be present or may enter the air current.

(b) (1) Four years after the operative date of this title all electric face equipment used in mines exempted from the provisions of section 305(a)(1) of this Act shall be permissible and shall be maintained in a permissible condition, except that the Secretary may, upon petition, waive the requirements of this paragraph on an individual mine basis for a period not in excess of two years if, after investigation, he determines that such waiver is warranted. The Secretary may also, upon petition, waive the requirements of this paragraph on an individual mine basis if he determines that the permissible equipment for which the waiver is sought is not available to such mine.

(2) One year after the operative date of this title all replacement equipment acquired for use in any mine referred to in this subsection shall be permissible and shall be maintained in a permissible condition, and in the event of any major overhaul of any item of equipment in use one year from the operative date of this title such equipment shall be put in and thereafter maintained in a permissible condition, if, in the opinion of the Secretary, such equipment or necessary replacement parts are available.

(3) One year after the operative date of this title all hand held electric drills, blowers and exhaust fans, electric pumps, and other such low-horsepower electric face equipment as the Secretary may designate which are taken into or used in by the last open crosscut of any coal mine shall be permissible and thereafter maintained in a permissible condition.

(4) During the term of the use of any nonpermissible electric face equipment permitted under this subsection the Secretary may by regulation provide for use of methane monitoring devices, under such conditions as he shall prescribe, which will automatically deenergize electrical circuits providing power to electrical face equipment when the concentration of explosive gas in the atmosphere of the active workings permits, in the opinion of the Secretary, a condition in which an ignition or explosion may occur.

(c) A copy of any permit granted under this [paragraph] *section* shall be mailed immediately to a duly designated representative of the employees of the mine to which it pertains, and to the public official or agency of the State charged with administering State laws relating to coal mine health and safety in such mine. *After the operative date of this title, whoever knowingly, in the case of a manufacturer, distributes, sells, offers for sale, introduces, or delivers in commerce any new electrical equipment used in coal mines, including, but not limited to, components and accessories of such equipment which fails to comply with the specifications or regulations of the Secretary, or, in the case of any other person, removes, alters, modifies, or renders inoperative any such equipment prior to its sale and delivery in commerce to the ultimate purchaser, shall, upon conviction, be subject to the sanctions in section 111(f) of this Act.*

(d) Any coal mine which, prior to the operative date of this title, was classed gassy and was required to use permissible electric face equipment and to maintain such equipment in a permissible condition shall continue to use such equipment and to maintain such equipment in such condition.

(e) All power-connection points, except where permissible power connection units are used, outby the last open crosscut shall be in intake air.

(f) The location and the electrical rating of all stationary electric apparatus in connection with the mine electric system, including permanent cables, switchgear, rectifying substations, transformers, permanent pumps and trolley wires and trolley feeders, and settings of all direct-current circuit breakers protecting underground trolley circuits, shall be shown on a mine map. Any changes made in a location, electric rating, or setting shall be promptly shown on the map when the change is made. Such map shall be available to an authorized representative of the Secretary and to the miners in such mine.

(g) All power circuits and electric equipment shall be deenergized before work is done on such circuits and equipment, [except, when necessary, a person may repair energized trolley wires if he wears insulated shoes and lineman's gloves.] *except when necessary for trouble shooting or testing. Energized trolley wires may be repaired only by a person qualified to perform such repairs and the operator of such mine shall require that such person wear approved and tested insulated shoes and wireman's gloves.* No work shall be performed on medium and high-voltage distribution circuits or equipment except by or under the direct supervision of a [competent electrician. Switches shall be locked out and suitable warning signs posted by the persons who are to do the work. Locks shall be removed only by the persons who installed them.] *qualified person. Disconnecting devices shall be locked out and suitably tagged by the persons who perform such work, except that, in cases where locking out is not possible, such devices shall be opened and suitably tagged by such persons. Locks or tags shall be removed only by the persons who installed them or, if such persons are unavailable, by persons authorized by an agent of the operator.*

[(h) Electric equipment shall be frequently examined by a competent electrician to] *(h) All electrical equipment shall be frequently examined, tested, and properly maintained by a qualified person to* assure safe operating conditions. When a potentially dangerous condition is found on electric equipment, such equipment shall be removed from service until such condition is corrected. A record of such examinations shall be kept and made available to an authorized representative of the Secretary and to the miners in such mine.

(i) All electric conductors shall be sufficient in size and have adequate current-carrying capacity and be of such construction that the rise in temperature resulting from normal operation will not damage the insulating materials.

(j) All [joints] *electrical connections* or splices in conductors shall be mechanically and electrically efficient and suitable connectors shall be used. All [joints] *electrical connections or splices* in insulated wire shall be reinsulated at least to the same degree of protection as the remainder of the wire.

(k) Cables shall enter metal frames of motors, splice boxes, and electric compartments only through proper fittings. When insulated wires other than cables pass through metal frames the holes shall be substantially bushed with insulated bushings.

(l) All power wires (except trailing cables on mobile equipment, specially designed cables conducting high-voltage power to underground rectifying equipment or transformers, or bare or insulated ground and return wires) shall be supported on well-installed insulators and shall not contact combustible material, roof, or ribs.

(m) Except trolley wires, trolley feeder and bare signal wires, power wires and cables installed shall be insulated adequately and fully protected.

(n) Automatic circuit-breaking devices or fuses of the correct type and capacity shall be installed so as to protect all electric equipment and circuits against short circuit and overloads. Three-phase motors on all electric equipment shall be provided with overload protection that will deenergize all three phases in the event that any phase is overloaded.

(o) In all main power circuits disconnecting switches shall be installed underground within five hundred feet of the bottoms of shafts and boreholes through which main power circuits enter the underground portion of the mine and at all other places where main power circuits enter the underground portion of the mine.

(p) All electric equipment shall be provided with switches or other controls that are safely designed, constructed, and installed.

(q) Each ungrounded, exposed power conductor that leads underground shall be equipped with lightning arresters of approved type within one hundred feet of the point where the circuit enters the mine. Lightning arresters shall be connected to a low resistance grounding medium on the surface which shall be separated from neutral grounds by a distance of not less than twenty-five feet.

(r) No device for the purpose of lighting any underground coal mine or flame which has not been approved by the Secretary or his authorized representative shall be permitted in any underground coal mine, except under the provisions of section 311(d) of this title.

(s) An authorized representative of the Secretary may require in any coal mine that face equipment be provided with devices that will permit the equipment to be deenergized quickly in the event of an emergency.

TRAILING CABLES

SEC. 306. (a) Trailing cables used underground shall meet the requirements established by the Secretary for flame-resistant cables.

(b) Short-circuit protection for trailing cables shall be provided by an automatic circuit breaker or other no less effective device approved by the Secretary of adequate current interrupting capacity in each ungrounded conductor. Disconnecting devices used to disconnect power from trailing cables shall be plainly marked and identified and such devices shall be equipped or designed

in such a manner that it can be determined by visual observation that the power is disconnected.

(c) When two or more trailing cables junction to the same distribution center, means shall be provided to assure against connecting a trailing cable to the wrong size circuit breaker.

(d) No more than two temporary splices shall be made in any trailing cable, except that if a third splice is needed during a shift it may be made during such shift, but such cable shall not be used after that shift until a permanent splice is made. In any case in which a temporary splice is made pursuant to this subsection such splice shall, within five working days thereafter, be replaced by a permanent splice. No temporary splice shall be made in a trailing cable within twenty-five feet of the machine, except cable reel equipment. Temporary splices in trailing cables shall be made in a workmanlike manner and shall be mechanically strong and well insulated. Trailing cables or hand cables which have exposed wires or which have splices that heat or spark under load shall not be used. As used in this subsection, the term "splice" means the mechanical joining of one or more conductors that have been severed.

(e) When permanent splices in trailing cables are made, they shall be—

(1) mechanically strong with adequate electrical conductivity and flexibility;

(2) effectively insulated and sealed so as to exclude moisture; and

(3) vulcanized or otherwise treated with suitable materials to provide flame-resistant qualities and good bonding to the outer jacket.

(f) Trailing cables shall be clamped to machines in a manner to protect the cables from damage and to prevent strain on the electrical connections. Trailing cables shall be adequately protected to prevent damage by mobile machinery.

(g) Trailing cable and power cable connections to junction boxes shall not be made or broken under load.

GROUNDING

SEC. 307. (a) All metallic sheaths, armors, and conduits enclosing power conductors shall be electrically continuous throughout and shall be grounded. Metallic frames, casing, and other enclosures of electric equipment that can become "alive" through failure of insulation or by contact with energized parts shall be grounded effectively. Methods other than grounding which provide equivalent protection may be permitted by the Secretary.

(b) The frames of all offtrack direct current machines and the enclosures of related detached components shall be effectively grounded or otherwise maintained at safe voltages by methods approved by an authorized representative of the Secretary.

[(c) The frames of all high voltage switchgear, transformers, and other high voltage equipment shall be grounded to the high voltage system ground.]

(c) The frames of all stationary high-voltage equipment receiving power from ungrounded delta systems shall be grounded by methods approved by an authorized representative of the Secretary.

(d) High-voltage lines, both on the surface and underground, shall be deenergized and grounded before work is performed on them [.] *, except that repairs may be permitted, in the case of energized surface high-voltage lines, if such repairs are made by a qualified person in accordance with procedures and safeguards, including, but not limited to, a requirement that the operator of such mine provide, test, and maintain protective devices in making such repairs, to be prescribed by the Secretary prior to the operative date of this title.*

(e) When not in use, power circuits underground shall be deenergized on idle days and idle shifts, except that rectifiers and transformers may remain energized.

UNDERGROUND HIGH-VOLTAGE DISTRIBUTION

SEC. 308. (a) High-voltage circuits entering the underground portion of the mine shall be protected by suitable circuit breakers of adequate interrupting [capacity. Such breakers shall be equipped with relaying circuits to protect against overcurrent, ground fault, a los.. of ground continuity, short circuit, and under voltage.] *capacity which are properly tested and maintained as prescribed by the Secretary. Such breakers shall be equipped with devices to provide protection against under-voltage, grounded phase, short circuit, and overcurrent.*

(b) High-voltage circuits extending underground *and supplying portable, mobile, or stationary high-voltage equipment* shall contain either a direct or derived neutral which shall be grounded through a suitable resistor at the source transformers, and a grounding circuit, originating at the grounded side of the grounding resistor, shall extend along with the power conductors and serve as a grounding conductor for the frames of all high-voltage equipment supplied power [from that circuit. At the point where high-voltage circuits enter the underground portion of the mine, disconnecting devices shall be installed out by the automatic breaker and such devices shall be equipped or designed in such a manner that it can be determined by visual observation that the power is disconnected.] *from that circuit, except that the Secretary or his authorized representative may permit ungrounded high-voltage circuits to be extended underground to feed stationary electrical equipment if such circuits are either steel armored or installed in grounded, rigid steel conduit throughout their entire length. Within one hundred feet of the point on the surface where high-voltage circuits enter the underground portion of the mine, disconnecting devices shall be installed and so equipped or designed in such a manner that it can be determined by visual observation that the power is disconnected, except that the Secretary or his authorized representative may permit such devices to be installed at a greater distance from such portion of the mine if he determines, based on existing physical conditions, that such installation will be more accessible at a greater distance and will not pose any hazard to the miners.*

(c) The grounding resistor, *where required,* shall be of the proper ohmic value to limit the voltage drop in the grounding circuit external to the resistor to not more than 100 volts under fault conditions. The grounding resistor shall be rated for maximum fault current continuously and insulated from ground for a voltage equal to the phase-to-phase voltage of the system.

(d) High-voltage, *resistance grounded, wye-connected* systems shall include a fail safe ground check circuit to monitor continuously the grounding circuit to assure continuity and the fail safe ground check circuit shall cause the circuit breaker to open when either the ground or pilot check wire is broken.

[(e) Underground high-voltage cables shall be equipped with metallic shields around each power conductor. One or more ground conductors shall be provided having a cross-sectional area of not less than one-half the power conductor or capable of carrying twice the maximum fault current. There shall also be provided an insulated conductor not smaller than No. 8 (AWG) for the ground continuity check circuit. Cables shall be adequate for the intended current and voltage. Splices made in the cable shall provide continuity of all components and shall be made in accordance with cable manufacturers' recommendation.]

(e) (1) Underground high-voltage cables used in resistance grounded, wye-connected systems shall be equipped with metallic shields around each power conductor, with one or more ground conductors having a total cross-sectional area of not less than one-half the power conductor, and with an insulated internal or external conductor not smaller than No. 8 (AWG) for the ground continuity check circuit.

(2) All such cables shall be adequate for the intended current and voltage. Splices made in such cables shall provide continuity of all components.

(f) Couplers that are used with high-voltage power circuits shall be of the three-phase type with a full metallic shell, except that the Secretary may permit, under such guidelines as he may prescribe, couplers constructed of materials other than metal. Couplers shall be adequate for the voltage and current expected. All exposed metal on the metallic couplers shall be grounded to the ground conductor in the cable. The coupler shall be constructed so that the ground check continuity conductor shall be broken first and the ground conductors shall be broken last when the coupler is being uncoupled.

(g) Single-phase loads such as transformer primaries shall be connected phase to phase.

(h) All underground high-voltage transmission cables shall be installed only in regularly inspected aircourses and haulageways, and shall be covered, buried, or placed so as to afford protection against damage, guarded where men regularly work or pass under them unless they are six and one-half feet or more above the floor or rail, securely anchored, properly insulated, and guarded at ends, and covered, insulated, or placed to prevent contact with trolley and other low-voltage circuits.

(i) Disconnecting devices shall be installed at the beginning of branch lines in high-voltage circuits and equipped or designed in such a manner that it can be determined by visual observation that the circuit is deenergized when the switches are open.

(j) Circuit breakers and disconnecting switches underground shall be marked for identification.

[(k) Terminations and splices of high voltage cable shall be made in accordance with manufacturer's specifications.]

(k) In the case of high-voltage cables used as trailing cables, temporary splices shall not be used and all permanent splices shall be made in accordance with section 306(e) of this title. Terminations and splices in all other high-voltage cables shall be made in accordance with the manufacturer's specifications.

(l) Frames, supporting structures, and enclosures of [substation or switching station apparatus] *portable or mobile underground high-voltage equipment and all high-voltage equipment supplying power to such equipment* shall be effectively grounded to the high-voltage ground.

[(m) Power centers and portable transformers shall be deenergized before they are moved from one location to another. High voltage cables, other than trailing cables, shall not be moved or handled while energized.]

(m) Power centers and portable transformers shall be deenergized before they are moved from one location to another, except that, when equipment powered by sources other than such centers or transformers is not available, the Secretary may permit such centers and transformers to be moved while energized, if he determines that another equivalent or greater hazard may otherwise be created, and if they are moved under the supervision of a qualified person, and if such centers and transformers are examined prior to such movement by such person and found to be grounded by methods approved by an authorized representative of the Secretary and otherwise protected from hazards to the miner. A record shall be kept of such examinations. High-voltage cables, other than

trailing cables, shall not be moved or handled at any time while energized, except that, when such centers and transformers are moved while energized as permitted under this subsection, energized high-voltage cables attached to such centers and transformers may be moved only by a qualified person and the operator of such mine shall require that such person wear approved and tested insulated wireman's gloves.

UNDERGROUND LOW- AND MEDIUM-VOLTAGE ALTERNATING CURRENT CIRCUITS

SEC. 309. (a) Low- and medium-voltage power circuits serving three-phase alternating current equipment shall be protected by suitable circuit breakers of adequate interrupting [capacity. Such breakers shall provide protection for the circuit against overcurrent, ground fault, short circuits, and loss of ground circuit continuity.] *capacity which are properly tested and maintained as prescribed by the Secretary. Such breakers shall be equipped with devices to provide protection against under-voltage, grounded phase, short circuit, and overcurrent.*

(b) Low- and medium-voltage *three-phase alternating-current* circuits used underground shall contain either a direct or derived neutral which shall be grounded through a suitable resistor at the power center, and a grounding circuit, originating at the grounded side of the grounding resistor, shall extend along with the power conductors and serve as a grounding conductor for the frames of all the electrical equipment supplied power from that [circuit. The grounding resistor shall be of the proper ohmic value to limit the ground fault current to 25 amperes. The grounding resistor shall be rated for maximum fault current continuously.] *circuit, except that the Secretary or his authorized representative may permit ungrounded low- and medium-voltage circuits to be used underground to feed such stationary electrical equipment if such circuits are either steel armored or installed in grounded rigid steel conduit throughout their entire length. The grounding resistor, where required, shall be of the proper ohmic value to limit the ground fault current to 25 amperes. The grounding resistor shall be rated for maximum fault current continuously and insulated from ground for a voltage equal to the phase-to-phase voltage of the system.*

[(c) Low and medium voltage circuits] *(c) Six months after the operative date of this title, low- and medium-voltage resistance grounded, wye-connected systems* shall include a fail safe ground check circuit to monitor continuously the grounding circuit to assure continuity and the fail safe ground check circuit shall cause the circuit breaker to open when either the ground or pilot check wire is broken. *Cable couplers shall be constructed so that the ground check continuity conductor shall be broken first and the ground conductors shall be broken last when the coupler is being uncoupled.*

(d) Disconnecting devices shall be installed in conjunction with the circuit breaker to provide visual evidence that the power is disconnected. Trailing cables for mobile equipment shall contain one or more ground conductors having a cross sectional area of not less than one half the power conductor and *six months after the operative date of this title,* an insulated conductor for the ground continuity check circuit. Splices made in the cables shall provide continuity of all components.

(e) Single phase loads shall be connected phase to phase.

(f) Circuit breakers shall be marked for identification.

(g) Trailing cable for medium voltage circuits shall include grounding conductors, a ground check conductor, and ground metallic shields around each power conductor or a grounded metallic shield over the assembly; except that on machines, employing cable reels, cables without shields may be used if the insulation is rated 2,000 volts or more.

TROLLEY AND TROLLEY FEEDER WIRES

SEC. 310. (a) Trolley wires and trolley feeder wires shall be provided with cutout switches at intervals of not more than 2,000 feet and near the beginning of all branch lines.

(b) Trolley wires and trolley feeder wires shall be provided with overcurrent protection.

(c) Trolley and trolley feeder wires, high-voltage cables and transformers shall not be located inby the last open crosscut and shall be kept at least 150 feet from pillar workings.

(d) Trolley wires, trolley feeder wires, and bare signal wires shall be insulated adequately where they pass through doors and stoppings, and where they cross other power wires and cables. Trolley wires and trolley feeder wires shall be guarded adequately (1) at all points where men are required to work or pass regularly under the wires [, unless the wires are placed 10 feet or more above the top of the rail]; (2) on both sides of all doors and stoppings, and (3) at man-trip stations. The Secretary or his authorized representatives shall specify other conditions where trolley wires and trolley feeder wires shall be adequately protected to prevent contact by any person, or shall require the use of improved methods to prevent such contact. Temporary guards shall be provided where trackmen and other persons work in proximity to trolley wires and trolley feeder wires.

FIRE PROTECTION

SEC. 311 (a) Each coal mine shall be provided with suitable firefighting equipment adapted for the size and conditions of the mine. The Secretary shall establish minimum requirements for the type, quality, and quantity of such equipment, and the interpretations of the Secretary relating to such equipment in effect on the operative date of this title shall continue in effect until modified or superseded by the Secretary. After every blasting operation performed on a shift, an examination shall be made to determine whether fires have been started.

(b) Underground storage places for lubricating oil and grease shall be of fireproof construction. Except for specially prepared materials approved by the Secretary, lubricating oil and grease kept in face areas or other underground working places in a mine shall be in portable, fire proof, closed metal containers.

(c) Underground transformer stations, battery-charging stations, substations, compressor stations, shops, and permanent pumps shall be housed in fireproof structures or areas. Air currents used to ventilate structures or areas enclosing electrical installations shall be coursed directly into the return. All other underground structures installed in a mine shall be of fireproof construction.

(d) All welding, cutting, or soldering with arc or flame in all underground areas of a mine shall, whenever practicable, be conducted in fireproof enclosures. Welding, cutting, or soldering with arc or flame in other than a fireproof enclosure shall be done under the supervision of a qualified person who shall make a diligent search for fire during and after such operations and shall immediately before and during such operations, continuously test for explosive gas with means approved by the Secretary for detecting explosive gas. Welding, cutting, or soldering shall not be conducted in air that contains [more than 1 volume per centum] *1.0 volume per centum or more* of explosive gas. Rock dust or suitable fire extinguishers shall be immediately available during such welding, cutting, or soldering.

(e) Within one year after the operative date of this title, fire suppression devices meeting specifications prescribed by the Secretary shall be installed on unattended underground equipment and suitable fire-resistant hydraulic funds approved by the Secretary shall be used in the hydraulic systems of such equipment. Such fluids shall be used in the hydraulic systems of other underground equipment unless fire suppression devices meeting specifications prescribed by the Secretary are installed on such equipment.

(f) Deluge-type water sprays or foam generators, automatically actuated by rise in temperature, or other effective means of controlling fire shall be installed at main and secondary belt conveyor drives. Such sprays or foam generators shall be supplied with a sufficient quantity of water to control fires.

(g) Underground belt conveyors shall be equipped with slippage and sequence switches. *The Secretary shall, within sixty days after the operative date of this title, require that devices be installed on all such belts which will give a warning automatically when a fire occurs on or near such belt. The Secretary shall prescribe a schedule for installing fire suppression devices on belt haulageways.*

(h) On or after the operative date of this title, all conveyor belts acquired for use underground shall meet the requirements established by the Secretary for flame-resistant conveyor belts.

MAPS

SEC. 312. (a) The operator of an active underground coal mine shall have, in a surface location chosen to minimize the danger of destruction by fire or other hazard, an accurate and up-to-date map of such mine drawn on such scale as the Secretary may require. Such map shall show the active workings, all worked out and abandoned areas, excluding those areas which have been worked out or abandoned before the effective date of this paragraph which are inaccessible or cannot be entered safely and on which no information is available, entries and aircourses with the direction of airflow indicated by arrows, elevations, dip of the coalbed, escapeways, adjacent mine workings within one thousand feet, mines above or below, water pools above, and oil and gas wells, either producing or abandoned, located within five hundred feet of such mine, and such other information as the Secretary may require. Such map shall be made or certified by a registered engineer or a registered surveyor of the State in which the mine is located. As the Secretary may by regulation require, such map shall be kept up to date by temporary notations, and such map shall be revised and supplemented at intervals on the basis of a survey made or certified by such engineer or surveyor.

(b) The coal mine map and any revision and supplement thereof shall be available for inspection by the Secretary or his authorized representative, by coal mine inspectors of the State in which the mine is located, and by persons working in the mine and their authorized representatives and by operators of adjacent coal mines. The operator shall furnish to the Secretary or his authorized representative, or to the Secretary of Housing and Urban Development, upon request, one or more copies of such map and any revision and supplement thereof.

(c) Whenever an operator permanently closes such mine, or temporarily closes such mine for a period of more than ninety days, he shall promptly notify the Secretary of such closure. Within sixty days of the permanent closure of the mine, or, when the mine is temporarily closed, upon the expiration of a period of ninety days from the date of closure, the operator shall file with the Secretary a copy of the mine map revised and supplemented to the date of the closure. Such copy of the mine map shall be certified

as true and correct by a registered surveyor or registered engineer of the State in which the mine is located and shall be available for public inspection.

BLASTING AND EXPLOSIVES

SEC. 313. (a) Black blasting powder shall not be stored or used underground. Mudcaps (adobes) or other unconfined shots shall not be fired underground.

(b) Explosives and detonators shall be kept in separate containers until immediately before use at the working faces. In underground anthracite mines, (1) mudcaps or other open, unconfined shake shots may be fired, if restricted to battery starting when no explosive gas or a fire hazard is present, and if it is otherwise impracticable to start the battery; (2) open, unconfined shake shots in pitching veins may be fired, when no explosive gas or a fire hazard is present, if the taking down of loose hanging coal by other means is too hazardous; and (3) tests for explosive gas shall be made immediately before such shots are fired and if explosive gas is present when tested in 1 volume per centum, such shot shall not be made until the explosive gas content is reduced below 1 per centum.

(c) Except as provided in this subsection, in all underground areas of a mine only permissible explosives, electric detonators of proper strength, and permissible blasting devices shall be used and all explosives and blasting devices shall be used in a permissible manner. Permissible explosives shall be fired only with permissible shot firing units. Only incombustible materials shall be used for stemming boreholes. The Secretary may, under such safeguards as he may prescribe, permit the firing of more than twenty shots and allow the use of nonpermissible explosives in sinking shafts and slopes from the surface in rock. This section shall not prohibit the use of compressed air blasting.

(d) Explosives or detonators carried anywhere underground by any person shall be in containers constructed of nonconductive material, maintained in good condition, and kept closed.

(e) Explosives or detonators shall be transported in special closed containers (1) in cars moved by means of a locomotive or rope, (2) on belts, (3) in shuttle cars, or (4) in equipment designed especially to transport such explosives or detonators.

(f) When supplies of explosives and detonators for use in one or more working sections are stored underground, they shall be kept in section boxes or magazines of substantial construction with no metal exposed on the inside, located at least twenty-five feet from roadways and power wires, and in a dry, well rock-dusted location protected from falls of roof, except in pitching beds, where it is not possible to comply with the location requirement, such boxes shall be placed in niches cut into the solid coal or rock.

(g) Explosives and detonators stored in the working places shall be kept in separate closed containers, which shall be located out of the line of blast and not less than fifty feet from the working face and fifteen feet from any pipeline, powerline, rail, or conveyor, except that, if kept in niches in the rib, the distance from any pipeline, powerline, rail, or conveyor shall be at least five feet. Such explosives and detonators, when stored, shall be separated by a distance of at least five feet.

HOISTING AND MANTRIPS

SEC. 314. (a) Every hoist used to transport persons at an underground coal mine shall be equipped with overspeed, overwind, and automatic stop controls. Every hoist used to transport persons shall be equipped with brakes capable of stopping the fully loaded platform, cage, or other device used for transporting persons, and with hoisting cable adequately strong to sustain the fully loaded platform, cage, or other device for transporting persons, and have a proper margin of safety. Cages, platforms, or other devices which are used to transport persons in vertical shafts shall be equipped with safety catches that act quickly and effectively in an emergency, and the safety catches shall be tested at least once every two months. Hoisting equipment, including automatic elevators, that is used to transport persons shall be examined daily. Where persons are regularly transported into or out of a coal mine by hoists, a qualified hoisting engineer shall be on duty while any person is underground, except that no such engineer shall be required for automatically operated cages, platforms, or elevators.

(b) Safeguards adequate, in the judgment of an authorized representative of the Secretary, to minimize hazards with respect to transportation of men and materials shall be provided.

(c) Hoists shall have rated capacities consistent with the loads handled and the recommended safety factors of the ropes used. An accurate and reliable indicator of the position of the cage, platform, skip, bucket, or cars shall be provided.

(d) There shall be at least two effective methods approved by the Secretary of signaling between each of the shaft stations and the hoist room, on of which shall be a telephone or speaking tube.

(e) In order to be capable of stopping with the proper margin of safety each locomotive and haulage cars used in an underground coal mine shall be equipped with automatic brakes, or shall be subject to speed reductions or other safeguards approved by the Secretary.

EMERGENCY SHELTERS

SEC. 315. The Secretary or an authorized representative of the Secretary may require in any coal mine that rescue chambers, properly sealed and ventilated, be erected at suitable locations in the mine to which men could go in case of an emergency for protection against hazards. Such chambers shall be properly equipped with first aid materials, an adequate supply of air and self-contained breathing equipment, an independent communication system to the surface, and proper accommodations for the men while awaiting rescue, and such other equipment as the Secretary may require. A plan for the erection, maintenance, and revisions of such chambers shall be submitted by the operator to the Secretary for his approval.

COMMUNICATIONS

SEC. 316. A two-way communication system, approved by the Secretary, shall be provided between the surface and each landing of main shafts and slopes and between the surface and each working section that is more than two hundred feet from a portal.

MISCELLANEOUS

[SEC. 317. (a) No coal mine shall be operated in any coal seam where the coal has been or is being removed from the said seam within five hundred feet of a known gas or oil well whether producing or abandoned, except that the Secretary may permit such operation within three hundred feet of such well under regulations prescribing conditions which will assure the complete safety of all miners engaged in such operation.]

Sec. 317. (a) While pillars are being extracted in any area of a mine, such area shall be ventilated in a manner approved by the Secretary or his authorized representative. Within six months after the operative date of this title, all areas which are or have been abandoned in all mines, as determined by the Secretary or his authorized representative, shall be ventilated by bleeder entries or by bleeder systems or equivalent means or sealed, as determined by the Secretary or his authorized representative, except that the Secretary may permit, on a mine-by-mine basis, an extension of time of not to exceed six months to complete such work. Ventilation of such areas shall be approved only where the Secretary or his authorized representative is satisfied that such ventilation can be maintained so as to, continuously, dilute, render harmless, and carry away explosive gases within such areas and to protect the active workings of the mine from the hazards of such gases. When sealing is required, such seals shall be made in an approved manner so as to isolate with explosion-proof bulkheads such areas from the active workings of the mine. In the case of mines opened on or after the operative date of this title or in the case of working sections opened on or after such date in mines opened prior to such date, the mining system shall be designed, in accordance with a plan and revisions thereof approved by the Secretary and adopted by such operator, so that, as each working section of the mine is abandoned, it can be isolated from the active workings of the mine with explosion-proof seals or bulkheads. For the purpose of this paragraph, the term "abandoned" as applied to any area of a mine shall include, but not be limited to, areas of a mine which are not ventilated and inspected regularly, areas where mining has been started but not completed, areas where future mining is still possible, and areas that are deserted.

(2) Each operator of a coal mine shall take reasonable measures to locate oil and gas wells penetrating coalbeds or any underground area of a coal mine. When located, such operator shall establish and maintain barriers around such oil and gas wells in accordance with State laws and regulations, except that such barriers shall not be less than three hundred feet in diameter, unless the Secretary or his authorized representative permits a lesser barrier consistent with the applicable State laws and regulations where such lesser barrier will be adequate to protect against hazards from such wells to the miners in such mine, or unless the Secretary or his authorized representative requires a greater barrier where the depth of the mine, other geologic conditions, or other factors warrant such a greater barrier.

(b) Whenever any working place approaches within fifty feet of abandoned workings in the mine as shown by surveys made and certified by a registered engineer or surveyor, or within two hundred feet of any other abandoned workings of the mine which cannot be inspected and which may contain dangerous accumulations of water or gas, or within two hundred feet of any workings of an adjacent mine, a borehole or boreholes shall be drilled to a distance of at least twenty feet in advance of the face of such working place and shall be continually maintained to a distance of at least ten feet in advance of the advancing working face. When there is more than one borehole, they shall be drilled sufficiently close to each other to insure that the advancing face will not accidentally hole through into abandoned workings or adjacent mines. Boreholes shall also be drilled not more than eight feet apart in the rib of such working place to a distance of at least twenty feet and at an angle of forty-five degrees. Such rib holes shall be drilled in one or both ribs of such working place as may be necessary for adequate protection of persons working in such place.

(c) Smoking shall not be permitted underground, nor shall any person carry smoking materials, matches, or lighters underground. Smoking shall be prohibited in or around oil houses, explosives magazines, or other surface areas where such practice may cause a fire or explosion. The operator of a coal mine shall institute a program, approved by the Secretary, at each mine to insure that any person entering the underground portion of the mine does not carry smoking materials, matches, or lighters.

(d) Persons underground shall use only permissible electric lamps approved by the Secretary for portable illumination. No open

flame shall be permitted in any underground mine except as specifically authorized by this Act.

(e) The Secretary shall prescribe the manner in which all underground working places in a mine shall be illuminated by permissible lighting while persons are working in such places.

(f) (1) At least two separate and distinct travelable passageways *which are maintained to insure passage at all times of any person, including disabled persons, and which are* to be designated as escapeways, at least one of which is ventilated with intake air, shall be provided from [each mine working section continuous to the surface, and] *each working section of a mine continuous to the surface escape drift opening, or continuous to the escape shaft or slope facilities to the surface, as appropriate, and* shall be maintained in safe condition and properly marked. Mine openings shall be adequately protected to prevent the entrance into the underground portion of the mine of surface fires, fumes, smoke, and flood water. [Adequate facilities approved by the Secretary or his authorized representative shall be provided in each escape shaft or slope to allow persons to escape quickly to the surface in event of emergency.] *Adequate and readily accessible escape facilities approved by the Secretary or his authorized representative, properly maintained, and frequently tested shall be immediately present at or in each escape shaft or slope to allow persons, including disabled persons, to escape quickly to the surface in the event of an emergency.*

(2) Not more than twenty miners shall be allowed at any one time in any mine until a connection has been made between the two mine openings, and such work shall be prosecuted with reasonable diligence.

(3) When only one main opening is available, owing to final mining of pillars, not more than twenty miners shall be allowed in such mine at any one time, except that the distance between the mine opening and working face shall not exceed five hundred feet.

[(4) In the case of all coal mines opened after the operative date of this title the escapeway required by paragraph (1) of this subsection to be ventilated with intake air, shall be separated from the belt and trolley haulage entries of the mine.]

(4) In the case of all coal mines opened on or after the operative date of this title, and in the case of all new working sections opened on or after such date in coal mines opened prior to such date, the escapeway required by this subsection to be ventilated with intake air shall be separated from the belt and trolley haulage entries of the mine for the entire length of such entries to the beginning of each working section, except that the Secretary or his authorized representative may permit such separation to be extended for a greater or lesser distance so long as the safety of the miners is assured.

(g) After the operative date of this title, all structures erected on the surface within one hundred feet of any mine opening shall be of fireproof construction. Unless structures existing on or prior to such date located within one hundred feet of any mine opening are of such construction, fire doors shall be erected at effective points in mine openings to prevent smoke or fire from outside sources endangering men working underground. These doors shall be tested at least monthly to insure effective operation. A record of such tests shall be kept and shall be available for inspection by interested persons.

(h) Adequate measures shall be taken to prevent explosive gases and coal dust from accumulating in excessive concentrations in or on surface coal-handling facilities, but in no event shall explosive gases be permitted to accumulate in concentrations in or on surface coal-handling facilities in excess of limits established for explosive gases by the Secretary within one year of the operative date of this title, and coal dust shall not accumulate in excess of limits prescribed by or under this Act. Where coal is dumped at or near air-intake openings, provisions shall be made to prevent the dust from entering the mine.

(i) Every operator of a coal mine shall provide a program, approved by the Secretary, of training and retraining of both qualified and certified persons needed to carry out functions prescribed in this title.

[(j) In any mine that liberates excessive quantities of explosive gases, and if in the opinion of the Secretary such excessive liberations present or are likely to present explosion dangers, a Federal inspector shall be present at such mine, for the purpose of making mine inspections on each and every day such mine is producing coal.]

(j) Whenever the Secretary finds that a mine liberates excessive quantities of explosive gases during its operations, or that a gas ignition or explosion has occurred in such mine which resulted in death or serious injury at any time during the previous five years, or that there exists in such mine other especially hazardous conditions, he shall provide a minimum of twenty-six spot inspections of all or part of such mine each year at irregular intervals by his authorized representative.

(k) An authorized representative of the Secretary may require in any coal mine where the height of the coalbed permits that the face equipment, including shuttle cars, be provided with substantially constructed canopies or cabs to protect the operators of such equipment from roof falls and from rib and face rolls.

(l) The opening of any mine that is declared inactive by its operator or is abandoned for more than ninety days, after the operative date of this title, shall be sealed in a manner prescribed by the Secretary. Openings to all active coal mines shall be adequately protected to prevent entrance by unauthorized persons.

(m) Each mine shall provide adequate facilities for the miners to change from the clothes worn underground, to provide the storage of such clothes from shift to shift, and to provide sanitary and bathing facilities. Sanitary toilet facilities shall be provided in the active workings of the mine when such surface facilities are not readily accessible to the active workings.

(n) Arrangements shall be made in advance for obtaining emergency medical assistance and transportation for injured persons. Emergency communications shall be provided to the nearest point of assistance. Selected agents of the operator shall be trained in first aid and first aid training shall be made available to all miners. Each mine shall have an adequate supply of first aid equipment located on the surface, at the bottom of shafts and slopes, and at other strategic locations near the working faces. In fulfilling each of the requirements in this subsection, the operator shall meet at least minimum standards established by the Surgeon General. Each operator shall file with the Secretary a plan setting forth in such detail as the Secretary may require the manner in which such operator has fulfilled the requirements in this section.

(o) A self-rescue device approved by the Secretary shall be made available to each miner by the operator which shall be adequate to protect such miner for one hour or longer. Each operator shall train each miner in the use of such device.

(p) The Secretary shall prescribe improved methods of assuring that miners are not exposed to atmospheres that are deficient in oxygen.

(q) Each operator of a coal mine shall establish a check-in and check-out system which will provide positive identification of every person underground and will provide an accurate record of the miners in the mine kept on the surface in a place chosen to minimize the danger of destruction by fire or other hazard. Such record shall bear a number identical to an identification check that is securely fastened to the lamp belt worn by the person underground. The identification check shall be made of a rust resistant metal of not less than sixteen gauge.

(r) The Secretary shall require, when technologically feasible, that devices to suppress ignitions be installed on electric face cutting equipment.

(s) Whenever an operator mines coal in a manner that requires the construction, operation, and maintenance of tunnels under any river, stream, lake, or other body of water, such operator shall obtain a permit from the Secretary which shall include such terms and conditions as he deems appropriate to protect the safety of men working or passing through such tunnels from caveins and other hazards. Such permits shall require, in accordance with a plan to be approved by the Secretary, that a safety zone be established beneath and adjacent to any such body of water that is, in the judgment of the Secretary, sufficiently large to constitute a hazard. No plan shall be approved unless there is a minimum of rock cover to be determined by the Secretary based on test holes drilled by the operator in a manner to be prescribed by the Secretary.

(t) The Secretary shall require that developed and improved devices and systems for the monitoring and detection of mine safety conditions and for the protection of the individual miner be acquired by each operator of a coal mine and that such devices and systems be used as soon as they become available.

(u) All haulage equipment acquired by an operator of a coal mine on or after one year after the operative date of this title shall be equipped with automatic couplers which shall couple by impact and uncouple without the necessity of men going between the ends of such equipment. All haulage equipment without automatic couplers in use in a mine on the operative date of this title shall also be so equipped within four years after the operative date of this title.

(v) An adequate supply of potable water shall be provided for drinking purposes in the active workings of the mine, and such water shall be carried, stored, and otherwise protected in sanitary facilities.

(w) The Secretary shall send a copy of every proposed standard or regulation at the time of publication in the Federal Register to the operator of each coal mine and the representative of the miners at such mine and such copy shall be immediately posted on the bulletin board of the mine by the operator or his agent, but failure to receive such notice shall not relieve anyone of the obligation to comply with such standard or regulation.

(x) An employee, the duties of whose position are primarily the inspection of coal mines, including an employee engaged in this activity and transferred to a supervisory or administrative position, who attains the age of fifty years and completes twenty years of service in the performance of those duties may, if the Secretary recommends his retirement and the Civil Service Commission approves, voluntarily retire and be paid an annuity. Any such employee who attains the age of sixty years and completes fifteen years of service may voluntarily retire on an annuity, unless the Secretary determines that such retirement would not be in the best interests of the program and, in such case, the Secretary may extend such employee's service on an annual basis. An employee who retires under this subsection shall be entitled to an annuity of 2½ per centum of his average pay multiplied by his total service, except that the annuities shall not exceed 80 per centum of his average pay. As used in this

subsection, the terms "employee", "average pay", and "service" have the meaning ascribed to those terms in subchapter III, chapter 83, title 5, United States Code, and the provisions of that subchapter respecting payment and adjustment of annuity, survivor annuities, and related matters, shall apply with respect to employees retiring under this subsection.

(y) (1) No person shall discharge or in any other way discriminate against or cause to be discharged or discriminated against any miner or any authorized representative of miners by reason of the fact that such miner or representative (A) has notified the Secretary or his authorized representative of any alleged violation or danger pursuant to section 103(g) of this title, (B) has filed, instituted, or caused to be instituted any proceeding under this Act, or (C) has testified or is about to testify in any proceeding resulting from the administration or enforcement of the provisions of this Act.

(2) Any miner or a representative of miners who believes that he has been discharged or otherwise discriminated against by any person in violation of paragraph (1) of this subsection may, within thirty days after such violation occurs, apply to the Secretary for a review of such alleged discharge or discrimination. A copy of the application shall be sent to such person who shall be the respondent. Upon receipt of such application, the Secretary shall cause such investigation to be made as he deems appropriate. Such investigation shall provide an opportunity for a public hearing at the request of any party, to enable the parties to present information relating to such violation. The parties shall be given written notice of the time and place of the hearing at least five days prior to the hearing. Any such hearing shall be of record and shall be subject to section 554 of title 5 of the United States Code.

Upon receiving the report of such investigation, the Secretary shall make findings of fact. If he finds that such violation did occur, he shall issue an order requiring the person committing such violation to take such affirmative action to abate the violation as the Secretary deems appropriate, including, but not limited to, the rehiring or reinstatement of the miner or representative of miners to his former position with back pay. If he finds that there was no such violation, he shall issue an order denying the application. Such order shall incorporate the Secretary's findings therein. Any decision issued by the Secretary under this paragraph shall be subject to judicial review in accordance with the provisions of this Act. Violations by any person of paragraph (1) of this subsection shall be subject to the civil penalties provisions of this title.

(3) Whenever an order is issued under this subsection, at the request of the applicant, a sum equal to the aggregate amount of all costs and expenses (including the attorney's fees) as determined by the Secretary to have been reasonably incurred by the applicant for, or in connection with, the institution and prosecution of such proceedings, shall be assessed against the person committing such violation.

DEFINITIONS

SEC. 318. For the purpose of this title and title II of this Act, the term—

(a) "certified person" means a person certified by the State in which the coal mine is located to perform duties prescribed by such sections, except that, in a State where no program of certification is provided or where the program does not meet at least minimum Federal standards established by the Secretary, such certification shall be by the Secretary;

[(b) "qualified person" means an individual deemed qualified by the Secretary to make tests for measurements, as appropriate, required by this Act;]

(b) "Qualified person" means, as the context requires, an individual deemed qualified by the Secretary to make tests and examinations required by this Act; and an individual deemed, in accordance with minimum requirements to be established by the Secretary, qualified by training, education, and experience, to perform electrical work, to maintain electrical equipment, and to conduct examinations and tests of all electrical equipment.

(c) "permissible" as applied to—

(1) equipment used in the operation of a coal mine, means equipment to which an approval plate, label, or other device is attached as authorized by the Secretary and which meets specifications which are prescribed by the Secretary for the construction and maintenance of such equipment and are designed to assure that such equipment will not cause a mine explosion or a mine fire,

(2) explosives, shot firing units, or blasting devices used in such mine, means explosives, shot firing units, or blasting devices which meet specifications which are prescribed by the Secretary, and

(3) the manner of use of equipment or explosives, shot firing units, and blasting devices, means the manner of use prescribed by the Secretary;

(d) "rock dust" means pulverized limestone, dolomite, gypsum, anhydrite, shale, talc, adobe, or other inert material, preferably light colored, 100 per centum of which will pass through a sieve having twenty meshes per linear inch and 70 per centum or more of which will pass through a sieve having two hundred meshes per linear inch; the particles of which when wetted and dried will not cohere to form a cake which will not be dispersed into separate particles by a light blast of air; and which does not contain more than 5 per centum of combustible matter or [more than a total of 5 per centum of free and combined silica (SiO_2);] *more than a total of 3 per centum of free and combined silica (SiO_2) or, where the Secretary finds that such silica concentrations are not available, up to 5 per centum of free and combined silica;*

(e) "coal mine" includes areas of adjoining mines connected underground;

(f) "anthracite" means coals with a volatile ratio equal to 0.12 or less;

(g) "volatile ratio" means volatile matter content divided by the volatile matter plus the fixed carbon;

(h) (1) "working face" means any place in a coal mine in which work of extracting coal from its natural deposit in the earth is done,

(2) "working place" means the area of a coal mine inby the last open crosscut,

(3) "working section" means all areas of the coal mine from the loading point of the section to and including the working faces,

(4) "active workings" means any place in a coal mine where miners are normally required to work or travel;

(i) "abandoned areas" means sections, panels, and other areas that are not ventilated and examined in the manner required for active underground working places;

(j) "electric face equipment" means electric equipment that is installed or used in the last open crosscut in an entry or a room;

(k) "registered engineer" or "registered surveyor" means an engineer or surveyor registered by the State pursuant to standards established by the State meeting at least minimum Federal requirements established by the Secretary, or if no such standards are in effect, registered by the Secretary;

(l) "low voltage" means up to and including 660 volts; "medium voltage" means voltages from 661 to 1,000 volts; and "high voltage" means more than 1,000 volts;

(m) "average concentration" means a determination which accurately represents the atmospheric conditions with regard to respirable dust during a full working shift; such determination shall be the result of applying valid statistical techniques to the minimum necessary measurements of respirable dust; and

(n) "respirable dust" means only dust particulates 5 microns or less in size.

Mr. STEIGER of Wisconsin. Mr. Chairman, will the gentleman yield?

Mr. PERKINS. I yield to the distinguished gentleman from Wisconsin, a member of the subcommittee, who has worked diligently on this legislation.

Mr. STEIGER. of Wisconsin. I appreciate the gentleman from Kentucky yielding to me.

In your remarks you directed the attention of the Members of the House to the question of compensation for persons suffering from black lung disease, about which there will be some controversy. The chairman knows that I supported the inclusion of this compensation section, but I simply want to see if the distinguished chairman of the full committee agrees with the statement appearing in the committee report:

> It is clearly not intended to establish a Federal prerogative or precedent in the area of payments for the death, injury, or illness of workers.

Does the gentleman agree with that statement.

Mr. PERKINS. Let me follow the gentleman a little closer. Let me get the report. I want to make sure that that is not intermingled with other sentences.

Mr. STEIGER of Wisconsin. It is on page 13.

The CHAIRMAN. The time of the gentleman from Kentucky has again expired.

Mr. PERKINS. Mr. Chairman, I yield myself 1 additional minute.

The CHAIRMAN. The gentleman is recognized for 1 additional minute.

Mr. PERKINS. On page 13? Where on page 13?

Mr. STEIGER of Wisconsin. The middle of the page.

It starts out by saying:

> This program of payments——

Mr. PERKINS. All right, "This program of payments"——

Mr. STEIGER of Wisconsin. It states:

> This program of payments—maintained in the bill by a committee vote of 25 to 9—is not a workmen's compensation plan.

I am sure that the chairman would clearly agree with that statement.

Mr. PERKINS. It is not a workmen's compensation plan even though it is included in the bill because the committee found workmen's compensation statutes in various States totally inadequate to compensate the victims of black lung. It is a special compensation plan because of the hazardous nature of the employment of coal miners.

Mr. STEIGER of Wisconsin. I understand.

Mr. PERKINS. There is no other occupation to my knowledge or thinking as hazardous and as dangerous. It is for this reason, because of the insidious nature of this disease, that we wrote the compensation provisions into this bill—knowing that many of the States would never provide compensation for the coal miners when they may have contracted

the disease in those States—they would never write a statute.

The CHAIRMAN. The time of the gentleman from Kentucky has again expired.

Mr. PERKINS. Mr. Chairman, I yield myself 1 additional minute.

Mr. STEIGER of Wisconsin. Mr. Chairman, will the gentleman yield further?

Mr. PERKINS. I yield further to the gentleman from Wisconsin.

Mr. STEIGER of Wisconsin. I simply want to again point to the one sentence that I think is the key and I want to make sure that the legislative record is clear for all to see, that this is not intended to serve as a precedent. It is on that point that I have asked the gentleman from Kentucky to make his comment about that sentence in the committee report.

Mr. PERKINS. This is intended—let me put it in my own words—as a Federal compensation statute to take care of a group of employees that has been ostracized by most of the State workmen's compensation statutes. It is a special statute because of the hazardous nature of the work.

Mr. STEIGER of Wisconsin. I appreciate the gentleman yielding.

The CHAIRMAN. The time of the gentleman from Kentucky has again expired.

Mr. ERLENBORN. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, we are here today considering H.R. 13950, the Federal Coal Mine Health and Safety Act of 1969 in an atmosphere of some emotion as a result of the terrible disaster in West Virginia's Consolidation Coal Co.'s No. 9 mine near Farmington, W. Va.

It is unfortunate that this would be true, that one of the major reasons that this bill comes out onto the floor for consideration and that we are presently considering the health and safety of the coal miners is as the result of such a disaster.

It does make it more difficult as well in considering this bill to make the kind of dispassionate valid judgments that one must make in order to legislate effectively.

Mr. Chairman, a little over a year ago 78 miners were killed in an explosion and fire at the Farmington mine. As was pointed out by the chairman of our committee (Mr. PERKINS), the one thing that goes unheralded is that over 170 men have died in coal mine accidents since the Farmington disaster, more than double the number that died in that disaster.

Mr. Chairman, this points up, I think, the fact that this is an extremely hazardous occupation.

But unfortunately we do not look at the hazards that exist day by day. Most people are not aware, except when there are demonstrations or strikes against the State legislatures, most people are not aware of the disease pneumoconiosis—which I could not even pronounce at the beginning of this session, and was not aware of it. It comes trippingly off my tongue now because I have talked about pneumoconiosis and studied it for the better part of this year—but most people are not aware of this disabling disease, how it comes about, and what we might do to see that miners are protected from the onset of this disease.

I believe it is a sad commentary that we here in the United States, being one of the greatest coal-producing nations in the world, have not done the job of research that should have been done years ago into the causes and prevention of the disease pneumoconiosis. Because of this, our subcommittee while considering this legislation felt that we should go to the source of valid information since it was not available through our own research, and some members of our subcommittee did go to England where for the last 20 or 30 years they have made a very detailed study of pneumoconiosis. They have taken readings over a period of a number of years on the concentration of respirable dust in the coal mines, and have developed the relationship between the concentration of respirable dust and the length of time a miner is exposed to it, and the possibility or probability that the miner would contract the disease pneumoconiosis.

We had some difficulty in relating the information we got there to our situation in the United States for several reasons.

One is that historically the British had made a particle count to determine the prevalence of respirable dust. In other words, they would take a measurable amount of air and actually count the particles that were deposited upon a filter. We in the United States had used what is called a gravimetric measurement, that is, we gathered the particles within a measured volume of air, and weighed them. So we talked about milligrams of a certain weight of respirable dust in a cubic meter of air, and the English were talking about hundreds of particles in a given volume of air.

Since our trip the English have changed over to the type of measurement that we have, the gravimetric measurement, and they have for the first time promulgated standards of dust concentration for the purpose of limiting the chance of contracting the disease pneumoconiosis. I think it has a real bearing on what we are proposing to do in this bill, as to the interim mandatory standards which appear in title II, and I will talk about that later.

Mr. CARTER. Mr. Chairman, will the gentleman yield?

Mr. ERLENBORN. I yield to the gentleman from Kentucky.

Mr. CARTER. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I am very much interested in the standards of respirable dust promulgated and fixed in England recently, what is that standard at the present time?

Mr. ERLENBORN. The English have just recently established a standard of 5.7. It would relate in the same terms to what we use of 5.7 milligrams per cubic meter of air, whereas the standards proposed to be established upon the operative date of this bill will be 4.5 milligrams, and within a year this would be reduced to 3 milligrams.

Mr. CARTER. In a recent letter from the Mining Board in England I believe I read that a standard of 8 milligrams per cubic meter would be required this year.

Mr. ERLENBORN. The gentleman is right. The standard set is 8 milligrams per cubic meter in England, but they measure at a different point than we do, and I think relating this to the standards and the method of measurement in the United States, if the gentleman will look at page 91 of the report of the committee, in the supplemental views, the gentleman will see that this would correspond to 5.7 milligrams concentration of coal dust.

Mr. CARTER. Is it not true that England has done a great deal more research work in this field than we have up to the present time?

Mr. ERLENBORN. There is no question about that. Up until a few years ago we had done practically no research in the United States. In the last 25 years or more extensive research has been conducted in England.

Mr. CARTER. Then, with an amount of research, less than that of England, we are setting a standard today in the United States which is lower than that of England; is that not true?

Mr. ERLENBORN. The gentleman is correct.

Mr. CARTER. I thank the distinguished gentleman.

Mr. ERLENBORN. I intend to address myself to that later in my remarks.

Mr. CARTER. I thank the gentleman.

Mr. ERLENBORN. Mr. Chairman, the history of coal mine legislation at the Federal level relates itself to safety legislation only. This bill will, for the first time put the Federal Government into the business that they should be in, in my opinion, and that is looking to the health of the coal miners.

As I say, over the years, actually over 100 years, we have had some legislation in the field of coal mine safety. The first real authority, I think, to inspect mines and to go into the business of safety for coal miners occurred in 1941.

In 1951 additional legislation was adopted that extended this authority.

In 1966 for the first time all of the mines were covered, and we brought in the smaller mines under the authority of this coal mine safety legislation.

At that time it was made quite clear that a valid distinction existed between the gassy mines, those liberating large amounts of methane gas and other mines that were not liberating excessive amounts of methane gas or enough methane gas to cause an explosive combination in the mine atmosphere.

An exemption was made for these nongassy mines so they would not have to comply with the very expensive requirement for permissible equipment, that is equipment designed according to specifications required by the Secretary of the Interior and the Bureau of Mines in such a way that it would not cause sparks or cause an ignition. It is contemplated under this bill to eliminate the nongassy classification and to bring all mines under the same requirement for the use of permissible equipment.

But to follow the historic progression of the legislative efforts of the Congress,

as I say, in 1966 the last amendment was made bringing the small mines under the Federal legislation.

Then in 1968, we had the Farmington disaster and here in 1969 we are considering the question of coal mine health and safety legislation.

One of the first items in the bill, section 101, relates to the setting of standards—interim standards for health are established in title II and interim standards for safety are established in title III.

But these are meant only to be interim standards until the Secretary through investigation and through advancements in technology decides that different standards should apply—more rigid standards should apply—that will help eliminate accidents and health problems.

I might mention again for reemphasis that we have never been in the field of health in the Federal jurisdiction in this area and this bill, for the first time, puts us in the area of health. But to make this clear, what we are talking about in the field of health for coal miners, is the disease of pneumoconiosis and the concentration of respirable dust.

This is a very technical field. The majority of the subcommittee and the majority of our full committee felt it was one which was within the unique expertise and knowledge of the Secretary of Health, Education, and Welfare.

I admit that the research that has been taking place now and what research has been conducted is under the auspices of the Secretary of Health, Education, and Welfare. I admit that the Secretary of Health, Education, and Welfare is uniquely qualified through the Surgeon General and through the National Institutes of Health to further this research.

But I have maintained and I continue to maintain and reiterate, and I hope the majority of Members of the House will agree with me, that the Secretary of the Interior, through the Bureau of Mines, is uniquely qualified to know what is technologically and technically freasible in the setting of standards and in the enforcement of those standards. In this bill the majority of our committee has provided a most unique procedure, I think an unprecedented procedure, for the establishment of health standards, giving the authority to the Secretary of Health, Education, and Welfare to develop these standards, and then the Secretary of Health, Education, and Welfare will direct the Secretary of the Interior to promulgate and to enforce those standards. That puts us in the most unique position—I think ridiculous position—of having one Cabinet-level Secretary dictating to another Cabinet-level Secretary, having one Cabinet-level Secretary developing standards, those standards being mandatory, and then the enforcement of the standards put in the hands of the Secretary of the Interior, a different authority.

At the proper time I intend to offer an amendment which would recognize the role that HEW can play in this field. It would provide that the Secretary of Health, Education, and Welfare would recommend the standards, but the actual development and promulgation of those standards would be by the Secretary of the Interior, who knows what is desirable from the reports given to him by the Secretary of Health, Education, and Welfare, but also will be armed with the knowledge as to what is possible, and he could relate the two together, so that the standards that would be promulgated would be really attainable, because the Secretary of the Interior knows that he is going to have to enforce them.

For the first time this bill also puts the Secretary of the Interior and the Bureau of Mines in the field of day-by-day safety. Up until this time the Secretary of the Interior and the Bureau of Mines have had no real authority in the field of the day-by-day accident—the roof falls and the other things that occur—which really account for many more lives than the great disasters. Those have not been within the jurisdiction of the Bureau of Mines, and this bill will expand the Secretary's authority so that he can really get into the most important field of day-by-day safety regulations.

The bill also provides carefully drawn provisions for judicial review of the decisions that are made by the Secretary of the Interior. The Secretary has some rather broad authority in the enforcement of interim health and safety standards, in the closure of mines, in the imposition of criminal penalties of up to $10,000, and 6 months in jail, in seeking the closure of a mine through an order of the Secretary. All of this should be subject to review. The Secretary can also enforce many of the provisions of this act through the use of injunctions. If the operator violates or refuses to comply with a valid order of the Secretary, the Secretary can go into the Federal District Court and get an injunction to enforce compliance. If the operator hinders or delays the representative of the Secretary or the mine inspector—refuses to allow him into the mine or will not show him his books and records—again the Secretary can go into the Federal District Court and obtain an injunction to enforce compliance.

I have mentioned penalties. The penalties are stiff. The penalties include not only closing a mine and getting injunctions, but, as I mentioned before, criminal penalties of up to $10,000 and 6 months in jail, and civil penalties will be up to $10,000 and for a repeated violation, a fine of not more than $20,000 a year and/or imprisonment for not more than 1 year.

The interim mandatory health standards, as they are called—again, I reiterate this really does not get into any broad questions of health—only the one question of respirable dust and the onset from which could be caused pneumoconiosis.

As has been pointed out already in the colloquy with the gentleman from Kentucky, England has conducted research in this field and they have come up with standards, which measured in the same places, would relate to the standards set in this bill of 5.7 milligrams per cubic meter. We are requiring in this bill, within 6 months after the passage of the bill, that is, the operative date of title II, 4.5 milligrams, a much lower standard than the English. Then 6 months thereafter, in other words, 1 year after the passage of the bill, we require 3 milligrams. Then we require the Secretary to reduce that even further as the technology becomes available.

These are very harsh limitations. They are meant really for the protection of the health of the miners. We should have very stringent standards.

I doubt whether anyone really knows if we can obtain the standards set in the act. I know it is desirable to do so. It is desirable that we have the toughest standards that are attainable.

My own inclination originally was to hold out for higher figures, those which would be more in keeping with what the English have established, but what is even more important—and this is something Members should realize—there is no imminent danger to the health or safety of the miners because of an extra large concentration of dust in the mine. Many people relate the dust standards to such things as concentration of methane. If we have a concentration above 5 percent, between 5 percent and 15 percent of methane in the atmosphere of a mine, it is an explosive situation. A spark can set it off. People can be killed in a disaster. But the concentration of coal dust in a mine constitutes no imminent danger to the mine, the mine operator, or the owner.

The fact is, a person would have to be subjected day in and day out to exposure over 15 or 20 years or more before evidence of pneumoconiosis would even begin to be ascertainable by X-ray and lung function tests.

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. ERLENBORN. I yield to the gentleman from Kentucky.

Mr. PERKINS. Mr. Chairman, first I compliment the distinguished gentleman from Illinois (Mr. ERLENBORN) for the outstanding job he has done, for being so diligent in his efforts to try to write a coal mine safety bill.

However, I do feel the 4.5 dust level figure in the House bill requires reduction to the 3.0 dust level within 12 months, with waivers for an additional 6 months. Based on recent tests that the gentleman heard discussed this morning, does the gentleman not think that timetable is achievable?

Mr. ERLENBORN. Mr. Chairman, first of all, I thank the chairman of the committee for his contribution. As the gentleman from Kentucky knows, we did have a meeting with representatives of the Bureau of Mines. They detailed for us some investigations they have made in the last few months that make it very hopeful these standards would be attained. I feel, as a result of that meeting, that, although it may not be entirely certain, it is more hopeful that these standards can be reached within the period of time set forth in this bill.

I was about to say that even though I think our standards are harsh and maybe not attainable, I am not going to attack the standards and try to increase the 4.5 to some higher number or to reduce it.

Mr. PERKINS. Mr. Chairman, I am glad to hear the gentleman make that

statement. We set no time in the bill as to the time when the 3.0 should be reached, but we leave that to the discretion of the Secretary, as I think it should be. I am glad the gentleman makes the observation that he does not intend to try to amend the standards.

Mr. STEIGER of Wisconsin. Mr. Chairman, will the gentleman yield?

Mr. ERLENBORN. I yield to the gentleman from Wisconsin.

Mr. STEIGER of Wisconsin. Mr. Chairman, I listened with great interest to the remarks of the gentleman from Illinois.

I do not want this time to pass without noting for the benefit of Members of the House the fantastic contribution made by the gentleman in the well. On our side we consider this a subject in which many of us have at least a peripheral interest, but clearly the gentleman from Illinois (Mr. ERLENBORN) has been the man who has spent the time and effort and energy and intelligence to do the most detailed and exhaustive study on the question of coal mine safety. He has spent hour after hour in studying what is a very complex and detailed piece of legislation. He has been extremely influential in shaping and forming the bill that is before the House today.

I believe it is important to note that the gentleman from Illinois has no coal mines in his district. This is not a subject in which, representing his constituency, he might have an interest. But as a member of the Committee on Education and Labor and as the ranking minority member on this subcommittee he has done his job, which he has handled, I believe, exceptionally well, in making sure the bill before us came to us, in the first place, and is in the shape it is in, in the second place.

I intend to support a number of the amendments he has talked about. I do not intend to support all of the amendments the gentleman from Illinois or others might offer, as he knows.

But I want to make sure that the record is here, and I wish to express my tribute to the work of the gentleman in the well, who has contributed so much to this kind of bill. If it passes, as I hope it will in the shape the gentleman from Illinois discussed in most details, it will be in large part due to the efforts of the gentleman from Pennsylvania (Mr. DENT) and the gentleman from Illinois (Mr. ERLENBORN) who together have done a magnificent job.

Mr. ERLENBORN. I thank the gentleman for that kind endorsement.

Mr. BROTZMAN. Mr. Chairman, will the gentleman yield?

Mr. ERLENBORN. I am happy to yield to the gentleman from Colorado.

Mr. BROTZMAN. Mr. Chairman, I do not have the privilege of serving on the committee, as does the prior speaker, but I have been sitting here on the House floor today listening to the very lucid explanation of a very complex subject by the gentleman from Illinois.

I represent a State that does have coal mining. In fact, I do have some coal mines in my particular district.

On behalf of those people who expose themselves to great risks on a daily basis to mine coal, I should like to congratulate the gentleman not only on qualifying himself so expertly but also on explaining, as he has today, to the Members of this House this complicated proposal.

I should like to take this opportunity to express my gratitude and say that I too, intend to support this particular bill. I will have to listen to all the debate relative to the various amendments.

Mr. ERLENBORN. I thank the gentleman for his kind remarks.

Mr. PUCINSKI. Mr. Chairman, will the gentleman yield?

Mr. ERLENBORN. I am happy to yield to my colleague from Illinois.

Mr. PUCINSKI. Is it the gentleman's intention to place the proposed amendments in the RECORD today, so that there will be an opportunity to study them tomorrow as we begin debating the various amendments? I know they are undoubtedly very complicated amendments. This is a very complicated bill.

I believe it would be helpful to all of us to have an opportunity to review them in the RECORD tomorrow as we go into the discussion of them.

Mr. ERLENBORN. I thank the gentleman for that suggestion. I may well do that. My amendments are not very complicated. For the most part they are very simple.

Mr. PUCINSKI. The gentleman knows that we on the subcommittee who wrote this bill, with his very good help and assistance, have learned over the past year that everything we touch in this bill is of immense complexity. There are no easy provisions in the bill. I believe this was one of the toughest bills we have ever had to work with.

I myself feel it is a good bill as it is. I am going to be very reluctant to support any amendments. That is why I suggested to the gentleman he might place his amendments in the RECORD, so that we could have an opportunity to study them.

Mr. ERLENBORN. Again I thank the gentleman for that suggestion.

I am encouraged by the gentleman's observation that this was the most complicated bill we had to consider. Because of my limited experience on the committee, I did not realize that. This was one of the most complicated bills I would care to handle, and I am happy to know there will not be others that are worse.

Mr. HECHLER of West Virginia. Mr. Chairman, will the gentleman yield?

Mr. ERLENBORN. I yield to the gentleman from West Virginia.

Mr. HECHLER of West Virginia. I commend the gentleman from Illinois for his presentation and for his obvious knowledge of this subject.

The gentleman from Illinois mentioned that he has an amendment which would transfer jurisdiction back to the Department of the Interior for the control of dust standards and recommendations for control of pneumoconiosis.

What disturbs me in this whole area of coal mine health and safety is the fact that if the Bureau of Mines and the Department of the Interior had been doing their job over the years we would not have to be debating at such great length the measure we are debating today and tomorrow. Because the Bureau of Mines and the Department of the Interior are production oriented in their approach and the emphasis in the expenditure of their funds has been almost entirely on production rather than health and safety, I wonder if the gentleman would not support an amendment to transfer jurisdiction to the Department of Labor, which is more sympathetic toward employees and coal miners.

Mr. ERLENBORN. Mr. Chairman, first of all let me say that I respectfully disagree with the gentleman about his observation concerning the Bureau of Mines.

My colleagues on the subcommittee know that I am not an apologist for the Bureau of Mines. I have had my differences with them. But the gentleman's assertion that if the Bureau of Mines had done their job over the years we would not be in the situation of having to give them the additional powers I do not think recognizes the facts.

As a matter of fact, we never gave them jurisdiction to go into anything except major disaster situations. We never gave the Bureau of Mines jurisdiction to go into any health-related situation. This bill, I believe, represents a great step forward in giving jurisdiction to the Bureau of Mines. It has not been a matter of emphasis, or a lack of their desire. We have not given them the funds to hire a sufficient number of inspectors to do the job that they should do. We have not given them the jurisdiction necessary to protect the coal miners. That is exactly what we intend to do with this bill.

The point that I make about setting of mandatory standards I still consider to be a very valid point. Whether you are talking about the Department of the Interior or HEW or any other department in this Government, you should not have one Secretary dictating to another Secretary. You should not have this conflict within the President's Cabinet. You should not have one department of the executive branch setting standards without any need to relate this to the achievability of those standards and without having to stand up in the final analysis and apply those standards. HEW, even though I am sure they will try to act in the most reasonable manner, has no jurisdiction and has no responsibility to enforce the standards that they will dictate to the Secretary of the Interior. This is bad from an organizational standpoint. It will not be good for the miners or the mines, and I hope my amendment on this will be adopted.

Mr. HECHLER of West Virginia. Mr. Chairman, recognizing our disagreement, if the gentleman will yield briefly, I will join the gentleman in supporting adequate funding for those additional responsibilities that we are placing on the departments.

I thank the gentleman for yielding.

Mr. ERLENBORN. I thank the gentleman for his contribution.

Mr. MORGAN. Mr. Chairman, will the gentleman yield?

Mr. ERLENBORN. I am happy to yield to the gentleman from Pennsylvania.

Mr. MORGAN. I am interested in section 317(j), the section dealing with Government inspectors in certain mines. I represent a district that has many

gaseous mines. In the last 50 years we have had at least five or six major mine explosions in my district. I just read the supplemental views, and I see one of the reasons given for opposing this is these provisions will not only be costly but difficult to administer. Do you intend to offer in your series of amendments one amendment which will be an amendment to 317(j)?

Mr. ERLENBORN. An amendment to 317(j) will be offered to make it more workable. As the gentleman is probably aware from reading the report, it requires a mine inspector or a representative of the Bureau of Mines to be present on every working shift in the mine. There are just not enough Federal inspectors to do this job. In the second place, it turns the attention of the mine operators and the miners away from what is really their basic job, to see that safe rules are followed and standards are followed to avoid explosions, injuries, and deaths.

Mr. BURTON of California. Mr. Chairman, will the gentleman yield?

Mr. ERLENBORN. Yes. I yield to the gentleman from California.

Mr. BURTON of California. Is it not the case that the requirement that a mine inspector be present every single day mandates the utilization of the already limited inspector manpower? It precludes the Bureau of Mines from using those inspectors in situations that on the facts may be more hazardous yet given the current requirement that there be an inspection every quarter may make that mandate impossible to comply with? And it also runs the unhealthy risk that the inspector will no longer be able to maintain an arm's length relationship with those operating the mines, because he will be there day in and day out and will virtually become a part of the management and thereby run the risk that management might default in its responsibility and turn over to the inspector every decision affecting mine safety which should essentially be a management function?

Mr. ERLENBORN. I agree with everything that the gentleman from California has said. This is one of those things that at first blush appears to be a great thing for safety, but as a matter of fact upon sober consideration my view of this is that it will not increase safety. It will probably do just the opposite. It will use up this limited manpower. There are many other inspections which should be made for the general safety of the miners.

Mr. BURTON of California. Mr. Chairman, if the gentleman will yield further, is it not the case that virtually every safety expert in the field agrees that a regular spot check procedure is infinitely more desirable on all counts than this permanent stationing of a mine inspector at a mine?

Mr. ERLENBORN. The gentleman is correct.

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. ERLENBORN. Yes, I yield to the gentleman from Kentucky.

Mr. PERKINS. Did I understand the gentleman from Illinois to say that he intended to offer an amendment to divest the Department of Health, Education, and Welfare of the authority to promulgate health standards?

Mr. ERLENBORN. Yes.

Mr. PERKINS. And place that authority with the Secretary of the Interior?

Mr. ERLENBORN. Yes. I would be happy to repeat that and then I will have to move along with the balance of my statement.

Mr. PERKINS. Let me just make this observation: I personally feel that the provision in the bill is sound. I cannot see any conflict. We simply provide in the bill that the Secretary of the Interior shall promulgate health standards that are called to his attention and approved by the Secretary of Health, Education, and Welfare.

Now, the Secretary of Health, Education, and Welfare is in a position to promulgate the health standards and the Secretary of the Interior does not have that know-how around him.

Mr. ERLENBORN. I cannot yield further to the gentleman. I am running short of time. However, I would like to explain my position.

Mr. PERKINS. Well, I shall be glad to yield the gentleman 1 additional minute if he needs it.

Mr. ERLENBORN. I yield to the gentleman.

Mr. PERKINS. Let me say to the gentleman that there is no conflict between the Secretaries here. We just require the Secretary of the Interior to publish those standards in the Federal Register promulgated by the Secretary of Health, Education, and Welfare. We are not going to have any division of authority here anywhere along the line. That is the point I want to get across.

I certainly hope that the gentleman, if he presently intends to offer the amendment, will reconsider and not offer it, because I feel we have taken the best approach.

Mr. ERLENBORN. Well, I do intend to offer the amendment. I hope my good chairman will in the meantime reconsider his position and support my amendment.

Mr. MORGAN. Mr. Chairman, will the gentleman yield?

Mr. ERLENBORN. I cannot yield any further at this time because we just do not have the time. There are other Members on my side who are seeking time and I do not wish to use all of it. However, I would like to proceed with my statement.

Mr. Chairman, before the colloquy with several Members we were talking about the dust standards, and to finish my thought on that, it is not my intention to vary the numbers in the bill. But I would call to the attention of the Members the fact that there is no other coal mining country in the world that closes mines because of dust. Those who have had their attention called to this know that the concentration of dust is harmful and they require that standards be set and that the operators try to attain those standards. Unless there is an imminent danger situation they do not close the coal mines. So, I intend to offer an amendment that will give the Secretary greater latitude in working with the operators to achieve these standards rather than closing the mines, which is not going to be of any use whatever to the coal miners.

If they are working in a dusty situation they will have two choices, either to lose their job because the mine is closed, or to work with the Secretary of the Interior and the operator to reduce the dust concentration so that they can work in a healthful atmosphere. I think that latter objective is what we should seek.

On the interim safety standards, the most plagueing question before our subcommittee and the full committee was the question of the limination of the nongassy classification. Suffice it to say that after an awful lot of effort on the part of all of those who were concerned we have come up in the bill that is before the House with a provision that will soften the impact of this. It takes into consideration the fact that you cannot overnight acquire all of the expensive permissible equipment necessary to equip all of the mines in the United States, some 4,500 mines. Even if the manufacturers of this equipment began tomorrow to produce at the fastest rate possible all of the permissible equipment that would be required, it would take years, and the Bureau of Mines has told us this, it would take 4 or 5 or 6 years within which to acquire all of the permissible equipment necessary to equip all of these mines.

So, taking this practical consideration into consideration, we worked out an extended period of time, taking into consideration the safety of the miners. We have immediately eliminated any open flame equipment. We eliminated the use of nonpermissible small hand drills and other of the small and easily acquired permissible equipment. We eliminated the use of this nonpermissible equipment from being used at the coal mine face, and we have taken into consideration the safety of the miners and the practicalities of the situation, and hope that this agreement will be maintained in the bill.

Another very important part of the consideration of our committee, and it was the result, really, of the efforts of our subcommittee, it was not recommended either by the administration or by others interested, is the provision for pneumoconiosis research. It provides for periodic chest X-rays of the miners.

The bill of the other body requires an X-ray every year. Medical evidence is that this would be not only useless but I think we might be killing our miners with radiation rather than pneumoconiosis. I think the most practical approach is the one in our bill which requires every 5 years a full chest X-ray of all of the miners. And under the agreement that has been reached recently the cost of these X-rays will be borne by the mine operators, and not by the miners or not by the general public.

In conclusion, let me say that I feel that on the whole this bill not only is necessary because of the inattention in the past to the day-by-day safety consideration of the coal miners. But in addition we will be going into the whole area of health research and control of

the atmosphere in the mines that is very necessary, and which we should have done years ago. Instead of that, we have let other countries get way ahead of us in this field, and I think it is a disgrace that we did not do this many years before.

I intend to support this bill. I did when it was reported from our full committee. I hope some of the amendments that I have discussed and others that I will discuss in more detail under the 5-minute rule will be adopted to make this a better bill.

I want all of you to know that that is my sole intention—to see that we get the best possible workable bill out of the House, and one that can be sustained in conference with the other body.

Mr. PERKINS. Mr. Chairman, I yield to the distinguished chairman of the subcommittee, the gentleman from Pennsylvania (Mr. DENT), such time as he may consume.

Mr. DENT. Mr. Chairman, before I say too much I would like to thank those who served with me in some of the longest hours of work that I have put in in my 37 years as a legislator.

Mr. Chairman, this legislation while it has been considered before, having held some hearings on it last year and the year before, and having passed a bill in 1966 including the title I mines for the first time under Federal regulations, the impetus for action at this time came about during the early hours of the morning of November 20 last year when an explosion rocked the Consolidation Coal Co.'s No. 9 mine at Farmington, W. Va., when 78 men lost their lives. The first body was removed just last Thursday.

Those of us who feel responsible for legislating a law—the best law we can—are very much aware of the atmosphere that we had to operate in. We knew the minute this mine exploded that it would give rise to demagogues and those who prior to this time had done little or nothing or said anything concerning mine safety and that they would soon be frontrunning as great leaders for a mine safety law.

Those of us who have records of some 30-odd years of working in the area of mine safety have tried to do the job that had to be done, namely, to pass legislation that would be economically sound to the country and the industry and the communities in which the mines are situated and, yet, would give the greatest measure of safety of life and limb and safety of lungs to the miners of this country of ours.

While the Farmington disaster was a great disaster and the shock, I know, created a great deal of feeling in this area, we know that 78 miners lost their lives and we also know that over 170 miners have lost their lives from that day to this in other accidents that have not been so well publicized as the catastrophies that happen in a disaster-type accident.

The largest mine disaster that I knew about personally was in my own community of Mammoth, Pa., when 210 miners lost their lives in one explosion. But these 210 are just a small number in that community who died in comparison to those I can recall over the years from roof falls, haulage accidents, and the normal accidents that go into the production of any particular product, and especially so in the mines.

There has been talks about the safety features of this act. I believe at this moment, that with some departmental amendments that will be asked for tomorrow, that we have written the best type of safety promoting legislation that has been written anywhere in the world.

Your general subcommittee on labor, accompanied by members of the United Mine Workers and accompanied by members of the industry and Department officials from the Department of Health, Education, and Welfare, and the Department officials from the Department of the Interior and its Bureau of Mines, visited Great Britain for 5 days. These members went down into the coal mines, 3,200 feet deep in Wales, and they visited coal mines in this country from 28- to 7-inch coal—from Cadillac type mines that have all of the safety features available today, to mines that are still running with the oldtime timbering and shooting from the solid into coal.

We have in this country some 4,000 mines and we are producing coal today to the tune of 600-odd million tons a year with 135,000 miners where not too long ago we had about 600,000 miners producing less than 400 million tons of coal.

While I am on that subject, let me state the basic argument for the pneumoconiosis payment provision contained in the bill. First, I should say that I know of only one State that has adequately tried to meet the problems arising as a result of the pneumoconiosis disease scourge. Our State of Pennsylvania passed a bill which made pneumoconiosis an occupational disease back in the days when I was a State senator. I had the privilege of introducing that legislation.

Scattered all over the United States are 300,000 miners who no longer work in the mines. Some of them are in Western States which have no coal or coal problems. Yet those men are crippled with a lung disease, and there is no place to which they can go to claim any kind of compensation. The coal-mining States have neglected to pass legislation that would provide them with compensation. So these men, and in many cases now, their widows, are living on nothing but direct relief. Every other kind of injury is compensable.

One of the reasons the States could not get around to passing legislation on the subject was that until this decade the experts had never been able to isolate pneumoconiosis so that they could, with absolute certainty, say that the disease stems from coal mining.

Many of us in our communities thought that black lung was a form of cancer. It has been known by various names throughout my lifetime. It has been known as night disease, black damp in the lungs, black lung, silicosis, anthracosis, and all kinds of other names. Finally, it was discovered to be a disease peculiar to coal mining, and was nothing more or less than a deposit of actual coal dust within the lungs.

This disease proceeds in four stages. There is a Stage 1, a Stage 2, and a Stage 3 of simple pneumoconiosis. However, none of those stages are related to each other nor are those three stages usually progressive. It is only when the victim reaches the fourth stage, known as progressive massive fibrosis or complicated pneumoconiosis, that he has a fatal, uncurable and irreversible disease. At that time he is destined to die from the disease. In some cases the men live a longer time. In some cases they live a shorter time, depending, I guess, on their constitution and how badly involved their lungs are.

So now we know the conditions in this area. We have studied the British figures and the history of mining in Britain, where they have had a history of 30 years of pneumoconiosis research. And, contrary to what I believe is the understanding of my good friend from Illinois, the Secretary of the Interior has had the absolute right, authority, and mandate since 1941 to do what he could in promoting inspections and investigations into occupational diseases and injuries in the mining industry. This was reemphasized in 1966, and the Federal Coal Mining Safety Act carries in it such language as this, and this is the original language:

> For the purpose of obtaining information relating to health and safety conditions in such mines and the various causes of accidents involving bodily injury or the causes of occupational diseases originating in such mines.

That language has been in the law since 1941, when the first mine inspection law was passed. However, when we passed that inspection law we were not able to give the mine inspectors any authority to enforce any of the rules.

Mr. CARTER. Mr. Chairman, will the distinguished gentleman yield?

Mr. DENT. I yield to the gentleman from Kentucky.

Mr. CARTER. Mr. Chairman, I thank the distinguished gentleman for yielding.

Certainly I agree that we do have thousands of people who suffer from pneumoconiosis who are living throughout our country. Further, I do think they should be compensated. As I go through the mining areas I find it not too difficult to recognize people who have this condition. It can be seen in their poor breathing, in their gasping efforts.

Certainly these people have been unfortunate because when they were working in the mines, they were not covered by workmen's compensation. Neither have the unions taken them on. They were not members of a union at that time.

I feel, as the distinguished gentleman from Pennsylvania does, that we must do something to help these people who are not helped at this time by our Government or any other agency.

Mr. DENT. Mr. Chairman, I thank the gentleman from Kentucky for his contribution.

Mr. Chairman, this is a one-shot effort. This is not a continuing compensation arrangement to establish Federal-based compensation for this or any other industry. We are only taking on those who are now afflicted with pneumoconiosis in the fourth stage—complicated

pneumoconiosis. In the first three stages, or simple pneumoconiosis, those afflicted are debilitated and are often disabled, but not with the same devastating frequency as are those with complicated pneumoconiosis.

However, what are we doing in this law? We are doing something that has never even been thought of before. We are giving the new miner, who applies for a job, a medical examination. We require an examination of his lungs by the best-known method that has been found to be such by the British, and that is by X-ray examination and whatever other supplemental tests may be required. Then if the new miner is acceptable, he goes into the mine, and within a year he is given another examination to see if during that year there has been any change in his lung structure. Then he goes from that time to the next period. The British have said it should be every 5 years—and I have every reason to believe them, especially after I have been to the laboratory where they have 30,000 specimens of miners' lungs from autopsies. I am convinced they made every human effort to find out what they could about the lungs of a human being, especially those of a coal miner.

Based on their experience, we require that every 5 years the miner shall have an examination, because they found that changes generally take place in 5-year periods.

We cannot force an old miner against his wishes to undergo an X-ray examination. However, we can so force the new miner.

If a miner who is presently working in the mines refuses to take an examination to determine whether he has pneumoconiosis, then a year from the date he was offered the opportunity to take that examination, and he has not done so, he is not eligible for the compensation payments provided by the bill.

Those already out of the mines have a period of 3 years within which to make their claims, because they may as exminers be in the State of California or Colorado or some other State, so they have 3 years. The widow has 1 year after the death of her husband or 3 years after the date of enactment of this act, whichever is the later date.

However, this is only one shot. I want to say this today and I want to have it placed in the record indelibly. I sincerely believe if the criteria of this act are followed, if the Bureau of Mines and the Secretary of Health, Education, and Welfare do their duty as prescribed in this act, there will never be a new case of pneumoconiosis in the coal mines of America, because prevention is the answer and examination is the answer, and we provide for both.

Remember, we have established in this particular act that if a miner is found to have substantial pneumoconiosis, he must be offered an opportunity to work in an area of the mine that has relatively little dust. When that miner may be moved from what might be a mine face job at higher pay and he is moved into a lower pay but dust-free area, he must be paid the higher rate. Certainly, this is a burden on the industry, but black lung is a scourge to the people who have it.

Do Members know why we cannot get miners to agree to examination? It is just a simple matter of their not wanting their neighbors and family or anyone else to know—when he already knows he has pneumoconiosis in a progressive stage.

In some of the coal mining communities they think it is a cancer, so he does not want his family to know he has it, so many of them will refuse to have the examination. We cannot force them to.

But we have said to them, "If you want relief, you can get it under this act."

I pray that whatever we do in this Congress we will not destroy this section of the bill.

There are three sections of this bill that have more value to the coal miners and to the mining industry than all the rest of the language put together. One is on the lung disease compensation; another is the section dealing with the mine dust standard; and another is the section dealing with the safety standards.

Warning is what we need in the coal mine. Given an opportunity to get out, the miner knows how to get out. Given an opportunity to know there is imminent danger, that miner knows how to get out, and he will get out.

We have set in motion necessary legislation, even additions in this law, to make it possible for the miner to get out.

There is one feature of this act that I am especially proud of. I am proud of the committee for taking it. I want to say to the gentleman from Illinois, not once did he question this particular feature of the act, never contained in any legislation before, yet it was highly controversial at the time because of the cost.

I am talking about a piece of machinery developed by the Bureau of Mines that is known as an automatic methane monitor. This particular piece of machinery is continuously working, always constantly on guard. After there is an accumulation of methane gas to a trigger point below the explosion point of that gas, this monitor flashes lights as a warning to the miner that there is excess gas in the mine. It also deenergizes the equipment in order that no spark can come from the equipment that may ignite the gas.

We have tried to write law that will be at least as safe as legislation can make coal mining, which is the most hazardous industry in our country.

Insofar as this old piece of machinery is concerned, we believe we now have outmoded it. It is cumbersome. It is not accurate. It does not always function. But it has been something of an early warning system.

We now have in our possession another piece of equipment. I had it here a while ago, but, as is said, "There is many a slip twixt the cup and the lip." Somebody turned the battery on over the weekend, and I will have to go out and get another battery. But I will show the Members this great piece of equipment, developed, I understand, since we started talking about methane monitors and all the equipment working in the coal mines.

The cost of this old equipment is between $1,800 and $2,000, or in that area, and we can understand the tremendous cost to these 4,000 mines being put under this new status in coal mining, that will be compelled under this law to put this kind of equipment in. We can imagine the cost to a mine producing a very small tonnage of coal.

We have been lucky enough to find in our research something that will take the place of this, where the cost is not exorbitant.

We have also increased the flow of air from 6,000 to 9,000 cubic feet. We have gone further than that, and for the first time intend to have a requirement of 100 feet per minute of velocity, of wind and clean air across the miner operating machinery, and 3,000 cubic feet of air at the working face.

In examinations already made by our own Bureau of Mines of recent date, and in my State of Pennsylvania of recent date, we are not disturbed about reaching the 3 milligram level of mine dust in the mines of this country within a reasonable time, and we are hopeful we can do so within less than the time prescribed in the bill.

I have before me a list of some 28 mines that were examined. These mines have made little or no effort in this area because the law is not yet in being. Here we have a continuous miner producing as low as 2.4 milligrams of dust at its face. We are requiring 4.5 milligrams after the first 6 months and 3 milligrams after the next 6 months, and also from then on lower levels to be set by the Secretary of Health, Education, and Welfare, who under this bill does have the authority to do what it has been said he did not have. He has the authority to send inspectors into the mines with authority to act. He may set the standard lower as the technology and equipment and methods of operation in the mines warrant his setting it.

Mr. Chairman, the British told us that when mine dust reaches a level of 2.2 milligrams per cubic meter of air, there is virtually a zero probability of a miner with 35 years of exposure to that level contracting stage 2 or above of pneumoconiosis. We are hoping that this is right and we are praying that it is right.

Once we can lower the methane gas danger in the mine by having an early warning system and circuitbreakers and deenergizers on all working equipment and make all the mines in the country come under the law of a gassy mine just by the presumption that they are a gassy mine—if we can do all these things, then we are reducing the dangers when it comes to deaths caused by explosions and fire in mines. By changing the law on roof bolting—and I want to show you a picture of this, because some people wonder what roof bolting is—we can help to cure this situation also. There are now innovations that have come into this rather recently. Roof bolting is the latest, up until recently, method of holding the roof up above the workers' heads. In the old days there was nothing but cross timbers sitting on posts.

Now they send a pattern, a copy of their diagram of that working area with a description of the kind of overburden

that will be above the coal, and they then set a pattern for how many bolts there will have to be and the spacing and at what intervals it will have to be and how deep the bolt will go into the overburden, and all of this is subject to approval by the Secretary. There is a flanged nut at the end of a large bolt with a 8 by 10 or a 2 by 12 piece of hardwood, and the bolt is put through it after the hole is drilled, and they tighten the nut underneath. That acts as a hanging strap to hold up the roof. They have developed a new crossbar type which will be bolted into the side next to the roof, and with a turnbuckle arrangement it will pull the roof this way. So you have the stress both ways to keep the mine roof up. If they can lift the mine roof, they will not only cut down the deaths by all of these causes that occur in the mines now, but they will make coal mining a little safer and more respectable for the fellow who values his life.

Mr. Chairman, it is my humble opinion that coal mining today is on the verge of an explosion of activity. It is still the cheapest source of fuel in the United States per B.t.u. or, for that matter, anywhere else in the world. It is without a doubt the whole energy impulse of our entire industrial complex. We are going to mine 600 million tons and we can even reach 700 million tons in the near future. I have been told by reliable sources that there is going to be a need for about 15,000 new coal miners within the next 2 years.

And, a third generation of immigrant coal miners is not going into the mines any more. What you have to do is pass this kind of legislation, or better if you can conceive of better legislation, in order to give these men a reasonable hope that they can live from the beginning of the shift to the end of the shift and that their life will not be plagued with the lung disease that sends them to an early grave or a miserable life in their elderly years.

So, I say to you insofar as the legislation itself is concerned I was grieved to learn where some said that there were giant loopholes in the bill. Well, the loopholes we are talking about are figments of the imagination. I would put it kindly that way.

I read one particular item quite a bit and oh—well, as first I was a little hot, being a fellow that has a little temper I get a little hot—but when I considered all of the ramifications as to why the statements were made and who was interested in the statements and realized that we had this bill up for consideration during a very difficult time when there is a fight on between the mineworkers as to who is going to be the president of that great international union and because in those campaigns a lot of things are generated and there is great latitude of expression. In other words, we do not always mean what we say and we do not always say what we mean in our campaign.

However, I am sorry to say I defy anyone to find in this legislation now pending before you a loophole that in any way endangers the life or hurts the miner, and if it can be made better within the conditions under which we are working, I do not know how but I will support the effort.

It has been said that we gave 4 years for the acquisition of the necessary so-called permissible equipment. This committee held the hearings. Every witness who appeared before us, representing either the mines or the manufacturers of the permissible equipment stated that they would have to have 7 to 12 years during which to provide the equipment.

Well, let us look at it now upon a realistic basis. There are about 500 mines in the country today which are using permissible equipment and the manufacturers of this particular type of equipment are tooled to produce for that many mines. In some instances with reference to certain types of equipment, due to the expansion of the coal industry, it will take anywhere from 6 months to a year and a half or better. We will have many mines for these manufacturers to produce equipment. It is just commonsense that it is going to take time to acquire the equipment. What do we do in order to safeguard the miners? We say that no replacement of the present nonpermissible equipment can be made, unless it is made with permissible equipment. And, we state that the small equipment which is in use every day shall be permissible because it is available and can be bought now.

So, Mr. Chairman, we have covered the nongassy mines and put them into the so-called permissible equipment state of operation to make sure that no more accidents of ignition or explosion will be caused by the use of nonpermissible equipment in those mines.

We believe we have proceeded correctly. We have given 4 years on an industry basis. But the Secretary knows that every 6 months he has to report to the mines and to this committee on the progress of making all equipment in these mines permissible.

I honestly believe that the nonpermissible equipment manufacturers will swing over and make permissible equipment and that thereby we can probably have equipment for all the mines in the country in a period of less than 4 years. But I do not believe in asking you to vote for legislation that I cannot honestly say to you is feasible. We have allowed some time because until now this type of mine was not even under the act insofar as permissible equipment is concerned.

In 1966 when I had the title I bill up, I was defeated in trying to classify all mines as nongassy and thereby require all mines to use permissible equipment.

I said at that time that the issue would be back within 5 years, and that you would have to have permissible equipment or you would not be able to hire any coal miners, and that is exactly what has happened in this country of ours. They are not able to hire coal miners. Why, even some of the Members—and I will not mention who they are—whom I have invited to go with me into a coal mine, they will not even go to the tipple, let alone go into the entranceway, because mining is dangerous. You are walking into an unknown quantity.

Let me tell you this about mining: When I was a boy I never saw my father until Sunday morning. When he went to work in the morning it was before I got up, and when he got back in the evening it was after I had gone to bed. It was not an easy life. It was a hard life, and if they could produce a ton and a half of coal in a day in those days they were doing a good job.

Today it has come to the point where one machine working on a 24-hour shift has produced something like 4,000 tons of coal in that 24-hour shift.

So machinery has come into the mines and that is what has produced the dust. Because in the old days when they would shoot the coal in the mines, the lump coal would come out in large sizes and it was not broken up into small pieces. and therefore did not liberate the same quantity of methane gas. Methane gas comes from mining coal. Dust comes from mining coal. Methane gas blows up the coal mines, kills the miners. Dust also kills miners though in a more subtle way. So with all of our technology we have failed to take into consideration the health of the miners for too many years, and in many instances the safety of the miners. Now we have come face to face and square on the problem—what do we do about it? We pass legislation that, as I said, is not economically unsound for the community or the operator, but it is the best kind of legislation that we have been able to conceive of—and I am here to buy any amendment that will better it so as to protect the lives of our miners and to improve their working conditions.

Mr. Chairman, I want to thank my subcommittee for their patience and for the many hours that they have put in, both those on the minority side and on the majority side. I also want to thank the chairman of our full committee for his tolerance and understanding, and in allowing me to have as much time as we had, and to put in as much effort as we put in our effort without any criticism on his part.

He would say to me, "When can you have it? What is your target date?" And I would tell him, and then if we could not make it I would go back and tell the chairman, and he always understood that we were trying to write the kind of legislation that would help the miners. And he has always been for that.

For the information of the minority who asked the question, I would refer them to page 19 of the committee report, and they will see the number of mines meeting the criteria levels based on occupation of the miners, and they will be surprised at the number of occupations within the mines today where the level of dust is less than that which we have set forth in the act. I believe we can live with it.

I have some doubts as to whether we are doing the right thing in eliminating the board. I do not know that it is best to go for your authority to one man, and then have to go to the courts. Let me cite you one example of what happened when we went to the courts before we had the Review Board.

On January 19, 1953, the judge of the district court of the State of Iowa in and for Monroe County handed down a

temporary injunction forbidding two Federal employees from going into the Lavilla Coal Co. mine, and restraining that miner from operating or enforcing their closure order. They later appealed, and asked that the jurisdiction be taken—or, rather, they asked that the case be taken before a Federal court. The U.S. district court sustained the motion to dismiss and dissolve the restraining order, and the injunction. That was done on March 30, 1953, some 2½ months after the injunction order was handed down by the local court.

On that day, March 30, when the Federal court dissolved the injunction and ordered the coal operator to allow these men to enforce the rule—that mine blew up and five men were killed. I do not know how you are going to get around it, but so far as I am concerned, I have never been wedded to the Board in this bill. Virtually the same Board has been in existence since 1953. So I have no pride of authorship in it. I do say though, do not force these miners, either the operators or the coal miners, to have to go directly to the court and petition the Federal court with its backlog of cases on a closure order.

When imminent danger is involved, you cannot wait for time scheduling of the case before a judge. At least in a review proceeding of some kind, I do not care how you write it and if you do not like the characters in it, then get rid of them—but let us not jump into this thing without giving it some careful consideration.

I also ask you to study carefully the proposal to take out of the hands of the Secretary of Health, Education, and Welfare the writing of criteria and the promulgating of rules for the dust standards or health measures in the mines.

The Secretary of the Interior has had that responsibility for so many years. He has never used it. I found that once we started to get the Health Department into it, we have here the only information on dust standards and lung disease anywhere in our country only of recent date because the Health Department went into Appalachia and made a study not too long ago and has now been working on dust standards.

In all these years the Department of the Interior has had millions of dollars under the Saylor-Dent mine research bill to spend on research and specifically spell out research for health standards. They spent most oi that money developing how to make oil out of coal. Pretty soon oil will be running out and we will be making oil out of coal.

The CHAIRMAN. Will the gentleman from Pennsylvania (Mr. DENT) yield so that the Committee may rise and the House receive a message from the President?

Mr. DENT. Yes, Mr. Chairman.

Accordingly the Committee rose; and the Speaker resumed the chair.

The SPEAKER. The Chair will receive a message from the President of the United States.

FURTHER MESSAGE FROM THE PRESIDENT

A further message in writing from the President of the United States was communicated to the House by Mr. Leonard, one of his secretaries.

The SPEAKER. The Committee will resume its sitting.

FEDERAL COAL MINE HEALTH AND SAFETY ACT OF 1969

Mr. DENT. Mr. Chairman, the only dust contract that was given to my knowledge by the Department of the Interior was given within the last 2 weeks and it was given to a firm in California to study mine dust standards. I do not know how we are going to get the dust out there; pipe it out or what we are going to do.

But I think the Department of Health has in fact the expertise and they will be disassociated with the economics of coal mining. The Bureau cannot be disassociated from the economics of coal mining.

The whole duty of HEW will be nothing but consideration of the health of the miner and trying to lower the dust levels in an effort to protect their health. Their jurisdiction is the dust levels in the mines, the examinations, and keeping of records.

Mr. GRAY. Mr. Chairman, will the gentleman yield?

Mr. DENT. I am happy to yield to the gentleman from Illinois.

Mr. GRAY. Mr. Chairman, I wish to commend the very distinguished gentleman in the well for a brilliant statement. He referred to page 2 of the report where it says:

> The death of 119 miners in an explosion at West Frankfort, Illinois, late in December 1951, aroused public concern against and led to the enactment of Public Law 552, 82d Congress, in 1952.

West Frankfort, Ill., happens to be my hometown. I drove an ambulance hauling people out of that mine, and anyone who has not really experienced a mine disaster does not know just how deadly methane gas and coal dust can be. So I want to subscribe from personal experience, having seen 119 miners lose their lives in one accident, to what the gentleman has said. He is implicitly correct in his statement of the dangers inherent in coal mining. I hope this legislation can be passed by this House without a dissenting vote, because the most we do here will not be enough to protect the lives and welfare of the miners, particularly those suffering from black lung.

I want to commend my distinguished friend, the gentleman from Pennsylvania (Mr. DENT), the gentleman from Kentucky (Mr. PERKINS), and the gentleman from Illinois, and others, for their very fine work in bringing out this piece of legislation. Representing a coal-mining district, I can assure you it is badly needed and long overdue.

Mr. DENT. Mr. Chairman, with your permission, I would like to demonstrate the difference between what has been developed up to now and what I think is probably the greatest little piece of equipment yet devised, which will save more lives than any other instrument ever developed. I showed you what we are now using in the mines. That is this two-box job on top of the coal-cutting machine shown in the picture I hold in my hands. It weighs hundreds of pounds. As I said before, it is nothing but a flashing light. It is worked in conjunction with the lamp that is sitting on top. That has a light in it, and as methane gas concentrates in a place, the flame gets longer, and an experienced fire boss or even a foreman or a worker at the face knows what it means. Most of the miners can tell when that flame starts and when it goes past the curved lines, there is a danger and they have to get out of the mine. That is a visual signal. One must see it. You have to be looking. You have to be on constant watch.

Now I hold in my hand a device that may be described as an early warning system. This, I believe, will be responsible for saving many lives.

Mr. ERLENBORN. Mr. Chairman, will the gentleman yield?

Mr. DENT. I yield to the gentleman from Illinois.

Mr. ERLENBORN. May I inquire whether the gentleman intends to activate that instrument?

Mr. DENT. Yes, only for a few seconds.

Mr. ERLENBORN. I would only caution the gentleman that maybe he ought to warn the Members in the Chamber and those in the gallery and, more importantly, the guards, that he intends to do so, so they do not think we have an air raid.

Mr. DENT. I will explain the principle of this device.

This is methane gas out of a coal mine. The law that you have before you sets the activating requirement point at 1.0 volume per centum. The instrument goes down as low as 0.005 volume per centum. Yet, with that low a concentration—the explosion point is 5 volume per centum—with that low a concentration of methane gas, there is an audible signal. That is all there is to it. You have a flashing light in this instance which shows a visible recognition of danger. On the other hand, you have this small siren, and on every one of these machines—this case is made for the foreman, so it is soft—but on these machines there is a three-legged fixture or connection which ties into the control boxes on the machines, and the machine is deenergized the minute the little bit of concentrated gas hits it. It can also be rigged up, and it is rigged up so that it breaks the circuit of power coming into the mine.

This older device costs about $2,000, and this, so far as I understand it, costs about $300. I think that between this device, the dust standards, the new added velocity of air required, and the volume of air across the working face, the new Department amendments which we will offer tomorrow on electrical equipment, and so forth, will, in my humble opinion, give this country the safest coal-mining law in existence anywhere in the world.

Mr. BURTON of California. Mr. Chairman, will the gentleman yield?

Mr. DENT. I yield to the gentleman from California.

Mr. BURTON of California. Mr. Chairman, I commend the gentleman in the well, the very distinguished chairman of our subcommittee, the gentleman from Pennsylvania (Mr. DENT). He has been working in this field for more than 20 years, and he brings to the House more expertise in this area, I think we

all will admit, than is normally our good fortune to have in a bill manager. The gentleman from Pennsylvania has been subjected to all of the difficulties that any chairman is subjected to, and then some, in his effort to see that the subcommittee and the full committee and the House pass the best possible bill to improve the health and safety of those who work in the Nation's coal mines.

I think when the history of this legislation is written, it will be very clear in the eyes of any objective observer that its passage was due to the superb and superior legislative skill of the gentleman from Pennsylvania (Mr. DENT) and his determination to see to it that all parties have an opportunity to be heard effectively in the development of the bill and, perhaps most important of all, rather than accept the notion advanced by some, that this is as a result of the lamentable disaster in Farmington, and that Congress should embark on a course of punishment in terms of the operators, instead, the gentleman from Pennsylvania continued to insist that our exclusive yardstick should be the health and safety of those who work in the Nation's mines.

Because of this exclusive yardstick, the legislation is brought to the floor. As on some occasions, the legislation, to be charitable, has been misunderstood, but to be a little more precise, it has been misrepresented.

But I salute the gentleman from Pennsylvania for his unique role. It so seldom happens that we had the right man managing the right bill to implement an idea whose time has come. If the gentleman from Pennsylvania does nothing else throughout the balance of his distinguished political career, this act will be a magnificent monument to that career, and literally hundreds of thousands of those who work in the mines and their families will owe an undying debt of gratitude to that marvelous and gentle and compassionate and concerned colleague of ours, the gentleman from Pennsylvania, JOHN DENT.

Mr. DENT. Mr. Chairman, I wish the gentleman had not said all that. I would like to say that whatever credit lies in this comes to all of us who have worked on it. I want particularly to pay the strongest possible compliment to the gentleman from California, who comes from an area where there are no mines, and no black lung disease developing. From the first day this legislation appeared before our subcommittee the gentleman from California made it his strong suit, and while he gave attention to other things as they came before us, he never lost sight of one thing in this bill that was his and his alone.

For any of us to take any credit other than supporting it along the way would not be fair and would not be honest. PHIL BURTON is the father of the pneumoconiosis payment feature in this bill, following the great leadership and understanding of the gentleman from New Jersey (Mr. DANIELS), who held the hearings on it.

I will say that there were many moments when I was ready to give it up because of the opposition from all sources against including this feature in the bill. Many a time I was ready to "chuck it" in order to get the safety features and the dust standard I wanted so badly. PHIL, with a very gentle bellow that would nearly tear my head off, would say, "All deals are off. There will be no mining bill at all unless we give these widows some relief and these miners some help."

So, PHIL, I say to you before this House, you and you alone are responsible for keeping this provision in this bill to this moment.

Mr. PERKINS. Mr. Chairman, will the distinguished gentleman yield to me?

Mr. DENT. I yield to the chairman of the committee.

Mr. PERKINS. I doubt that any Member of the House of Representatives is more affected by reason of this mine safety bill than I am in the district I am privileged to represent. The mining of coal and the employment of miners in my district will expand. With the passage of this bill I believe they will enter a much safer occupational field.

In the 81st and 82d Congresses I dedicated myself, just like the gentleman from Pennsylvania did this year, to the passage of a mine safety bill. But never in my career has any Member demonstrated such ability and such knowledge on a subject matter so complex as mine safety. The gentleman from Pennsylvania has contributed much to the safety of the coal miners.

I recognized earlier in the year, and discussed it with the gentleman from Pennsylvania and the gentleman from New Jersey, that unless we took the pneumoconiosis compensation provisions of the bill I introduced in February, H.R. 6780 to the mine safety bill I had fears that we would be solving the problems of miners for the future and would be ignoring the plight of those now afflicted with "black lung" disease. The gentleman from Pennsylvania, the gentleman from New Jersey and the gentleman from California worked this out.

We all owe to this distinguished chairman of this subcommittee a great debt of gratitude. I believe the whole country will be proud of the legislation of which the gentleman from Pennsylvania is the chief sponsor. I believe we also should commend the UMW and its leadership for its insistence that legislative effort concentrate on assuring maximum safety and health standards.

Mr. DENT. The gentleman from Kentucky is too modest. The House ought to know that he was the cosponsor of the 1952 law which gave authority to the coal inspectors for the first time in history. So his work in the vineyard of mine safety has not been of late; it has been for a long time.

Mr. DANIELS of New Jersey. Mr. Chairman, will the gentleman yield?

Mr. DENT. I yield to the gentleman from New Jersey.

Mr. DANIELS of New Jersey. I rise in full support and enthusiastic support of this legislation.

As chairman of the Select Subcommittee on Labor, I cannot let this occasion go by without paying tribute to the gentleman from Kentucky, the distinguished chairman of the Committee on Education and Labor, for the role he played in developing this legislation. I know he must have "kept on top of" the gentleman, and he "kept on top of" me, to get out the pneumoconiosis provisions with reference to the payment of benefits to miners who suffer from black lung or to the widows and dependent children of miners who died from that disease.

With all due respect to all of the Members of this House who come from coal mining States, I do not think there is any Member in this body who is as knowledgeable and who possesses the understanding of the problems that exist in the coal mines as the gentleman in the well, the chairman of the general Subcommittee on Labor.

I know from my conversations with you over the years, having served on this subcommittee for the past 11 years with you, that you worked in the mines as a young man and subsequently you owned a mine as a young man, and that during your term of public life in the State of Pennsylvania as a minority leader in the State senate I am sure you have dealt time and time again with the problems of mining legislation. Today you gave a really wonderful exhibition of your knowledge of this subject. So I wish to salute you for your full knowledge and understanding of it. I am sure if any other Member of this body undertook to handle this legislation, with all of the problems and intricacies involved in legislation of this type, they would have an awfully difficult job in trying to get this legislation through the House. However, I am quite sure under your leadership and that of our able chairman, I can predict now that this legislation will pass and it will do so by an overwhelming majority.

I would also like to take this opportunity, Mr. Chairman, to pay tribute to the gentleman from California to whom the gentleman from Pennsylvania referred, PHIL BURTON. Likewise he came into my office and I had to shut the doors because he almost blew the girls out into the corridor with his insistence on the pneumoconiosis benefits contained in this bill. Of course, sometimes his language and voice were very loud. I cannot say what else they were, but with all due respect to him, I will say that if it were not for his persistence, his tenacity, and his courage, perhaps, we would not have the benefit of these provisions in this bill.

Mr. SLACK. Mr. Chairman, will the gentleman yield?

Mr. DENT. I yield to the gentleman from West Virginia.

Mr. SLACK. Mr. Chairman, I just wish to compliment the gentleman from Pennsylvania (Mr. DENT) for a most detailed and comprehensive statement regarding this very complex subject matter. I certainly support this legislation.

As Representative from a district ranking among the leaders in coal tonnage production I have watched with great interest the efforts of the committee to draw together a sensible, balanced proposal which can be enacted into law for the greater protection of our coal miners. After listening to the detailed and comprehensive statement of Chairman DENT, I must compliment him and the members of the subcommittee on a pro-

posal which I was pleased to have the opportunity to cosponsor. They have separated fact from fantasy and by sheer diligence have arrived at a satisfactory middle ground. The coal miners of this country will have a great deal for which to be grateful to all of them, and as a native of the No. 1 mining State with many friends throughout the coalfields, I want to be among the first to express gratitude and appreciation for the masterful way in which they have discharged a most serious responsibility.

Mr. GAYDOS. Mr. Chairman, will the gentleman yield?

Mr. DENT. I am glad to yield to the gentleman from Pennsylvania.

Mr. GAYDOS. Mr. Chairman, I thank the gentleman for yielding to me.

I wish to add my compliments to those of the other gentlemen for his having a first-hand personal knowledge and for having the dedication which he has to miners and their problems. I am very proud that the gentleman in the well represents the congressional district next to the one that I represent. It was my personal pleasure and a very informative and educational one to serve with him on the subcommittee. I am personally proud to associate myself with his remarks.

Mr. HECHLER of West Virginia. Mr. Chairman, will the gentleman yield?

Mr. DENT. I am happy to yield to the gentleman.

Mr. HECHLER of West Virginia. Mr. Chairman, I would like to compliment the gentleman in the well for the really outstanding job he and his subcommittee and the other members of the full committee have done in clarifying the provisions of this bill. On behalf of thousands of coal miners from the State of West Virginia, which is the largest coal-producing State in the Union, I would like to express our deep and heartfelt thanks particularly for the provision that has been written into this bill for benefits for miners and their widows from pneumoconiosis disability. I think the gentleman in the well should be complimented for his determination, as well as the gentleman from New Jersey (Mr. DANIELS) and the gentleman from California (Mr. BURTON) as well for having done Herculean work in bringing this provision out and insisting that it remain in the bill. It is a monument which I know will long stand to the hard work which they put in on the bill.

I would like to ask the gentleman this question: Does he recall earlier in the year when there were forces at work trying to get us to separate the health and safety provisions of this bill?

Mr. DENT. Oh, yes. Many of them, from different angles and sometimes hard-to-understand areas, who were also opposing pneumoconiosis benefit payments in this legislation.

Mr. HECHLER of West Virginia. Yet the gentleman persisted and the committee, as well as the chairman of the full committee, the gentleman from Kentucky (Mr. PERKINS), and others persisted. I commend them for their courage.

Mr. DENT. Mr. Chairman, it is with a great sense of both personal satisfaction and relief that I speak in favor of H.R. 13950. I am satisfied because I know this bill is one we can all take pride in supporting, and relieved because the arduous task of getting it to this point is completed.

Mr. Chairman, this bill has nearly 100 cosponsors and I am privileged to be prime sponsor as well as chairman of the subcommittee that gave it birth. The bill is better than good. And I am confident that when we act favorably on it, the bill will be refined and improved to an even greater extent.

I say all of this with a feeling of gratitude to my colleagues on my committee, for I am well aware of the positive contributions and tireless efforts made by so many who, like myself, are committed to making our Nation's coal mines safer places to work.

There have been interferences with our work, and I find it somewhat remarkable that we were able to bring this quality of legislation before the House today. One interference has been the struggle underway for the presidency of the United Mine Workers of America; a contest into which this bill has become inextricably and unfortunately injected. Another has been a misunderstanding of the bill by some who have been misled by inaccurate statements about the subject matter and misrepresentations and exaggerations about the provisions of the bill.

The fact is, however, that this bill has emerged untouched by it all. Many of us have agonized over it to insure it would. It is time that these individuals, who have remained behind the public spotlight so as to work more effectively, were recognized for the credit they so richly deserve.

First among them is the gentleman from California (Mr. BURTON). One does not think of San Francisco as a great coal-producing section of the country, and it is not. But is represented by a man with a great compassion for people, particularly those whose voices are not always heard with ringing clarity. The gentleman has labored over this bill with a deep and responsible concern for them.

This feeling on his part led to the existence of section 112(b) of the bill—the subsection dealing with payments to miners who suffer from and the widows of miners who died with complicated pneumoconiosis, a disease which is terminal and irreversible. The gentleman from California developed this subsection and in doing so met every objection to the proposal from many of those who initially opposed it. His tenacity with reason is why the subsection is now the benefactor of widespread support. It is also the reason why these afflicted individuals will now be afforded a measure of relief and dignity.

There are now some who embrace this subsection as though it were their own creation. But history should have the benefit of a clear statement of facts at the time the facts are known. And the simple fact is that PHIL BURTON, more than any other single individual, deserves the thanks of us all for this provision of the bill. He is entitled to this because this provision will help people; people for whom life has taken on an added and heavy burden.

Particular recognition and appreciation is also especially due the gentleman from New Jersey (Mr. DANIELS). The gentleman is chairman of the Select Subcommittee on Labor, the subcommittee which has jurisdiction over legislation dealing with payments to injured workers. Section 112(b) of the bill was first engendered in legislation in the gentleman's subcommittee, and he held several days of hearings on the various proposals relating to payments for miners suffering from an occupationally caused disease. The gentleman was determined to meet the urgent need of these miners and, in the case of deceased miners, their widows. I am confident that, under his leadership and guidance, section 112(b) of this bill would have become a public law apart from this bill had he not allowed it to become such an integral part. But there was no selfishness on his part and no false pride to be derived from retaining the legislation as his personal domain. The gentleman's only concern was getting relief to afflicted people at the earliest possible moment. I salute him for that quality which I have always known was so much a part of his character. I also thank him for his invaluable assistance in the formation of this legislation. He certainly deserves a special "thank you and well done" from us all.

If there is one person whom I can never praise too highly, it is the distinguished chairman of the Committee on on Education and Labor, the gentleman from Kentucky (Mr. PERKINS). Our chairman was most gracious in permitting the "exchange of legislative provisions," if you will, between subcommittees. Of course, we all know this conciliation is based on his deep concern and desire to do the very best for our coal miners. When the subcommittee bill was considered in full committee executive sessions, our chairman could not have been more accommodating nor cooperative. Indeed, his leadership in guiding the bill through committee was nothing less than vital.

Also, I wish to acknowledge the excellent work and fine cooperation of the ranking minority member of my subcommittee, the gentleman from Illinois (Mr. ERLENBORN). On many points the gentleman expressed what he felt were valid and sincere objections. But, never was he unreasonable. And as a result we were able to produce a good, bipartisan subcommittee bill.

Special thanks are also due to three other minority members of my subcommittee; the gentleman from California (Mr. BELL), the gentleman from Michigan (Mr. ESCH), and the gentleman from Idaho (Mr. HANSEN). Their attendance at the hearings and executive meetings and their contributions to the discussions were particularly noteworthy.

In singling out those I have just mentioned, I do not, in any way, intend to disparage the roles of the other committee members. If we had not had the additional comments and worthy suggestions of those members, I dare say we may not have had as good a bill as the one we present here today.

There is one other tribute I must extend, Mr. Chairman, and that is to my colleague and neighbor back home, who has been so helpful to me and the committee on this legislation. I refer to my good friend and the tireless worker for the coal miners—the gentleman from

Pennsylvania (Mr. SAYLOR). The gentleman and I have worked side by side for many years to improve the working conditions in the most hazardous industry in our Nation. And I know the gentleman fully concurs with me when I say that coal mining can be made a safer occupation.

Mr. Chairman, I am sure it is well known how some of us here have been pressing for more effective mine safety laws for so long. But it is ironic and lamentable that a major coal mine disaster must occur before public indignation is aroused and the Congress is prodded into enacting better safety laws. Regrettably, that is the case with respect to the bill before us today.

The public cry for better mine safety laws was again heard on November 20, 1968, a few hours after the announcement that an explosion had rocked Consolidation Coal Co.'s No. 9 mine near Farmington, W. Va. When the mine was sealed several days later, it became the tomb for 78 miners working that tragic midnight shift who could not escape and for whom no rescue operation could succeed. Since Farmington, over 170 additional miners have lost their lives in much less publicized—yet equally outrageous—accidents that continue to make coal mining the most hazardous occupation in the United States.

Some recognition of the dangers inherent in coal mining came at the Federal level as long ago as 1865, when a bill to create a Federal Mining Bureau was introduced in the Congress. Little more was done, however, until a series of serious coal mine disasters after the turn of the century aroused public demand for Federal action. Consequently, the Bureau of Mines was created within the Department of the Interior on July 1, 1910, and was charged with making "diligent investigation of the methods of mining, especially in relation to the safety of miners, and the appliances best adapted to prevent accidents, the possible improvement of conditions under which mining operations are carried on, the treatment of ores and other mineral substances, the use of explosives and electricity, the prevention of accidents, and other inquiries and technologic investigations pertinent to said industries."

A glaring but deliberate omission in the new Bureau's spectrum of responsibility was the lack of authority to conduct mine inspections. In fact, the act specifically denied "any right or authority in connection with the inspection or supervision of mines in any State" by any Bureau employee.

This significant inadequacy was recognized by the Congress and Public Law 49, 77th Congress, was enacted in 1941. Federal inspectors were given authority to enter and inspect for health and safety hazards all anthracite, bituminous coal, and lignite mines in the United States.

Despite this new authority to make "annual or necessary inspections and investigations," however, the Bureau lacked authority to establish standards for coal mines or to enforce compliance with the standards and recommendations of the Secretary of the Interior.

The death of 119 miners in an explosion at West Frankfort, Ill., late in December 1951, aroused public concern again and led to the enactment of Public Law 552, 82d Congress, in 1952.

This act, which refined further the machinery for approaching mine safety, left much to be desired. President Truman said as much in signing the bill when he commented:

> This measure is a significant step in the direction of preventing the appalling toll of death and injury to miners in underground mines.
>
> Nevertheless, the legislation falls short of the recommendations I submitted to the Congress to meet the urgent problems in this field.

There were many deficiencies in the 1952 law and legislative attempts to correct them were made during the ensuing years. The prime objective was the elimination of the exemption enjoyed by small mines—those employing 14 or fewer persons underground.

Continuing mine disasters inspired the establishment of a task force to investigate mine safety and make recommendations. The report of the task force was submitted in August 1963.

Public Law 89-376—1966—was a response to yet another mine disaster and incorporated some of the recommendations of the task force. The most significant change made by the 1966 law was the deletion of the exemption of small mines from the act.

Even after the 1966 amendments, however, the larger number of causes of fatalities and accidents remain beyond the reach of the Federal statute. This broader, non-Federal area of coal mine safety was left by the Congress in 1952 to be embraced by State laws and the Federal Mine Safety Code. By doing so, the Congress intended to attack fatalities by major disaster. The remaining 90 percent of accident occurrences resulting in death or injury were left covered only by State law and the safety code.

The death of 222 miners in 1967, 311 in 1968, the Farmington disaster, and the death of over 170 miners in nondisaster type accidents since Farmington now surrounds the consideration of this legislation.

Mr. Chairman, my subcommittee—the General Subcommittee on Labor—has never expended more time or energy in the formulation of any other legislation proposed. The subcommittee held 10 days of public hearings on coal mine health and safety proposals. Included in the hearing record are the views of representatives of operators of large coal mines; operators of small coal mines; the mine workers' union; individual mine workers; interested parties; and administration personnel. The hearings are further enhanced by testimony on coal workers' pneumoconiosis presented by several medical researchers, all of whom are internationally recognized experts in their field. In addition to the presentations of public witnesses, statements and supplementary materials were submitted to the subcommittee and inserted in the record.

Two investigatory trips were made by the subcommittee to observe coal mining operations and the atmosphere in mines; and to learn what the British Government—the leading nation in pneumoconiosis research—had concluded from its studies of the relationship between pneumoconosis and exposure to excessive coal dust and its recommendations on controlling dust, protecting miners from dust exposure, and the treatment of miners who have contracted the disease.

On February 27, the subcommittee toured two coal mines—a deep shaft mine and a smaller drift mine—in western Pennsylvania. The tours consisted of surface and underground observations of mining opeartions and discussions with company officials and workers. Members indicated the tours resulted in their better understanding of the unique conditions that make coal mine health and safety requirements different from those of any other industry.

The subcommittee devoted 4 days—May 12 through 15—in Great Britain engaged in consultations with officials of the National Coal Board and medical research staffs. The members attended several seminars at the National Coal Board where they were apprised of the medical problems involved in pneumoconiosis research and treatment; details of the Board's studies; medical and scientific control, including dust standards and evaluations; and engineering problems of dust control methods. During field trips to several pneumoconiosis research laboratories, further information was elicited relative to dust control procedures, medical evaluations, and procedures for medical and engineering control. A visit was also made to an English colliery.

After the subcommittee hearings were officialy closed and the hearing record printed, representatives of certain small coal mine operators requested an additional hearing to assure understanding of their viewpoint of certain sections of the subcommittee proposal. To accommodate them, the full Committee on Education and Labor was convened on September 9, to receive the additional testimony.

The subcommittee held 8 days of executive sessions to consider a subcommittee print which was a composite of the major proposals, with amendments based on recommendations from the hearings and investigatory trips.

On August 6, the subcommittee voted to amend H.R. 1047—a coal mine health and safety bill introduced by the subcommittee chairman—by substituting the approved language of the subcommittee print, and to report the bill to the full committee.

The committee met 3 days in open session and on September 18, by a 29-to-3 vote, ordered H.R. 1047, as amended, reported to the House as a clean bill. On September 24, the committee met, pro forma, and voted 30 to 4 to report the clean bill, H.R. 13950, to the House.

Mr. Chairman, in September 1968, President Johnson proposed a strong new Federal Coal Mine Health and Safety Act. In March, President Nixon submitted a proposal which was similar to that of his predecessor. In doing so, President Nixon said:

Coal is our most abundant fuel resource. Right now, it supplies nearly a fourth of our total energy demand and every forecast, whether by Government or the private sector, indicates that coal must continue to play a significant role if this country's future energy requirements are to be satisfied.

At the same time, it is clear that our society can no longer tolerate the exorbitant cost in human life and human misery that is exacted in the mining of this essential fuel. Unless we find ways to eliminate that intolerable cost, we must inevitably limit our access to a resource that has an almost inexhaustible potential for industrial, economic, and social good.

The adequacy of a major industry's work force is at stake here. If we cannot today assure coal miners a safe and healthful working environment and educate them in the practices that will keep it safe and healthful, our mines tomorrow will be unable to attract the workers they need, and the industry will sicken for want of qualified manpower.

Already, as you know, real difficulties are being encountered in recruiting young men as coal miners. Let this trend continue and our future energy supplies, along with all the benefits that are implicit in them, will be jeopardized.

As a people we have always placed human values at the summit of our esteem. We pride ourselves on our resourcefulness and our efficiency. Yet, the way that we mine coal today is not humanitarian, resourceful, or efficient. It is inexcusably wasteful of our most precious asset—the human being.

Following Secretary Hickel, John F. O'Leary, Director of the Bureau of Mines, testified. In discussing the fatality rate in coal mines, he said:

The workers in the coal mining industry and their families have too long endured the constant threat and often sudden reality of disaster, disease, and death. This great industry has strengthened our Nation with raw material of power. But it has also frequently saddened our Nation with news of crippled men, grieving widows, and fatherless children.

Death in the mines can be as sudden as an explosion or a collapse of a roof and ribs, or it comes insidiously from pneumoconiosis or black lung disease. When a miner leaves his home for work, he and his family must live with the unspoken but always present fear that before the working day is over, he may be crushed or burned to death or suffocated. This acceptance of the possibility of death in the mines has become almost as much a part of the job as the tools and the tunnels.

The time has come to replace this fatalism with hope by substituting action for words. Catastrophes in the coal mines are not inevitable. They can be prevented, and they must be prevented.

Secretary of the Interior Walter J. Hickel testified in support of the administration proposal before the general Subcommittee on Labor on March 4. At that time, the Secretary said:

The need for this legislation is unmistakable—there has been no improvement in the overall fatality rate since 1947. On the other hand, since passage of the Federal Coal Mine Safety Act with its antidisaster provisions in 1952, the fatality rate from major disasters has been cut by about 50 percent. This should provide some idea of the potential inherent in enforceable laws.

Clearly, if we are to have any impact on the day-to-day accidents that cause most of our coal mine injuries and deaths, we need a law that gives broader enforcement powers to the inspector and thereby provides stronger incentives for management and labor to think safety at all times. We must reduce injuries and eliminate the accidents that kill miners by the ones, twos, or threes as well as prevent major disasters.

To us, it seems that the cold, statistical, day-to-day record of death and disease among our coal miners is reason enough for positive and immediate action, and in the proposal I have just outlined our convictions have been clearly voiced.

There is more at stake here than the lives and health of 144,000 coal miners, though they surely merit our most strenuous efforts on their behalf. The problems that we are wrestling with have an impact that extends beyond any coal mine. If we fail, those problems can weaken the physical and moral fiber of our whole society.

Whereas that rate did drop following the enactment of the 1941 law—from an average of 1.5 per million man-hours between 1932 and 1941, to an average of 1.2 million man-hours between 1942 and 1951—the downward trend in the rate stopped in 1947 and there has been virtually no detectable improvement since then.

When discussing the code, which is not enforceable by the Bureau, Director O'Leary said:

In this context it is significant to note that while we are able to achieve virtually 100-percent compliance with the mandatory provisions of the Federal Coal Mine Safety Act, compliance during the inspections with the nonenforceable code provisions leaves much to be desired. Although such compliance ranges as high as 90 percent in some of the captive mines of the steel companies, the average is about 65 percent for large coal mines. At the small coal-producing operations, compliance with code provisions was as high as 33 percent in one State, but was as low as 7 percent in another.

For these reasons we are convinced that conditions in our coal mines cannot be significantly improved without new and stronger health and safety legislation. The Bureau needs broader authority, and it needs it now, in order to bring coal mine injury and fatality rates into line with those of other major industries, and to assure that our coal miners do not escape accidental injuries only to fall victim to an insidious occupational disease. * * *

Mr. Chairman, I fully subscribe to the foregoing positions and I believe H.R. 13950 is a testament to that.

For too long the Congress has countenanced the passage of piecemeal measures which have failed to provide the Bureau with the enforcement power it needs. Too many injuries and too many lives have filled the gap left by inadequate laws. A strong law is necessary to protect the men who extract one of our Nation's most vital resources. Our coal miners deserve the safest, healthiest work environment our technology will enable us to provide.

Mr. Chairman, I would now like to discuss the major provisions of the bill. I feel I should first emphasize that this bill has a twofold, inseparable purpose—to protect the health and safety of coal miners.

TITLE I—GENERAL

ESTABLISHMENT OF MANDATORY HEALTH AND SAFETY STANDARDS

Section 101 establishes the procedures for the promulgation of mandatory health and safety standards by the Secretary of the Interior—hereinafter referred to as the "Secretary." The Secretary promulgates all mandatory standards, but is responsible for developing and revising only mandatory safety standards. The Secretary of Health, Education, and Welfare is responsible for developing and revising mandatory health standards. All proposed standards are required to be published in the Federal Register and are subject to review by the Federal Coal Mine Health and Safety Board of Review—established in section 106—prior to promulgation by the Secretary. No standard promulgated by the Secretary shall reduce the protection afforded miners below that afforded by the interim mandatory health and safety standards contained in title II and title III, respectively. These interim standards apply to underground coal mines. Standards for surface coal mines shall be proposed by the Secretary not later than 12 months after the date of enactment of this act.

The committee was easily persuaded to vest authority for the promulgation of mandatory standards in the executive branch. Any law establishing health and safety requirements for an industry as complex and as subject to constant technological change as coal mining, certainly demands flexibility. Too often, standards are enacted only to become almost immediately inadequate in the face of changing conditions.

The committee has, however, provided detailed interim health and safety requirements which are delineated in titles II and III, respectively. It has also stated clearly the health and safety goals to be achieved.

The committee originally considered placing the responsibility for developing revising, and promulgating both mandatory health and safety standards within the Department of the Interior, but ultimately decided the Department of Health, Education, and Welfare should develop and revise all health standards. It was felt the latter could bring more expertise to bear on the problems of miners health and the goals related thereto. Although the Secretary of the Interior is responsible for promulgating all mandatory standards, in the case of mandatory health standards he acts only to give official status to those developed and revised by the Secretary of Health, Education, and Welfare.

In the case of all proposed standards, however, interested persons have the right of filing objections and requesting a public hearing on such objections.

INSPECTIONS AND INVESTIGATIONS

Section 103 authorizes and requires representatives of the Secretary to make frequent inspections and investigations in coal mines each year for information retrieval and enforcement purposes. Each underground mine shall be inspected at least four times a year. The Secretary of Health, Education, and Welfare is also authorized entry to coal mines to enable him to carry out his functions and responsibilities under the act.

Section 103 also empowers the Secretary or his authorized representative with authority, in the event of an accident, to take whatever action he deems appropriate to protect the life of any person and to be consulted regarding any plan to recover any person in the mine.

This section further provides opportunity for a miner to request the Secre-

tary to conduct a special investigation to determine if an imminent danger or violation of a standard exists in a mine, and for the representative of miners at a mine to accompany an authorized representative of the Secretary—at no loss in pay—on any inspection of the mine.

During any inspection of a mine by the Secretary or his authorized representative, no advance notice of such inspection shall be given to the operator or the representative of miners at the mine.

When affording the representative of miners at a mine the opportunity to accompany him on an inspection of the mine, the authorized representative of the Secretary shall first notify a member of the mine's safety committee working during the shift such inspection is to be made in the case of a mine which has such a committee.

FINDINGS, NOTICES, AND ORDERS

Section 104 establishes improved procedural mechanisms for finding dangerous conditions or violations of standards in a mine, and for the issuance of notices and orders relative to such.

Subsection (a) deals with the finding of a condition of imminent danger by an authorized representative of the Secretary during an inspection. When this occurs, the representative will determine the area where the danger exists and immediately issue an order requiring the mine operator to withdraw all persons, except those necessary to take corrective action, from the affected area until the danger is abated.

Subsection (b) deals with the finding of a violation of a mandatory health or safety standard during an inspection. When this occurs, the representative will immediately issue a notice fixing a reasonable time for the abatement of the violation. If the violation is not abated at the end of that period, and if the representative finds that the period should not be extended, he shall issue an order requiring the operator to withdraw all persons, except those necessary to take corrective action, from the area affected by the violation until the violation has been abated.

Subsection (c) deals with the unwarrantable failure of an operator to comply with a mandatory health or safety standard. When a representative finds a violation of a standard and further finds that the violation is caused by an unwarrantable failure on the part of the operator in complying with the particular standard, he includes such additional finding in the notice issued under subsection (b). Within 90 days of the time the notice is issued, the mine is reinspected to determine if the violation continues to exist. If it does, and the operator has again unwarrantably failed to comply with the standard, the withdrawal procedures described in subsection (b) will be followed. If such withdrawal order has been once issued, it will continue to be issued upon the finding of similar violations during subsequent inspections. Once an inspection is made which discloses no such similar violation, the continuous closure provisions of subsection (c) no longer apply and the initial procedures are again applicable.

Subsection (h) deals with the finding, upon inspection, of conditions in a mine which have not yet resulted in imminent danger but which cannot be effectively abated through the use of existing technology and which may result in imminent danger. When this occurs, the representative will determine the area in which the conditions exist, and issue a notice to the operator with copies to the Secretary and the miners. The Secretary shall thereupon cause such further investigation to be made as he deems appropriate and provide an opportunity for a hearing. The Secretary will then make findings of fact and require that either the notice issued be canceled, or an order be issued causing all persons, except those necessary to take corrective action, to be withdrawn from and prohibited from entering the affected area until he determines—after a hearing—that the conditions responsible for the order have been abated.

Subsection (i) deals with the finding of a violation of a health standard by atmospheric samples taken as required by section 202(a). When such sample discloses a violation, the Secretary or his authorized representative shall find a reasonable time within which to take corrective action and shall immediately issue a notice fixing a reasonable time for the abatement of the violation. If at the expiration of the period of time originally fixed or subsequently extended the violation has not been abated, and if it is found that the period of time for compliance should not be further extended, a withdrawal order shall be issued and continue in effect until the violation has been abated. If it is found that the period of time for compliance should be further extended, another notice of violation must be issued.

REVIEW BY THE SECRETARY

An operator or miner affected by an order issued under section 104 may apply to the Secretary for review of the order within 30 days of its receipt. The Secretary will then make whatever investigation he deems appropriate as well as provide an opportunity for a hearing. He will make findings of fact and issue a written decision vacating, affirming, modifying, or terminating the order complained of. Pending completion of his investigation, the Secretary may, upon application and after a hearing, grant temporary relief from an order.

FEDERAL COAL MINE HEALTH AND SAFETY BOARD OF REVIEW

Section 106 establishes the Board. Current members of the existing Federal Coal Mine Safety Board of Review would be members of the new Board until the expiration of their terms. New and additional members will be appointed by the President, by and with the advice and consent of the Senate.

For the purpose of reviewing orders and penalties, the Board is composed of five regular members. One member shall be representative of the viewpoint of the operators of small mines; one of the operators of large mines; one of the workers in small mines; and one of the workers in large mines. The Chairman shall be drawn from the public generally and shall not have had any interest in or association with the coal industry for 5 years prior to his appointment.

For the purpose of carrying out the review of proposed mandatory health and safety standards, and for carrying out the provisions of section 401—research—and 412—special report—the Board is composed of eight members. In addition to the five regular members, there will be one member with a public health background, and two others who have a background in coal-mining technology. The additional members shall not have had any interest in or association with the coal-mining industry for 1 year prior to their appointment.

REVIEW BY THE BOARD

An operator may apply to the Board for review of an order issued under section 104 or for review of a decision made by the Secretary pursuant to section 105. Such application must be made within 30 days of receipt of the order or decision. If an appeal to the Board is made from the Secretary's review, the evidence is considered to establish a prima facie case against the operator although either side may produce additional evidence. When an appeal is made directly from an order issued under section 104, the Board is not bound by any previous findings of fact and the burden of proof is on the Secretary. After a hearing, the Board shall make findings of fact and issue a written decision affirming, vacating, modifying, or terminating the order or decision complained of. Pending completion of the hearing, the Board may, upon application, grant temporary relief from an order or decision.

Mr. Chairman, the Board has been the subject of much controversy. Its critics charge that it represents a giant "loophole" through which operators will escape enforcement of the act. It is essential in debating the merits of the Board, however, to understand exactly its powers. They may be simply stated as follows:

First, review of withdrawal orders;

Second, review of penalties;

Third, review of proposed mandatory health and safety standards;

Fourth, establish research objectives; and

Fifth, conduct special study into possible Federal-State cooperative arrangement.

Only in the first and second case does the Board have any authority. In the third case, fourth, and fifth, the Board's capacity is purely advisory and procedural.

Although the existing Federal Coal Mine Safety Board of Review has no authority to review penalties—no penalty provisions exist in the present law—it does have authority to review violations on appeal. The record of the Board in the conduct of this responsibilty is interesting.

Since 1952, when the existing Board was created, until the present, there have been 22 litigated cases. The Board fully upheld the Bureau of Mines in 10, upheld in part in one, reversed in five, and six cases were settled upon agreement of the parties after a hearing. Of the cases fully litigated and decided therefore, the

Bureau was upheld in whole or in part in 69 percent, and reversed in 31 percent of the cases. Five of these cases were appealed to the U.S. courts of appeals—three by operators and two by the Bureau—and the Board's decisions were affirmed in four cases, and in one case the appeal by the Bureau was dismissed as untimely filed. All decisions of the Board were unanimous, except in Princess Elkhorn, 1955, in which a worker representative dissented, and in St. Mary's Sewer Pipe, 1958, in which an operator representative dissented; both majority decisions were affirmed unanimously by the courts of appeals.

There were, of course, a number of other cases involving disputes which were filed formally or informally, and which were resolved without a hearing. There were also a large number of State plan cases which were decided upon stipulation and without dispute of the parties.

Mr. Chairman, when the subcommittee conducted hearings on coal mine health and safety proposals, the administration, the Mine Workers Union, and the operators' organization testified in favor of a board of review substantially identical to the Board established by this bill. The subcommittee found considerable merit in the Board, and maintained it in the bill reported to the full committee.

We recognized the advantages of a panel composed with equal representation of an industry's management and labor force, as well as a public member. Such a panel could be a very useful instrument in participating in the enforcement of uniform standards and requirements applicable to the industry. This procedure has worked very effectively and efficiently in other industries, particularly in the electrical contractor industry.

But this procedure is only valid when all parties to the tripartite agreement are willing to participate. Until only recently, all parties to the Board were willing to do so.

In a telegram to Senator HARRISON A. WILLIAMS, JR., chairman of the Subcommittee on Labor, dated October 1, Mr. W. A. Boyle, president of the United Mine Workers of America, said labor's "support of the Federal Coal Mine Safety Board of Review was predicated upon the position the Board would be retained in its present form." The Board established by this bill is substantially like the existing Board.

In a letter of October 9 to all Members, however, Mr. Boyle said the United Mine Workers of America "are entirely opposed to provisions vesting any board of review with the right to overrule the decisions of the Secretary of the Interior."

The significance of this is not the change of position in 8 days, but the fact that one very essential party to the tripartite Board is no longer willing to participate and, indeed, now opposes the arrangement. In my mind, that renders the Board invalid as a useful functionary in the administration of this bill.

JUDICIAL REVIEW

Any decision issued by the Board upon review of an order or decision by the Secretary shall be subject to judicial review by the U.S. court of appeals for the circuit in which the affected coal mine is located. The court shall hear the appeal on the record made before the Board. The findings of the Board, if supported by substantial evidence on the record considered as a whole, shall be conclusive and the court may affirm, vacate, or modify any decision or may remand the proceedings to the Board for further action as it directs. The court may also grant such temporary relief as may be appropriate pending final determination of the appeal. The judgment of the court shall be subject only to review by the Supreme Court of the United States.

INJUNCTIONS

The Secretary may request the Attorney General to institute a civil action for relief against an operator who impedes the execution of the act or refuses to comply with its provisions and requirements.

PENALTIES

The operator of a mine in which a violation occurs of a mandatory health or safety standard or who violates any provision of the act shall be assessed a civil penalty by the Secretary of not more than $10,000 for each violation. Whoever knowingly violates or fails or refuses to comply with an imminent danger withdrawal order or with any final decision on any other order shall, upon conviction, be punished by a fine of not more than $10,000, or by imprisonment for not more than 6 months, or by both. The penalty for a repeat conviction is a fine of not more than $20,000 and/or imprisonment for not more than 1 year. The same provisions apply to directors, officers, or agents of corporate operators who authorize, order, or carry out the violation. In addition, whoever knowingly makes any false statements or representations relative to this act shall, upon conviction, be punished by a fine of not more than $10,000, or by imprisonment for not more than 6 months, or by both.

Any penalty assessed under this section is, upon request, subject to review by the Board. The Secretary may initiate the collection of any penalty by civil action in the appropriate district court of the United States.

The committee expended considerable time and energy in discussing the role of an agent of a corporate operator and the extent to which he should be penalized and punished for his violations of the act. At one point, it was agreed to hold the corporate operator responsible for any fines levied against an agent. It was ultimately decided to let the agent stand on his own and be personally responsible for any penalties or punishment meted out to him.

The committee recognizes, however, the awkward situation of the agent with respect to the act and his supervisor, the corporate operator, and his position somewhere between the two. The committee chose to qualify the agent as one who could be penalized and punished for violations, because it did not want to break the chain of responsibility for such violations after penetrating the corporate shield. The committee does not, however, intend that the agent should bear the brunt of corporate violations. It is presumed that the agent is often acting with some higher authority when he chooses to violate a mandatory health or safety standard or any other provision of the act, or worse, when he knowingly violates or fails or refuses to comply with an imminent danger withdrawal order or any final decision on any other order.

ENTITLEMENT OF MINERS

Section 112(a) provides for limited pay guarantees to miners idled by a closure order issued under section 104. All miners working during the shift when the order is issued who are idled by the order are entitled to full compensation by the operator at their regular rates of pay for the balance of the shift. If the order is not terminated prior to the next working shift, all miners idled by the order on that shift are entitled to such compensation for 4 hours of the shift. Whenever an operator violates or fails or refuses to comply with a withdrawal order issued under section 104, all miners who would be idled by the order are entitled to such compensation, in addition to pay received for work performed after the order is issued, for the period beginning when the order is issued and ending when it is complied with, vacated, or terminated.

Subsection (b) provides payments to miners totally disabled from complicated pneumoconiosis and to the widows of miners who suffered from complicated pneumoconiosis at the time of death. The disease must have arisen out of or in the course of the individual's employment in a coal mine. If he was so employed for 10 years or more, there is a rebuttable presumption that the disease so arose; if he was not, the individual must demonstrate that his disease so arose.

Payments are based upon the minimum monthly payment to which a Federal employee in grade GS–2, who is totally disabled, is entitled at the time of payment under provisions of Federal law relating to Federal employees—section 8112, title 5, United States Code. In the case of total disability, the disabled individual is entitled to payment at a rate equal to 50 percent of such minimum monthly amount. The widow of a miner entitled to payment would be eligible to receive the same amount. This represents approximately $136 per month. The payment would be increased to allow for up to three dependents. The first dependent would increase the basic payment by 50 percent; the second dependent by 75 percent; and the third dependent by 100 percent. The maximum monthly payment, therefore, to which an eligible individual is entitled under this subsection is equal to the minimum monthly payment such Federal employee is entitled to.

Payments made under this subsection shall be reduced by any amount the individual receives under the workmen's compensation, unemployment compensation, or disability insurance laws of his State, and the amount by which the payment would be reduced on account of excess earnings under section 203 (b) through (l) of the Social Security Act if the amount paid were a benefit payable under section 202 of that act.

The Secretary of Labor will enter into agreements with the Governors of the States under which the State will receive and adjudicate claims under this subsection from its residents and under which the payments will be made. Each Governor will implement the agreement in any manner he determines will best effectuate the provisions of this subsection. If the Secretary of Labor is unable to enter into an agreement with a Governor or if a Governor requests him to do so, the Secretary may make payments directly. When the Secretary of Labor has an agreement with a State, he will make a grant to the State for the purpose of making the individual payments.

Payments under this subsection are for retroactive claims only, and not for prospective claims. No claim will be considered unless it is filed, first, within 1 year after the date an employed miner received the results of his first chest roentgenogram as provided under section 203, or, if he did not receive such a chest roentgenogram, the date he was first afforded an opportunity to do so under that section, or, second, in the case of any other claimant, within 3 years from the date of enactment of this act, or, in the case of a claimant who is a widow, within 1 year after the death of her husband or within 3 years from the date of enactment of this act, whichever is the later.

No payments shall be made under this subsection to the residents of any State which, after the date of enactment of this act, reduces the benefits payable to persons eligible to receive payments under this subsection, under its State laws which are applicable to its general work force with regard to workmen's compensation, unemployment compensation, or disability insurance.

This program of payments—maintained in the bill by a committee vote of 25 to 9—is not a workmen's compensation plan. It is not intended to be so and it contains none of the characteristic features which mark any workmen's compensation plan. Moreover, it is clearly not intended to establish a Federal prerogative or precedent in the area of payments for the death, injury, or illness of workers.

Rather, it is a limited response in the form of emergency assistance to the miners who suffer from, and the widows of those who have died with, complicated pneumoconiosis.

Complicated pneumoconiosis is a serious disease of the lungs caused by the excessive inhalation of coal dust. The patient incurs progressive massive fibrosis as a complex reaction to dust and other factors, which may include tuberculosis and other infections. The disease in this form usually produces marked pulmonary impairment and considerable respiratory disability.

Such respiratory disability severely limits the physical capabilities of the individual, can induce death by cardiac failure, and may contribute to other causes of death. Once the disease is contracted, it is progressive and irreversible.

One of the compelling reasons the committee found it necessary to include this program in the bill was the failure of the States to assume compensation responsibilities for the miners covered by this program. State laws are generally remiss in providing compensation for individuals who suffer from an occupational disease as it is, and only one State—Pennsylvania—provides retroactive benefits to individuals disabled by pneumoconiosis.

Also, it is understandable that States which are not coal producing have no wish to assume responsibility for residents who may have contracted the ailment mining coal in another State. The substantial reduction in the number of miners actually employed in mines following World War II caused a dispersal of men throughout the country—many into States which have few, if any, mines. These men took with them an irreversible disease, but because of their present location are denied benefits.

The committee also recognizes the possible inequities inherent in requiring employers to assume the cost of compensating individuals for occupational diseases contracted in years past.

Many miners have worked in more than one coal mine and for more than one employer. Who can determine precisely when that miner contracted pneumoconiosis and for whom he was working?

The resolution of this dilemma, consistent with the desperate financial need of individuals eligible to receive payments under this bill, was the inevitable inclusion of section 112(b), and the requirement that the payments be made from general revenues.

Hopefully, the health standards prescribed in title II will eliminate conditions in mines which cause the disease. Also, it is expected that the States will assume responsibility in their respective compensation plans for miners who contract the disease in the future.

The miners for whom this program is intended became victims of pneumoconiosis many years ago. They were mining coal for national consumption, and for an industry under intense Federal pressure to keep the cost of the fuel low. The entire Nation benefited from the use of coal and its low cost. The entire Nation, then, has an obligation to the miners who became the unfortunate recipients of an insidious disease in the process, and to their widows and minor children.

REPORTS

All accidents are required to be investigated by the operator, and records of such accidents and investigations required to be kept by the operator. The operator is also required to establish and maintain such records and make such reports as the Secretary may reasonably require.

TITLE II—INTERIM MANDATORY HEALTH STANDARDS

COVERAGE

The interim health standards contained in this title are mandatory and applicable to all underground coal mines until superseded by standards promulgated by the Secretary pursuant to section 101.

DUST STANDARD AND RESPIRATORS

Section 202(a) requires each operator to take accurate samples of the amount of respirable dust in the mine atmosphere to which the miners in the active workings of the mine are exposed. The samples are transmitted to the Secretary and analyzed and recorded by him.

Subsection (b) establishes the dust standard. Effective on the operative date of this title, each operator shall maintain the average concentration of respirable dust in the mine atmophere to which each miner in the active workings of the mine is exposed at or below 4.5 milligrams per cubic meter of air. Effective 6 months after the operative date of this title, the limit on the level of dust concentration is 3 milligrams of respirable dust per cubic meter of air. Beyond that, the Secretary of Health, Education, and Welfare shall reduce the limit as he determines such reductions become technologically attainable.

An extension of time within which to comply with the prescribed limits is available to an operator who demonstrates to the satisfaction of the Secretary that he is undertaking maximum efforts to reduce the level of dust concentration but is unable to do so because it is not technologically feasible for him to do so. In such cases, the Secretary may grant an extension of no more than 90 days with regard to the 4.5 milligram limit, and no more than 6 months with regard to the 3 milligram limit.

Respirators or other approved breathing devices must be made available to all persons exposed to dust concentrations in excess of the applicable limit.

When reference in this report is made to dust readings which yield results in terms of milligrams per cubic meter of air—mg/m^3—such determinations are measured with an MRE instrument. As used in this title, the term "MRE instrument" means the gravimetric dust sampler with four channel horizontal elutriator development by the Mining Research Establishment of the National Coal Board, London, England. When using the MRE instrument to measure the dust, such measurement would be taken over several production, as distinguished from cleanup, shifts in order to assure a valid statistical sample. Measurements may also, however, be made with any other instrument approved by the Secretary and the Secretary of Health, Education, and Welfare.

The personal atomic sampler is one such device, and existing and future technology will undoubtedly produce more. In these eventualities, determinations of the dust level in a mine will be in terms of another yield. It is intended—and the bill states—that a yield other than one in terms of mg/m^3 be mathematically equivalent to the latter, and interpreted as such, for the purpose of enforcing the dust standard.

The bill expressly prohibits the use of personal respirators as a substitute for environmental control of the active workings of a mine. Respirators to date have been of such a nature as to be extremely uncomfortable to the workers and impracticable for the type of operations he must generally perform. It is for this reason, as well as the knowledge that some States have placed restrictions on the use of such respirators, that the committee chose to preclude their use.

The bill permits the use of personal respirators, however, in specified instances.

JUSTIFICATION FOR DUST STANDARDS

On March 26, Charles C. Johnson, Jr., Administrator, Consumer Protection and Environmental Health Service, Public Health Service, U.S. Department of Health, Education, and Welfare, testified before the subcommittee and presented the following remarks of the Surgeon General:

Pneumoconiosis is a pathological condition of the lung induced by inhalation of small particles.

There are many types of pneumoconiosis caused by specific kinds of dusty materials, as, for example, silica and cotton fibers. Coal miners' pneumoconiosis is a chronic chest disease, caused by the accumulation of fine coal dust particles in the human lung. In its advanced forms, it leads to severe disability and premature death.

Coal miners' pneumoconiosis was recognized, in Great Britain as early as 1943, as a disease entity separate from silicosis. It was not generally recognized as such in the United States until the 1950's. Prevalence studies by the Pennsylvania Department of Health (1959–61) and by the Public Health Service (1963–65) confirmed the existence of the disease entity documented its prevalence among coal miners and showed that it is a widespread problem.

Coal miners' pneumoconiosis is a distinct clinical entity, resulting from inhalation of coal dust. Physicians diagnose it on the basis of X-ray evidence of nodules in the lungs of a patient with a history of long exposure to coal dust. However, it should be pointed out that data from postmortem examinations indicate a higher prevalence of the disease than can be diagnosed from X-ray examinations.

Physicians classify coal miners' pneumoconiosis as simple or complicated, depending on the degree of evidence in the X-ray picture. In the simple form, pinpoint, micronodular or nodular lesions distributed throughout the lungs show up in the X-ray picture.

The physician decides the radiological category of simple pneumoconiosis on the basis of the extent of the opacities. There are no specific symptoms, and pulmonary function tests seldom enable the physician to say whether or not the patient has the disease. It is generally accepted by physicians that simple pneumoconiosis seldom produced significant ventilatory impairment, but, the pinpoint type may reduce the diffusing capacity, the ability to transfer oxygen into the blood.

Complicated pneumoconiosis is a more serious disease. The patient incurs progressive massive fibrosis as a complex reaction to dust and other factors, which may include tuberculosis and other infections. The disease in this form usually produced marked pulmonary impairment and considerable respiratory disability.

Such respiratory disability severely limits the physical capabilities of the individual, can induce death by cardiac failure, and may contribute to other causes of death.

Medical researchers in both Britain and the United States have repeatedly shown that coal miners suffer from more respiratory impairment and respiratory disability than does the general population. These respiratory problems are frequently accentuated by chronic bronchitis and emphysema, the causative factors of which remain to be clarified.

There is no specific therapy for pneumoconiosis in either its simple or complicated form. Adequate environmental dust controls, use of respirators, or removing the miners from the dusty environment as soon as they show minimal effects appear to be, under present technology, the only helpful preventive procedures.

For over 30 years, the Public Health Service has undertaken cooperative studies with the Bureau of Mines on coal miners health problems. Not until 1963, however, did the Department first receive funds for the specific support of operations in this area. Our first major project was a prevalence study of pneumoconiosis in soft coal miners in Appalachia and other coal mining areas.

This study established pneumoconiosis among soft coal workers in the United States as an occupational respiratory disease of serious and previously unrecognized magnitude. Our research showed that 1 in 10 men in the mines and 1 in 5 of the former miners in Appalachia showed X-ray evidence of this chronic respiratory disease. Data from post-mortem examinations would indicate an even higher prevalence of this disease.

For work periods less than 15 years underground, the occurrence of pneumoconiosis among miners appeared to be spotty and showed no particular trend. For work periods greater than 15 years underground, there was a linear increase in the prevalence of the disease with years spent underground.

* * * * *

The United States is the only major coal-producing nation in the world which does not have an official Government standard for coal mine dust. Since Great Britain began requiring dust control efforts in the coal mines—which resulted in reduced concentration levels—there has been a substantial reduction there in the prevalence of coal miners' pneumoconiosis.

Thus, the incidence of new cases in miners has decreased from 8.1 new cases per 1,000 miners in 1955 to 1.9 new cases per 1,000 miners in 1967; the age specific prevalence of simple coal miners' pnuemoconiosis has also decreased as has the overall prevalence, from 12.5 percent in 1959–62 as compared with 10.9 in 1964–67.

An official respirable dust standards for coal mines could, in our opinion, if properly enforced, make a significant reduction in new cases of pneumoconiosis and decrease the rate of progression of old cases. Last year, we concluded that sufficient data were available to recommend the adoption of an interim coal dust exposure standard for miners, pending further refinement of technical knowledge. After careful analysis of the British and Pennsylvania experiences, and after consultation with many authorities, we concluded that:

An interim standard should represent no more than a reasonable degree of risk to our miners, given our present technology, and be one that would significantly reduce the rate at which new cases of pneumoconiosis would develop in the future and old cases would progress.

On the basis of those conclusions, last December, the Secretary of Health, Education, and Welfare recommended to the Department of the Interior a Federal standard which could be used to lower respirable dust levels in coal mines. This standard called for a respirable dust level not to exceed 3.0 milligrams per cubic meter, as measured by the Mining Research Establishment horizontal elutriator instrument.

We recommended this standard in the conviction that it could, if adopted, and properly enforced throughout the coal-mining industry, make a significant reduction in coal miners' pneumoconiosis. This standard, if adopted and enforced, would place the United States along with other major coal-producing nations which have set health standards for dust exposures in the coal mining industry.

Approximately 100,000 active and retired coal miners are presently afflicted with pneumoconiosis, and about half that number are disabled from the ailment. It is apparent from all sources of information that the prevalence of pneumoconiosis among coal miners in the United States can certainly be reduced through effective dust control and other measures. Other nations have concluded this beyond any doubt.

When the subcommittee visited Great Britain, it did so in the expectation that it would observe the procedure and application of what had been hailed as the most effective dust control program of any nation. This was partially true, but the subcommittee took greater confidence in the information it derived from the visit with respect to the medical aspects of the problem. The subcommittee was also impressed with the significant reductions in the prevalence of pneumoconiosis since the inception of the control measures in Great Britain.

It was surprising to learn, however, that the British have achieved this relative success without the benefit of a mandatory program and without the benefit of established dust standards which reflect even their own notion of what the level should be from the standpoint of miners' health.

The British program does not, for instance, entail the withdrawal of men from a mine when the standard is exceeded. In actual practice, only about 80 percent of all British active working faces conform to the standard at any given time.

Also, the British have recently issued new standards which suggest an average exposure of 5.7 mg/m^3—if measured with an MRE instrument—to the face worker. This amount of exposure, incidentally, has little relevance to the health data the British themselves have accumulated.

The British advances against pneumoconiosis by the control of coal dust, then, have been made under a program somewhat deficient in comparison to that established in this bill. Obviously, the experience in the United States should prove to be considerably better. This is especially true since the mining methods used in this country do not generate the same amount of dust as those in Great Britain. Other controls of pneumoconiosis also exist, and they will be referred to in the next section, "Medical Examinations."

The British utilize several techniques for controlling dust in the mine atmosphere, all of which are applicable to U.S. mines. Among them are water infusion, machine design, dust collection, cutting speed, and ventilation techniques.

The British have also amassed an enormous amount of impressive medical data relative to the problem, which also is applicable to conditions in the United States. The British have concluded, from statistical analysis, that the probability of a miner contracting pneumoconiosis—ILO category 1 or greater—after 35 years of exposure to a mean total respirable dust concentration of 3 mg/m^3, is about 5 percent. The probability of a miner contracting pneumoconiosis—ILO category 2 or greater—after the same period of exposure in the same mine

environment is about 2 percent. In a dust environment below about 2.2 mg/m³, there is virtually no probability of a miner contracting pneumoconiosis—ILO category 2 or greater, even after 35 years of exposure to such concentration. It is significant that simple pneumoconiosis below ILO category 2 is not disabling.

The committee bill, then, establishes a dust limit of 3 mg/m³ 1 year after enactment of this act, but provides a procedure whereby the Secretary of Health, Education, and Welfare shall thereafter reduce such limit as reductions become technologically feasible. The ideal mine environment is a dust-free environment, but the committee recognizes the present inconceivability of this attainment, given the state of existing technology. The committee expects the Secretary of Health, Education, and Welfare, however, to prescribe the limit of at least 2.2 mg/m³ as soon as he deems it attainable, and to prescribe limits below that level in a final attempt to eliminate even simple pneumoconiosis — ILO category 1—through dust control.

The state of existing technology can achieve a reduction in the concentration of dust in U.S. mines to at least 3 mg/m³ after 1 year. The greatest possible stimulus to this achievement is the establishment of that level as a required standards, with concomitant enforcement procedures. This bill prescribes both.

The committee obviously believes a realistic standard of 4.5 mg/m³ after 6 months, and a standard of 3 mg/m³ after 1 year, is realistic. There is no disagreement with the 4.5 mg/m³ standard, and the initial criticism of the 3 mg/m³ standard has been noticeably diffused.

During 1968 and early 1969, the Bureau of Mines determined respirable dust concentrations in 29 selected large mines. In this investigation, a total of 280 sections were sampled. The criteria for selecting mines were, first, the mine must employ more than 20 men underground, and, second, the mine should have sufficient coal reserves to last at least 10 years. As a result, it cannot be presumed that the data are representative of the entire industry. Care, however, was taken to select mines with typical mining methods and machines, in a wide range of coal seams and in a number of different States.

The following table gives the results for the 29 large mines sampled. The data are presented by the type of occupation underground, the number of mines for each occupation, the number of samples taken for each occupation, and the number of mines for each occupation that averaged the 3, 4.5, and the 5.5 mg/m³, and higher level standards:

NUMBER OF MINES MEETING CRITERIA LEVELS BASED ON OCCUPATIONS

Occupation	Number of mines	Number of samples	Less than 3	3.1 to 4.5	4.6 to 5.5	+5.5
Cont. miner operator	21	178	2	2	4	13
Cont. miner helper	19	131	4	3	2	10
Cutting machine operator	15	98	1	6	2	6
Cutting machine helper	8	37	1	3	----	4
Coal drill operator	9	59	3	----	1	5
Loading machine operator	18	98	2	1	2	13
Loading machine helper	6	31	----	3	----	3
Roof bolter operator	25	296	6	9	6	4
Shuttle car operator	27	463	17	7	3	----
Beltman	7	32	2	3	1	1
Boomboy	6	20	5	----	----	1
Timberman	12	49	7	1	----	4
Shotfirer	12	83	5	2	2	3
Supplyman	8	24	5	1	1	1
Mechanic	19	142	17	2	----	----
Section foreman	28	236	19	4	2	3
Total			96	47	26	71
Total	29	1,976	[1] 40	[1] 19	[1] 11	[1] 30

[1] In percent.

Based on these data, 40 percent of the mines for these 16 occupations had an average full-shift exposure of less than 3 mg/m³, 19 percent were between 3.1 and 4.5 mg/m³, 11 percent were between 4.6 and 5.5 mg/m³, and 30 percent were greater than 5.5 mg/m³.

The significance of these results is that 40 percent of the mines for the specified occupations had an average full-shift exposure of less than 3 mg/m³.

This has already been accomplished without any concentrated attempt to reduce the dust levels in the mines, and without the requirement of complying with a Federal law establishing standards for permissible concentrations of respirable dust in the mine atmosphere.

MEDICAL EXAMINATION

Section 203 requires that each miner have an opportunity to have taken, at least once every 5 years, a chest roentgenogram to be paid for by the Board. Each worker who begins work in a coal mine for the first time shall be given such a chest roentgenogram at the commencement of his employment and again 3 years later. If the second such chest roentgenogram shows evidence of the development of pneumoconiosis, the worker shall be given an additional chest roentgenogram 2 years later. The Secretary of Health, Education, and Welfare is responsible for reading, classifying, and recording all readings for each miner, and may prescribe such other supplemental tests as he deems necessary.

Any miner who, in the judgment of the Secretary of Health, Education, and Welfare, shows substantial evidence of the development of pneumoconiosis, shall, at the option of the miner, be assigned by the operator to work in a relatively dust-free area of the mine, or in any other area provided he wears respiratory equipment. Any miner so assigned shall not receive less than his regular rate of pay.

The committee considers this section of the bill equal in importance to the dust control section for decreasing the incidence and development of pneumoconiosis. Three facets of medical service are prescribed:

Examination of new entrants: The required chest roentgenograms (X-rays) for new entrants should be supplemented by whatever other tests the Secretary of Health, Education, and Welfare deems necessary. Early detection can stop the employment of the small proportion of new entrants with pulmonary damage.

Periodic chest X-rays: The 5-year chest X-ray requirement for each miner conforms to the best medical evidence on pneumoconiosis. Because the ailment progresses at a relatively slow pace, an X-ray every 5 years is more than adequate. The Secretary of Health, Education, and Welfare may also require other tests to supplement X-rays.

The committee intends that large film be used in taking X-rays. It also expects the Secretary of Health, Education, and Welfare to advise the miner of conditions other than pneumoconiosis which may appear in an analysis of the miner's X-ray.

Supervision of pneumoconiosis cases: The development of simple pneumoconiosis may be impeded if the afflicted individual is removed from a dusty to a relatively dust-free atmosphere or if he is equipped with approved respiratory equipment. The bill provides for this type of supervision, subject to the choice of the individual miner.

TITLE III—INTERIM MANDATORY SAFETY STANDARDS FOR UNDERGROUND COAL MINES

COVERAGE

The interim safety standards contained in this title are mandatory and applicable to all underground coal mines until superseded by standards promulgated by the Secretary pursuant to section 101.

SAFETY STANDARDS

Sections 302 through 317 establish detailed requirements to provide for safer working conditions in underground coal mines. These include requirements with regard to roof support, ventilation, combustible materials and rock dusting, electrical equipment, trailing cables, grounding, underground high-voltage distribution, underground low- and medium-voltage alternating current circuits, trolley and trolley feeder wires, fire protection, maps, blasting and explosives, hoisting and mantrips, emergency shelters, communications, escapeways, and other miscellaneous matters.

The standards in this title are largely the result of recommendations by the Bureau of Mines. In the case of every standard, however, the committee challenged the Bureau to defend its recommendation. In the case of many, the committee adopted a standard other than one recommended by the Bureau. In those instances, the committee relied upon expert opinion from technicians outside the Bureau.

A number of the mandatory safety standards in this title are written in broad general language, such as those relating to the transportation of men and materials, fire protection, permissibility, and welding. The committee considered it unnecessary, at this time, to write into the bill detailed requirements in these cases, since present provisions of the Bureau's code, interpretations, regulations, and instructions which cover these matters in very great detail will still be preserved under this act so long as they do not conflict or are not inconsistent with the provisions of this act. The committee, however, expects that the Bureau of Mines will carefully review all of these and quickly improve and revise them, and publish them as mandatory standards in order to insure adequate safety to the miners. This comment is of particular importance in the case of the code which has not been revised since 1953. Further, if a particular item in the code or any of these other publications is of significance from a safety standpoint it should be published as a standard.

Several of the standards deserve elaboration in this summary, and some require clarification as to legislative intent.

ROOF CONTROL

Section 302 includes some very detailed provisions relative to the control of the roof and ribs in the active workings of the mine, including the face areas where 70 percent of roof fall fatalities occurred in 1967 and 1968. One of the most important of these provisions is the requirement that a roof control plan be adopted by the operator and kept up to date. This plan should form the basis for systematic upgrading of all roof control practices in this industry. The death and injury rate from roof falls is shocking. The industry and the Bureau of Mines have been remiss in attempting to solve this problem. The Committee expects that an effort will be mounted by both on an accelerated basis using the services and expertise of other Federal agencies and other organizations to overcome it.

PILLARED AND ABANDONED AREAS

The most hazardous condition that can exist in a coal mine, and lead to disaster-type accidents, is the accumulation of methane gas in explosive amounts. Methane can be ignited with relatively little energy and there are, even under the best mining conditions, numerous potential ignition sources always present.

There is a general awareness by coal mining personnel of the existence of this hazard. Men working in the face areas where coal is being mined and where fresh methane can be emitted in large volumes due to the disturbance of the coal bed, are required to take numerous safety precautions to insure that methane is not present in explosive amounts. All equipment in by the last open crosscut must be of a permissible type, and frequent examinations, both preshift and onshift, are made to determine methane concentrations. The present bill requires examinations for methane onshift at least once each coal producing shift, at the start of each coal producing shift before electrical equipment is energized, at least every 20 minutes during a shift when electrically operated equipment is energized, before intentional roof falls are made, before explosives are fired, and before welding is done. When, on examination, methane concentrations exceed 1 volume per centum, changes must be made in the ventilation to reduce the methane content. When the methane concentration exceeds 1.5 volume per centum, the electricity must be shut off in the section affected, and men withdrawn from the section until the methane content is reduced.

Methane, however, also accumulates in areas from which pillars have been removed and in other abandoned areas of a mine. These areas are often inaccessible because the roof has been deliberately allowed to fall or caving has otherwise occurred. In these cases, it is not usually possible to determine methane concentrations without great physical risk, and in many instances, the areas are completely inaccessible. In addition, during the time pillars are being removed and the roof permitted to fall in a planned sequence, ventilation of the area can best be accomplished with present technology by ventilating the area in a systematic manner.

These pillared and abandoned areas that are no longer being mined are not tested as frequently as working places, nor can they be given the same attention a working place receives. Consequently, these areas represent a great potential source of explosions, which can lead to widespread underground destruction with attendant loss of life.

Sections 303 (p), (q), and (r) are all directed toward solving this difficult problem. It is the intent of these three sections to require that the areas of mines described above be made as safe as present technology will permit so that the possibility of disasters from this source can be reduced or eliminated. There is general agreement among mining and safety engineers that bleeder systems are difficult to maintain in satisfactory condition over long periods of time and they do not eliminate explosive concentrations of gas in the gob because of bypassing of air when the gob area extends over long distances. Sections 303 (p), (q), and (r) require that when bleeder entries or systems or equivalent means are permitted instead of sealing, they shall be effective. This means that, where no superior method of ventilation is available, one of these may be approved by an authorized representative of the Secretary. When bleeder entries or systems are approved, they shall be used only under conditions where they can be adequately maintained, over short distances. Bleeder air shall not contain more than 2 volume per centum of explosive gases when sampled at a point immediately before entering another split of air.

Seals or bulkheads shall be used to isolate in an explosion-proof manner all abandoned areas in existing mines. In addition, wherever possible, new areas of existing mines will be "sectionalized" with explosive-proof sealing when abandoned, that is, isolated from active sections. In new mines, opened after the operative date of the act, it is intended that the mining system be such as to permit isolation by explosion-proof bulkheads of each section of a mine as it is abandoned.

ROCK DUSTING

Section 304(c) requires that all underground areas of a coal mine be rock dusted to within 40 feet of all face areas. It also requires all crosscuts less than 40 feet from such faces to be rock dusted. Where rock dusting is required, it must be applied and maintained in accordance with subsection (d) of this section. There are three exceptions, however, to this general rock dusting requirement.

The first provides that such rock dusting is not necessary in those underground areas of a mine that are, in fact, too wet or too high in incombustible content to propagate an explosion. Artificial wetting of such underground areas of mines is not acceptable in lieu of rock dusting, except as such wetting is done on the floors of active roadways used by mobile equipment, between the working face and the section loading points. Rock dusting would still be required for the top and sides of such roadways.

Water, when properly applied and maintained, can be effective in preventing the initiation of coal dust explosions and propagation of ignitions and explosions caused by gas or other means. In order to be effective, however, the coal dust along the floor of the mine must be properly wetted and maintained wet. All too often, the coal dust dries up unless there is constant attention given to insuring that it is, in fact, "too wet." It is incumbent upon the operator to insure such attention, and upon the authorized representative of the Secretary to satisfy himself that, when water is relied on as an inert by the operator, it results in the same degree of safety that would be obtained if rock dusting were required.

The second exception is that such rock dusting is not required in areas determined by an authorized representative of the Secretary to be unsafe to enter or inaccessible.

The third relates to cases where an authorized representative of the Secretary permits an exception to this general requirement. In granting this exception for some areas of the mine, such as in the case of back entries, the authorized representative of the Secretary should, among other factors, take into consideration the conditions of the mine, the adequacy, based on past performance, of the rock dusting program at the mine, relevant research findings, and, most importantly, the potential hazards to the miners that could result when an exception is granted. The miner's safety must, in all of these exceptions, be considered to be of foremost concern to the operator and the authorized representative of the Secretary.

ELECTRICAL EQUIPMENT

Section 305 establishes the requirements for electrical equipment. Effective 1 year after the operative date of this title, only permissible junction or distribution boxes shall be used for making multiple power connections inby the last open crosscut or in any other place

where dangerous quantities of explosive gases may be present or may enter the air current. Also effective 1 year after the operative date of this title is the requirement that all electric face equipment used in a mine be permissible and be maintained in a permissible condition, except that the Secretary may permit the continued use of nonpermissible or open-type electric face equipment in use on the date of enactment of this act for such period—not in excess of 1 year—as he deems necessary to obtain permissible equipment. This provision does not apply to any mine which is not classified as gassy.

In the case of a mine which is not classified as gassy, all hand held electric drills, blowers and exhaust fans, electric pumps, and other such low-horsepower electric face equipment as the Secretary may designate, shall be permissible and be maintained in a permissible condition 1 year after the operative date of this title. All other electric face equipment used in such mines shall be permissible and be maintained in a permissible condition 4 years after the operative date of this title, except that the Secretary may, upon petition, waive this requirement on an individual mine basis for a period not in excess of 2 additional years if, after investigation, he determines that such waiver is warranted. The Secretary may also, upon petition, waive these requirements on an individual mine basis if he determines that the permissible equipment for which the waiver is sought is not available. Effective 1 year after the operative date of this title, however, all replacement equipment and equipment for which a major overhaul is necessary in such mines, shall be installed as permissible and be maintained in a permissible condition. The Secretary also has the authority to require, on any nonpermissible equipment in use in such mines during these waiver periods, the use of methane monitors which will automatically deenergize electrical circuits providing power to electric face equipment when the concentration of explosive gas in the mine may permit a condition in which an ignition or explosion may occur.

Before proceeding with a further discussion of this section, it is important to first understand the issue which underlies it; namely, the gassy, nongassy issue. The following is excerpted from a memorandum used as background information by the committee when discussing the issue:

I. HISTORY OF GASSY CLASSIFICATION

Methane gas, because of its explosive characteristics, presents one of the most serious hazards during coal mining. Methane occurs most often in the coal itself, but may occur in strata below or above the coal seam. When the strata adjacent to the coal ore is disturbed by the mining operations, the methane migrates into the mine atmosphere.

Explosive mixtures are formed when the methane concentrations range from 5 to 15 percent. The energy required for ignition is minute. For example, frictional sparks considerably less intense than those produced by an ordinary cigarette lighter cause ignition. The ignited mixture produces flame and pressure. The resulting disturbance to the atmosphere, even from a poorly mixed body of gas, will dispense coal dust from mine surfaces and, if insufficient rock dust is present, a serious coal dust explosion will occur. The records of the Bureau of Mines show that most mine disasters are caused by ignition of a localized body of gas.

The Bureau first recognized the distinction between gassy and non-gassy mines in 1926. The Mine Safety Board of the Bureau at that time stated:

"The U.S. Bureau of Mines believes that *all mines are potentially gassy;* but for purposes of administration in respect to prevention of explosions and fires the Bureau recommends the following classification."

The Bureau then classified mines into three types: (1) *Nongassy*—when all samples of mine air contains less than 0.05 percent methane; (2) *slightly gassy*—a classification that could be determined in four different ways depending upon the ventilation and the amount of methane found (one of the four ways included a methane content more than 0.25 percent in a split of the ventilating current); and (3) *gassy*—a classification applied to all other mines.

In 1941, the Mine Safety Board decided the use of the three classifications was unsatisfactory. The new decision provided only two classes—gassy and nongassy mines. The gassy classification was applied to "any coal mine where methane or any other combustible gas can be detected in amounts as much as 0.25 percent or more, frequent systematic searches * * *."

The Mine Safety Board also noted that:

"In the 30 years of investigating mine accidents by the Bureau of Mines, it is noteworthy that many serious gas explosions have occurred in mines in which methane had not been reported prior to the disaster."

Under the present Federal Coal Mine Safety Act, mines are classified by the Bureau either as gassy or nongassy. A coal mine is considered gassy if:

1. A state mining bureau classified the mine as gassy.

2. A gas ignition or gas explosion occurred in the mine.

3. A sample taken in a prescribed way shows 0.25 percent methane or more when analyzed.

Once a mine is classified as gassy, it is never reclassified as nongassy.

II. ALL MINES ARE POTENTIALLY GASSY

A. Some 210 active mines now classified as gassy were once classified as nongassy.

Number of years operated nongassy:	*Number of mines*
0 to 5 years	131
6 to 10 years	35
11 to 15 years	18
Over 15 years	26
Total	210

B. Sixty years of experience has shown that a large number of gas explosion disasters have occurred in nongassy mines. In fact, nongassy mines may actually be more dangerous than gassy mines because of the false sense of security the classification gives.

C. The following is an analysis of selected mines which were once classified as nongassy and are now classified as gassy, and the reason for the classification change:

Date of gassy classification	State	Size of mine	Type of opening	Reason for gassy classification	Air analysis (methane) 2 previous inspections	
					Quantity	Quantity
Sept. 16, 1964	Pennsylvania	Large	Drift	1.05	0.21	0.09

[1] Ignition.

This represents only a partial listing of mines recently classified as gassy and the reason they were so classified. It is obvious, however, that a high methane content may be found in any size or type of mine, whether it be large or small, or whether it be shaft, slope, or drift. It is also obvious that methane may be liberated in dangerous quantities in any mine at any given time. Many mines whose atmosphere had a methane content of 0.00 percent in previous readings were classified as gassy because that content exceeded the 0.25 percent limit.

III. INADEQUACY OF THE PRESENT CRITERIA FOR CLASSIFYING MINES

The three methods of classifying mines gassy are wholly inadequate.

The State method is unsatisfactory because definitions of the gassy classification vary from State-to-State, as do methods used by the States to classify a mine.

Classifying a mine as gassy after an explosion has occurred is a classic example of "locking the barn door after the horse has been stolen." While such an action helps to prevent future explosions, it does not do much for those who have been killed or injured.

The third requires that air samples be taken and, under the present law, the sample must be taken at a point not less than 12 inches from the roof, rib, or face, and must show less than 0.25 percent methane. If a sample were to be taken closer to the coal

face than 12 inches, the atmosphere could contain high percentages of methane without affecting classification. In addition, the amount of ventilation of air passing the sampling point is not specified. Obviously, the quantity of air passing the point will have a direct effect on the methane content of the sample. In practice, this air quantity may vary considerably. If a mine which has adequate ventilation and is not classified as gassy were to be sealed for several days, it might yield an air sample with a methane content greatly in excess of the 0.25 percent specified in the law.

In some mines where gas generally occurs in small quantities, the mining operation may unexpectedly tap relatively large pockets of methane gas. Experience has shown that such occurrences have caused serious disasters. Unless a sample were taken at a particular moment when the methane was released, the mine would continue to be classified as nongassy. A sample taken properly and at the right time when methane was released from the pocket would show high percentages of gas. One wonders whether all mines would be classified as gassy were it not for the physical impossibility of having a Federal inspector present in all areas of every mine constantly measuring for methane. It is unfortunate that coincidence apparently has a greater role in determining which mines are to be classified as gassy than does reality.

In his testimony before the subcommittee, Secretary Hickel called for an elimination of the present distinction between gassy and nongassy mines. He said:

"There is another provision of the bill which I want to call to your attention—the elimination of the nongassy classification for certain mines. The experts in the Bureau of Mines have for more than 30 years urged the elimination of this classification because in their opinion all mines are potentially gassy. On numerous occasions there have been gas explosions in so-called nongassy mines killing and injuring workers."

The Director of the Bureau of Mines expressed concern over the distinction: "* * * we are convinced that the accident records of so-called nongassy mines, and the numbers of such mines in which explosive concentrations of methane are found even after years of operation in the nongassy category, strongly support the provision in the administration's bill that all coal mines be classed as gassy."

The committee bill eliminates the artificial distinction between gassy and so-called nongassy mines, and classifies all mines as gassy by requiring permissible electric equipment in all underground mines 1 year after the operative date of this title. In the case of mines not classified as gassy, however, waivers to part of this requirement are permitted for specified periods of time.

In the case of such mines, low-horsepower electric face equipment such as hand held electric drills, blowers and exhaust fans, and electric pumps, are required to be permissible and maintained in a permissible condition 1 year after operative date of this title. The same requirement is made of all replacement equipment acquired for use in such mines, and equipment for which a major overhaul is necessary.

The remaining electric face equipment not specifically required to be permissible 1 year after the operative date of this title, which is used in such mines, must be permissible and maintained in a permissible condition 4 years after the operative date of the title, except that the Secretary may, upon petition, waive this requirement on a mine-by-mine basis for an additional period not in excess of 2 years if, after investigation, he determines such waiver is warranted. The committee intends that the Secretary use his discretion in determining if such waivers are warranted for mines, requesting them, but expects his first consideration to be the availability of permissible replacement equipment.

The Secretary also has the authority to grant, upon petition, an additional waiver on a mine-by-mine basis if he determines the permissible equipment for which the additional waiver is sought is not available to the petitioning mine. The committee intends here that the Secretary administer this authority with extreme care and adhere literally to the language of the bill which spells out precisely the only reason for granting such additional waiver. The committee does not in any way intend for this additional waiver to represent an "open end" to the requirement for permissible electric face equipment.

The Department of the Interior has indicated a period of 5 years will be required for the mine equipment manufacturing industry to produce permissible replacement equipment in sufficient quntities for all underground mines. If the Department alters its present policy of requiring all inspections of permissible equipment to be made in Pittsburgh, and permits field inspections, the period necessary to produce sufficient equipment will be reduced.

The committee believes the time allowances in the bill therefore, to be exceedingly generous, and expects the most judicious consideration by the Secretary of additional waiver requests. Further, the committee expects the Secretary to begin surveying the availability of permissible replacement equipment immediately following enactment of this act and to continue such surveys—making the results of such surveys known to those mines using equipment which is not permissible—on a regular basis (at least every six months) until the electric face equipment in all underground mines is permissible.

During the term use of any electric face equipment which is not required to be permissible, pursuant to section 305(b), the Secretary may by regulation require the use of methane monitors on such equipment, which monitors will automatically deenergize electrical circuits providing power to electric face equipment when the concentration of explosive gas in the active working permits, in the opinion of the Secretary, a condition in which an ignition or explosion may occur. When the Secretary believes conditions in these mines are such that an ignition or explosion may occur, the committee expects him to require the use of methane monitors which act to deenergize the equipment when the explosive gas content in the mine atmosphere reaches a level to be determined by him. The committee believes the explosive gas content of 0.25 volume per centum to be a level the Secretary might very well choose, as that level is currently used as a level of distinction between gassy and nongassy mines.

It should be noted here that a considerable segment of the committee did not feel the additional time period granted for nongassy mines to obtain permissible electric face equipment was justified. It was felt that the arguments made by representatives of such mines to retain the present distinction were wholly inadequate. When it became obvious the committee was not inclined to retain the present distinction, the representatives of the nongassy mines then sought time beyond that prescribed in the bill reported by the subcommittee within which to obtain permissible equipment. The bill permits such additional time, and such time was granted in the interest of the total bill.

The committee does not believe that this concession was made at the cost of sacrificing the safety of miners in nongassy mines. Since 1953, there have been 55 ignitions or explosions in nongassy coal mines. Some 28 miners were killed and 62 injured because of them. Twelve of the 28 deaths were caused by the use of equipment which was not permissible. All of that equipment was of low horsepower, such as that required to be permissible in all mines—regardless of their gassy status—1 year after the operative date of this title.

None of the equipment causing the ignitions or explosions was of the type for which the waiver periods are permitted. Although this is somewhat mollifying, the committee recognizes that the ignitions and explosions could have conceivably and eventually been caused by the larger electric face equipment (for which the waiver periods are permitted), had not the smaller equipment first ignited the source of explosive gas.

EMERGENCY SHELTERS

Section 305 permits the Secretary or his authorized representative to require the erection of mine rescue chambers to which miners could go in the event of an emergency.

The committee is cognizant of a study being conducted by the National Academy of Engineering, pursuant to a contract with the Department of the Interior, to determine improved means of survival after mine accidents. The committee expects the Secretary to promptly institute requirements for rescue chambers in mines if the study concludes such rescue chambers are indeed an effective method of insuring survival after a mine accident.

INSPECTOR PRESENT IN SELECTED MINES

Section 317(j) requires the Secretary to insure that his authorized representative is present daily to make inspections at a mine the Secretary determines liberates "excessive quantities of explosive gases."

Despite opposition to this provision by the Secretary, the committee found the following statement by W. A. Boyle, president of the United Mine Workers of America, a most compelling reason for its inclusion in the bill:

Certainly if this Government can spend money on game wardens far in excess of Federal coal mine inspectors, commonly known as "rabbit shepherds," protecting the lives of rabbits, deer, antelope, elk; certainly we can have a Federal mine inspector in each one of these mines who will make these inspections when necessary every day that the mine operates, and that Federal inspector should be required to be there.

The committee appreciates the Secretary's concern about the cost of detailing inspectors to such mines on a regular basis, but believes the advantages of such surveillance far exceed any suggested disadvantages.

In administering this provision, the committee expects the Secretary to rotate inspectors among the mines he believes liberate "excessive quantity of explosive gases," and not station the same inspector at the same mine for an extended period of time.

TITLE IV—ADMINISTRATION

RESEARCH

Section 401 requires the Board to establish objectives for the conduct of appropriate studies, research, experiments, and demonstrations. Activities to meet the objectives in the area of coal mine health will be carried out by the Secretary of Health, Education, and Welfare. Those in the area of coal mine safety will be carried out by the Secretary of the Interior. No research may be carried out unless the results of it are available to the general public.

Funds for the research shall be distributed to the Secretaries from moneys the Board shall receive from operators, appropriations, and the States. Each operator is required to contribute an amount equal to 2 cents for each ton of coal he produces. The Board may reduce this amount when it determines it has sufficient funds from other sources with which to carry out its activities.

In addition, the Federal Government will contribute an amount equal to 2 cents for each ton of coal produced by operators. States may also contribute and the Federal Government will match such contributions up to an amount equal to 1 cent per ton of coal produced in the respective State.

Prior to distributing any funds derived under this section, the Board must first assure the payment of the chest roentgenograms and other tests provided for under section 203(a).

The committee believes the Board should consider, as the first priority item in establishing objectives for the conduct of studies, research, experiments, and demonstrations, the establishment of a respiratory disease center. The medical information gathered in Great Britain is comprehensive and impressive, and was derived largely because a central repository for the collection and interpretation of relevant data was established.

Before the Farmington tragedy of last year, the record of the Department of the Interior and the Bureau of Mines since 1952 with respect to health and safety in this industry left a great deal to be desired. Many of the weaknesses in the 1952 act were well known years ago, yet little has been done to seek appropriate changes in the law. Similarly, the 1953 code, which is a part of labor-management contracts in this industry, and violations of which are often cited by inspectors, has not been revised despite known changes in technology and mining practices. Considering the injury and fatality rate of this industry, the committee was shocked to learn that in the past several years the annual budget for the Bureau of Mine's health and safety functions, including the coal and metals industries, has been about $10 million, while the Bureau's total annual budget is about $80 million.

Since Farmington, the record of the Bureau of Mines has shown marked improvement. But more still needs to be done if the coal miners of this Nation are going to receive the protection they deserve and, indeed, demand.

The legislation recommended by the committee abandons the old, worn-out and ineffective provisions of the present law and provides a new and comprehensive approach to the problem of coal mine health and safety. To be effective, however, the Secretary of the Interior and the Bureau of Mines must be provided with the needed personnel who are vigorous and well-trained in this field, and funds to carry out this program.

The committee recognizes that the many interim health and safety standards and extensive new requirements of this legislation can become mockery if enforcement of this law is lax. Strict enforcement which the committee in its oversight responsibility will insist upon, is impossible without frequent inspections—both regular and spot inspections.

The lack of trained inspecting personnel requires that special programs be developed to assure that the law can be properly enforced. New facilities will be required along with funds to operate them, in order to train the needed Federal inspectors and, when appropriate, possibly State inspectors too.

For the first time, inspections for violation of health standards in order to insure that the samples taken by the operator are truely representative of the mine atmosphere will be required. The thousands of samples sent to the Bureau by the operators and the samples which are collected by the Bureau must be analyzed and recorded and a procedure developed which will alert the laboratory to conditions that exceed the standards in the bill. New personnel will be needed to perform both the sampling and analytical work and new facilities will be needed to carry out these new responsibilities.

In addition, the committee considers research vital to improved health and safety conditions in coal mines. The health and safety hazards afflicted upon the miners of this industry are directly related to the fast developing production technology for which this industry is known. In many areas, the industry has improved its methods for producing coal by leaps and bounds. But this same drive and energy has not shown itself in health and safety research and development efforts in this industry. Rather, many, including the Bureau of Mines, have followed the fatalistic attitude so prevalent in the industry that coal mining is a "hazardous" occupation and these hazards cannot really be overcome. The committee is not willing to adopt this attitude. Neither will the American public or the miners themselves accept this unreal situation. We know that 311 miners were killed in this industry last year. Over 170 have been killed so far this year. Over 100,000 miners are afflicted with pneumoconiosis. Many are disabled from it. Certainly, a nation with know-how in so many other technology complex areas can improve this situation with a little more effort.

The committee is aware that the British expenditure for coal mine health and safety alone, exceeds $20 million annually. This has enabled the British to adduce relevant conclusions from their research effort; especially in the area of health. Surely, the United States effort should be no less intense. Some of the research programs needed in the Bureau are: First, new instrumentation for measuring respirable dust concentrations; second, dust suppression technology which may range from redesign of cutting bits on cutting machines to water infusion of the coal seam in advance of mining; third, methane drainage methods which will reduce the dangers from methane—one of the greatest hazards in mining coal; fourth, new methods for strata control that will prevent roof fall accidents that account for more than 50 percent of fatalities each year; and fifth, development of a system approach to the mining problem that will increase safety and reduce health hazards. Many other research opportunities exist.

The committee also is aware that the industry has not always contributed its fair share to improving health and safety. In 16 years, the industry has invested about $195 million on commercial research, while Government has spent over $165 million for production research and development. Secretary Hickel estimates that less than $15 million was spent on health and safety research in the past 16 years. It is time that the industry—the beneficiary of all this research—make an even greater effort toward further research and development.

The industry must develop and intensify its own health and safety research and development program and spend greater amounts than have heretofore been spent. Even now, after these many months of public discussion there is little overt evidence of industry expenditures on controlling dust, for example. Yet, within a few months they will be required to meet a dust standard of 4.5 mg/m^3 and soon thereafter 3 mg/m^3.

The committee is also concerned that, while there have been improvements since Farmington by the Bureau and the Department in the administration of this program, much needs to be done. Greater efforts by the officials of the Department must be made to assure that the objectives of this legislation will be fulfilled. The present uncertainties regarding personnel should be resolved quickly. For once this legislation is finally enacted into law this year, the leadership of the Bureau will need to devote full time to carrying out the provisions of this legislation. The improvements of the past few months must be doubled and carried over under this new legislation which will require personnel familiar with its background and the intent of the Congress.

The committee also believes the Secretary should review the administration of the Holmes safety award program. Too many mines to which such safety awards have been made have had a relatively poor accident record and a history of violations of the existing law. Moreover, the full time of several inspectors has been taken in administering this program when that time could be better spent in making actual mine inspections. This is especially true in view of the greater demands placed upon the inspectorate by this bill.

ASSISTANCE TO STATES

The Secretary is authorized to make grants to any State in which coal mining takes place to conduct research, first, and planning studies and to carry out plans designed to improve workmen's compensation and occupational disease laws and programs, as they relate to compensation for pneumoconiosis and injuries in coal mine employment; and second, to assist the States in planning and implementing other programs for the advancement of health and safety in coal mines.

For this purpose there is authorized to be appropriated for the fiscal year ending June 30, 1970, and each of the succeeding fiscal years, the sum of $1 million.

EQUIPMENT

Under section 404, the Secretary is authorized to make loans to operators of coal mines to enable them to procure or convert equipment needed by them to comply with the provisions of this act. The loans shall not have maturities beyond 20 years and shall bear interest at

a rate adequate to cover, first, the cost of the funds to the Treasury; second, the cost of administering the loans; and third, probable losses. The Secretary shall use the services of the Small Business Administration to the greatest extent possible in carrying out this section.

INSPECTORS; QUALIFICATION; TRAINING

Section 405 establishes qualifications for inspectors and requires the Secretary to provide for the adequate training and continuing education of such personnel.

The committee fully expects the Secretary to undertake a comprehensive and exhaustive program of recruiting, training, and continually educating persons employed as his authorized representatives or in other capacities. The Secretary should also initiate programs for the training and retraining of inspectors by appropriate educational institutions and operators.

SPECIAL REPORT

The Board shall make a study to determine the best manner to coordinate Federal and State activities in the field of coal mine health and safety and report to the Congress as soon as practicable on the results of its study.

In conducting this study, the committee expects the Board to review existing Federal-State cooperative agreements. The committee bill does not contain a provision—like that in existing law—for a continuation of a State plan arrangement. The existing law is totally inadequate in that respect and all related proposals considered by the committee were unacceptable. A testament to the inadequacy of the present law in this respect is the fact that only one major coal-producing State—the Commonwealth of Virginia—is a participant to it. The Board would be wise to first review that agreement to determine the relevance and adequacy of proposing a similar agreement on a national scale.

OPERATIVE DATE AND REPEAL

The provisions of titles I and III of this act become operative 90 days after enactment. The provisions of title II become operative 6 months after enactment. The provisions of the Federal Coal Mine Safety Act are repealed on the operative date of titles I and III of this act.

Mr. Chairman, I referred in my opening remarks to the explosion which, during the early hours of November 20, 1968, killed 78 miners in Consolidation Coal Co's No. 9 mine near Farmington, W. Va. Well, the early hours of Thursday, October 23, brought back the harsh reality of that disaster and underscored the urgent need for this legislation. It was then when the first of the 78 bodies were found by the recovery team at the mine.

I will not be macabre and expand on that news. But this bill is desperately needed to help prevent future Farmington's, as well as the daily toll of human sacrifice to the mines. The miners need the bill for their own and their families' protection. The industry needs the bill to clean its own house and to attract new miners to an industry in which young and potential mine workers have no confidence. And the public needs the bill, if only to be spared the horror that comes in hearing news broadcasts announcing yet another disaster.

Mr. Chairman, I hope we will act quickly and favorably on H.R. 13950.

Mr. FLOOD. Mr. Chairman, will the gentleman yield?

Mr. DENT. I shall be happy to yield to my distinguished colleague, the gentleman from Pennsylvania (Mr. FLOOD).

The CHAIRMAN. The gentleman from Pennsylvania has consumed 1 hour.

Mr. PERKINS. Mr. Chairman, I yield the gentleman 2 additional minutes.

Mr. FLOOD. I may say, Mr. Chairman, that I never thought I would live to see the day when this bill wou'd be before this House. I am the only spokesman left in the House of Representatives who represents a hard coal district. But I want you soft coal miners to know that we have collie dogs in the anthracite section of the State of Pennsylvania, which it is my honor to represent, with hind legs farther apart than most of your soft coal mines.

Mr. Chairman, when I came here we had 30,000 men working in the anthracite district. Now we have 3,000. However, we have 23,000 suffering from anthracosilicosis. Some have talked about pneumoconiosis and black lung. We have known about that miner hazard for a long time. Both sides of my family have worked and died in the mines from anthracosilicosis and members of my wife's family on both sides have worked under these conditions for a hundred years.

If one were to review the history of workmen's compensation for occupational diseases in this country, one would find that these laws, for the most part, have been inadequate and so inflexible that they have not been able to deal with new disease problems. Many of our early occupational disease compensation laws recognized only a specified list of diseases which were largely based on English law. Originally, this list, in most laws, omitted the diseases caused by the inhalation of dust, such as silica. In the early 1930's the now famous Gauley Bridge incident in West Virginia focused the attention of a shocked Nation in the inadequacies of its compensation law. Gauley Bridge was a power tunnel being driven through highly siliceous rock and, in the absence of dust control procedures, many workers quickly developed silicosis and many others died due to lungs overburdened with silica dust. Because silicosis was not a compensable disease, the only recourse these workers had for recovery was under common law—a most inadequate and unsatisfactory procedure.

The incident led to the calling of the National Conference on Silicosis by the Secretary of Labor in 1937. Out of the conference came certain recommendations to the States on procedures for compensating for silicosis. These laws were built around social concepts which existed at that time and I am fearful, in our modern concepts, that these laws tended to overprotect the employer and penalize the worker. For example, the worker had to prove exposure to hazardous concentrations of silica dust, even though medical testimony left little doubt that the worker was afflicted with classical silicosis. To be eligible for compensation, he must have had complete disability. Thus, men were encouraged to continue working in a dusty trade until they were completely disabled. Other difficulties included unreasonable statutes of limitations, the "last employer responsibility" concept, and inadequate medical procedures. The States were slow to adopt the concept of compensation for silicosis. Only within the last decade has one of our major mining States recognized silicosis as a compensable disease.

Thus, when coal pneumoconiosis, or black lung, became a major health problem several years ago, our State compensation laws were totally unprepared to deal with this disease because State laws were, for the most part, limited to providing compensation for silicosis which did not fit either the legal or medical definition of coal workers' pneumoconiosis. Thus, many coal miners were denied or found ineligible for compensation even though there was little doubt that the disease was an occupational one.

Mr. Chairman, in our present-day situation we have reached another "Gauley Bridge" in terms of recognizing the inadequacies of our compensation laws for dust diseases. Other coal mining countries, especially those in western Europe have reexamined their compensation concepts for the dust diseases, especially coal workers' pneumoconiosis, and have applied modern knowledge and techniques in their evaluation and in establishing legal and medical procedures. Maybe it would not be out of order for the Secretary of Labor to call another conference similar to the 1937 one to reexamine our compensation practices for dust diseases. For example, there is no uniform criteria for the diagnosis of coal workers' pneumoconiosis; there is no standard method for assessing disability and few, if any, of the States encourage prevention over compensation. In other words, our present compensation procedures are based on knowledge which was developed almost 50 years ago.

In recent years, several States, notably Alabama, Virginia, Pennsylvania, and more recently West Virginia, have modified their laws to include coal workers' pneumoconiosis. However, in doing so they, for the most part, have modified antequated laws and procedures and have failed to take advantage of applying new concepts of compensation, medical evaluation and prevention.

Various studies by the Public Health Service provide some insight as to the incidence of pneumoconiosis among coal workers. Medical examination of active and inactive coal miners in the Appalachian area, which includes anthracite coal region, revealed that 6.5 percent of the active miners had evidence of simple pneumoconiosis and 3 percent had evidence of complicated pneumoconiosis. Whereas, of the inactive miners, the percentages were 9.2 percent and 9.4 percent respectively. The estimates of the total number of new coal pneumoconiosis cases range from a low of 30,000 to more than 100,000. In the State of Pennsylvania alone, there have been 25,000 cases of pneumoconiosis compensated since January 1966 under terms of a new law which permitted payment of $75 per month to those men with pneumoconiosis but who had been ruled ineligible for compensa-

tion under existing workmen's compensation laws.

Statistical studies indicate that the death rate for bituminous coal miners is about twice that of the general working male population and same is true in anthracite coal fields. Death rates attributed to respiratory diseases, however, were five times that of the general male population. I am sure that other data and studies are available to further substantiate the magnitude of this problem.

Coal pneumoconiosis is a relatively new disease on the American scene. Although anthracosilicosis was known in the anthracite industry, it had been generally assumed up until the early part of this decade that bituminous coal did not cause a disabling pneumoconiosis. However, the introduction of mechanical mining equipment, which caused an increase in the dust concentrations in underground mines, has been responsible for the development of pneumoconiosis by thousands of workers. Even prior to 1950, the disease had been recognized in certain European countries, so we were not without forewarning that a similar situation could occur in the United States. Agreeing on compensation procedures for this disease is not going to be a simple matter. For instance, the early stages of the disease, recognizable by X-ray, result in little if any pulmonary disability. However, the continued exposure of men to even low levels of coal mine dust will doubtlessly cause the disease to progress to its complicated form which is disabling and results in a shortened life expectancy. Although there are no therapeutic measures available at this time, there are palliative measures which can be provided the individual which at least would alleviate the period of disability.

Mr. Chairman, H.R. 10259 does attempt to deal with the basic problems involved in the compensation of coal workers' pneumoconiosis. It does, however, recognize financial responsibility on the part of the Federal Government to those individuals disabled as a result of pneumoconiosis and anthracosilicosis which was contracted in the coal mining industry and who are not entitled to compensation under existing workmen's compensation laws. This bill, or any other bill of a similar nature, should be viewed as a bridge between the present chaotic situation and the time when the States can readjust their compensation laws to reflect modern-day practices and place the compensation laws in accordance with our present concepts of social responsibility. This bill does not attempt to take away from the States their responsibility for administration of compensation laws and place it in the hands of the Federal Government; on the contrary it maintains administration of aid at the State level by providing full measure of financial support to the States.

Mr. Chairman, one of the great injustices today under the compensation laws of the States is the inability of the States to give aid to miners suffering from "black lung" and "miners' asthma" who are not receiving compensation either because their claims for benefits have been denied, or because their claims have expired. This bill would apply benefits and coverage retroactively, and thus help thousands of coal miners disabled by black lung and miners' asthma who have never been eligible to receive benefits or who have been given partial aid for a limited time only. This bill would be of tremendous aid to the States which cannot pay retroactive benefits because such payments would be prohibited under their constitution as an impairment of contracts. My State of Pennsylvania is an exception in that payments are being made out of general revenue, and is, therefore, not in violation of the Commonwealth's constitution but we are straining out tax revenues to do so.

First, the oft-declared purpose of this bill is to encourage the States to improve their workman's compensation laws; and to provide necessary immediate financial relief to the employees disabled in the mining industry until the States workmen's compensation laws provide adequate coverage and benefits.

Second, to establish minimum standards of coverage and benefits and provide Federal funding for these benefits is a commendable and necessary step in the immediate implementation of the intent of Congress.

Third, Federal grants to reimburse, in part, progressive States with comprehensive workmen's compensation laws will indeed "encourage the States to improve their workmen's compensation laws."

Fourth, however, H.R. 13950, in its present form—section 112, subparagraph (B)—will penalize the States already providing benefits by reducing the Federal payments to individuals by an amount equal to the amount currently being paid by the State. This provision will act as a deterrent instead of an encouragement for States to improve their workmen's compensation laws.

Fifth, the taxpayers in the States with a comprehensive workmen's compensation law in effect or to come will be burdened with a double taxation; providing revenue for the State benefits and also providing the revenue for the Federal benefits, while the beneficiaries of these benefits receive the same amount as beneficiaries in States with no coverage on the State level.

Sixth, Pennsylvania, the State with the most comprehensive compensation laws and the largest number of claimants will be affected the most by this provision.

Seventh, in the anthracite region, the efforts of all the State legislators, mine workers union, and the Pensioned Miners Protest Committee will be completely undermined and the current benefits—$75 per month—and any increase they are successful in obtaining from the State will be deducted from the benefits provided by H.R. 13950.

Eighth, the effect of this bill on the future enactment of workmen's compensation laws or improvements thereof, is rather obvious; States failing to enact or improve such laws can offer industries a healthier financial climate to operate in, they will not directly or indirectly burden their taxpayers with a State-supported law and at the same time, coverage for the employees will be provided by the Federal Government.

Mr. Chairman, I have been at the mouth of a mine after it had been flooded or after an explosion and have seen death and grief and disaster. So, I knew JOHN DENT when he was in the Senate in Pennsylavnia. He led the fight then. For 25 years, when I first came here, I have been trying to get something like this but was not able to do it.

So I come here today as an old friend and old neighbor representing the hard coal miners. I never worked in the mines myself. I worked outside, but I lived over them and I know of them. I thank God for this House of Representatives and for the efforts of this committee and especially those of the gentleman from Pennsylvania (Mr. DENT).

Mr. DENT. Thank you very kindly.

Mr. ERLENBORN. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I take this additional time to also pay my compliments to the gentleman from Pennsylvania although I thought I would be able to do that on my own time.

Mr. Chairman, the gentleman from Pennsylvania has, of course, broad and deep knowledge of coal mining legislation, going back many years. Through the course of the consideration of this bill, he has been most helpful to me while I learned something about coal mining legislation. He has been persistent in getting legislation that is workable and legislation that will really help toward protecting the health and safety of coal miners.

I want also to express my compliments to the gentleman from California who has likewise been realistic in his approach to this legislation. There have been those who have made suggestions as to the provisions in this bill which sounded good and which had the appearance of helping the safety and health of the miners. But these two gentlemen have consistently insisted that this legislation not have simply the appearance of adding to the health of the miners, but that this bill have provisions of substance to it. I commend both of them for the work they have done, as well as the chairman of the full committee, the gentleman from Kentucky (Mr. PERKINS), who was most helpful in the very difficult section of this bill relating to the compliance with the permissible equipment and in helping us reach the agreement that we did in a compromise, recognizing the fact that many small mines would be closed had the provisions of the original bills that were introduced been enacted. A compromise was reached as I have mentioned before, a realistic compromise, and one which will help us over the trying period of going from the nongaseous classification to a situation where nongassy situations no longer exist and all mines will have to have permissive equipment.

I further compliment the gentlemen upon the job they have done. I disagree with them upon a few points, but I hope to remedy that situation during the amendment process.

Mr. Chairman, I yield 5 minutes to the gentleman from Idaho (Mr. HANSEN).

Mr. HANSEN of Idaho. Mr. Chairman, the bill before us, H.R. 13950, is undoubtedly the most important and

far-reaching coal mine health and safety bill ever to come before the Congress. It is the product of the diligent efforts over a long period of time by many people—members of the General Labor Subcommittee and the full Committee on Education and Labor, many of our other colleagues, representatives of the coal miners, the coal mine industry, various State governments, agencies of the Federal Government, and even experts from the British coal mining industry, whose experience and advice have been so helpful in the development of this legislation.

I would like to pay particular tribute to two of my colleagues for their outstanding leadership and painstaking effort that have resulted in the substantial agreement on the main features of the bill before us today. A great deal of the credit for the giant step forward that this bill represents goes to the gentleman from Pennsylvania (Mr. DENT) chairman of the General Labor Subcommittee, and to the gentleman from Illinois (Mr. ERLENBORN) the ranking minority member. Both have demonstrated great skill and patience in an effective and good faith effort to compare and search out areas of agreement on provisions of this bill that have been the subject of sharp but honest difference of opinion.

This is a tough bill, but I do not believe that it is too tough. While I expect to support some amendments that will improve the bill and make it more workable, I believe that the rather rigid standards it proposes to establish are both reasonable and attainable.

This bill is, at least in part, a response to the disaster at Farmington, W. Va., nearly a year ago. The tragedy that took the lives of 78 miners serves as a grim reminder that our efforts to make the Nation's coal mines safer and more healthful places to work must be a continuing one. The threat and all too often the sudden reality of disaster, death, and disease have confronted our coal miners and their families for too long.

Our coal mine industry has added a great economic strength to our Nation, but it has all too frequently been the source of great sadness with news of crippled men, grieving widows, and fatherless children.

Death in the coal mines can come very suddenly as a result of an explosion or collapse of a roof. Death or broken health can also come more slowly but surely as the result of pneumoconiosis. The coal miner must live and work under a constant uncertainty, not knowing when he leaves for work in the morning that he will return home before the end of the day.

In his message to Congress earlier this year, President Nixon said:

> The time has come to replace this fatalism with hope by substituting action for words. Catastrophes in the coal mines are not inevitable. They can be prevented and they must be prevented.

The bill before us properly acknowledges that the most valuable resource in the Nation's coal mining industry is the coal miner. The bill is properly concerned first and foremost with the health and safety of the miner. It responds to a clearly demonstrated need to provide more effective means for improving the working conditions in the Nation's coal mines in order to prevent death and injury and in order to effectively control the conditions that cause occupational diseases in the mines.

The bill before us corrects some obvious deficiencies in the present law. It established procedures for the promulgation of mandatory health and safety standards and makes provision for interim health standards.

Among the most significant achievements of the bill is the establishment of dust standards. Very fine coal dust produced during mining operations has always been a major health hazard for those working in the mines. This country has never established by law the permissible limits of dust concentrations. This bill will give the United States an official standard for the first time.

Effective with the enactment of this bill into law each operator will be required to maintain the average concentration of respirable dust in the mine atmosphere to which each miner in the active workings of the mine is exposed at or below 4.5 milligrams per cubic meter of air. Effective 6 months after the operative date of this title, the limit on the level of dust concentration will be 3.0 milligrams of respirable dust per cubic meter of air. That limit shall be further reduced when such reductions are determined to be technologically attainable.

Already there is encouraging evidence that the pendency of this legislation has provided a stimulus for effective research in the area of dust control that strengthens our belief in the validity of the assumption made in this bill that ultimately a standard below 3.0 milligrams per cubic meter is realistic and attainable. The passage of this bill will provide a powerful stimulus for further research and development resulting in greater improvements in health and safety conditions in our coal mines.

Mr. Chairman, passage of this bill will go far to protect the health and prolong the lives of the Nation's coal miners. It may very well be one of the most constructive and far-reaching pieces of legislation to emerge from the 91st Congress.

Mr. HECHLER of West Virginia. Mr. Chairman, will the gentleman yield?

Mr. HANSEN of Idaho. I yield to the gentleman.

Mr. HECHLER of West Virginia. Mr. Chairman, I commend the gentleman from Idaho for his presentation and particularly for his separate views. The very last page of the committee report contains the support of the gentleman from Idaho and the gentleman from California (Mr. BELL) for the compensation feature. I do hope and trust that he may bring many of his colleagues on that side of the aisle to the support of this feature of the bill which I think is one of the better parts of the bill. On behalf of thousands of West Virginia coal miners, I thank the gentleman from Idaho for his support.

Mr. HANSEN of Idaho. I thank the gentleman for his kind remarks.

Mr. BURTON of California. Mr. Chairman, will the gentleman yield?

Mr. HANSEN of Idaho. I yield to the gentleman from California.

Mr. BURTON of California. Mr. Chairman, our distinguished colleague, the gentleman from Idaho (Mr. HANSEN), already impressed every member of the Committee on Education and Labor on both sides of the aisle for his appetite for doing his political homework and his concern that any action that the committee takes be based on fact and not on fancy and his determination in this particular area to see that we emerge with a strong and responsible bill protecting the health and safety of the coal miners of this country.

Mr. HANSEN of Idaho. I thank the gentleman for his kind remarks.

Mr. DENT. Mr. Chairman, will the gentleman yield?

Mr. HANSEN of Idaho. I yield to the gentleman.

Mr. DENT. I just happened to be looking at a picture here which shows a group of Members of Congress down in a coal mine. The gentleman now in the well is one of the Members of Congress in this picture. In every instance he has never asked any questions when the committee was going to go down into mines or was going to make a visit to some hospital or something. He was always out front as a volunteer and, in fact, he was one of the few volunteers to go into the Welsh mine 3,200 feet deep with an 85° temperature. If sometime you get the gentleman in the mood when he feels like talking about it, he will tell you how they dress in the British mines.

Mr. HANSEN of Idaho. I thank the gentleman for his kind remarks.

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. HANSEN of Idaho. I am delighted to yield to the distinguished chairman of the Committee on Education and Labor.

Mr. PERKINS. Mr. Chairman, I wish to take this opportunity to pay tribute to the distinguished gentleman from Idaho for his great service to the Committee on Education and Labor. We do not have a member who is more attentive and stays more on the job. He has made a great contribution not only in the area of mine safety but in the area of education legislation. I am delighted to have the opportunity to pay tribute to such an outstanding legislator.

Mr. HANSEN of Idaho. I thank the gentleman for those kind remarks.

Mr. CARTER. Mr. Chairman, will the gentleman yield?

Mr. HANSEN of Idaho. I am happy to yield to the gentleman from Kentucky.

Mr. CARTER. Mr. Chairman, mines in Kentucky have been, up until this year, generally classified as nongassy.

The large operators, because of their wealth, can afford the cost of all permissible equipment. However, the small operators, who employ smaller groups of men, would have great difficulty in buying permissible equipment.

Purchase of such equipment seems unnecessary in nongassy mines, since there have been only 52 ignitions in the past 16 years in all the nongassy mines in our

country, and 43 of these have been the result of smoking, lighting matches, or by use of an open-flame lamp.

Only nine of these ignitions, over this 16-year period, could have been prevented by the use of permissible machinery. The methane monitor the distinguished gentleman speaks of would be extremely helpful. It would eliminate much expensive equipment.

An added burden placed upon the small operators is the low level of dust concentration promulgated by the present bill. We have based much of our legislation upon that of England, where it has been generally understood there has been more research on methods of controlling dust in mines, and also more work has been done on the cause of pneumoconiosis, progressive massive fibrosis, or black lung disease.

Let me state here that I support the present bill, but feel that many small operators will be unable to reach the low dust concentrations required by law.

A few weeks ago, at my own expense, I visited England and interviewed Dr. John Rogan, chief medical officer of the national coal board. At that time, England had a different standard for determining the concentration of dust, based upon the number of particles of dust in the air per cubic meter.

Dr. Rogan stated that it was impossible to keep dust concentration at a certain level at all times, because of many factors: one, the concentration of dust would naturally be much higher after a blast; and two, at the cutting edge on the coal face.

He explained that the level—concentration in milligrams per cubic meter—would vary and that a certain level should be selected as a guideline.

In the past few weeks I have received, as have many of you, information from the Ministry of Power in England to the effect that a standard has been accepted which is set at 8 milligrams per cubic meter. As the capabilities of operators improve, then the level is to be diminished.

I have talked with operators throughout Kentucky and it is their feeling that they cannot reach the 4.5 millimeter concentration at this time. For this reason, today I am offering an amendment which would fix the level for the first 12 months at 6 millimeters per cubic meter, which is 2 millimeters below the present English standard; and commencing with the second year, would fix it at 4.5 millimeters per cubic meter; and after that time would be lowered as the Secretary of the Interior would determine it feasible and possible.

In my conversation with Dr. Rogan, pneumoconiosis was discussed at length, including the study of X-rays of various stages of this disease. In the discussion, Dr. Rogan stated that factors other than ingestion of coal dust caused the later stages of this disease. He stated that in the first three stages of pneumoconiosis miners were not outwardly affected, but that in the stages which included consolidation, passive massive fibrosis, the miners became totally and permanently disabled.

Mr. Chairman, there are many hundreds of thousands of miners who suffer from pneumoconiosis and who have not been compensated. For the disabled miners, I feel that the Federal Government should compensate them. These men are not eligible for pensions from their union, neither are they eligible for workmen's compensation.

At the appropriate time, I shall offer the amendment which would fix the permissible level at 6 milligrams per cubic meter for the first year, 4.5 milligrams for the second year, and thereafter at the discretion of the Secretary of the Interior.

I shall offer a second amendment, since we are all interested in safety and in the protection of the miners throughout our area, that any coal mine which has experienced two or more ignitions or explosions due to methane should be ordered by a representative of the Secretary to close and cease mining operations in such mine within 60 days following such order.

A mine which is once gassy almost always remains so, even if permissible equipment is used. The cutting edge of a continuous miner often strikes inclusion bodies and causes showers of sparks, which can easily set off further explosions and cause more severe disasters.

If we really believe in mine safety, we must concentrate on the mines in which explosions occur, and these occur in gassy mines.

Mr. ERLENBORN. Mr. Chairman, I yield 10 minutes to the gentleman from Pennsylvania (Mr. SAYLOR).

Mr. SAYLOR. Mr. Chairman, first let me say that the Members of the House are deeply indebted to the House Committee on Education and Labor for presenting this bill to us for consideration today. There are a number of individuals who I think deserve special mention. They are the chairman of the full committee, the gentleman from Kentucky (Mr. PERKINS), the gentleman from Pennsylvania (Mr. DENT), the gentleman from California (Mr. BURTON), and the gentleman from New Jersey (Mr. DANIELS). On our side of the aisle there are four men that I think also deserve special mention. There are our good friends and the ranking member of the subcommittee, the gentleman from Illinois (Mr. ERLENBORN), the gentleman from Idaho (Mr. HANSEN), the gentleman from California (Mr. BELL), and the gentleman from Wisconsin (Mr. STEIGER).

I want to pay particular credit to Mr. ERLENBORN, Mr. BURTON, and Mr. DANIELS, because none of them have coal mines in their districts. They could have taken the easy way out. They could have said that this is a matter which does not immediately concern their congressional districts and turned the matter over to someone else. But these three men in particular dedicated days, weeks, and months to ironing out one of the most difficult pieces of legislation that has been presented to this Congress in this or any other recent session.

The reason it is difficult is that there are large coal mines and small coal mines. There are big operators and little operators. There is a labor union that does not agree among itself as to what should be in this bill. There are those that manufacture mining equipment that have honest differences as to what kind of equipment should be in the bill.

Last, but not least, downtown we have the U.S. Bureau of Mines that sometimes cannot agree with anybody in the industry or anybody who manufactures equipment or with the Members of Congress.

Out of all of this disagreement this committee has presented a bill which can be described as a strong bill. It is a strong bill because it does not satisfy the coal miners in every respect. It is a strong bill because it does not satisfy the operators in every respect. And it is a strong bill because it does not satisfy the Bureau of Mines in every respect. When you have the three groups that are interested in the bill unable to agree on parts of the legislation, then I say it must be a pretty good bill. And the important thing about their disagreement is that no two of the groups disagree on the same provision.

I went back and looked up the RECORD of a speech I made on the floor of this House in 1952. I followed the gentleman from Kentucky (Mr. PERKINS) when we had before us a bill at that time to give to the Federal mine inspectors the right to close down mines.

I might just have cut out that speech and brought it in here, because what we said then we might well say today, because we have not changed our tune.

The most important thing we have to face is to provide a bill which is workable, which will give safety protection to the men, and which will cover them as far as their health is concerned.

For those who do not live in coal-mining areas or who do not come from areas where there have been coal mines, it might be startling to realize that 20 years ago there were about 250,00 to 300,000 men mining coal. Today the number is down to about 150,000 persons mining coal. More coal is being produced today per man than ever before—with less miners it is true, but now few people want to go into the mines.

It is hard to believe, and I never thought I would see the day when in the daily newspapers in my area ran the following ads:

WANTED MINE WORKERS

Certified or apprentices (All U.M.W.A. Benefits).

Assistant Mine Foreman (First Grade Assistant Foreman Certificate) Salaried supervisory benefit program (Pension—Insurance—Hospitalization, Etc.).

Steady employment, 2 New Mines in Armstrong Co.

Call: Area Code 412–465–5621, and Ask for R. H. Darr, or write R & P Coal Co., P.O. Box 279, Indiana, Pa. 15701.

This company needs 1,000 miners today and cannot get them. I am hoping as a result of this legislation that men might be induced once more to look to mining as a profession they can follow.

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. SAYLOR. I am happy to yield to the chairman of the committee.

Mr. PERKINS. Mr. Chairman, I feel I would be derelict if I failed to mention the great job that the distinguished gentleman from Pennsylvania (Mr.

SAYLOR) has done in behalf of mine safety all through the years.

I well recall the great speech the Congressman from Pennsylvania (Mr. SAYLOR) made in behalf of the 1952 act, requesting that the Federal Government have the right to police mines and to close them down when danger existed. That was in 1952.

But he did not stop there. It was necessary to get appropriations for the Bureau of Mines inspectors, in order to give meaning to the legislation. No Member in this body made a greater contribution than that made by the gentleman from Pennsylvania (Mr. SAYLOR) in appealing to the Appropriations Committee and to the membership of this House to increase appropriations for the Bureau of Mines.

The gentleman from Pennsylvania has been untiring in behalf of mine safety, and he has made a great contribution insofar as improving working conditions in the mines. It might observe that the gentleman from Pennsylvania does not confine his interest in natural resources to coal alone but he also is concerned about the whole area of conservation in this country, and for this we all owe the gentleman from Pennsylvania a great debt of gratitude.

Mr. SAYLOR. Mr. Chairman, I thank the gentleman from Kentucky.

Mr. BURTON of California. Mr. Chairman, will the gentleman yield?

Mr. SAYLOR. I yield to the gentleman from California.

Mr. BURTON of California. Mr. Chairman, first I thank the gentleman from Pennsylvania for his kind observations about me.

One of the very little-known facts about the temporary, one-shot black lung pay provision is that this provision ripened as a result of a conversation held between the gentleman from Pennsylvania and me.

It was the gentleman from Pennsylvania who advanced one of the essential concepts of the bill, in order to avoid what was the justifiable concern expressed in the very early days of this black lung payment idea, that we might be running the risk of federalizing in some way the workman's compensation program.

As the gentleman from Pennsylvania and I know full well, it was the concept advanced by the gentleman from Pennsylvania, embodied in this bill, that avoids that which all of us at least at this stage are delighted we have avoided; that is, that we would be creating any unnecessary or unhealthy precedent.

In that particular I want to now spread on the public record that of which the gentleman from Pennsylvania is so clearly aware as part of the background of this measure.

I would think the gentleman from Pennsylvania, in addition to that, deserves great credit along with others I shall mention during the course of my statement, for bringing virtually all the men representing the coal areas into very full and vigorous support of this amendment.

Mr. SAYLOR. I thank my colleague.

Let me digress for just a moment, for those who do not come from the coal mine areas. I put this in the RECORD now because I have lived with miners all my life. I am old enough to remember when, as a little boy, the men who were in the mines had what was described then as miners' cough.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. ERLENBORN. Mr. Chairman, I yield the gentleman 3 additional minutes.

Mr. SAYLOR. It was thought to be consumption. Nobody liked to use that word, because it was a dirty word. They did not know it was curable. They did not realize that it was not tuberculosis.

Then, when they found out it was not tuberculosis, those living in the mining communities gave it a new name—they called it miners' asthma. Unless one lived in one of those towns and could actually see the men come out of the mine and try to walk home, see them sit down on the curb or sit down in the mud along the way home, fighting to get their own breath, one cannot really understand.

Then people realized it was not asthma, because they found some things that would help asthma which did not help these miners.

Then they called it silicosis.

Then they discovered that silicosis was not the same as what the miners seemed to have. Yes, there were men in other industries who seemed to have something called silicosis because they did some work with rock dust in the mine.

Then they got a new name, a high-class name. The doctors got into it then and the medical profession gave it the name of anthracosilicosis.

Now they have come up with a name I cannot even spell, and they now call it pneumoconiosis.

Whether we call it the original name of miners' cough or pneumoconiosis, it is the same dreadful disease that strikes some of the men who work in the mines.

The worst part of it all is that the medical profession cannot tell us why it strikes some people and does not strike others. We have had cases where father and son worked in a mine, together in the same room, and one would get it and the other would not. We have had cases where whole families would get it and cases where neighbors did not.

These several hundred thousand people no longer in the mines are now spread out all over the country. They are in the 50 States of the Union.

What this bill does is to give these people who have had this mining experience and suffering from the disease, a one-shot operation to be taken care of. I am delighted with the fact that a few of the States, such as Pennsylvania, that have tried to take care of men with the disease, are also taken care of in this bill. Their contribution has been recognized.

I want to say that this is a strong bill. People have said they wanted to get a strong bill, and this is a strong bill. I hope that we can stand with the committee on it. There are going to be a few amendments offered. These amendments will deal with whether or not the Department of Health, Education, and Welfare should handle this matter or whether or not it should be a separate mine board composed of doctors. That is the one point of difference.

The CHAIRMAN. The time of the gentleman has expired.

Mr. ERLENBORN. Mr. Chairman, I yield the gentleman 1 additional minute.

Mr. SAYLOR. Mr. Chairman, I yield to the gentleman from Pennsylvania (Mr. DENT).

Mr. DENT. Mr. Chairman, the gentleman in the well and myself started working together on this type of legislation a number of years ago. When I first came to Washington in 1958 we were cosponsors of that legislation which set up the Mine Research Bureau. During the time in 1965 when we were working on the title I mines it was his strong support that gave us the kind of a bill which we received on final passage. It was his strong support now in collaboration with the chairman of the full committee, the gentleman from Kentucky (Mr. PERKINS) and the gentleman from New Jersey (Mr. DANIELS) who was holding the hearings, and the gentleman from California (Mr. BURTON) who was doing all of the leg work on the pneumoconiosis, that we were able to retain pneumoconiosis in the bill as it was originally written. This is because the gentleman (Mr. SAYLOR) understood then and understands now that this need be only a one-shot proposition. The reason for this is that we believe if they live up to the law as we hope to write it, there will be no more disease in the mines.

Mr. ERLENBORN. Mr. Chairman, I yield such time as he may consume to the gentleman from Texas (Mr. COLLINS).

Mr. COLLINS. Mr. Chairman, where the Federal Coal Mine and Safety Act of 1969 covers the field of safety everyone is in complete agreement. But, in this bill we enter a new region which involves Federal workmen's compensation. This program will add billions to the Federal budget at the time we are trying to achieve a balanced budget so as to halt the inflation facing the country.

In this bill we are taking over a function of Government that has been reserved in the past for the States. Workmen's compensation is not a Federal function. Conditions differ in every section of the country. In one section, folks are concerned with the coal miners, in another section problems relate to cotton mill workers; and in another area it is automobile factories.

On the average, maximum weekly compensation by the States for temporary total disability is 68 percent of average take-home pay after allowing for Federal income and social security taxes, and most States have unlimited medicare benefits to go with this. States are moving forward to meet the workers' compensation needs. We are all concerned with pneumoconiosis, but the inadequacies of workers' compensation for workers concerned with coal dust is just as applicable to workers employed in other industries and trades. Why should we concern ourselves in this bill with coal when many factory jobs are very high risk. What about Federal workmen's compensation for building construction? It is very dangerous, and

let us also get into materials. For example, beryllium is a highly toxic metal which has been used in the manufacture of fluorescent light bulbs until chronic beryllium poisoning was recognized as a workers' health hazard.

Asbestos is widely used. There are 3½ million workers who are exposed to it in their jobs. Asbestosis is recognized as a serious respiratory ailment and a cause of lung cancer, and half of the men who had worked in the trade had X-ray evidence of asbestosis. We are all aware of the sensitivity of uranium and yet we do nothing for uranium workers. What of the many people who are exposed to silica dust in their handling of rocks, dust, sands, and clay? My wife says beauty shop operators have a lung problem with hair spray. We all know of paint fumes and especially spray paint.

For many years inhaling cotton dust by textile workers was overlooked, but now we know that byssinosis—the lung disease—is affecting the health of hundreds of thousands of cotton textile workers. This is not only a factor in the cotton mills but out in the cotton fields where we have open air cotton gins the lint is even more severe.

Lung dangers come in many forms from talc, diatomite, carborundum, sugarcane fiber, moldy silage, and also in many natural and fabricated materials. But, in this bill we are dealing solely with coal dust pneumoconiosis and providing only the coal miners with Federal disability compensation.

And, even in the coal mining industry itself, this bill is discriminatory as it provides for workers disabled by coal dust but does nothing for disability in the coal mines from any other cause. A coal miner who is totally disabled because of the loss of his arms or his legs gets nothing, but a man who has the coal dust problem is fully covered.

This is not only a situation of inequity between miners, but complete inequity between coal miners and every other industrial worker in the Nation.

It is necessary that we delete this unfair section 112 from this Coal Mine Health and Safety Act.

Mr. ERLENBORN. Mr. Chairman, I yield 5 minutes to the gentleman from California (Mr. BURTON).

Mr. BURTON of California. Mr. Chairman, in earlier discussion I mentioned what I believe to be a very accurate description of the role of our very distinguished subcommittee chairman (Mr. DENT). I also make note of Mr. SAYLOR'S contribution to the resolution of the one-time payment issue. I would also like to commend the most distinguished chairman of our committee which had jurisdiction over the payment issue, Mr. DOM DANIELS of New Jersey. Because of his initiative, foresight, and determination we were able to move that matter along rapidly and he was able to get his committee to approve of it. I think the RECORD should also note this: Because of the persistence of the gentleman from Illinois (Mr. ERLENBORN) we were able to refine many of the sections of the bill so that they addressed themselves to the stated problem rather than accepting the statement of the problem and then proceeding to solve the problem in a blunderbuss and in many instances unduly expensive manner. I think it is in the finest tradition of legislative debate and give and take that the gentleman from Illinois forced the majority in all instances to justify, with the facts on the RECORD not only the statement of the problem but also the proposed solution advanced. In addition to the number of improvements directly offered by the gentleman from Illinois, there were a number of administrative subcommittee recommendations that were strengthened as a result of this give and take.

I think also the RECORD should reflect, if I may, Mr. Chairman, the prodigious efforts which were made by the gentleman from California (Mr. BELL) with reference to the development of the full committee resolution of the rather difficult so-called gassy-nongassy issue. I think the RECORD should also show, while we are at this late stage of the debate, that Mr. John F. O'Leary, the Director of the Bureau of the Mines; Mr. Harry Perry, Research Adviser, Assistant Secretary of Mineral Resources; and Cecil "Lucky" Lester, Herschel Potter, and Harry Weaver, all Federal coal mine inspectors, played a very important role in developing not only the thrust and tone of this legislation but some of the more difficult technical aspects of the bill.

And, last but not least, there have been three or four or five or six men who worked for us during the course of the preparation of this legislation. I make specific reference to Mr. Bob Vagely, the tireless, energetic, and superb staff counsel to Chairman DENT. Bob has given this legislation more staff attention than I have ever witnessed given a single bill, and certainly more than we would expect from this most conscientious committee counsel. His schedule with it has been daily, without regard to evening or weekend. His purpose was always single-minded and in the interest of the miner. He, too, was a focal point for intense pressures from all directions, and he withstood them to the credit of us all. Add it all up, and you have a brilliant effort.

From my personal standpoint, I make reference to a young man who has been of so much assistance to all of us and particularly to me, Mr. Gary Sellers. Gary came to us at a time when there was a paucity of expertise in this complex field and gave unselfishly of himself so that coal miners might work under conditions of relative safety. That humanitarian concern was his only one, and he should take great pride in his contribution. I have certainly benefited from it, but those he sought to help will be the most grateful benefactors in the years to come. His consummate dedication to the task, and concomitant skill and energy, is genuinely appreciated.

Also, I would like to acknowledge the efforts of Dan Krivit, who works for Chairman DANIELS, and Dave Finnegan who has been so enormously helpful during the course of this legislation since he left the Department of the Interior where he also worked on the legislation; as well as Don Baker and Jack Reed and Austin Sullivan who work for our distinguished chairman of the full committee.

Mr. Chairman, these are the men who truly devoted their efforts to the formulation of this legislation, along with Mike Bernstein who carefully looked out for the interests of the minority. They all deserve the approval and the plaudits of all of us who were ultimately faced with the responsibility of making policy judgments.

But, Mr. Chairman, perhaps a point about the chairman of our full committee, the gentleman from Kentucky (Mr. PERKINS). CARL is an old war horse in the finest meaning of the term.

He kept very close rein on our two friends, DANIELS and DENT, who always seem to work in tandem and whenever any of us on our side got a little out of line he was there to remind us to keep our eye on the ball. I think, as I stated earlier, when the history of this legislation is written, the fundamental difference that permeates the legislation before this House—and this can be distinguished from some of the ideas advanced by others—is that we rejected the concept that sound health and safety legislation to protect coal mine workers inevitably also had to be punitive legislation as it affected the industry.

The CHAIRMAN. The time of the gentleman from California has expired.

Mr. ERLENBORN. Mr. Chairman, I yield the gentleman 1 additional minute.

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. BURTON of California. I yield to the gentleman from Kentucky.

Mr. PERKINS. Mr. Chairman, although the distinguished gentleman from California (Mr. BURTON) has no coal in his congressional district, the interest he has taken in this legislation will mean much to the health and safety of coal miners and their families throughout America. The gentleman from California (Mr. BURTON) has worked day and night—and I say "day and night" because he has called me at midnight, and other Members on both sides of the aisle to clarify and resolve the issues in this complex and technical legislative field. I certainly want to compliment the gentleman for his untiring efforts in seeing to it that this legislation goes through the Congress—that we pass a strong mine safety bill, one that is meaningful in terms of the health and safety of our miners.

Mr. BURTON of California. I thank the chairman of our committee.

Mr. ERLENBORN. Mr. Chairman, I have no further requests for time.

Mr. PERKINS. Mr. Chairman, I yield 5 minutes to the distinguished gentleman from New Jersey (Mr. DANIELS).

Mr. STOKES. Mr. Chairman, will the gentleman yield?

Mr. DANIELS of New Jersey. I yield to the gentleman from Ohio.

Mr. STOKES. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I rise to support this bill and commend the distinguished chairman of our subcommittee (Mr. DENT) for the extremely competent job

he has done in preparing this measure, and for so successfully guiding it through our full committee, with the aid and assistance of our distinguished chairman (Mr. PERKINS).

We are all aware of the genesis of this legislation. The horrifying tragedy at Farmington last winter shocked the conscience of the Nation and lifted public concern about coal mine safety from almost two decades of lethargic inaction.

Your committee has, I feel, responded well to this outcry. For over 9 months we have heard testimony and collated the enormous amount of data available on safety practices. In addition, we observed the procedures used in the mines of Great Britain—procedures which were of great assistance to us in the preparation of our own bill.

The results of this effort are before you. It is a good, tough bill. My distinguished chairman (Mr. DENT) will offer some technical amendments tomorrow which will further strengthen the safety standards laid out in the bill. These amendments should be supported. Basically, however, the bill in its present form accomplished well its purposes. Whenever doubt arose in our discussions, it was resolved, as it should be, on the side of safety for our miners.

I strongly recommend, therefore, that the House adopt the measure, and consequently give a resounding endorsement to the concept of maximum safety in our country's mines.

Mr. ANNUNZIO. Mr. Chairman, will the gentleman yield?

Mr. DANIELS of New Jersey. I yield to the gentleman from Illinois.

Mr. ANNUNZIO. Mr. Chairman, I deeply appreciate my distinguished colleague, the gentleman from New Jersey (Mr. DANIELS), yielding me this time.

Mr. Chairman, as a cosponsor of H.R. 13950, I, of course, am pleased to add my voice in support of passage of the Federal Coal Mine Health and Safety Act of 1969.

I note in a recent issue of the United Mine Workers Journal that in the first 8 months of 1969 no less than 141 coal miners have been killed in mine accidents. This is what has happened in the mines while we have been considering this bill. This was no new disaster. This happens day by day, in twos and threes. One hundred and forty-one men, most of them family heads, are dead.

One cannot legislate overnight. I have followed closely the work of the House Committee on Education and Labor in preparing H.R. 13950. In particular I have been impressed with the devotion to writing a strong, sound bill shown by the General Subcommittee on Labor, under the chairmanship of Representative JOHN H. DENT. Mr. DENT not only comes from a coal-mining State, but has been himself engaged in coal mining. He understands the problems of this industry, an industry with many unique conditions, which make its problems with respect to safety and health unlike those of any other industry. Mr. DENT has made an outstanding contribution in his work of drafting H.R. 13950.

The subcommittee not only has held extensive hearings, 10 days in all, but has also visited coal mines in the United States. It has gone to England to consult with officials of the National Coal Board there and with their medical research staffs. This was done especially to seek information on the problem of the "black lung" disease, coal miners' pneumoconiosis. While in England, the subcommittee also visited a British coal mine.

Subsequently the subcommittee spent 8 days in open and executive session writing the bill now before us. When it was referred to the full committee, hearings were held an additional day by Chairman PERKINS to permit the consideration of issues which had arisen subsequent to the completion of action by the subcommittee.

Thus when taking up, as we do here, the result of these deliberations we have no reason to think that we can easily write on the floor of this House improvements in the work of the committee. The subject matter of H.R. 13950 is outside the experience of most Members of the Congress. Few of us have ever been in a coal mine. He must rely on the expertise developed by the members of the committee.

It is they who have consulted with authorities on mine health and mine safety, here and abroad. They have listened to the views of and questioned representatives of operators of large coal mines, operators of small coal mines, mine union officials, individual coal mines, interested members of the public and, administration officials, including the Departments of Interior; Labor; and Health, Education, and Welfare. They have talked with mining engineers and doctors. They have talked with State officials concerned with coal mine safety. They heard from the very lips of the coal miners telling what it is like to go through a mine accident and survive.

We need have no doubts of the soundness of the proposal before us. I believe, Mr. Chairman, it is time to vote this bill, up or down—and there is little question but that it will be passed by this body overwhelmingly, as was the Senate bill by the Senate.

It is time—and past time. Only last month, in a mine owned by the Consolidation Coal Co., a fire swept through one section. There were at the time over 100 miners at work in the mine. Fortunately none were trapped in the area of the mine where the fire erupted. This mine was the Loveridge mine of the Consolidation Co. It is located in the same area as the Farmington No. 9 of this company where 78 men died last fall. Indeed, it is separated from No. 9 by only a 160-foot barrier of coal.

Let it not be said that while we talked here another disaster took place like the Farmington disaster. We have had at least this one close call. But let us not forget the real mine safety problem. While it is the major disasters which catch the attention of the American public and lead to demand for, and support of, congressional action, the real problem is to prevent the small accidents, where one, two, or three men are injured or killed. Ninety percent of the injuries and deaths in coal mines are in these small accidents, not in the major disasters. It was these small accidents which killed 141 men in 8 months; there have been, fortunately, no major mine disasters since Farmington, last fall.

This legislation will not end all coal mine accidents. We cannot make the work of coal mining other than dirty, arduous, and dark. But at least we should try to make it as safe and as healthful as it can be made. It will never be pleasant work. It probably can never be made wholly safe or healthful. But it need not continue to be work where all too many workers have a choice only between dying young from diseased lungs, or dying even younger from a rock fall, a fire, or an explosion.

Mr. DANIELS of New Jersey. Mr. Chairman, I rise in support of H.R. 13950, a bill to provide for the health and safety of persons working in the coal mining industry of the United States

At the outset, I again must hail the valiant efforts of my colleague, the gentleman from Pennsylvania (Mr. DENT) the chairman of the General Subcommittee on Labor, for his magnificent work on behalf of the coal miners of America and praise equally the leadership of our distinguished chairman, the gentleman from Kentucky (Mr. PERKINS). Also, I wish to compliment all the members of my Select Subcommittee on Labor, and in particular the gentleman from California (Mr. BURTON) for his invaluable contributions in developing this legislation.

Although the Federal coal mine health and safety bill is primarily directed toward prevention and control, it also provides for grants to the States to pay benefits to miners totally disabled from complicated pneumoconiosis and to the widows of miners who suffered from complicated pneumoconiosis at the time of death.

Although the passage of H.R. 13950 is of overwhelming importance, I particularly want to address my remarks to section 112(b), "entitlement to miners." The crucial section is needed to save thousands of miners and their widows and children from a life of despair, illness, and poverty.

While the number of people involved in coal mining has fallen from 650,000 in the late forties to a current figure of about 150,000, in the last 20 years approximately 1 million miners have been exposed to hazards of coal dust. As a result, some experts estimate that in this country there are now about 100,000 cases of miners' pneumoconiosis.

According to the public health service, 20 percent of all inactive, and 10 percent of all active miners show X-ray evidence of the disease; and of these, 9 percent of the inactive—18,000—and 3 percent of the active—4,320—miners have progressive massive fibrosis—the complicated form of the disease that causes severe disability and ultimately death.

At the turn of the century, the British became suspicious of the effects of inhalation of coal dust and began a rather thorough investigation of the problem. Thus, coal workers' pneumoconiosis was recognized in Great Britain as early as 1943. Unfortunately, the medical profession in the United States has been extremely reluctant to accept the British findings, and consequently, coal workers' pneumoconiosis, until the last couple of years, was not widely accepted as a disease entity in this country.

The impact of the reluctance of the American scientists and doctors to accept the validity of the findings of their British counterparts had several unfortunate consequences.

First, it precluded attempts by private enterprise to control coal dust in the mines in order to prevent the effects of this insidious disease.

Second, it caused States to neglect the problem when it was in its inception and the cost of prevention could still be economically borne by State governments or private enterprise.

Third, it operated to prevent disabled coal miners from obtaining workmen's compensation, proper medical care, and other remedial action.

Thus, many thousands of miners have died before their claims were processed, or the expiration of the statute of limitations has prevented miners from proving their claims in time to receive benefits.

Today, it is economically impossible for most States to provide funds for retroactive claims and unconstitutional to make private employers pick up these claims. It is also understandable that States which are not coal producing have no wish to assume responsibility for residents who may have contracted the ailment mining coal in another State.

The substantial reduction in the number of miners actually employed in mines following World War II caused a dispersal of men throughout the country—many into States which have few, if any, mines. These men took with them an irreversible disease, but because of their present location they are denied benefits.

So we find ourselves with this problem. How do we get the States to pass laws to aid these victims when these victims contracted the disease of "black lung" years ago while working in a coal mine in another State?

The answer is clear—States are either unable to act or are not sufficiently motivated to act. But, we in Congress must concern ourselves with the unmet needs of the disabled miner and his family when his State, his employer, and his union have not met their responsibilities.

The CHAIRMAN. The time of the gentleman from New Jersey (Mr. DANIELS) has expired.

Mr. PERKINS. Mr. Chairman, we have several Members who are requesting time, but let me yield another minute to the distinguished gentleman from New Jersey (Mr. DANIELS), who has done so much to put this compensation feature together and which would not have been put together but for the gentleman from New Jersey.

Mr. DANIELS of New Jersey. I thank my chairman.

Mr. Chairman, for us to fail to provide for the future health, safety, and protection of coal miners and at the same time deny aid to the worker who has already given up precious years of life in this, our Nation's most hazardous occupation, would be both callous and unforgivable on our part.

Section 112(b) directs payment of compensation to an individual rendered totally disabled from complicated pneumoconiosis and to the widows of miners who suffered from complicated pneumoconiosis at the time of death. The disease must have arisen out of or in the course of the individual's employment in a coal mine. Work in a coal mine for 10 years establishes a rebuttable presumption—less than 10 years in a coal mine does not foreclose recovery, but without the benefit of a presumption.

Payments are based upon 50 percent of the minimum monthly payment to which a Federal employee, grade GS–2, is entitled who is totally disabled at the time of payment. This amount is approximately $136 monthly. In case of death, a widow would receive the same amount.

Payments would be increased as follows:

Fifty percent for one dependent, or approximately $204 per month.

Seventy-five percent for two dependents, or approximately $238 per month.

One hundred percent for three or more dependents, or approximately $272 per month.

Payment under this provision is reduced by any amount the payee receives under workmen's compensation, unemployment compensation, disability laws of a State, and excess earnings under section 203 (b) through (L) of the Social Security Act.

No claim shall be considered unless it is filed:

First. One year after the date an employed miner received the results of his X-ray provided under section 203 of the Federal Coal Mine Health and Safety Act, or if he did not receive such X-ray, 1 year from the date he received such opportunity to do so under section 203.

Second. In case of other claimants, 3 years from the date of enactment.

Third. In the case of a widow, 1 year after death or 3 years after date of enactment, whichever is the later.

No payment shall be made to residents of a State which after the date of enactment of this act reduces its State workmen's compensation or disability insurance laws to persons eligible to receive payment under this act.

We have made every effort to relieve the concern that we are trampling on the States' right to administer this particular payment—on page 40 of H.R. 13950, starting on line 21, you will note the following language:

> Such Governor shall implement the agreement in such manner as he shall determine to best effectuate the provisions of this subsection.

The Select Subcommittee on Labor, of which I am chairman, held 7 days of hearings on legislation to provide benefits for persons who have contracted pneumoconiosis. As a result, on August 5, our subcommittee reported a bill to provide benefit payments to coal miners suffering from complicated pneumoconiosis. This program of payments was maintained in the bill by the Committee on Education and Labor by a vote of 25 to 9.

On September 30, the Senate also recognized the need for a similar provision and enacted as part of their coal mine health and safety bill an amendment modeled after section 112(b). This provision passed the Senate 91 to 0.

Section 112(b) is clearly not intended to establish a Federal prerogative or precedent in the area of payments for the death, injury, or illness of workers. However, coal miners' pneumoconiosis is one of our Nation's most critical occupational health problems. I am sure none of us would want to excuse inaction here by pointing to the necessity of action elsewhere. We must make progress where we can, and whenever we can.

The CHAIRMAN. The time of the gentleman from New Jersey has again expired.

Mr. PERKINS. Mr. Chairman, how much time do we have?

The CHAIRMAN. The gentleman has 2 minutes remaining.

Mr. PERKINS. Mr. Chairman, I yield to the distinguished gentleman from Illinois (Mr. PUCINSKI) 1.5 minutes.

Mr. PUCINSKI. Mr. Chairman, I rise in support of this legislation.

I would like to point out this is the most significant coal mine safety bill ever written by Congress. I regret that times does not permit us to go deeper into this subject.

I congratulate my colleague, the gentleman from Pennsylvania (Mr. DENT), for the tremendous job he has done. He has fought back every special interest group and every selfish interest group in this country which tried to water down this bill. They are working overtime right now still trying to stop this bill from bringing meaningful safety standards to the coal mining industry.

I say to you that when you have 90,000 deaths in the coal mines of America since the beginning of this century and 170 deaths occurring in the coal mines since the disaster in Farmington alone, as good as this bill is, it still does not go far enough.

The 135,000 coal miners who produce 600 million tons of coal a year in this country demonstrate that they are the most productive workers in America.

I do not think we can go too far in raising safety standards to give these men the kind of protection that they are entitled to. That is the least the Congress can do for men who risk their lives every day so that the wheels of American industry can keep turning.

I shall view with grave concern any amendments that are offered on either side tomorrow as we go into the amending stage of this bill because I tell you the committee has done a good job. It is a good and sound piece of legislation. The fact that there are those who would have Congress respond to their own narrow, special interests is of no interest to me. I shall do everything possible to retain the high standards of safety written into this bill by the committee.

As a member of the subcommittee which wrote the legislation, I can tell you every means possible was used to thwart our efforts. I am proud that the committee rejected these efforts and wrote a strong bill. I have one concern and that is to have a good safe-mining bill before this Congress, and tomorrow I shall resist amendments if they are going to weaken this bill. As a member of the subcommittee, I know how hard this committee labored to get us a good bill, and I intend to have a good safety bill come out of this House tomorrow when the smoke clears.

Mr. PERKINS. Mr. Chairman, I yield to the gentleman from New Jersey (Mr. MINISH).

Mr. MINISH. Mr. Chairman, I rise in support of this legislation.

During the last 100 years, approximately 120,000 fatalities have occurred in coal mines. The figure, of course, does not include the hundreds of thousands of additional miners who met early death due to black lung and other coal mining related diseases. I believe I am able to speak with some expertise on this important subject. I grew up in the coal mining region of northeastern Pennsylvania. Many of my relatives worked in the mines. My father died of black lung disease at the age of 36.

Passage of the Federal Coal Mine Health and Safety Act of 1969 will result in better protection against injury and death for the Nation's 130,000 coal miners. However, while the bill is an obvious improvement over present law in many respects, it still falls far short of providing for the maximum health and safety of miners.

On the plus side, the measure before us today includes both comprehensive safety standards for mine facilities, equipment, and operations, and improved procedural mechanism to detect and redress health and safety violations in the mines. It authorizes the Secretaries of Interior and Health, Education, and Welfare to inspect and investigate mines without prior notice to mine operators and to assign full-time inspectors to excessively gassy mines. Injunctive powers are granted to insure compliance with safety regulations, and penalties ranging from $10,000 for a first violation to $20,000 and/or 1 year in prison for repeated convictions are established.

The legislation would provide Federal compensation for victims of pneumoconiosis or black lung disease. Miners suffering from severe stages of incurable black lung could be compensated up to $272 a month. In order to prevent the occurrence of this dreaded disease, the concentration of dust in mines would not be permitted to exceed 4.5 milligrams of respirable dust per cubic meter of air 6 months after enactment. One year after enactment the maximum allowable dust level would be reduced to 3 milligrams. The Secretary of Health, Education, and Welfare then assumes authority to further lower this standard.

Additionally, all miners will be given the opportunity to be X-rayed periodically for signs of black lung. Miners showing traces of the disease will be allowed to shift to less dusty sections of the mine at no loss in pay. A levy of 2 cents per ton of coal produced is imposed on mine operators to support research into mine health and safety.

While the coal dust level provided in the bill is generally fair and will assure much safer mining conditions, the method of computing the dust level leaves much to be desired and should be revised. Dust levels should be measured over each work shift, rather than derived from the average level over a number of shifts as proposed in the bill now before us. Moreover, a definite timetable should be established for reducing the allowable dust standard to a lower, safer figure.

I hope the House will act also to eliminate the other glaring loopholes contained in the mine safety bill as reported. I refer specifically to provisions which would encourage delays in buying safe equipment for certain mines and increase the powers of the industry-dominated board of review to review health and safety standards for mines.

Exemptions written into this bill at the last moment would permit operators of so-called nongassy mines, numbering about 3,000 across the United States, to put off the installation of vital spark-free electrical equipment for up to 6 years and even, at the discretion of the Secretary of the Interior, forever.

There is no need for a board, traditionally controlled by special interests, to review the carefully drawn conclusions of public officials charged with insuring the health and safety of miners. Under the pending legislation, this board of review would be empowered both to overrule a closing order by a qualified Bureau of Mines inspector and to annul penalties imposed on violators of safety regulations. For the purposes of review, in fact, the board is not "bound by an previous findings of fact" by the Secretary of the Interior or by a Federal mine inspector.

Lastly, I believe we should adopt a provision similar to that section of the Senate passed bill which protects miners who report safety violations from discharge or discrimination.

Mr. Chairman, unless these loopholes are closed, we will not have done our best to protect the health and safety of thousands of coal miners. We cannot, and must not, allow certain mine operators to place a higher value on profit than on human life.

Mr. PERKINS. Mr. Chairman, I yield to the gentleman from West Virginia (Mr. HECHLER).

Mr. HECHLER of West Virginia. Mr. Chairman, coal mining is a barbarous business. Yet one of the most heartening developments of the past year is that the people of every State in the Union have become aroused about the conditions under which coal miners work and try to live.

The conscience of the Nation has been stirred. From State after State comes the determined cry: Stop this slaughter in the coal mines.

You do not have to be a longtime expert to understand the human aspects of coal mining. It is right in front of your eyes. Charles Dickens wrote about Coketown in his classic novel "Hard Times" and painted the picture very accurately. Conditions a century ago were well described by Emile Zola in "Germinal," one passage of which goes like this:

"Have you been working long at the mine?" He flung open both arms.

"Long? I should think so. I was not eight when I went down and I am now fifty-eight. They tell me to rest, but I'm not going to; I'm not such a fool. I can get on for two years longer, to my sixtieth, so as to get the pension."

A spasm of coughing interrupted him again.

"I never used to cough; now I can't get rid of it. And the queer thing is that I spit, that I spit."

The rasping was again heard in his throat, followed by the black expectoration.

"Is it blood?"

He slowly wiped his mouth with the back of his hand.

"No, it's coal. I've got enough in my carcass to warm me till I die. And it's five years since I put a foot down below. I stored it up, it seems, without knowing it."

"And is your company rich?"

"Ah, yes . . . an output of 5,000 tons a day. Ah, yes, there's money there."

In the century which has elapsed since Emile Zola wrote the words I have quoted, very little has changed in the coal mines except the modernized machinery. Coal miners live and die in a system which can only be characterized as feudal. Profits and dividends in the coal industry, according to Moody's, more than doubled from $56 million in 1959 to $130 million in 1965—and they are still going up, as the major oil companies are eagerly purchasing coal properties. Against this background of rising profits, what is happening to the men who work in the mines? Listen to these grim statistics:

One and one-half million men injured in coal mines since the early 1930's.

Seven times as many coal miners are killed and injured as the average industrial occupation.

Between the ages of 60 and 64, eight times as many coal miners and retired miners die as compared to the average in any other occupation.

One hundred and twenty-five thousand coal miners wheezing, breathless, disabled by pneumoconiosis.

More than twice as many coal miners killed since Farmington—182, to be exact—as compared to the 78 who are still buried in their gassy grave at Farmington.

Since the Farmington disaster, 5,465 coal miners injured.

The last major revision of our coal mine safety law was in 1952, and since that law was passed over 6,000 coal miners have been killed and more than a quarter of a million injured.

Here is a headline on Columbus Day in the Huntington, West Virginia newspaper: "More Miners Were Killed, But Less Coal Was Mined."

The Associated Press dispatch starts:

More miners were killed during the first six months of this year than in 1968, yet fewer tons of coal were mined, the West Virginia State Mines Department said.

The shock of the Farmington disaster, which occurred almost a year ago, on November 20, 1968, awakened the Nation to demand action to protect the men who work in the most hazardous job in the United States. I think it is accurate to state that we would not be debating this bill today, nor would some of the provisions of the bill be so strong, had it not been for the explosion which killed 78 men at Farmington. But the important point about the effect of Farmington is that very little has changed since November 20, 1968, in the stark picture of death, injury, and disease in the coal mines. In a flurry of activity following the Farmington disaster, the able Director of the Bureau of Mines, John F. O'Leary, cracked down on safety violations, ordered that many mines be closed until their unsafe practices were corrected, made it easier for miners to call attention to safety violations by notifying him directly, and issued stern

orders against mine inspectors tipping off the coal operators before making their spot inspections. All these measures should be marked down as pluses for the protection of the coal miner. One can only speculate about how many more deaths and injuries would have occurred in the coal mines had John F. O'Leary and the Bureau of Mines not put into effect these aggressive new measures.

But still there have been over twice as many killed since Farmington, as died in that disaster. And over 5,000 coal miners have been injured since Farmington—5,465 to be exact. Every day that passes sees more and more men crippled either by accident or by the breathing of coal dust. In West Virginia, which is the largest coal-producing State in the Union, where we mine over one-quarter of the Nation's total tonnage of coal, one out of every 300 men who went into the mines lost his life and one out of 10 suffered a lost-time injury in the mines. Did you hear that figure? One out of 10 injured; we have a little more than 40,000 coal miners in West Virginia, and over 4,000 of them were injured during 1 year, not to mention the thousands suffering from the crippling effects of black coal dust encrusting their lungs.

I appeal to you, Mr. Chairman, to make this bill we vote on tomorrow a tough bill, a bill which is effective, and a bill which does not cut corners in protecting the health and safety of the coal miners. There are enough people worrying about the economic health of the coal industry; you can see them running around Capitol Hill. They have been here doing some very effective lobbying every time this Congress has considered coal-mine legislation. The coal operators are shedding tears that this bill might force the closing down of mines. They threaten power blackouts. They say stockpiles are running low. A letter from the National Coal Association to all Members states:

> The Congress should make clear that the Government need not close a mine in which the operator is doing his utmost to meet the dust standards but is unable to do so for lack of technology.

Mr. Chairman, we have heard this cry, this threat, this form of insensitive and implacable opposition for a long, long time. When are we going to start placing the priority where it belongs—on the value of a human life? When are we going to declare that the threat of closing down a mine is not nearly as serious as the threat of closing down a man?

Yes, there will be compromises offered during the course of this debate. There will be many amendments designed to weaken and water down the otherwise strong provisions of this bill. I find this prospect very depressing. I know that legislation involves the fine art of compromise. I know that in an effort to gain support for this bill it is felt necessary to indulge in the good, old-fashioned parliamentary game of give and take. But we are dealing with men's lives here today. We are dealing with the most hazardous occupation in this Nation. We are dealing with an industry whose social attiudes are medieval, and whose union leadership has failed to stand up and fight for the protection of the rank and file. The coal industry has fought every step of the way against measures to protect health and safety, and I am sorry to say that the union leadership has been insensitive to the needs of the men. There is no profit incentive in health and safety, and there is plenty of profit incentive in high production, high wages, high coal dust levels which produce a high rate of industrial murder.

How can we talk of compromise in this situation? Can you compromise a man's life, can you afford to compromise his limbs, can you afford to compromise his lungs? Death is a very certain phenomenon. You cannot compromise it. When you get coal dust in your lungs, you cannot reverse the process and flush it out like you can a man's stomach. Once a coal miner contracts this disease, the effects are progressive.

So I appeal to you, Mr. Chairman, in this first chance in 17 years to make a comprehensive revision in the coal mine health and safety law, let us not compromise with a man's life, or his limbs or his lungs. This slaughter in the coal mines must stop.

There follows the text of amendments which I feel would strengthen the bill. I also contemplate further amendments in the areas of dust standards, firmer inspection guidelines in extrahazardous mines, and a clarification of judicial procedures and remedies.

AMENDMENTS TO H.R. 13950 OFFERED BY MR. HECHLER OF WEST VIRGINIA

(Section 3)

AMENDMENT NO. 1—THE BOARD

On page 4, line 24, after the semi-colon insert "and".

On page 5, line 4, change the semi-colon to a period and strike "and".

On page 5, strike lines 5 and 6.

(Section 101)

On page 6, line 4, strike "the Board, other".

On page 8, line 3, strike "by the Board".

On page 8, line 7, change the comma to a period and strike out all thereafter through the period on line 9.

On page 8, line 10, strike all through page 9, line 6, and substitute the following:

"(f) Promptly after any such notice is published in the Federal Register by the Secretary under subsection (e) of this section, the Secretary shall issue notice of, and hold a public hearing for, the purpose of receiving relevant evidence. Within sixty days after completion of the hearings, the Secretary shall make findings of fact which shall be public. In the case of mandatory safety standards, the Secretary may promulgate such standards with such modifications as he deems appropriate. In the case of mandatory health standards, the Secretary shall transmit his findings to the Secretary of Health, Education, and Welfare who may, upon consideration of the Secretary's findings of fact, direct the Secretary to promulgate the mandatory health standards with such modifications as the Secretary of Health, Education, and Welfare deems appropriate and the Secretary shall thereafter promulgate the mandatory health standards."

(Section 105)

On page 20, line 1, strike after the period through page 21, line 14, and substitute the following:

"The applicant shall send a copy of such application to the representative of miners in the affected mine, or the operator, as appropriate. Upon receipt of such application, the Secretary shall cause such investigation to be made as he deems appropriate and shall promptly hold a public hearing for the purpose of receiving relevant evidence relating to the issuance and continuance of such order. The operator and the representative of the miners shall be given written notice of the time and place of the hearing at least five days prior to the hearing. Any such hearing shall be of record and shall be subject to section 554 of title 5 of the United States Code.

"(b) Upon completion of the hearing, the Secretary shall make findings of fact, and he shall issue a written decision vacating, affirming, modifying, or terminating the order complained of, or the modification or termination of such order, and incorporate his findings therein.

"(c) In view of the urgent need for prompt decision of matters submitted to the Secretary under this section, all actions which the Secretary takes under this section shall be taken as promptly as practicable, consistent with the adequate consideration of the issues involved.

"(d) Pending completion of the proceedings required by this section, the applicant may file with the Secretary a written request that the Secretary grant temporary relief from any order issued under section 104 of this Act, except section 104(a) of this Act, or from any modification or termination of any order issued under section 104(g) of this Act, together with a detailed statement giving reasons for granting such relief. The Secretary may grant such relief, under such conditions as he may prescribe, if—

"(1) a hearing has been held in which all parties were given an opportunity to be heard;

"(2) the applicant shows that there is substantial likelihood that the findings of the Secretary will be favorable to the applicant; and

"(3) such relief will not adversely affect the health and safety of miners in the affected coal mine."

(Section 106)

On page 21, line 15, strike all through page 30, line 19.

(Section 108)

On page 30, line 21, strike all through page 31, line 20, and substitute the following:

"SEC. 108. (a) Any decision issued by the Secretary under section 105 of this Act shall be subject to judicial review by the United States court of appeals for the circuit in which the affected mine is located, or the United States Court of Appeals for the District of Columbia Circuit, upon the filing in such court within thirty days from the date of such decision of a petition by the operator or a representative of the miners in any such mine aggrieved by the decision praying that the decision be modified or set aside in whole or in part. A copy of the petition shall forthwith be sent by registered or certified mail to the other party and to the Secretary and thereupon the Secretary shall certify and file in such court the record upon which the decision complained of was issued, as provided in section 2112 of title 28, United States Code.

"(b) The Court shall hear such petition on the record made before the Secretary. The findings of the Secretary, if supported by substantial evidence on the record considered as a whole, shall be conclusive. The court may affirm, vacate, or modify any such decision or may remand the proceedings to the Secretary for such further action as it may direct.

"(c) Pending review of any decision issued by the Secretary under section 105 of this Act, except a decision pertaining to an order issued under section 104(a) of this Act, the court upon request, may, under such conditions as it may prescribe, grant such temporary relief as it deems appropriate pending final determination of the proceeding if—

"(1) all parties to the proceeding have been notified and given an opportunity to be heard on a request for temporary relief;

"(2) the person requesting such relief shows that there is a substantial likelihood that he will prevail on the merits of the final determination of the proceedings; and

"(3) such relief will not affect the health and safety of miners in the coal mine."

On page 32, line 2, strike "Board's" and insert "Secretary's."

On page 32, line 4, strike "Sec. 109" and insert "Sec. 107".

On pge 34, line 2, strike "Sec. 110" and insert "Sec. 108".

On page 35, line 9, strike "Sec. 111" and insert "Sec. 109".

On page 37, line 22, strike "Sec. 112" and insert "Sec. 110".

On page 43, line 11, strike "Sec. 113" and insert "Sec. 111".

(Section 111)

Page 36, line 3, strike out "Board" and insert "Secretary".

(Section 201)

Page 44, line 25, strike out "sections 105, 107, and 108 of".

On page 48, lines 10 and 14, strike "the Board" and insert "the Secretary of Health, Education and Welfare".

On page 49, line 9, strike the comma after "Secretary" and strike "the Board".

(Section 301)

On page 51, lines 22 and 23, strike "sections 105, 107, and 108 of".

(Section 401)

On page 106, line 5, strike all through line 17, and substitute the following:

"SEC. 401. (a) The Secretary and the Secretary of Health, Education and Welfare, as appropriate, shall conduct such studies, research, experiments, and demonstrations as may be appropriate."

On page 108, line 1, strike all after "(b)" through the period on line 5.

On page 108, line 13, strike all after the period through the period on line 15.

On page 108, line 24, strike "the Board" and insert "the Secretary".

On page 109, lines 1, 7, 11, 16, 20 and 22, strike "Board" and insert "Secretary".

On page 109, lines 1, 4, and 5 strike "it" and insert "the Secretary".

On page 109, lines 7, 18, and 20, strike "it" and insert "the Secretary".

On page 109, lines 7, 18, and 20, strike "it" and insert "the Secretary and the Secretary of Health, Education and Welfare".

(Section 407)

On page 115, line 2, strike the period and insert a comma and the following "except as otherwise provided in section 105 of this Act".

(Section 412)

On page 117, lines 8 and 15, strike "Board" and insert "Secretary".

AMENDMENT NO. 2—DISCHARGE OF MINERS

(Section 104)

On page 19, between lines 18 and 19, insert:

"(j) (1) No person shall discharge or in any other way discriminate against or cause to be discharged or discriminated against any miner or any authorized representative of miners by reason of the fact that such miner or representative (A) has notified the Secretary or his authorized representative of any alleged violation or danger pusuant to section 103(g) of this title, (B) has filed, instituted, or caused to be instituted any proceeding under this Act, or (C) has testified or is about to testify in any proceeding resulting from the administration or enforcement of the provisions of this Act.

"(2) Any miner or a representative of miners who believes that he has been discharged or otherwise discriminated against by any person in violation of paragraph (1) of this subsection may, within thirty days after such violation occurs, apply to the Secretary for a review of such alleged discharge or discrimination. A copy of the application shall be sent to such person who shall be the respondent. Upon receipt of such application, the Secretary shall cause such investigation to be made as he deems appropriate. Such investigation shall provide an opportunity for a public hearing at the request of any party, to enable the parties to present information relating to such violation. The parties shall be given written notice of the time and place of the hearing at least five days prior to the hearing. Any such hearing shall be of record and shall be subject to section 554 of title 5 of the United States Code.

"Upon receiving the report of such investigation, the Secretary shall make findings of fact. If he finds that such violation did occur, he shall issue an order requiring the persons committing such violation to take such affirmative action to abate the violation as the Secretary deems appropriate, including, but not limited to, the rehiring or reinstatement of the miner or representative of miners to his former position with back pay. If he finds that there was no such violation, he shall issue an order denying the application. Such order shall incorporate the Secretary's findings therein. Any decision issued by the Secretary under this paragraph shall be subject to judicial review in accordance with the provisions of section 106 of this Act. Violations by any person of paragraph (1) of this subsection shall be subject to the judicial review and civil penalties provisions of this title.

"(3) Whenever an order is issued under this subsection, at the request of the applicant, a sum equal to the aggregate amount of all costs and expenses (including the attorney's fees) as determined by the Secretary to have been reasonably incurred by the applicant for, or in connection with, the institution and prosecution of such proceedings, shall be assessed against the person committing such violation."

AMENDMENT NO. 3—CRIMINAL SANCTIONS ON CLOSING ORDERS

(Section 111)

On page 36, line 16, strike "(a)".

AMENDMENT NO. 4—SINGLE SHIFT MEASUREMENTS

(Section 202)

On page 46, lines 6 and 22, and on page 47, line 14, strike "over several shifts".

AMENDMENT NO. 5—MOVING MINER TO LOWER DUST AREA

(Section 203)

On page 49, line 16, strike all through the period on page 50, line 9, and substitute the following: "shows evidence of the development of pneumoconiosis shall be assigned by the operator for such period or periods as may be necessary to prevent further development of such disease, to work, at the option of the miner, in any working section or other area of the mine, where the average concentration of respirable dust in the mine atmosphere to which the miner is exposed during each shift is at or below 1.0 milligrams of dust per cubic meter of air."

AMENDMENT NO. 6—MINE NOISE

(Section 203)

On page 50, between lines 11 and 12, insert:

"(c) Beginning six months after the operative date of this title, and at intervals of at least every six months thereafter, the operator of each mine shall conduct tests by a qualified person of the noise level at the mine in a manner prescribed by the Secretary and certify the results to the Secretary. If the Secretary determines, based on such tests or any conducted by his authorized representative, that the standards on noise prescribed under the Walsh-Healey Public Contracts Act, as amended, or such improved standards as the Secretary may prescribe, are exceeded, such operator shall immediately undertake to install protective devices or other means of protection to reduce the noise level in the affected area of the mine, except that the operator shall not require the use of any protective device or system which the Secretary or his authorized representative finds will be hazardous or cause a hazard to the miners in such mine."

AMENDMENT NO. 7—PERMISSIBLE EQUIPMENT

(Section 305)

On page 72, line 11, strike all through page 74, line 17, and substitute the following:

"ELECTRICAL EQUIPMENT

"SEC. 305. (a) Effective one year after the operative date of this title—

"(1) all junction or distribution boxes used for making multiple power connections in the active workings of a coal mine shall be permissible;

"(2) all handheld electric drills, blower and exhaust fans, electric pumps, and other such low horsepower electric face equipment as the Secretary may designate within two months after the operative date of this title, which are taken into, or used in, the working section of any coal mine shall be permissible; and

"(3) all electric face equipment which is taken into, or used in, the working section of any coal mine classified as gassy under any provision of law prior to the operative date of this title shall be permissible.

"(b) (1) Effective one year after the operative date of this title, all electric face equipment not referred to, or designated under, subsection (a) (2) of this section which is taken into, or used in, the working section of any coal mine, except a coal mine subject to the requirements of subsection (a) (3) of this section or paragraph (2) of this subsection, shall be permissible.

"(2) Effective two years after the operative date of this title, all electric face equipment not referred to, or designated under, subsection (a) (2) of this section which is taken into, or used in, the working section of any coal mine, except a coal mine subject to the requirements of subsection (a) (3) of this section, which is operated entirely in coal seams located above the watertable with one or more openings made prior to the date of enactment of this Act, and with a total production of coal that does not exceed fifty thousand tons annually, based on the mine's production records for three calendar years prior to such date, shall be permissible.

"(3) In the case of any coal mine subject to the requirements of paragraph (1) of this subsection, if the operator of such mine is unable to comply with such requirements on such effective date, he may file an application for a permit for noncompliance with the Secretary ninety days prior to such date. If the Secretary determines that such application satisfies the requirements of paragraph (6) of this subsection, he shall issue to such operator a permit for noncompliance. Such permit shall entitle the permittee to an extension of time to comply with such requirements of not to exceed twelve months, as determined by the Secretary, from such effective date.

"(4) In the case of a coal mine subject to the requirements of paragraph (2) of this subsection, if the operator of such mine is unable to comply with such requirements on such date, he may file an application for a permit for noncompliance with the Secretary ninety days prior to such date. If the Secretary determines, after notice to all interested persons and an opportunity for a hearing, that such application satisfies the requirements of paragraph (6) of this subsection, and that such operator, despite his diligent efforts will be unable to comply with such requirements, the Secretary may issue to such operator a permit for noncompliance. Such permit shall entitle the permittee to an additional extension of time to comply with such requirement of not to exceed twelve months, as determined by the Secre-

tary, from the date such compliance is required.

"(5)(A) Any operator of a coal mine issued a permit under paragraphs (3) and (4) of this subsection who, ninety days prior to the termination of such permit, determines that he will be unable to comply with the requirements of said paragraphs upon the expiration of such permit may file with the Secretary an application for renewal thereof. Upon receipt of such application, the Secretary, if he determines, after notice to all interested persons and an opportunity for a hearing that such application satisfies the requirements of paragraph (6) of this subsection and that such operator, despite his diligent efforts, will be unable to comply with such requirements, may renew the permit for a period not exceeding twelve months. Any hearing held pursuant to this paragraph shall be of record and the Secretary shall make findings of fact and shall issue a written decision incorporating his findings therein.

"(B) Any permit issued pursuant to this subsection shall entitle the permittee to use nonpermissible electric face equipment, as specified in the permit, during the term of such permit. Permits issued under this subsection to operators who must comply with the requirements of paragraph (1) of this subsection shall, in the aggregate, not extend the period of noncompliance more than thirty-six months after the date of enactment of this Act. Permits issued under this subsection to operators who must comply with the requirements of paragraph (2) of this subsection shall, in the aggregate, not extend the period of noncompliance more than forty-eight months after the date of enactment of this Act.

"(6) Any application for a permit of noncompliance filed under this subsection shall contain a statement by the operator—

"(A) that he is unable to comply with paragraphs (1) or (2) of this subsection, as appropriate, within the time prescribed;

"(B) listing the nonpermissible electric face equipment by type and manufacturer being used by such operator in connection with mining operations in such mine on the operative date of this title and on the date of the application for which a noncompliance permit is requested and stating whether such equipment had ever been rated as permissible;

"(C) setting forth the actions taken from and after the operative date of this title to comply with such paragraphs, together with a plan setting forth a schedule of compliance with the appropriate paragraphs for the equipment referred to in such paragraphs and being used by the operator in connection with mining operations in such mine with respect to which such permit is required and the means and measures to be employed to achieve compliance; and

"(D) include such other information as the Secretary may require.

"(7) One year after the operative date of this title all replacement equipment acquired for use in any mine referred to in this subsection shall be permissible and shall be maintained in a permissible condition, and in the event of any major overhaul of any item of equipment in use one year after the operative date of this title such equipment shall be put in, and thereafter maintained in, a permissible condition, if, in the opinion of the Secretary, such equipment or necessary replacement parts are available.

"(8) The operator of each coal mine shall maintain in permissible condition all electric free equipment, required by this subsection and subsection (a) of this section to be permissible.

"(9) Each operator of a coal mine shall, within two months after the operative date of this title, file with the Secretary a statement listing all electric face equipment by type and manufacturer being used by such operator in connection with mining operations in the working section of such mine as of the date of such filing, and stating whether such equipment is permissible and maintained in permissible condition or nonpermissible on such date of filing, and, if nonpermissible, whether such nonpermissible equipment has ever been rated as permissible, and such other information as the Secretary may require.

"(10) The Secretary shall promptly conduct a survey as to the total availability of new or rebuilt permissible electric face equipment and replacement parts for such equipment and, within six months after the operative date of this title, publish the results of such survey.

"(11) No permit for noncompliance shall be issued under this subsection for any nonpermissible electric face equipment, unless such equipment was being used by an operator in connection with the mining operations in a coal mine on the operative date of this title.

"(12) As used in this title, the term 'permissible electric face equipment' means all electrically operated equipment taken into or used in the working section of any coal mine the electrical parts of which, including, but not limited to, associated electrical equipment, components, and accessories, are designed, constructed, and installed, in accordance with the Secretary's specification, to assure that such machines will not cause a mine explosion or mine fire, and the other features of which are designed and constructed, in accordance with the Secretary's specifications, to prevent, to the greatest extent possible, other accidents in the use of such equipment. The regulations of the Secretary in effect on the operative date of this title relating to the requirements for investigation, testing, approval, certification, and acceptance of such equipment as permissible shall continue in effect until modified or superseded by the Secretary, except that the Secretary shall promptly provide procedures, including, where feasible, field testing, approval, certification, and acceptance by an authorized representative of the Secretary, to facilitate compliance by an operator with the permissibility requirements of this subsection within the periods prescribed.

"(13) Any operator or representative of miners aggrieved by a final decision of the Secretary under this subsection may file a petition for review of such decision in accordance with the provisions of this Act.

"(c) A copy of any permit granted under this section shall be mailed immediately to a duly designated"

AMENDMENT NO. 8—AUTOPSIES OF MINERS

(Section 401)

On page 107, after line 23, insert:

"In furtherance of research on the incidence and prevalence of pneumoconiosis, if the death of any active miner occurs in any coal mine, or if the death of any active or inactive miner occurs in any other place, the Secretary of Health, Education, and Welfare is authorized to provide for an autopsy to be performed on such miner, with the consent of his surviving widow or, if he has no such widow, with the consent of his next of kin. The results of such autopsy shall be submitted to the Secretary of Health, Education, and Welfare and, with the consent of such survivor, to the miner's physician or other interested person. Such autopsy shall be paid for by the Secretary of Health, Education, and Welfare."

Mr. ERLENBORN. Mr. Chairman, I have no further requests for time.

The CHAIRMAN. All time having expired, the Clerk will read.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Federal Coal Mine Health and Safety Act of 1969".

Mr. PERKINS. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. STEED, Chairman of the Committee of the Whole House on the State of the Union, reported that the Committee, having had under consideration the bill (H.R. 13950) to provide for the protection of the health and safety of persons working in the coal mining industry of the United States, and for other purposes, had come to no resolution thereon.

CERTAIN TECHNICAL AMENDMENTS AND MODIFICATIONS PROPOSED BY THE BUREAU OF MINES TO H.R. 13950

Mr. PERKINS. Mr. Speaker, I ask unanimous consent that certain technical amendments and modifications as proposed by the Bureau of Mines to the Federal Coal Mine Health and Safety Act of 1969 be printed in the RECORD. It is a new section for title III, as proposed to be amended.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

Mr. PUCINSKI. Mr. Speaker, reserving the right to object, and I do so only to clarify the record for a point of information, the request would in no way preclude full discussion on these amendments tomorrow, nor would it preclude a separation of these amendments when they come up for voting.

Mr. PERKINS. Mr. Speaker, the only purpose of putting the modifications to title III in the RECORD is so Members may have access to those modifications tomorrow when they receive the CONGRESSIONAL RECORD.

Mr. PUCINSKI. Mr. Speaker, I thank the gentleman from Kentucky.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

PERMISSION TO FILE CONFERENCE REPORT ON S. 1857, NATIONAL SCIENCE FOUNDATION ACT AMENDMENTS OF 1969

Mr. MILLER of California submitted the following conference report and statement on the bill (S. 1857) to authorize appropriations for activities of the National Science Foundation pursuant to Public Law 81–507, as amended:

CONFERENCE REPORT (H. REPT. No. 91–600)

The committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 1857) to authorize appropriations for activities of the National Science Foundation pursuant to Public Law 81–507, as amended, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its disagreement to the amendment of the House to the text of the bill and agree to the same with an amendment as follows:

In lieu of the matter proposed to be inserted by the House amendment insert the following:

"That there is hereby authorized to be appropriated to the National Science Foundation for the fiscal year ending June 30, 1970, to enable it to carry out its powers and duties under the National Science Foundation Act of 1950, as amended, and under title IX of the National Defense Education Act of 1958, out of any money in the Treasury not otherwise appropriated, $477,605,000.

"SEC. 2. Appropriations made pursuant to authority provided in section 1 shall remain available for obligation, for expenditure, or for obligation and expenditure, for such period or periods as may be specified in Acts making such appropriations.

"SEC. 3. Section 14 of the National Science Foundation Act of 1950, as amended by Public Law 90-407 (82 Stat. 360), is amended by adding at the end thereof the following new subsection:

"'(i) Notwithstanding any other provision of law, the authorization of any appropriation to the Foundation shall expire (unless an earlier expiration is specifically provided) at the close of the second fiscal year following the fiscal year for which the authorization was enacted, to the extent that such appropriation has not theretofore actually been made.'

"SEC. 4. Appropriations made pursuant to this Act may be used, but not to exceed $2,500, for official reception and representation expenses upon the approval or authority of the Director, and his determination shall be final and conclusive upon the accounting officers of the Government.

"SEC. 5. In addition to such sums as are authorized by section 1 hereof, not to exceed $3,000,000 is authorized to be appropriated for expenses of the National Science Foundation incurred outside the United States to be paid for in foreign currencies which the Treasury Department determines to be excess to the normal requirements of the United States.

"SEC. 6. Notwithstanding any provision of the National Science Foundation Act of 1950, or any other provision of law, the Director of the National Science Foundation shall keep the Committee on Science and Astronautics of the House of Representatives and the Committee on Labor and Public Welfare of the Senate fully and currently informed with respect to all of the activities of the National Science Foundation.

"SEC. 7. (a) If an institution of higher education determines, after affording notice and opportunity for hearing to an individual attending, or employed by, such institution, that such individual has been convicted by any court of record of any crime which was committed after the date of enactment of this Act and which involved the use of (or assistance to others in the use of) force, disruption, or the seizure of property under control of any institution of higher education to prevent officials or students in such institution from engaging in their duties or pursuing their studies, and that such crime was of a serious nature and contributed to a substantial disruption of the administration of the institution with respect to which such crime was committed, then the institution which such individual attends, or is employed by, shall deny for a period of two years any further payment to, or for the direct benefit of, such individual under any of the programs specified in subsection (c). If an institution denies an individual assistance under the authority of the preceding sentence of this subsection, then any institution which such individual subsequently attends shall deny for the remainder of the two-year period any further payment to, or for the direct benefit of, such individual under any of the programs specified in subsection (c).

"(b) If an institution of higher education determines, after affording notice and opportunity for hearing to an individual attending, or employed by, such institution, that such individual has willfully refused to obey a lawful regulation or order of such institution after the date of enactment of this Act, and that such refusal was of a serious nature and contributed to a substantial disruption of the administration of such institution, then such institution shall deny, for a period of two years, any further payment to, or for the direct benefit of, such individual under any of the programs specified in subsection (c).

"(c) The programs referred to in subsections (a) and (b) are as follows:

"(1) the programs authorized by the National Science Foundation Act of 1950; and

"(2) the programs authorized under title IX of the National Defense Education Act of 1958 relating to establishing the Science Information Service.

"(d)(1) Nothing in this Act, or any Act amended by this Act, shall be construed to prohibit any institution of higher education from refusing to award, continue, or extend any financial assistance under any such Act to any individual because of any misconduct which in its judgment bears adversely on his fitness for such assistance.

"(2) Nothing in this section shall be construed as limiting or prejudicing the rights and prerogatives of any institution of higher education to institute and carry out an independent, disciplinary proceeding pursuant to existing authority, practice, and law.

"(3) Nothing in this section shall be construed to limit the freedom of any student to verbal expression of individual views or opinions.

"SEC. 8. This Act may be cited as the 'National Science Foundation Authorization Act, 1970.'"

And the House agree to the same.

That the Senate recede from its disagreement to the amendment of the House to the title of the bill and agree to the same.

CLAIBORNE PELL,
TOM EAGLETON,
GAYLORD NELSON,
WINSTON L. PROUTY,
PETER H. DOMINICK,
RICHARD S. SCHWEIKER,
Managers on the Part of the Senate.

STATEMENT

The Managers on the part of the House at the conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S-1857) to authorize appropriations for activities of the National Science Foundation and for other purposes, submit the following statement in explanation of the effect of the action agreed upon by the conferees and recommended in the accompanying conference report.

The amendment of the House struck out all after the enacting clause in the Senate bill and substituted new language. The committee of conference agreed to accept the House amendment with certain amendments proposed by the Managers on the part of the Senate.

The differences are explained as follows:

For fiscal year 1970 the National Science Foundation requested authorization in the amount of $487,000,000. (This figure is exclusive of the $10,000,000 Sea Grant program which is authorized independently and of $3,000,000 to be made available in excess foreign currencies.)

The Senate increased this request to $487,150,000.

The total appropriations authorized by the House amendment were $474,305,000. This represented a decrease from the Senate bill of $12,845,000. As a result of the conference, the total amount of appropriations to be authorized was adjusted to $477,605,000. To this sum, the Managers on the part of the House agreed.

FUNDING ACTION

The differences reflected by this total from that carried in the bill as passed by the House are as follows:

(1) A sum of $2,000,000 to permit the construction of an Oceanographic Research Vessel was restored, as originally requested by the National Science Foundation. This item had been deferred by the House on the basis of long-range scheduling and pending completion of further study. Evidence adduced by the Senate convinced the conferees that conditions do not now warrant delay of the ship construction.

(2) A sum of $300,000 to permit the acquisition of a small research aircraft by the National Center for Atmospheric Research at Boulder, Colorado, was restored as originally requested by the National Science Foundation. This plane is to replace a similar aircraft lost in an accident over Lake Superior in 1968. House conferees concurred that it would be more economical to purchase the aircraft than to continue to lease and equip a privately owned one.

(3) A sum of $1,000,000, part of a $3,000,000 block of unobligated appropriations carryover from fiscal year 1969 which the House had deleted, was restored by the conference. House conferees concurred in the view that authorization of this amount would provide the National Science Foundation with at least minimal leeway in program planning for fiscal year 1970, particularly in view of the requests being made on the Foundation by other Government agencies for research assistance.

Total restoration of funds in the bill thus amount to $3,300,000.

ARECIBO IONOSPHERIC OBSERVATORY

The bill as passed by the House eliminated again on the basis of deferral, $3,300,000 for the resurfacing of the Arecibo Radio Telescope. The reason for the deferral was largely a matter of priorities. The House felt that, since the telescope could operate usefully using the present surface, these funds were needed to a greater extent elsewhere. The reason for the deferral did not indicate any disagreement on the part of the House over the desirability of resurfacing.

This matter was the subject of considerable discussion by the committee of conference. The conferees agreed to make it clear that while they accepted the House position, they were strongly in support of the continued activity of the Arecibo facility as planned and of its upgrading. It was emphasized that the proposals of the Foundation in regard to the Arecibo facility should be considered sympathetically in the future.

EXPIRATION OF UNFUNDED AUTHORIZATION

The bill as passed by the House carried a proviso that all outstanding unfunded authorization accruing to the National Science Foundation should henceforth expire at the close of the first fiscal year after the fiscal year for which the authorization was enacted. The Senate bill had originally provided that such authorization should expire at the close of the third fiscal year following the year of authorization.

The conference agreed to require that such authorization expire at the close of the second fiscal year following the year of authorization.

"STUDENT UNREST" PROVISION

The bill as passed by the Senate contained no provision relating to restraints to be applied to persons attending or employed by institutions receiving funds thereunder who violate the law or the regulations of the institution.

The House amended the bill to include such a provision. In essence, that provision stated that no funds under the Act could be

paid by the institution to such persons if they

(a) willfully refused to obey a lawful regulation or order of such institution and such refusal was of a serious nature and contributed to the disruption of the administration of such institution; or

(b) had been convicted in any Federal, State, or local court of competent jurisdiction of inciting, promoting, or carrying on a riot, or convicted of any group activity resulting in material damage to property, or injury to persons, found to be in violation of Federal, State, or local laws designed to protect persons or property in the community concerned.

The committee of conference chose to substitute a similar provision, but one which is already law in connection with five major Federal programs of higher education. The committee of conference has thus included in the bill, with appropriate technical changes, the eligibility-for-student-assistance clause of the Higher Education Amendments of 1968. (P.L. 90–575. Sec. 504)

The intended effect of the two versions is the same. The major difference is that the provision adopted by the conference, when evoked, is effective against violators for two years. The effective life of the provision in the bill as passed the House might be interpreted in one of several ways, from a single year to an indefinite period.

The over-riding factor, however, is that the provision approved by the conferees has already been studied and approved by the Congress in regard to other similar situations.

GEORGE P. MILLER,
EMILIO Q. DADDARIO,
JOHN W. DAVIS,
GEORGE E. BROWN, Jr.
JAMES G. FULTON,
LARRY WINN, Jr.
CHARLES A. MOSHER,
Managers on the Part of the House.

PERMISSION FOR COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE TO FILE REPORT ON H.R. 14465, EXPANSION AND IMPROVEMENT OF NATION'S AIRPORT AND AIRWAYS SYSTEM

Mr. PERKINS. Mr. Speaker, I ask unanimous consent, on behalf of the gentleman from West Virginia (Mr. STAGGERS) that the Committee on Interstate and Foreign Commerce may have until midnight tonight, October 27, to file a report on the bill (H.R. 14465) to provide for the expansion and improvement of the Nation's airport and airways system for the imposition of airport and airway user charges, and for other purposes.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

THE 10TH ANNUAL REPORT ON WEATHER MODIFICATION—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 91–186)

The SPEAKER laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, referred to the Committee on Interstate and Foreign Commerce and ordered to be printed with illustrations:

To the Congress of the United States:

In recent months many American communities were ravaged by storms that were among the most violent and destructive in our history. Although our civilization has been able to perform the incredible feat of placing a man upon the moon and returning him to earth, we have only a very incomplete understanding of the forces which shape our weather and almost no power to control or change them. That is why this Tenth Annual Report on Weather Modification, as submitted by the National Science Foundation for Fiscal Year 1968, is of special interest.

This report tells of the important progress that is taking place in the field of weather modification—on projects ranging from augmenting precipitation and dissipating fog to simulating the life cycle of hurricanes. Such advances may someday permit us to manipulate our weather in ways which protect us from natural disasters and substantially improve the quality of our environment.

I congratulate those Americans who, in cooperation with scientists of other nations, are doing so much to achieve these goals.

RICHARD NIXON.

THE WHITE HOUSE, *October 27, 1969.*

ROGERS SAYS "GRAS LIST" SHOULD BE INSPECTED, ELIMINATED

(Mr. ROGERS of Florida asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ROGERS of Florida. Mr. Speaker, for many years now, the American public has visited the marketplace and selected foods without thought of possible danger. The enactment of the Federal Food, Drug, and Cosmetic Act in 1938 and the activity of the Federal Government in the area of food inspection gave the American public a feeling of complete security from harmful and dangerous foods.

Mr. Speaker, the turn of events over the past 2 weeks indicate that the confidence the public has placed in the Food and Drug Administration may have been shaken.

First there was cyclamate, a sweetener which is believed to represent a possible cancer cause. Then came monosodium glutamate. Brain damage in animals fed MSG has caused concern for that portion of the public which uses products with MSG, including baby food.

The one thing which both these items have in common is that they both are additives and have been placed on a list called generally recognized as safe. The novel thing about this list is that none of the more than 600 items on it have been subjected to FDA laboratory testing. They are in the marketplace, but FDA has not run any tests on them nor has testing been required by industry.

It it my feeling that any additives which are used in food products should first be tested. And there should be no type of list which is generally recognized as safe. Either the additive is safe or it is not and the FDA has the responsibility for deciding this.

I think the GRAS list may be compared to an unloaded gun. Both are generally recognized as safe until someone is killed.

Last week I wrote HEW Secretary Finch and asked that he immediately order testing on all items on the GRAS list. If FDA personnel is not adequate to this task, then he should press the National Academy of Sciences into the crash program.

When the testing is completed and the additives are approved, then the list of items generally recognized as safe should be abolished. All additives from then on should be thoroughly tested.

The FDA is supposed to be the Government's consumer protector, but the cyclamate and monosodium glutamate cases indicate that the credibility of this agency has been severely compromised.

THE AMERICAN SECURITY COUNCIL IDENTIFIES MORATORIUM REDS

(Mr. WAGGONNER asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous mattter.)

Mr. WAGGONNER. Mr. Speaker, to supplement the mounting evidence that the recent moratorium was a handmade product of domestic and foreign Communists and their agents and dupes, and there were dupes, the American Security Council has just issued a documentation entitled "Mobilization for Surrender," which should be made required reading for all who, ill advisedly, supported the moratorium or who might want to reconsider participating in the next one.

It is one thing to be guilty of misplaced emotions; it is quite another to be guilty of participation in something conceived to support the Communists in general and the Vietcong in particular.

The report prepared by the American Security Council follows:

MOBILIZATION FOR SURRENDER

As protests against the war in Vietnam rise across the country, Americans should become aware of the origins of these protests.

During the late Spring of 1969, a group of approximately 30 radical leaders of anti-war organizations issued a Call to a National Anti-War Conference to be held in Cleveland, Ohio, July 4–5, 1969. The Call was initiated for the most part by individuals associated with the National Mobilization Committee to End the War in Vietnam (MOBE), an organization which has functioned as a coalition for numerous anti-war groups operating throughout the country. Included among those persons who endorsed the Conference Call were such MOBE leaders as David Dellinger, Robert Greenblatt, Donald Kalish, Sidney Lens, Sidney Peck and Maxwell Primack.

Functioning as the lineal descendant of A. J. Muste's November 8 Mobilization Committee for Peace in Vietnam, MOBE has a three-year history involving violence and civil disobedience. MOBE sponsored the October 21–22, 1967 demonstrations in Washington, D.C., during which time repeated attempts were made to close down the Pentagon. It also jointly planned and executed the disruption of the 1968 Democratic Party National Convention held in Chicago, and sponsored the demonstrations in the Nation's Capital on January 18–20, 1969 in protest over the inauguration of President Nixon.

In a determined effort to revive and strengthen agitational protest activities against U.S. military involvement in Viet-

nam, MOBE-oriented initiators of the Cleveland Conference believed that a more extensive formation of MOBE was required in order to establish an effective anti-war program. According to the published Call, the purpose of the Conference was to "broaden and unify the anti-war forces in this country and to plan co-ordinated national anti-war actions for the fall." The Conference was hosted by a MOBE-affiliated organization called the Cleveland Area Peace Action Council (CAPAC), a coordinating body of several dozen anti-war groups in Cleveland, in cooperation with the University Circle Teach-In Committee at Case Western Reserve University. The meetings were held during the entire two-day period at the University's Strosacker Auditorium. Publicity for the Conference was arranged by several organizations including the Student Mobilization Committee to End the War in Vietnam, a group dominated by the Trotskyist Socialist Workers Party.

The Conference was attended by approximately 900 persons, many of whom were delegates from anti-war groups comprising individuals identified in sworn testimony as Communists, well-known Communist sympathizers, and radical pacifists in their leadership. Among the more notorious organizations represented at the Conference, in addition to MOBE and CAPAC, were the Communist Party, U.S.A., W.E.B. DuBois Clubs of America, National Lawyers Guild, Chicago Peace Council, Southern California Peace Action Council, Veterans for Peace in Vietnam, Socialist Workers Party, Young Socialist Alliance, Student Mobilization Committee To End the War in Vietnam, Youth Against War and Fascism, Fifth Avenue Vietnam Peace Parade Committee, Women's Strike for Peace, and the Students for a Democratic Society. There were also in attendance persons representing so-called "GI underground newspapers" which are devoted to disseminating anti-war propaganda and to discrediting the U.S. Armed Forces.

A Steering Committee of about 20 to 30 members formed the ruling clique at the Conference. In effect, the Steering Committee was a self-appointed group composed mostly of Communists and radical pacifists with pro-Communist leanings who have participated in MOBE action projects in varying degrees. Members of the Steering Committee with Communist backgrounds included the following: Arnold Johnson, Public Relations Director and legislative representative of the Communist Party, U.S.A. (CPUSA); Irving Sarnoff, who has served as a member of the District Council, Southern California CPUSA; Sidney M. Peck, a former State Committeeman, Wisconsin CPUSA; Dorothy Hayes of the Chicago Branch, Women's International League For Peace and Freedom, who has been identified in sworn testimony in 1965 as a Communist Party member; Sidney Lens (Sidney Okun), leader of the now defunct Revolutionary Workers League; and Fred Halstead, 1968 presidential candidate of the Socialist Workers Party. Moreover, Steering Committee member David Dellinger, MOBE Chairman, declared in a May 1963 speech: "I am a communist, but I am not the Soviet-type communist."

The first day of activity was mainly devoted to speeches by MOBE officials and representatives of various groups. Among those who participated in the deliberations on July 4, 1969, were Jerry Gordon, Chairman, Cleveland Area Peace Action Council; Sidney Peck, MOBE Co-Chairman; Irving Sarnoff, Dellinger, LeRoy Wolins, leader of the Chicago branch, Veterans for Peace in Vietnam; Stewart Meacham, Peace Secretary, American Friends Service Committee; Mark W. Rudd, National Secretary, Students for a Democratic Society (SDS); Bill Ayers, SDS Educations Secretary; Arnold Johnson, of the CPUSA; Jack Spiegel, once a Communist Party candidate for Congress in Illinois; David Hawk, Co-Coordinator, Vietnam Moratorium Committee; Douglas Dowd, New University Conference; and several persons representing Trotskyist organizations. In addition to Peck, Sarnoff and Johnson, Wolins and Spiegel have been identified as members of the Communist Party.

There were a number of other individuals attending the Conference, in addition to those previously identified, who have been closely linked with activities of the Communist Party, U.S.A. or its front apparatuses. Some of these persons were Phil Bart, newly appointed Chairman, Ohio CPUSA; Jay Schaffner, W.E.B. DuBois Clubs of America; Charles Wilson of Chicago; Ishmael Flory, Afro-American Heritage Association; Gene Tournour, National Secretary, W.E.B. DuBois Clubs of America; and Sylvia Kushner, leader of the Chicago Peace Council.

The Conference was well represented by a number of functionaries of the Socialist Workers Party (SWP) and its youth arm, Young Socialist Alliance (YSA). It is noteworthy that the Conference itself was marked by periods of dissension. At the outset of the Conference, it became apparent that the majority of those in attendance were affiliated with numerous anti-war groups operating under the domination of the Trotskyist SWP or YSA.

There were two principal issues at the Conference which were vigorously debated with respect to the nature of Fall anti-war demonstrations. First, the SWP essentially held that a Fall anti-war action should comprise only a massive, legal as well as peaceful march on Washington, with the sole demand of immediate withdrawal of the U.S. Armed Forces from Vietnam. This proposal brought about a split in the Steering Committee; however, it was defeated. David Dellinger and Douglas Dowd presented the majority proposal which called for the Steering Committee's support of a "Washington action" project together with the endorsement of the scheduled "Chicago action" originally planned by SDS for September 27, 1969. Interestingly, the SDS project extended the "Washington action" demand beyond troop withdrawals and advocated civil disobedience as a necessary part of the demonstrations.

Secondly, the other main source of disagreement which occurred at the Conference involved a proposal by SDS National Secretary Mark Rudd to plan the Fall anti-war actions to center around the Marxist-Leninist theme of an "anti-imperialist struggle." The SDS proposal was disapproved by the majority of the delegates who took the position that the Fall demonstrations should concern only the issue of the Vietnam War.

During part of the second and final day of the Conference the delegates and observers attended workshop sessions which were devoted to the following topics in connection with proposed demonstration tactics: "November Washington Action," "September Chicago Action," "September Washington Action," "August 17 Summer White House Action," "October 15th Vietnam Moratorium," "GI's and Vets," and "Third World."

The plenary session reconvened during the afternoon of July 5, 1969 at which time the Steering Committee introduced a "majority-minority" resolution for approval. The Communist-oriented Guardian of July 12, 1969 stated that the resolution was "vague" and gave "support" to "all factions and covered up all political differences. The resolution said next to nothing about the Chicago demonstration except that negotiations would be held. The unity resolution was accepted with little discussion." The Conference resolution agreed to endorse or assist in organizing a series of anti-Vietnam war action projects commencing during the month of August and terminating with the November 15, 1969 demonstration in Washington, D.C.

The Conference resolution specifically adopted the following actions:

(1) Support a mass march on President Nixon's Summer White House at San Clemente, California on August 17, 1969.

(2) Endorse an enlarged "reading of the war dead" demonstration in Washington, D.C. in early September 1969.

(3) Support plans of the Vietnam Moratorium Committee for a "moratorium on campuses" on October 15, 1969.

(4) Support the September 27, 1969 demonstration in Chicago sponsored by SDS in opposition to the Vietnam War and to protest the trial of "The Conspiracy" scheduled to commence on that day.

(5) Support a "broad mass legal" demonstration around the White House in Washington, D.C. on November 15, 1969 which will include a march and rally in other areas of the city. An associated demonstration will be planned for the same date on the West Coast.

The Conference agreed to form a bicameral organization to effectively launch the Chicago and Washington actions. Two Co-Chairmen and two project directors were designated to be responsible for the Chicago demonstration slated for September 27, 1969. They were: Sidney Lens and Douglas Dowd, Co-Chairmen; and Renard (Rennie) C. Davis and Sylvia Kushner, Project Directors. With respect to the Washington action scheduled for November 15, 1969, the Conference selected Sidney Peck and Stewart Meacham to administer that project; Fay Knopp and Abe Bloom were to be Project Directors. In an effort to develop both the Chicago and Washington actions in a related manner, David Dellinger was selected by the Cleveland Conference to be a liaison coordinator between both proposed demonstrations.

The Conference claimed that it selected a "new, broadly-based" National Steering Committee of approximately 30 individuals to "implement the program of action." Prior to adjourning, the Steering Committee adopted a new name for the organization which was to be responsible for planning and directing the Fall demonstrations. It was designated the New Mobilization Committee to End the War in Vietnam. However, in actuality, the MOBE-oriented Steering Committee composed of key MOBE officials, simply decided to drop the name National Mobilization Committee and substitute a new but similar title. Therefore, the New MOBE succeeded the "old" National MOBE with the leadership of the latter remaining virtually intact. The New MOBE has characterized itself as a "new anti-war coalition" which will "carry forward the work of the old National Mobilization Committee" to "affect the inclusion of a wider social base among GI's, high school students, labor, clergy and third world communities." It simply added overt support from the Communist Party and Socialist Workers Party to create a "united front" approach.

Since the staging of the National Anti-War Conference in Cleveland in July 1969, New MOE has increased the size of its Steering Committee. It has also instituted a number of organizational changes in planning for the Fall demonstrations. One such change brought about the withdrawal of New MOBE support for the SDS-sponsored Chicago action which was re-scheduled from September 27 to October 11, 1969. New MOBE re-scheduled its Chicago action to October 25, 1969. The reason for this change was the fact that New MOBE leadership felt apprehension over the SDS project which they deemed foolhardy and destined for a collision course with the Chicago Police Department. In effect, New MOBE viewed that its participation in such an "adventurous" project of outright confrontation would be detrimental to both New MOBE and the entire anti-war movement at this time.

An evaluation of the Conference by the Socialist Workers Party provided a revealing insight into the effectiveness of the Conference from a Communist viewpoint. The SWP

declared: "The attendance at the conference, the serious political debate, the program mapped out and the spirited note on which the sessions ended offer every promise that the anti-war movement is on the road to one of the biggest things this country has ever seen."

The distinguished Senators and Congressmen, TV commentators, newsmen, columnists, professors and others who have described the Vietnam Moratorium as "responsible dissent" have, in fact, lent Moratorium whatever "responsibility" it has. In most cases, they have acted from the laudable desire for peace but without first checking the facts. They have failed to ask the key question, "What kind of peace?"

North Vietnam's Prime Minister, Pham Van Dong, has no illusions. He knew precisely what he was saying when he addressed his letter in support of the Moratorium to his "Dear American Friends."

THE EXPORT CONTROL BILL

(Mr. WIDNALL asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. WIDNALL. Mr. Speaker, on Thursday, October 16, by vote of 272 to 7, the House reported out H.R. 4293, with amendments, a bill to provide for continuation of authority to regulate exports. On Wednesday, October 22, the Senate Chamber reported out S. 2696, cited as the "Export Expansion and Regulation Act of 1949" which differed substantially from the House action. Both bills must now go to conference for resolution.

The existing Export Control Act of 1949 expired June 30 and due to congressional inaction we have been forced to resort to two 60-day resolutions. The current resolution expires Friday, October 31, just a few days away.

Mr. Speaker, this important piece of legislation has been moving through Congress at a snail's pace and the time has come for us to take immediate action. We are being characterized as a "do-nothing Congress" and this is one area where the label fits. We should take fast remedial action. Let us get this piece of legislation into conference now; let us avoid long and unnecessary discussions and disputes, and get on with the business at hand.

Both the House and Senate versions of the export control bill recognize, the House clearly, and the Senate vaguely, the need in the interest of national security and foreign policy to regulate exports. H.R. 4293 is a good bill—straightforward and easily understood. It goes a long way toward meeting the two main points of concern contained in the Senate bill—consideration of the availability of products from countries other than the United States and the removal of the requirement to deny a license application where the shipment in question contributes to the economic as opposed to strategic potential of Communist countries. H.R. 4293 is a bill the administration supports and it passed the House by an overwhelming vote.

The Senate bill, however, is neither clear nor easily understood. In fact, during the course of debate on this bill, there has arisen substantial confusion as to the bill's intent among the business community, the press, and even among the bill's proponents. Some Senate advocates during floor debate implied that the Senate bill would reduce controls over some 1,100 items leaving under control a small list of 200 products. This statement was widely reported in the press. However, Senator MUSKIE himself, the bill's cosponsor, had to correct this misconception. He admitted that the Senate bill decontrolled nothing. In fact, it is difficult to identify even the origin of the figures cited, for commodity definitions appearing on the Department of Commerce's commodity control list vary significantly and are not susceptible to simple characterization. Many are extremely broad and cover a variety of items; others are quite specific. We should not be deluded during our deliberation by accepting any estimate or statement as to the number of items under control, the number of items over which we might not have effective control because such are also available from foreign sources, and most importantly, what number of products which may or may not be described as strategic. Too many products fall in the "gray area" of having dual potential—depending on how or when they are used.

During the testimony, the administration has pointed out repeatedly the need in administering export controls for flexibility and careful analysis on a case-by-case basis. The current legislation provides such flexibility. The administration recognizes changing circumstances. For example, the Secretary of Commerce has already announced significant steps to simplify export documentation.

Mr. Speaker, it is H.R. 4293 that should be considered and approved immediately by the conference committee. Let us get on with this job.

VIETNAM MORATORIUM DAY

(Mr. HAGAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HAGAN. Mr. Speaker, there have been a lot of speeches on the Vietnam moratorium day and as I have listened and read an uneasy feeling has been growing in me and I am convinced that this nationwide demonstration has done more to help the North Vietnamese and less to bring about peace than even the originators may have thought possible. When a letter such as the one written by the Premier of North Vietnam to the American people can be called by him "their fall offensive," we are surely doing something that is very pleasing to the enemy and it is not costing him a man or a gun. What will the cost be to us, to the United States?

I would be one of the first to defend our right to freedom of speech and the freedom to dissent. They are the privileges of a free country and should not be abused. With those privileges go responsibility—responsibility to our country, our leaders, and to our fighting men. Everyone has a responsibility to our men serving overseas. Any indication on our part that will aid the enemy should and must be avoided. One of my colleagues has said that we should be careful that we do not fall into a trap because of this recent so-called moratorium. Our responsibility is to our fighting men and the need to back them up while the war continues, not to give comfort to the enemy through a misunderstood peace demonstration or a denunciation of our leaders.

Walk down the streets of America today, and who will tell you he does not want peace? Who will say they do not want our troops to come home? These same people will be unwilling to compromise our men and our policies for "peace at any price." They trust and believe that our duly elected leaders will at all times have uppermost in their thinking and planning the desire of the American people for an end to the war, an early and honorable end. An end that will not leave one more country in the hands of the Communists, an end that will give people who wish the freedom to govern themselves, the opportunity to do so. That is what it is all about. We have a responsibility, those participating in moratorium days have a responsibility and it is not to the enemy. We must assume that this enemy is not stupid and if we let this vocal element mislead the enemy without standing up and being counted then we, too, share in the irresponsibility of these demonstrations.

The letter written by the Premier of North Vietnam to the American public was almost gleeful. It shows clearly how this is playing into their hands and will no doubt help delay peace talks in Paris and will encourage the North Vietnamese to wait for more demonstrations and more concessions brought on by the pressure of these groups.

Recently, a House resolution was introduced by the leaders from both sides of the aisle relating to demonstrations for peace. I supported this resolution calling upon all Americans to disassociate themselves from any efforts of the North Vietnam Premier to use these demonstrations to undercut the United States. The right of dissent must not and should not be considered assent to the enemy's cause.

I sincerely hope that every American will carefully weigh this entire situation before participating in similar demonstrations scheduled for the future.

AMERICA'S YELLOW BELLY

(Mr. DEVINE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. DEVINE. Mr. Speaker, in the last few weeks many voices have been heard about American posture in Vietnam. Some of our "bug-out" colleagues are helping to create an international image somewhat strange to patriotic basic American philosophy. The London, England, Daily Telegraph of October 15, 1969, had an editorial that should create some real second thoughts for these vocal, inexperienced foreign policy "experts."

The editorial follows:

AMERICA'S YELLOW BELLY

How is America going to behave today? It threatens to provide a spectacle to turn the stomach—a great nation in a delirium of treason and shame. Let us hope this turns

out not to be the case. The omens are not good. It is the first day of the so-called "moratorium" nationwide anti-Vietnam war campaign. Thousands, perhaps millions of Americans of all kinds and all ages have been induced by rising anti-war hysteria to demonstrate for an abdication from responsibility. Other countries, in particular those of Western Europe, cannot simply sit by and regard this phenomenon with cold objectivity. America is top of the pile in material resources. What she does with her moral resources is therefore a matter of literally vital concern to the rest of us.

All this madness is naturally being watched in Hanoi with undisguised glee—no doubt with some stupefaction too. The North Vietnamese minister of culture, who also holds the post of chairman of the Vietnamese Committee of Solidarity with the American People (how often does this committee meet?), has addressed words of gratitude and encouragement to the "dear friends" of the Vietnamese in America.

President Nixon has summed up the situation correctly in his letter to a student. It would be, he wrote, "an act of gross irresponsibility" on his part to abandon his policy because of public demonstration. It is precisely this irresponsibility which today's "Get out now" demonstrators will be pleading for. The Americans set their hand to Vietnam and things have not worked out for them. That is no reason to make matters a hundred times worse by scuttling like a beaten rabble.

INACCURATE SONIC-BOOM TALK

(Mr. PELLY asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. PELLY. Mr. Speaker, there is considerable discussion, and often emotional, concerning the effect of a sonic boom from an airplane passing overhead in excess of the speed of sound. The noise emitted, or the boom, is inevitable when an aircraft is flying supersonically, but the noise that is being heard regarding that boom often is erroneous.

The actual experience most people say they have experienced with the boom, Mr. Speaker, is from an accidental, low-level military sonic boom. The supersonic transport that is planned by the United States will fly at altitudes of 70,000 feet, thus dissipating the boom, according to engineers. In addition, present plans call for banning the SST overland should there be complaints.

The SST, by present reckoning, would be used over water, and it is important to remember that our earth is mostly covered by our oceans.

In my judgment, the supersonic transport is the only ongoing technological achievement we are working on in the field of air transport, and if we are going to continue our leadership in the field of air transportation, we had better get going. Without the supersonic transport, American dominance in this field will come to an end.

The Seattle Times on October 20, presented an editorial on the matter of the sonic boom, and I insert it at this point in the RECORD:

INACCURATE SONIC-BOOM TALK

Critics of the supersonic transport who enaged in scare talk about sonic booms would be well advised to lower their own noise level until they get their facts straight.

This conclusion is inescapable if one considers the central facts about the SST sonic boom as reviewed in Seattle last week by John H. Shaffer, head of the Federal Aviation Administration.

The plain truth is that the American people are never going to be subjected to the SST's sonic boom, Shaffer made clear. The SST will fly in and out of land-locked airports all over the country at subsonic—not supersonic—speeds.

When the giant craft approaches faster-than-sound speeds, it will be over the ocean and flying at a height that dissipates the boom effect as far as the surface of the earth is concerned.

"People who are talking about the boom never will be subjected to it," Shaffer said.

And yet the government expects at least 500 of the Boeing-built planes to be sold by 1990, enabling the Treasury to recover its investment in the SST, providing jobs for tens of thousands of skilled workers in all parts of the country, and retaining for the United States its present position as world leader in commercial aviation.

Shaffer pointed out that commercial aircraft are "the one product with which we successfully compete with other countries, regardless of the cost of labor."

Now that President Nixon's request for continued SST financing is before Congress, informed members of that body ought to make certain that the essential facts about this project—so vital to this nation's international balance of payments—are not obscured by irresponsible talk about a sonic boom to which the public will not, in fact, be exposed.

SDS WORKERS GROUPS TO CUBA CIRCUMVENT U.S. ECONOMIC SANCTIONS

(Mr. ADAIR asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ADAIR. Mr. Speaker, it has come to my attention that plans are going forward by the Students for a Democratic Society to send two groups of 150 "workers" each to aid the Cuban Government harvest its 1970 sugar crop. Since June of this year radical organizers of the "youth brigade" have been conducting a national campaign to enlist young persons to this cause. It concerns me greatly that recent Supreme Court decisions prevent the application and enforcement of area travel restrictions to these radicals. By allowing this movement to go forward, we are permitting the economic sanctions we have imposed on the Communist government of Cuba to be circumvented and are also giving Castro more economic freedom to pursue and instigate guerrilla wars throughout Latin America.

It is instructive to read the resolution printed in the SDS publication, New Left Notes, in June 1969, which sets forth the reasons for this project:

(1) To give political, moral, and material support to Cuba for the critical sugar harvest in 1970;

(2) To educate people about the international revolution against imperialism; and

(3) To gain a practical understanding of creative application of communist principles on a day to day basis.

SDS organizers claim to be receiving 20 applications per day to harvest sugar for Cuba.

When our embargo on trade with Cuba and the blacklisting of all ships visiting Cuban ports is just beginning to achieve the desired result of placing such a burden on the Cuban economy that it is incapable of exporting Communist revolutions elsewhere in Latin America, it seems most self-defeating to permit Americans to lend assistance in the harvesting of the 1970 sugar crop, which is considered critical both for the economy of the country and for the survival of Castro's regime. Castro himself has described the goal of 10 million tons of sugar to be produced in 1970—4,500,000 tons were produced in 1969—as "a test of the honor and merit of the revolution." If this goal is realized, Castro will be able to supply all the needed sugar for barter with the Soviet Union and then sell substantial amounts on the world market for good foreign exchange with which Cuba can purchase goods from Western Europe and Japan.

If this planned trip of initially 300 young radicals and possibly a great many more later in the year goes forward, it will be the largest group of Americans to visit Cuba since Castro took over in 1959. This, in my opinion, is sufficient justification for the introduction and passage of legislation which for the first time gives the Secretary of State authority to impose and enforce area travel restrictions. Recent Supreme Court and court of appeals decisions, including *Lynd* v. *Rusk*, 389 F2d 940, and *United States* v. *Laub*, 385 US 475 (1967), prohibit the enforcement of these area restrictions and also the imposition of sanctions for their violation. Essentially, these cases have held that it would be a violation of due process to enforce these restrictions as there is at present no statutory authorization for their imposition or enforcement. Thus, Mr. Speaker, I will soon introduce legislation providing such authorization in the hope that such expeditions as the one I have just described can be avoided in the future.

Mr. WAGGONNER. Mr. Speaker, will the gentleman yield?

Mr. ADAIR. I yield to the gentleman from Louisiana.

Mr. WAGGONNER. Mr. Speaker, I appreciate the gentleman from Indiana (Mr. ADAIR) yielding to me.

Mr. Speaker, it is good the gentleman has brought this to the attention of the House today, because looking as we do to what is proposed on November 15, this Congress and this Nation need to know what some of us know about this movement, which has used good Americans as dupes, and is directed from Hanoi.

There is one good thing about these groups going to Cuba, and that is for the first time in their lives if they do help in the Cuban sugar harvest, most of them will be doing the first work in their lives, because they have not contributed anything to this economy.

The gentleman from Indiana is eminently correct. They should not be allowed to go, but if they do they should not be allowed to return.

PRESIDENT'S NEW MARITIME PROPOSALS

(Mr. EDWARDS of Alabama asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. EDWARDS of Alabama. Mr. Speaker, the New York Times over the weekend made a typically impetuous editorial comment on the President's new maritime proposals. In their usual manner of viewing only the immediate effects of events, they failed to see the long-range results that would be brought about by the President's well-formulated plan for restructuring the maritime industry.

The Times—quick to find fault—points out that the President failed to apply the "same hardheaded principles" underlying most of his proposals to his plan for subsidy of 300 new vessels. They argue that the President's decision was based on "politics alone" and that he failed to consider the fact that "by applying new technology, American shipbuilders ought to be able to compete, without a massive Government crutch, in the wide-open market for new container ships and giant tankers."

Without purporting to be able to read the President's thoughts, it is rather clear to me that Mr. Nixon had just this idea of eventual world competitive ability through American technology in mind. His entire proposals speak of a challenge to the shipbuilding industry to become competitive and stop relying on the "Government crutch."

Every aspect of the program including the underwriting of the 300 new ships is carefully designed to help the maritime shipbuilding industry back into a posture of world competition.

The problem he faced, in this area, however, was that the lack of any substantial long-range Government commitment in the past caused the shipbuilding industry to fall behind in the application of new technological developments. He, therefore, devised a plan that would give the industry the long-range Government backing needed to develop and apply new technological ideas and start the industry on the road away from dependence on Government subsidy.

The fact is, that in every capital-intensive industry the Government has found it necessary to help in the development of new technological skills. The railroads were greatly aided by direct and indirect subsidies in the early years of the industry. Even today, the Department of Transportation is actively engaged in the development of the "Metroliner' as the answer to some of our transportation problems. The airlines are receiving a big boost from the Government in the development of the SST. To apply the New York Times standards to all industries equally, the Government should stop underwriting development of new rapid rail transit and of supersonic air transports. In fact, maybe the Government should get out of the business of granting any subsidies. And maybe we should start by cutting out the second-class mail subsidy granted to the New York Times. What is fair for one is fair for all.

Mr. Speaker, I guess it just depends on whose ox is being gored.

DRUG ABUSE EDUCATION ACT

(Mr. GUDE asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and include extraneous matter.)

Mr. GUDE. Mr. Speaker, Art Linkletter's visit to the White House last week to discuss the tragic death of his daughter has added a dramatic urgency to deal with the problem of drug abuse that we all know surrounds us.

If a private citizen can come forward so selflessly, at a time of such personal grief, to add emphasis to our fight against drug abuse, then it behooves us, as public servants, to act in equal good faith.

I therefore urge, no; I implore my colleagues to consider and swiftly pass the Drug Abuse Education Act, when it comes before the House tomorrow. This act will provide comprehensive support for the establishment of effective drug abuse educational programs in our schools. Our youngsters and our schools have become a principal focal point of this problem, and it is there that we should concentrate our efforts in prevention. The few dollars we spend for the prevention of drug abuse is nothing compared to the thousands of dollars needed to rehabilitate someone who is hooked, and no amount of money can buy back the life of one Diane Linkletter.

LINKLETTER TELLS OF DAUGHTER'S SUICIDE: DRUG DEATH DRAMA UNFOLDS AT WHITE HOUSE

(By Garnett D. Horner)

Art Linkletter recited the personal tragedy of his daughter's suicide to a White House conference today in an effort to alert parents that their children will be tempted to take drugs.

President Nixon, administration officials concerned with the dangerous drug problem and congressional leaders of both parties listened in rapt silence as Linkletter told how LSD had taken the life of his daughter Diane.

At the end of the nearly 2-hour meeting, there was general agreement among the senators and congressmen that the administration's proposals for a new law to tighten up efforts to wipe out traffic in dangerous drugs and to provide flexible penalties for marijuana users and first offenders in particular would be spurred to passage.

Linkletter, a television personality and old friend of Nixon, told the group that "two weeks ago my beautiful 20-year-old daughter leaped to her death from her apartment while in a depressed, suicidal frame of mind, in a panic believing she was losing her mind from recurring bad trips as a result of LSD experiments some six months before."

Linkletter said he decided that "this tragic death would not be hushed up" and that he would "speak out to shock the nation—that this wasn't happening to some other people's children in some poor part of town—that this could happen to a well-educated, intelligent girl" of a traditionally Christian and "straight" family.

He emphasized that Diane was not a hippie, not a drug addict, but "had everything to live for and no problems not normal growing up problems."

Linkletter said one of the dangers of LSD is that it "works in the bloodstream like a tiger—you never know when it is going to hit."

He said his daughter had told him months ago that she had experimented with LSD and found "bum trips" frightened her. She thought use of LSD was ridiculous and that she was not going to do it again.

But, even though she took no more LSD "those trips kept recurring," and led her to think she was losing her mind, Linkletter said.

During the last 10 days, he said he has received "an alarming number" of letters from parents who say they know this is happening in their families and asked him what they should do.

"I was horrified," Linkletter told the group in the White House Cabinet Room, "to find out that I don't know what to tell them."

He said the trouble is that children are reacting to the "drug society." He said they see people on television "popping things into their mouths whether they want to get thin or fat or happy or go to sleep or wake up or erase tensions or take away headaches, or whatever.

He said children in the fourth, fifth and sixth grades should be taught that "you no more put something into your mouth or bloodstream than you walk in front of an automobile or set fire to your dress."

PROPOSED LAW ENDORSED

Endorsing the proposed legislation, particularly the provision for flexible penalties for marijuana users, Linkletter said it is as bad to make the use of marijuana a felony, as present law does, as it would be to have no law at all.

He also endorsed in particular provisions for stricter government inspections and control from manufacturers through distributors of depressant and stimulant drugs, saying most of the illicit supply is diverted from legitimate trade channels.

Sen. Jacob Javits, R.–N.Y., raised a question of why marijuana should not be legalized if medical research shows it is no more harmful than alcohol.

Linkletter said that the country probably would not accept such action and that while marijuana is not physically addictive, at least in some cases it is psychologically addictive and "makes things seem what they are not."

"REALLY DON'T KNOW"

Health, Education and Welfare Secretary Robert H. Finch also said that at present "we really don't know" whether marijuana is addictive or has other physically harmful affects.

Nixon said there are "some real dangers" in the use of marijuana, one being that it may lead an individual to other drugs.

And Sen. Harold E. Hughes, D-Iowa, interjected that he thought all those present know "I am a recovered alcoholic." He suggested that it would be helpful "to at least tell the truth about (effects of) alcohol."

Linkletter said he thought Hughes' suggestion would "answer the charge of the kids that we are hypocritical."

SEES PLUGS IN RECORDS

Turning to what he called the media, Linkletter said that "almost everytime a 'top 40' record is played on radio, it is an ad for marijuana."

He said the lyrics to rock 'n' roll songs have symbols and words that kids understand and which "campaign for the thrills of trips."

Nixon interjected to ask Linkletter if he thinks television is doing an adequate job and went on to suggest that the networks show exciting programs to get the message across.

Though he doesn't think that is being done now, Linkletter said "it is being planned" and that he is personally involved.

PLEDGES TO ACT

Senate Democratic Leader Mike Mansfield, thanking Linkletter for "in effect opening up a new world to me," told the President that if the senate committee clears the proposed legislation," "we will act expeditiously and we will get it passed."

House Speaker John McCormack said "We will do the same thing." and members of committees handling the legislation promised prompt action.

Nixon said, "We're going to keep entirely above partisanship."

PANAMA CANAL ZONE RESOLUTION

The SPEAKER. Under a previous order of the House, the gentleman from Missouri (Mr. HALL) is recognized for 60 minutes.

(Mr. HALL asked and was given permission to revise and extend his remarks.)

Mr. HALL. Mr. Speaker, it is certainly a pleasure to join with the distinguished gentlewoman from Missouri, the distinguished gentleman from Pennsylvania and the distinguished gentleman from Ohio in introducing into this House a resolution that would arm the President with the sentiment of the House of Representatives—and that of the American people—in any future negotiations with the Republic of Panama Government over the status of our Canal Zone. It is essential that this be done so that a reoccurrence of the abortive proposed 1967 "treaty" does not come back to haunt us. As many may remember this proposed 1967 treaty contained provisions that ceded additional rights of the Canal Zone to Panama, gave Panama joint administration, increased our annual payments to Panama, raised tolls, and forced the United States to share its defense and police powers with Panama.

When the text of this treaty was published there was a hue and cry throughout the United States opposing its provisions. I am sure that Theodore Roosevelt turned over many times in his grave. As we celebrate his birthday today, I am hopeful this resolution will quiet the eternal rest that is so highly deserved by the man whose foresight and energy produced the canal. In 1967 about 150 Members of Congress introduced or cosponsored resolutions expressing the sense of the House that it was the desire of the American people that the United States maintain its sovereignty and jurisdiction over the Canal Zone. The same language exists in the resolution we are introducing today. Public indignation ran so high that the 1967 draft treaty was never sent to the other body for ratification. It even failed consideration in Panama's parliamentary body.

Mr. Speaker, it is now over 2 years later. Much has transpired. A military junta is now ruling Panama. A new administration has taken over the reins here in Washington. We have a new Ambassador to Panama. On the other hand, much has remained the same, Castro is still preaching and exporting revolution and communism in Latin America. American property is still being expropriated "south of the border."

Many people both here and abroad call for the surrender of American bases and rights throughout the world. The Panamanian Government is aware of this and is now willing to make another attempt to negotiate a new treaty. They know that they have nothing to lose, and everything to gain. They no doubt feel that if they obtain concessions from us as they did in the negotiations for the 1967 treaty, they can obtain them again in any new round of negotiations. I am confident that this House resolution we are introducing today, will have a dissuasive effect.

I am also confident that the citizenry of this country know and comprehend the strategic importance of the Canal Zone. As a member of the House Committee on Armed Services I was particularly concerned about the possible effect of the 1967 treaty on both the subjects of national security and hemispheric defense. The importance of the Canal Zone as a bastion on our "southern flank" cannot be overrated. This importance has heightened since 1967, because now the loss and give-away of Okinawa seems eminent. Without our control of the Canal Zone the possibility of a potentially hostile regime in Panama denying access of the transferring of our naval forces from ocean to ocean ever grow. The loss of this access would destroy a link in our defense chain and could produce a disaster.

Mr. Speaker, intertwined with the aspect of national security, is the equally important area of hemisphere defense. The Canal Zone under our control and jurisdiction serves as an outpost, thwarting the perverted ambitions of Castro, Moscow, and Peking. Our presence serves as a constant reminder of our determination to stop subversion in Latin America. I ask, would the presence of Panamanian control of the canal serve a like purpose? I think the answer is obvious.

Beside military considerations, the commercial considerations must also be examined. A Communist or hostile government of any "ism," could completely close the canal to all U.S. shipping. Over 65 percent of all U.S. shipping passing through the canal annually, either originates or terminates in U.S. ports. The added shipping costs, as well as the curtailment of shipping would be astronomical in the event this facility was denied our use.

Besides paying the price for increased shipping costs the U.S. taxpayers could possibly be forced to surrender this aggregate investment of over $5 billion which would constitute the biggest single "give-away" in recorded history. I cannot envision our hard-working taxpayers wishing to write off this huge public asset without some reasonable and tangible compensation in return.

Finally, Mr. Speaker, I am delighted and gratified that so many of my colleagues have cosponsored our resolution today. They represent all sections of this great country and the entire political spectrum. This in turn represents the grassroots, for as we well know no other branch of Government is as representative as the House.

I am equally gratified that my distinguished colleague from Missouri has announced that the Subcommittee on the Panama Canal of the House Committee on Merchant Marine and Fisheries, of which she is chairman, will soon begin hearings on this most important and vital subject. I sincerely hope that the House Committee on Foreign Affairs will follow suit, and hold hearings on our resolution. It is imperative that this body make known the desires, feelings, and opinions of the people so that any future negotiations will reflect these desires, feelings, and opinions. We cannot, as the distinguished gentleman from Pennsylvania (Mr. FLOOD), once said, "afford to see Panama another Cuba and the Panama Canal another Suez."

Mr. Speaker, I am delighted to yield to the gentlewoman from Missouri (Mrs. SULLIVAN), my colleague.

(Mrs. SULLIVAN asked and was given permission to revise and extend her remarks and include extraneous matter.)

Mrs. SULLIVAN. Mr. Speaker, once again the House must assume a leadership role in the protection of American rights to, and in, the Canal Zone and the Panama Canal.

Although the House has no prerogatives under the Constitution in the ratification of treaties, we do have vital responsibilities in connection with the implementation of any treaty which surrenders U.S. rights to territory or property. We have exercised those responsibilities—with responsibility—in numerous historic situations resulting from negotiation and ratification of treaties in which we had no voice until the time came to enact the necessary legislation to implement those treaties.

Before we blunder into, or stumble into, or fall into, or deliberately create a new crisis with the Republic of Panama over the ownership and operation of the Panama Canal and the administration of the Canal Zone, the House must now demonstrate to a new administration what we repeatedly made clear to the previous one, and that is that this body is adamantly opposed to giving away the Panama Canal to the Republic of Panama, or surrendering our rights in the Canal Zone.

An opportunity to express this view—which I know is the overwhelming sentiment of the House of Representatives—is being provided today through the introduction by me and other Members of a House resolution as follows:

H. RES. 592

Whereas it is the policy of the House of Representatives and the desire of the people of the United States that the United States maintain its sovereignty and jurisdiction over the Panama Canal Zone; and

Whereas under the Hay-Pauncefote Treaty of 1901 between Great Britain and the United States, the United States adopted the principles of the Convention of Constantinople of 1888 as the rules for the operation, regulation, and management of said canal; and

Whereas by the terms of the Hay-Bunau-Varilla Treaty of 1903, between the Republic of Panama and the United States, under the authority of the perpetuity of use, occupation, control construction, maintenance, operation, sanitation and protection for said canal was granted to the United States; and

Whereas the United States has paid the Republic of Panama almost $50,000,000 in the form of a gratuity; and

Whereas the United States has made an aggregate investment in said canal in an amount of over $5,000,000,000; and

Whereas said investment or any part thereof could never be recovered in the event of Panamanian seizure or United States abandonment; and

Whereas under Article IV, Section 3, Clause 2 of the United States Constitution, the power to dispose of territory or other property of the United States is specifically vested in the Congress; and

Whereas 70 per centum of the Canal Zone traffic either originates or terminates in United States ports; and

Whereas said canal is of vital strategic im-

portance and imperative to the hemispheric defense and to the security of the United States; and

Whereas, during the preceding administration, the United States conducted negotiations with the Republic of Panama which resulted in a proposed treaty under the terms of which the United States would shortly relinquish its control over the Canal; and

Whereas there is reason to believe that the present dictatorship in control of the Government of Panama seeks to renew negotiations with the United States looking toward a similar treaty; and

Whereas the present study being conducted by the Atlantic-Pacific Interoceanic Canal Study Commission may result in a decision to utilize the present canal as a part of a new sea level canal; and

Whereas any action looking toward an agreement with the Government of Panama which would affect the interest of the United States in the Canal would be premature prior to the submission of the report of the Commission in any event;

Resolved by the House of Representatives, that it is the sense of the House of Representatives that the Government of the United States maintain and protect its sovereign rights and jurisdiction over said canal and that the United States Government in no way forfeit, cede, negotiate, or transfer any of these sovereign rights or jurisdiction to any other sovereign nation or to any international organization.

Similar resolutions were introduced in the last Congress, with the support and cosponsorship of about 150 Members of the House of Representatives. Hearings were conducted by the Subcommittee on Inter-American Affairs of the House Committee on Foreign Affairs, during which the prevailing sentiment of House Members was clearly established in favor of such a declaration.

However, the legislation was not acted on for the simple reason that, officially, no treaty or proposed treaty actually existed. All we had before us was an unofficial draft as printed in a newspaper of a treaty said to have been worked out by negotiators from the United States and the Republic of Panama. Neither country officially acknowledged that the draft was authentic. Officials of the Republic of Panama said they were not satisfied with this draft and wanted to make changes. Our country took no steps to arrange for additional meetings of the negotiators. Hence the Committee on Foreign Affairs decided that, until it had formal knowledge of the existence of a treaty draft, it would be premature to pass legislation condemning its purported terms.

Nevertheless, behind all of the State Department's diplomatic doubletalk about the terms of the proposed treaty, or even its existence, I think all of us recognized the fact that our negotiators had entered into commitments which could have been destructive to national policy objectives, and that a blunder of great magnitude had been committed.

Let us make sure we do not repeat that blunder. Extremist elements in the Republic of Panama have insisted for years—for generations—that the United States is a criminal exploiter of a poor and small and weak neighbor and an imperialist power grinding the poor people of Panama into abject servitude to the Yankee octopus. The truly unfortunate concessions offered—or said to have been offered—by our negotiators seemed to bear out these charges. By agreeing to give up our ownership of the canal and our administration of the Canal Zone, our negotiators were placed in the position, I maintain, of acknowledging we never should have taken over the Canal Zone in the first place, or built the canal, or retained it all these years. If a treaty were to be agreed upon carrying out these ideas, and the Senate should ratify it, I am convinced the House would be confronted with a most serious constitutional issue, and the possible—or probable—refusal of the House to pass the necessary legislation providing for a giveaway of the Canal Zone and of the canal would create the most far-reaching problems in our international relations.

Why should we go out of our way as a nation looking for, or inviting, a crisis of this nature? Yet the expressed willingness of the Department of State to engage in new discussions with the military junta now in control of Panama with a possible view toward negotiating a new treaty holds out to the Panamanians a tantalizing prize which I do not think is going to be awarded in our lifetimes, at least, if ever.

Mr. Speaker, as chairman of the Subcommittee on the Panama Canal of the House Committee on Merchant Marine and Fisheries, I have gone through this issue—and various crises related to it—on numerous occasions. One of my first assignments as subcommittee chairman was to guide through to passage in 1957 a bill implementing the treaty of 1956—one which gave away to Panama about $24 million worth of real estate owned by, and used by, the Panama Canal Company in the Republic of Panama, outside the Canal Zone. That treaty also upped the annual contribution to Panama for use of the Canal Zone from $450,000 a year to $1,950,000 a year. These actions were supposed to "ease tensions" and mollify nationalist aspirations in Panama for dreamed-of riches from the canal.

The results are well known: all the 1956 treaty did was whet the appetite of Panama for more. The real estate we turned over in 1957 was vandalized and virtually destroyed while the powers-that-be in that country argued and disagreed over which family or firm, or family firm, would obtain the best parcels. Your heart would ache, Mr. Speaker, from seeing what happened to well-built, well-maintained, pleasant apartment buildings turned over in 1957, only to rot and decay and become uninhabitable.

The seeds sown in the 1956 treaty led to armed attacks upon our people in the Canal Zone only a few years later.

These attacks were based on the determination of extremist groups in the Republic to seize the Canal Zone, and the canal. To meet this situation, President Johnson invited discussions with Panama on the development of a new treaty with no restrictions on the issues to be negotiated. The result was the draft which, in effect, ceded back the Canal Zone area and gave the canal away.

Mr. Speaker, I am not in the habit of writing to the President every time I object to some administration policy or every time I have some idea which I think might merit some consideration. Usually, I call such ideas to the attention of the Cabinet Secretary or other official having the responsibility for policymaking in a particular field.

When I do write to the President, it is only in those situations which involve some special problem only he can solve and with which I might have some special familiarity. Under those circumstances, when I write to a President, it is for his information and any help or guidance I could provide—not for the purpose of announcing to the press what I think the President should do. Hence, I did not make public a letter I wrote to him on September 24 on this issue.

However, in view of the discussions here this afternoon, and the deep concern of those of us who are introducing legislation dealing with the subject of a possible new treaty with Panama, I include herewith, a copy of my letter to the President outlining my sincere fears about the mischievous results which could flow from a reopening of negotiations at this time for a new treaty with Panama, and a reply from the White House.

The letters are as follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., September 24, 1969.

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: As Chairman of the Subcommittee on the Panama Canal of the House Committee on Merchant Marine and Fisheries, I have been deeply disturbed by press reports originating with unnamed "State Department officials" inviting the military Junta now ruling Panama to begin negotiations for new treaties dealing with the same subject matter as the unfortunate proposals worked out by special teams of negotiators from the two countries in 1967. My purpose in writing to you is to urge the utmost caution and restraint in raising once again false hopes among Panamanian nationalists that we are about to surrender the Canal Zone and the Canal.

More than one hundred Members of Congress joined me several years ago in introducing resolutions strongly opposing the 1967 treaty drafts made public in the Republic of Panama. The issue is an explosive one and the consequences of its further discussion at this time could be serious indeed to the continued efficient operations of the Canal, and to our international relations in the entire hemisphere.

The apparent conflicts of position within the State Department were dramatized by the publication of two news articles earlier this month. On September 2, a report appeared in the *New York Times* attributing to "unnamed State Department officials" a statement that the United States cannot engage in long-term commitments on militarily and politically sensitive issues with the "military-type provisional" government which has assumed power in Panama. Two days later a UPI dispatch from Washington stated that the Department of State had announced on September 3 that the United States will accept any initiative of Panama to reopen "stalled conversations on the proposed treaties". Five days later, the Junta government of Panama responded to this implied invitation by announcing the appointment of negotiators to work on new treaty drafts.

In view of the near disastrous nature of the negotiations of 1967, insofar as American interests were concerned, I sincerely hope that you will impose and maintain firm control over activities within the Department of State directed toward the reopening of negotiations. The Provisional Government of Panama has made no claims whatsoever of being a constitutional government. It holds only by military force. It

has publicly promised that elections would be held next year to create a constitutional government. Unless that promise is an empty one, any treaties negotiated with the Junta would be in danger of repudiation by a constitutionally elected National Assembly.

Furthermore, the whole concept of the 1967 approach is now questionable. The possibility of construction of a sea-level canal to replace the existing canal becomes increasingly remote. So does the possibility that Panama will grant permanent United States bases in that country.

May I respectfully remind you that the 1967 treaty drafts were negotiated on the assumption that the construction of a sea-level canal was necessary, practical, and urgent and that we would need Panama's acquiescence and assistance in constructing it. Events since 1967 throw these assumptions into great doubt.

In the meantime, we have blundered into lending a semblance of respectability to—in effect, official American concurrence with—extremist Panamanian claims that our presence in the Canal Zone is imperialistic and morally indefensible. In introducing resolutions strongly opposing the 1967 draft treaty proposals, more than one hundred Members of Congress refused to accept for this country any such taint on the legitimacy of our role in the Canal Zone. I hope you concur with us in that conviction and will exercise firm leadership in preventing mischievous actions within the Department of State which would tend to jeopardize our moral and legal rights in the continued operation of one of the greatest instruments of world trade, which we have operated in strict conformance with international law and in the highest traditions of international cooperation.

Respectfully,

(Mrs. John B.) LEONOR K. SULLIVAN,
Member of Congress, Third District, Missouri.

THE WHITE HOUSE,
Washington, D.C., Sept. 30, 1969.

HON. LEONOR K. SULLIVAN,
House of Representatives,
Washington, D.C.

DEAR MRS. SULLIVAN: Thank you for letter to the President bringing to his attention your interest and concern over any negotiations pertaining to proposals for new treaties with the Republic of Panama.

I know the President will be especially interested in having this thoughtful analysis, writing as you do as Chairman of the Subcommittee on the Panama Canal of the House Committee on Merchant Marine and Fisheries. You may be assured your letter will be given careful consideration.

With cordial regard,

Sincerely,

WILLIAM E. TIMMONS,
Deputy Assistant to the President.

Mr. HALL. Mr. Speaker, I certainly thank the gentlewoman from Missouri (Mrs. SULLIVAN), who has served as chairman of the subcommittee of the distinguished Committee on Merchant Marine and Fisheries, and who has made it a personal goal and followed through in making personal trips to the Canal Zone and the Republic of Panama through the years before arriving at her position, which she defended so well in the unpublished hearings of the Committee on Foreign Affairs to which this resolution was referred 2 years ago. There was sufficient and good reason for not publishing these hearings, perhaps, but her position has been well known, and she has been a stalwart in maintaining this area through which we have a corridor. Despite various treaties, there has never been established a corridor of land which we controlled with the same soveriegnty that we do the zone in Panama. I cannot conceive our hard-working taxpayers wishing to write off this huge public asset without some reasonable and tangible compensation in return.

Finally, Mr. Speaker, I am delighted and gratified that so many of our colleagues have cosponsored this or a similar resolution today that represents all sections of this great country and the entire political spectrum. This, in turn, represents the grassroots to which as we well know no other branch of Government is as responsive as the House of Representatives.

I am equally gratified that my distinguished college, the gentlewoman from Missouri (Mrs. SULLIVAN), has announced that the Subcommittee on the Panama Canal of the House Committee on Merchant Marine and Fisheries of which she is chairman will soon begin hearings on this most important and vital subject.

I sincerely hope that the House Committee on Foreign Affairs will follow suit and hold hearings on our resolution.

I think this is particularly important because as our colleague from Tennessee pointed out in 1967 so effectively, the Constitution requires both Houses of the Congress act if territory is to be ceded or revert to another country where we have sovereign and fee simple control. It is, therefore, most imperative that this body make known the desires and the feelings and opinions of the people so that any future negotiations will reflect these desires, feelings, and opinions. We cannot, as the distinguished gentleman from Pennsylvania, Mr. DANIEL FLOOD, so ably once said, "afford to see Panama another Cuba and the Panama Canal another Suez."

Mr. FLOOD. Mr. Speaker, will the gentleman yield?

Mr. HALL. I am delighted to yield to my colleague, the gentleman from Pennsylvania.

(Mr. FLOOD asked and was given permission to revise and extend his remarks.)

Mr. FLOOD. Mr. Speaker, I am very grateful to my distinguished colleague, the gentleman from Missouri (Mr. HALL).

As the doctor has suggested, I am not unknown in this House and in Panama on this subject. I have the unique distinction by Act of the Congress of Panama unanimously declaring me several years ago persona non grata to visit that beautiful and lovely country.

Mr. Speaker, when the Eisenhower administration was first considering this matter and the House was about to adjourn sine die, I indicated that it was my judgment that within a certain number of days after sine die adjournment, the administration would act, vis-a-vis, the treaty of negotiation and, of course, that happened.

In the Johnson administration we were confronted with very much the same thing. It was at that time, as my colleague from Missouri has indicated, that at this very spot I suggested that if and when the great Committee on Foreign Relations in the other body would hold a hearing, I would advise the chairman that there would meet here in the Chamber of the House 200 Members who would march four abreast to the other Chamber and request that one by one we be heard in opposition to ratification of a proposed treaty if and when, God forbid, that it came.

I may add, Mr. Speaker, that I have introduced a bill calling for an amendment to the Constitution which will give to the House—Dr. HALL and Mrs. SULLIVAN—give to the House by constitutional amendment the same prerogative which is reserved to the Senate in the ratification of treaties which become the law of the land.

I just cannot conceive that the historic reason for that provision of the Constitution exists any longer. It does not. And, I cannot conceive in this day of our Lord 1969 from now on that other body of the Congress constitutionally can impose upon this Nation what is a law without equal action by the other body.

I would just say this, Mr. Speaker, as a person acquainted with the subject—and as you know I serve upon the great Committee on Appropriations for the Department of Defense, and so became involved deeply in the last 20 years with Western Hemisphere defense.

This involves the canal. The canal is our jugular vein for Western Hemispheric defense. We found that out at the end of V–E Day when we had divisions moving to the Pacific. We found out how important was the canal.

But one of the greatest inspirations of my life was hearing from former President Teddy Roosevelt while he was a guest in our home in Wilkes-Barre, Pa.—how long ago that is is none of your business, it was some time ago—and I heard Teddy Roosevelt explain to my father and my grandfather the problem that he faced in the acquisition of the Canal Zone and the construction of the Panama Canal. He viewed this extension of the U.S. territory in 1903 and the launching of the canal in 1904 as the most important contribution of his administration, comparable in its consequences with the Louisiana Purchase of 1803.

Mr. Speaker, I am so happy today to have as my ally the distinguished gentlewoman from Missouri (Mrs. SULLIVAN), and the distinguished gentleman from Missouri (Mr. HALL) in this great cause for our country.

Mr. Speaker, it is, indeed, historically fitting that a significant number of Members of this body have introduced today, October 27, the birthday of Theodore Roosevelt, a resolution to protect this important legacy that he passed on to future generations. I can think of no better tribute to that great American than for this body of the Congress, which reflects the will of the people of the United States, to adopt the resolution.

To assist in its consideration, I wish to invite attention to the following facts that are basic to understanding the present Canal Zone sovereignty situation:

First, that the Canal Zone and Panama Canal are constitutionally acquired territory and property of the United States;

Second, that the validity of the U.S. title has been upheld in a long series of court decisions;

Third, that the net total investment of the U.S. taxpayers—1904–68—in the canal enterprise and its defense is more than $5 billion;

Fourth, that, under article IV, section 3, clause 2, of the U.S. Constitution, only the Congress is vested with the power to dispose of territory and other property of the United States;

Fifth, that the Congress has not authorized the disposal of the Canal Zone territory and canal;

Sixth, that, in formulating the proposed 1967 treaties, our negotiators disregarded the above-mentioned important constitutional limitation as regards the disposal of U.S. territory and property.

Seventh, that, if the President with the approval of two-thirds of the Senate can cede U.S. sovereignty and ownership over the Canal Zone territory, it could do likewise for Texas, California, and Alaska;

Eighth, that the cause for much of the trouble at Panama is the failure on the part of high officials of our Government since Secretary of State Hughes, to make unequivocal statements of our just rights at Panama;

Ninth, that the current situation requires the House of Representatives to assume leadership in clarifying and making definite what are the rights, power, and authority of the United States over the Canal Zone and canal;

Tenth, that the history of Panama, both before and after the U.S. occupation of the Canal Zone in 1904 shows conclusively that it is a land of endemic revolution and endless political instability; and

Eleventh, that, in addition to our treaty obligations for the efficient operation of the Panama Canal, experience during both its construction and subsequent operations has repeatedly confirmed that full sovereign control over the Canal Zone territory is indispensable for the continued efficient operation of the vital interoceanic link.

In addition, Mr. Speaker, I would quote a recent article by Harold Lord Varney, president of the Committee on Pan American Policy of New York. In connection with Mr. Varney's remarks about the newly appointed U.S. Ambassador to Panama, Robert M. Sayre, I wrote the President on July 29, 1969, protesting Mr. Sayre's appointment and published it in an extension of my remarks in the CONGRESSIONAL RECORD of September 9, 1969.

The indicated article by Mr. Varney follows:

[From American Opinion, November 1969]

PANAMA, S.O.S.—MR. NIXON IS SINKING IN THE CANAL

Anybody who still entertains the hope that the Nixon Administration is going to scrap President Johnson's pending treaty with Panama to give away our Canal Zone is due for a sad awakening. The last possibility of forthright action on the matter was dashed when the Associated Press announced recently that President Nixon is going to appoint Robert M. Sayre as his Ambassador to Panama. This surprising appointment is a slap in the face to those Americans, both Republicans and Democrats, who have done their best since 1964 to preserve U.S. sovereignty over the Panama Canal. It includes many who gave Mr. Nixon important support in 1968.

Throughout his career, Robert M. Sayre has been a member of the State Department ring which has counselled appeasement and retreat in our foreign policy for the Hemisphere. He cut his eyeteeth in the Department as executive secretary to the Adolf A. Berle "task force" of 1961, which drew President Kennedy into the phony Alliance for Progress that has already cost the American people more than $5 billion.

Under President Johnson, Sayre was a member of the staff of the Anderson-Irwin group which in 1967 negotiated the infamous Canal Zone treaty now pending. Sayre was, in fact, one of those who drafted the treaty. Peripherally, it is significant that President Nixon has singled out another member of this group, John I. Irwin, for appointment as has personal envoy to Peru, where Irwin distinguished himself by suspending the Hickenlooper Amendment which would have ended U.S. aid to that Communist Government when it confiscated property belonging to American citizens. This, despite the fact that enforcement of the Hickenlooper moratorium was, by law, obligatory.

The Panama Ambassadorship is particularly important since, under the disturbed political conditions there over the last decade, the American Ambassador has assumed an ex-officio authority little short of that of a pro-consul. Sayre's predecessor, Charles W. Adair, manipulated the election to the Presidency of Arnulfo Arias in the riotous campaign of 1968. He ensured victory for Arias by persuading the strongly pro-American General Bolivar Villarino, a life-long opponent of Arnulfo Arias and Commandant of the National Guard, to declare Arias the winner after the election was contested. Ambassador Adair's ineptitude was demonstrated when the National Guard, turning against Villarino, forced Arias from office after only eleven days and established a military dictatorship. Yet, despite this serious failure in Panama, President Nixon has elevated Charles Adair to be U.S. Ambassador to Uruguay, another hot spot under the Communist gun.

In an effort to win national popularity, General Omar Torrijos, head of Panama's ruling junta, is now trying earnestly to revive the treaty negotiations with Washington, in abeyance since 1967. Recently Torrijos announced that he was thinking in terms of prolonging the suspension; if he plays his cards skillfully, he can refuse even to consider a Canal treaty until after a new national election in Panama.

Unfortuntely, President Nixon is so surrounded by Leftists that he may prefer to wobble. Certainly, his personal position on the Panama treaties has been an ambivalent one. On January 16, 1964, immediately after the Communist riots, he declared in Philadelphia that the United States "must stand firm on the right of the U.S. to control the Canal Zone." He added that "if the U.S. retreats one inch in this respect, we will have raised serious doubts about our bases throughout the world." But in 1966, when the Committee on Pan American Policy urged him to reiterate this statement as an aid to the forces fighting President Johnson's efforts to give away the Cana. Zone, he remained silent. Mr. Nixon maintained this silence throughout the campaign of 1968; and the Republican Party platform, drafted by his supporters, conspicuously omitted any indictment of the Johnson Administration on this extremely important issue.

Fortunately, not all the news from Panama is bad. Dictator Torrijos has just won a shattering victory over Panama's Communists at the National University. For years, Communist control of the student organizations at the University provided the base for the Communist movement in Panama. Torrijos's two Liberal Party predecessors, Roberto F. Chiari and Marco A. Robles, did not make a serious attempt to root out Communist there because their policy was to use the Communist students as shock troops in the frequent anti-gringo street demonstrations which they encouraged to force American surrender on the matter of U.S. sovereignty over the Canal Zone.

General Torrijos has demonstrated how easily a Government which means business, and is willing to disregard the yelps of the Left, can wipe out the Communist apparatus. His first step was to appoint Edwin Fabrega as Administrator of the University, with full Government support. Señor Fabrega found that the Communist cadre on campus was made up almost entirely of "professional students," many of them middle-aged, who had enrolled for courses in order to enjoy the sanctuary for Communist agitation provided by the University. It was these "professionals" who had recruited sizable student followings and won control of student organizations.

Since they had paid little attention to their courses, the professional students proved vulnerable to expulsion for low marks. Previous University chancellors had been afraid to invoke academic discipline, but Administrator Fabrega ruled that all those who had not maintained an average of "C" in the three previous semesters were to be expelled. The ruling caught the "professionals" flat-footed. Of the eight thousand students at the University, two thousand were expelled. Fabrega also dropped forty professors who had flagrantly encouraged the Communists. He instituted a further rule that only honor students could represent the student body. Señor Fabrega struck at the Communist jugular, and as a result the voice of Communism has been hushed to a whisper among students and University organizations in Panama. The scouring of the University has removed the core of organized Communism in the Republic. And, the success of General Torrijos could well supply a guideline for anti-Communists who have faced violence and terrorism among students this past year in Mexico City, Rio, Cordoba, Montevideo, and elsewhere.

Mr. DORN. Mr. Speaker, will the gentleman yield?

Mr. HALL. Mr. Speaker, I will be delighted to yield to the gentleman from South Carolina after just one remark.

Mr. Speaker, I certainly appreciate the comments of my colleague, the gentleman from Pennsylvania (Mr. FLOOD). The gentleman has long been preeminent in his perception of the problem and his implementation of the remedy. I hope that I will be like other stouthearted people, and one of those in the front ranks of those four abreast who go to that body that does advise and consent. Like the gentleman from Pennsylvania (Mr. FLOOD) and the gentlewoman from Missouri (Mrs. SULLIVAN), who have taken such interest in this subject and who have expressed such considered judgment on it, I have long been interested in the Panama Canal. As a boy one of the first books that I recall my family acquiring was "The Panama Canal Zone." We still have that book in our library.

Our town was likewise favored with a visit by the former President Theodore Roosevelt. But in addition to all of that

in later years, as one of the Assistant Surgeon General of the Army, I came to know Dr. Cummings personally, and of course read and reread the history of the contractor Goethals, and the experiments of Walter Reed, and those things which made sure, in spite of malaria, blackwater fever, yellowjack, dengue, and many others, the construction of this monolithic engineering feat that was accomplished. I have read in great detail in preparing testimony before the Committee on Foreign Affairs 2 years ago on the background and the history of the Panama Canal. All of us know as a fact, had we not interceded and had we not made possible that which other great sovereign nations failed in matters of construction, that there would indeed have been reversion of this area perhaps to another sovereign territory juxtaposed and contiguous to the Republic of Panama.

This threat still remains but we will leave that to the Department of State and to the distinguished Committee on Foreign Affairs.

I do hope that we can be heard and the lending of credence and background and the long years of support by those and others who join us today, strengthen the resolution, the intent of Congress, and the will of the people.

I certainly thank the distinguished gentlewoman from Missouri (Mrs. SULLIVAN) and the gentleman from Pennsylvania for their contribution.

Mr. DORN. Mr. Speaker, will the gentleman yield?

Mr. HALL. I am delighted to yield to the distinguished gentleman from South Carolina (Mr. DORN).

Mr. DORN. Mr. Speaker, I want to commend the distinguished and able gentleman from Missouri and my distinguished colleague, the gentleman from Pennsylvania (Mr. FLOOD) and the gentlewoman from Missouri (Mrs. SULLIVAN) for this enlightening discussion here today, not only enlightening but I think pointing out to this House and to the people of this country the danger, which seems to be constant, although I had hoped that it would go away, the danger of this vital link in the Western World, as the gentleman so ably put it, the jugular vein, the Panama Canal of falling perhaps into alien hands.

I commend the gentleman today for calling this to the attention of the House and warning that this threat is still there.

I might point out that ships, that is, transportation by water, going from the Southeastern United States to the western ports of South America originating from Charleston and Savannah to go through the Panama Canal and then to the western coast of South America travel a shorter distance than ships going from San Francisco to the western coast of South America.

This is a great link and it would hinder the development of the southeastern part of our country and certainly be a threat and a great threat to the defense of the western world should it fall into enemy hands.

So I commend the gentleman and want to associate myself with him and with the gentleman from Pennsylvania (Mr. FLOOD) here today in your warning to this Nation and to the American people about this.

I might remind the Members of the House as the gentleman from Pennsylvania (Mr. FLOOD) so ably did here several years ago that there was a full-scale attack here several years ago on the Panama Canal by mobs and it was only through the coolheadedness of the major general, the commander in the Canal Zone, that prevented perhaps the blowing up of the canal and the destruction of this vital link between the Pacific and the Atlantic.

I wish again to commend the gentleman.

Mr. HALL. I thank the distinguished gentleman. I certainly agree with him and with the gentleman from Pennsylvania that this is not only a jugular vein of our commerce, our defense, and of our hemisphere; but it is indeed the carotid artery, and why we need to have it reamed out occasionally from the obstructing of those who would give a good thing away, owned in complete fee and sovereignty by us as this is, as well as many of the other giveaways of today, is beyond my comprehension.

I think we must realize that capability and gold are, like the words of the poet:

Not gold, but only men can make a nation
great and free.
Men who for truth and honor's sake stand
fast for all to see
Brave men, who work while others sleep
They build a nation's pillar deep and lift her
to the sky.

So again, Mr. Speaker, I commend this resolution to all Members of the House, Indeed, I commend it to the other body.

Mr. Speaker, I ask unanimous consent that a copy of the resolution may appear following the remarks made here today in the body of the RECORD.

The SPEAKER pro tempore. Without objection, it is so ordered.

There was no objection.

The resolution referred to is as follows:

H. RES. 593

Whereas it is the policy of the House of Representatives and the desire of the people of the United States that the United States maintain its sovereignty and jurisdiction over the Panama Canal Zone; and

Whereas under the Hay-Pauncefote Treaty of 1901 between Great Britain and the United States, the United States adopted the principles of the Convention of Constantinople of 1888 as the rules for the operation, regulation, and management of said canal; and

Whereas by the terms of the Hay-Bunau-Varilla Treaty of 1903, between the Republic of Panama and the United States, under the authority of the perpetuity of use, occupation, control construction, maintenance, operation, sanitation and protection for said canal was granted to the United States; and

Whereas the United States has paid the Republic of Panama almost $50,000,000 in the form of a gratuity; and

Whereas the United States has made an aggregate investment in said canal in an amount of over $5,000,000,000; and

Whereas said investment or any part thereof could never be recovered in the event of Panamanian seizure or United States abandonment; and

Whereas under Article IV, Section 3, Clause 2 of the United States Constitution, the power to dispose of territory or other property of the United States is specifically vested in the Congress; and

Whereas 70 per centum of the Canal Zone traffic either originates or terminates in United States ports; and

Whereas said canal is of vital strategic importance and imperative to the hemispheric defense and to the security of the United States; and

Whereas, during the preceding administration, the United States conducted negotiations with the Republic of Panama which resulted in a proposed treaty under the terms of which the United States would shortly relinquish its control over the Canal; and

Whereas there is reason to believe that the present dictatorship in control of the Government of Panama seeks to renew negotiations with the United States looking toward a similar treaty; and

Whereas the present study being conducted by the Atlantic-Pacific Interoceanic Canal Study Commission may result in a decision to utilize the present canal as a part of a new sea level canal; and

Whereas any action looking toward an agreement with the Government of Panama which would affect the interest of the United States in the Canal would be premature prior to the submission of the report of the Commission in any event;

Resolved by the House tof Representatives, that it is the sense of the House of Representatives that the Government of the United States maintain and protect its sovereign rights and jurisdiction over said canal and that the United States Government in no way forfeit, cede, negotiate, or transfer any of these sovereign rights or jurisdictions to any other sovereign nation or to any international organization.

Mr. RARICK. Mr. Speaker, the Panama Canal is one of the great works of man—an enduring monument to American ingenuity and initiative—vital not only for interoceanic commerce, but also for hemispheric defense. Thousands of vessels of all nations transit the canal each year. Its services during World Wars I and II, the Korean war, the Cuban missile crisis, and the Vietnam war reflect the vision of our statesmen, who formulated U.S. Isthmian Canal policy and brought about the acquisition of the Canal Zone and construction of the canal.

Of all who contributed toward the success of this great engineering project, no one is deserving of greater recognition than President Theodore Roosevelt. It was his statesmanship that effected perpetual U.S. sovereignty over the Canal Zone Territory and ownership of the canal. It was he who made the critical decision for the high level lake and locks at Panama against strong opposition. It was his determination which propelled the project on to success.

Today, the House has before it a measure that will perpetuate and retain what Theodore Roosevelt felt was the greatest accomplishment of his administration. The introduction today of these resolutions, setting forth the views of this body, and their adoption is in the best interests of our Nation and the highest tribute that we can pay to the great American who had the vision and vigor to start the Panama Canal.

THE PANAMA CANAL

Mr. RANDALL. Mr. Speaker, I regret that it was not possible to be on the floor during the special order participated in by two of my fellow Missourians, the gentlelady from St. Louis (Mrs. SULLIVAN) and the gentleman from Springfield, Dr. HALL, on the subject of the Panama Canal.

Because of my required absence away from the Hill during this special order, I was denied the privilege to hear what was said concerning the retention of one of our most valuable possessions, the Panama Canal, and the zone of land which surrounds it. Although I was denied the pleasure of hearing my fellow Missourians and the gentleman from Pennsylvania (Mr. FLOOD) as well as those who participated, it is an honor to associate myself with their remarks and to compliment each of them upon taking the time to emphasize this vital issue. Accordingly some of the things I say may be repetitious, but if I am not grossly in error our colleagues need to hear repeated many times the great concern some of us may have that, if we are not vigilant, the United States may lose its sovereignty and jurisdiction over the Canal Zone.

In the 90th Congress I joined with other Members in House Concurrent Resolution 390 introduced in June 1967. The resolution introduced today, and its former counterpart, resolved that it is the sense of the House of Representatives that the Government of the United States maintain its sovereign rights and jurisdiction over the Panama Canal. It is also resolved that the United States in no way forfeit, concede, negotiate, or transfer any of those sovereign rights or jurisdiction to any other sovereign or international organization.

Now, Mr. Speaker, there may be those who would wonder why a Member of Congress from the very heart of America would take such an interest in the Panama Canal. The gentlelady from St. Louis is, of course, a member of the Committee on Merchant Marine and Fisheries. Because it is my honor to be a member of the House Committee on Armed Services, I realize the strategic importance of this priceless possession. But regardless of the location of my home district or regardless of my membership of any committee of the Congress, the Panama Canal belongs to the United States and because it is ours we should not lose it by any concession or negotiated transfer.

Certainly the canal belongs to us as a matter of right because of the Hay Treaty of 1901 between Great Britain and the United States, and because of the treaty of 1903 between the United States and the Republic of Panama. That last treaty granted to the United States in perpetuity the use, control, operation, and protection of the said canal.

The United States has an investment in the canal of over $5 billion. This is money that was invested when the American dollar was worth many times its present value. It would be difficult, if not impossible, to estimate the replacement cost or the cost to build the canal at today's level of inflation.

Our country has already paid gratuities to the Republic of Panama in the amount of over $50 million. Seventy percent of the traffic through the canal either originates or terminates in U.S. ports.

Most unfortunately, there is no way we could ever recover our investment except by use of the canal. Again, most unfortunately, there was a treaty proposed in 1967 which would give additional rights of the Canal Zone to Panama and give Panama joint administration, increasing our annual payments, raising tolls and forcing us to some degree to share the defense and police powers with the Republic of Panama.

Put in different language, these were all preliminary steps which would, taken one step at a time, force the United States to relinquish its control over the canal.

Mr. Speaker, the Panama Canal belongs to the United States. We paid for it. It is of strategic importance for our hemispheric defense and the security of the United States. It belongs to us as if we had bought and paid for a piece of land in fee simple. We cannot, we must not, become so apathetic and indifferent to the value and importance of this strategic and also economically important piece of real estate that we let a military ruling junta of Panama maneuver us into negotiations or any kind of bargaining that would affect our sovereignty over the Canal Zone.

We should not wait until it is too late. The time for the Members of the Congress to express their concern about the canal is now. It is my hope that enough voices will be raised that the present administration will get the message that Members of the Congress are concerned about our Panama Canal.

GENERAL LEAVE TO EXTEND REMARKS

Mr. HALL. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to comment on this subject.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Missouri?

There was no objection.

VICTIMS OF NAZI PERSECUTION FAIL TO GET FULL JUSTICE IN THEIR CLAIMS FOR COMPENSATION

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Illinois (Mr. PUCINSKI) is recognized for 60 minutes.

Mr. PUCINSKI. Mr. Speaker, I wish to call attention today to the plight of former Polish nationals still living in Germany who are entitled to just compensation because they were victims of Nazi terror but are not getting such compensation.

The compensation law passed by the German Republic divides victims into several categories according to whether they were persecuted on political, racial, religious, or nationality grounds. The last category comprises mainly Poles, Czechs and others who were liberated at the end of the war from prisons, concentration camps and forced labor in Germany but could not or would not return to their own countries for fear of Communist persecution; they therefore became stateless, and some of them, after a period of years, adopted American, British, or some other nationality.

German law clearly discriminates against those victims who were persecuted on "national grounds." Unlike those who suffered for their political views or racial origin, the victims of national persecution are not assigned compensation in respect of loss of life in captivity, and they do not enjoy the same rights as others as regards compensation for loss of health, ability to work et cetera. It is impossible to understand on what principle a legislature, motivated by good will, could make such a distinction between different categories of victims. How can it be said that, in the eyes of a democratic Germany, compensation is due a man because he was an ideological opponent of nazism, but denying a victim of nazism the same compensation under the same circumstances because he was a Pole? Why is it that a man persecuted on racial grounds is deemed to deserve compensation for loss of ability to work if his disability exceeds the level of 15 percent, whereas if he was persecuted on national grounds, compensation only begins at 30 percent? Are people different? Were the crimes committed against them of a different order, even though they resulted in death or in the same degree of disability?

There is another important respect in which the German law discriminates against victims of national persecution as opposed to others. In the event of their death, the judicial procedure lapses and their heirs have in principle no right to inherit their claim. Such discrimination is odious in itself and tragic in its effects if one considers that these are people who were grievously injured in health and that the German compensation procedure is still dragging on, despite the fact the 25 years have elapsed after the end of the war.

By the 1st of December 1968, out of 36,383 claims for compensation, German authorities have examined only the substance of 12,074. Another 15,729 were waiting to be dealth with, while the remainder had been rejected out of hand as unfounded. At this rate of progress, we may expect that the bulk of the outstanding claims will be settled in the simplest manner, by the death of the claimants. Is this the intention of the democratic German law, and the reason for the disgraceful delay in handling the compensation claims of victims of nazism?

What is at stake here in financial terms?

According to the unchallenged estimate in the memorandum presented to the German Parliament by the German Catholic Bureau, from which my figures are drawn, if German authorities were to give satisfaction to 18,000 or 20,000 claims, it would involve an annual charge on the German treasury of DM60 million—a charge which, as the Catholic Bureau observes "would not be intolerable for the German state." Indeed, for a country suffering from overvaluation of its currency, it would seem acceptable to spend $15 million a year on the preservation of its good name.

In practice, however, it appears that

out of the 12,074 claims so far examined, only 2,065, or slightly over 15 percent, have been decided favorably. If we take into account the claims rejected out of hand, the proportion of the total number who have received compensation is barely 9 percent.

This being so, I have examined the grounds advanced for some decisions of the German courts rejecting claims for compensation by the victims of persecution on national grounds.

I would like to cite 13 decisions which I believe indicate the scope of unjustice being perpetuated on these tragic victims of Nazi oppression 25 years ago.

I confess that I was shocked when I first read details of grounds for the decisions taken in these cases. More than once, I had to assure myself that I really was reading about decisions of the German Federal authorities in 1966, 1967, and 1968, and not by Nazi courts and institutions in 1943, 1944, and 1945. For the decisions, in effect, constitute an apologia for the basic principles of nazism.

Consider this: a man was publicly hanged for daring to have sexual relations with a German woman. The German court tells us that his punishment was not reprehensible because it was meted out according to law. If he had been a gypsy it might have been a case of racial persecution, but since he was a Pole it was not and compensation to his heirs was denied.

Again, an institution of the democratic German state tells us that it was not persecution to deport boys of 15 and 16, as some of the victims were, to forced labor in mines and ammunition factories. This, it appears, was done simply because the Germans were short of labor to carry on the war, and anyway the imprisonment was not severe—only barbed wire around the labor camp, and only a single armed sentry at the gate.

The German bureau shows especial cynicism in defending Nazi ideas of justice in the matter of collective responsibility. A youth is arrested and held in prison and concentration camps for years, merely because the Gestapo wanted to lay hands on his father—but this is not persecution, only a military measure. Another boy whose father, brothers, and sisters were murdered is kept in concentration camps till the end of the war, and the German bureau tells us that this was required by the security of the German armed forces: if he had been allowed to go free, he might have sought revenge.

During the war, the Nazis closed all secondary schools and universities in Poland. The law in force was that the Polish nation was to become a nation of pariahs. Anyone who dared to teach, or help to teach, arithmetic, geography, or the Polish language in a private house is judged today by the German bureau to have been a criminal and not a person who suffered persecution on national grounds. In this fashion the German authorities have rejected claims of many Poles who, at the age of 14 or 16, spent years in prisons and camps and suffered permanent loss of health.

An especially typical example of this Nazi reasoning is given by the decision of the German compensation bureau which I have quoted and which declared that a Ukrainian woman who was made to do heavier work than the German railway regulations allowed, and whose health broke down in consequence, was not a victim of discrimination, because Ukrainian women were accustomed in their own country to much heavier work than German women.

Mr. Chairman, we cannot remain silent and passive in the face of such decisions by Federal German institutions. We must speak out, not only because the United States has a formal duty to protest this injustice on the basis of the act that the United States acknowledged the sovereignty of the FGR; but also for moral reason because victims of Nazi terror are being grievously wronged and are defenseless against rejection of their claims by German authorities. Over and above these reasons, we must speak because the vital interests of our own country are affected. We cannot be talking about human dignity while we witness this injustice with impunity.

It is time to draw attention to remaining traces of Nazi injustice still lingering in some quarters of the FGR, which are so blatantly manifested in the decisions I have cited. The tendencies they reveal are more alarming even than the perceptible growth in influence of the extreme nationalist party. They represent the source and basis of a movement which may be dangerous to peace in Europe and the whole world.

The German Catholic Bureau has properly called this indefensible practice to the attention of the Bundestag in its recent memo.

It is a favorable sign that treatment of claims for damages in respect to Nazi persecution on national grounds has aroused protests on the part of German Catholic opinion, the German league of victims of nazism and other organs of public life. Last year the Union Internationale de la Résistance et de la Déportation adopted a unanimous resolution, supported by representatives of 17 countries including those of the German associations, which expressed regret that the Cologne compensation bureau and the German courts "had taken decisions on the claims of those persecuted on national grounds, in a manner contrary to the spirit of the law." But the fact remains that all these protests have had no effect and the injustice continues.

It is an open secret that the unyielding attitude of the FGR in this matter is dictated by a few senior officials of the Finance Ministry. It is they who, by their instructions and binding commentaries on the compensation law, have given a discriminatory character to the decisions of the German bureau and courts. That is why no result has been achieved by the interventions of the U.N. High Commissioner for Refugees or by periodical changes in the terms of the law. In the absence of good will, every version of the law in turn is distorted so as to make out that there was no real persecution on grounds of foreign nationality, but only crimes committed by foreign nationals—men, women, and children who broke Nazi laws and were imprisoned, kept in camps, and subjected to forced labor because such measures were required by the interests of the German state, which needed labor for the victorious prosecution of the war, or by the security of the armed forces which were occupying their countries.

Directly or indirectly, it is the Government of the FGR itself which bears political and moral responsibility for the manner in which the obligation to compensate the victims of persecution is discharged. We should not permit a situation in which hostile propaganda, or the nations which were once conquered by Hitler and are now living under Communist terror, are able to accuse the United States of acquiescing by its silence, to conditions I have described, whether from opportunism or any other motive. For, as I said at the outset, our moral respect in the world rests on the fact that we defend the rights of mankind to freedom, dignity, and justice to the utmost of our power and wherever they are violated.

For these reasons, it occurs to me we must urge the Federal German Government:

First. That victims of nazism who were persecuted on national grounds should be equated as regards compensation rights to those persecuted on any other grounds such as race, religion, or political views; and in particular, that their heirs should be entitled to inherit their compensation.

Second. That all compensation claims should be settled at the latest by December 31, 1970, or in the shortest possible time.

Third. That German authorities should be permitted to deny compensation to victims of Nazi prisons and concentration camps and forced labor in Germany, only in cases where it is proved that they had been convicted for taking an active part in armed action against occupation forces.

Fourth. That minors who were deported to Germany for forced labor should automatically be compensated for persecution on national grounds, especially if they suffered loss of health or ability to work as a result of such labor.

Fifth. That claimants should be permitted to invoke the lapse of time as a valid defense to the objection that they have not submitted adequate formal evidence in support of their claim: for instance, in the case of a witness having died or being untraceable, or documents being lost, if it appears from the circumstances of the case that the claimants were, in fact, deprived of freedom, confined in concentration camps, or deported for forced labor.

Sixth. That all claims for compensation which have been rejected by the German authorities and courts on the ground that the victims were not persecuted on national grounds should be retried in accordance with the above principles.

Seventh. That these regulations regarding compensation should not be distorted in their practical application by the administrative authorities, such as

the Ministry of Finance, whose duty it is to supervise the compensation procedure.

There is no doubt that the State Department and the U.S. Embassy in Bonn are fully informed of German practice in regard to compensation for those persecuted on national grounds. Nor can I presume that the State Department has not complied with its duty to intervene in these matters with the Government of the FGR. But it must have done so within the limits of diplomatic discretion, for up to the present, no authoritative declaration on this shameful subject has come from the U.S. Government.

Since diplomatic methods have been fruitless, it is time to invoke public opinion. The need for this has been voiced even by some in Germany who declare that for their part they have exhausted every method of persuading their government to alter its treatment of those persecuted on national grounds.

Unless in the very near future there is a radical change for the better, I shall be obliged to ask that public hearings be arranged before an appropriate committee of the House in order:

First. To investigate thoroughly the state of affairs that I have described today;

Second. To ascertain what steps have been taken by the U.S. administration, and why it has not succeeded in convincing the Federal German Government of the harm done by its present practice as regards compensation for the victims of Nazi persecution on grounds of nationality;

Third. To consider what attitude the House should adopt in order to guarantee to the victims of nazism the rights which were reserved at the time of the recognition of the sovereignty of the FGR.

It is my hope my colleagues would join me in redressing this tragic wrong being perpetrated against former victims of Nazi persecution.

On the occasion of the 30th anniversary of the Nazi invasion of Poland, President Heinemann of the FGR made a speech in which he declared that the bridging of the gulf between Germans and Poles, brought about by that invasion, is a major condition for lasting peace in Europe. We share his view, and heed with much respect the declaration which has come from so high a source. But words cannot replace deeds. If we could expect a sincere and generous settlement of the claims of the Polish victims of cruel Nazi persecution—a matter so trifling in its financial aspect and yet so important from the moral point of view—would this not be the first step, a small but practical one, on the road to German-Polish reconciliation, the need for which was stressed by President Heinemann?

Perhaps Germany's new chancellor Willy Brandt, who has a long and impressive record of concern for his fellow man, will want to interest himself in this tragic miscarriage of justice being perpetrated on these unfortunate victims of the war.

Following are details of the more glaring examples of injustice.

I quote some decisions of the German compensation court in Cologne and of other German courts. Copies of these are in the archives of the State Department.

First. The case of Frank Wilk. Wilk was arrested by the Gestapo in 1943, when he was still under age, together with his sister, who was murdered then and there, and his father and brother, who were murdered later. His claim for compensation for loss of health and ability to work as a result of his detention in a concentration camp has been rejected by the German authorities on the following ground: It was proved that the members of the family offered resistance, and the safety of the German forces thus required that he be isolated. He was, therefore, not persecuted on national grounds.

Second. The case of Barbara Emisarska, arrested in connection with the Warsaw rising. The German authorities rejected her claim for compensation for loss of health and ability to work as a result of her detention in a concentration camp, their grounds being as follows: In the heat of events it was not possible to distinguish those who took an active part in the fighting against the forces of occupation, and those who were merely civilians. This is, therefore, a case of preventive military measures and not of persecution on national grounds. Such measures cannot be equated with the extreme methods adopted at Oradour.

Third. The case of Stefan Bobak. Bobak had sexual relations with a German woman while he was engaged on forced labor in Germany, and was publicly hanged for the crime of "Rassenschande." The son born of this union claimed compensation on the ground of racial persection. His claim was rejected on the ground that the Nazi laws discriminated racially only against Jews and gipsies, so that Bobak was hanged not as an act of racial persecution but only for violation of the law.

Fourth. The case of Jan Wasilewski, arrested in his native village in 1942. The compensation court took the view that his removal to Germany for forced labor was not due to his nationality but to the shortage of laborers, so that there was no question of persecution on national grounds; nor was there any violent element of compulsion, since the camp in which he was confined was enclosed only by a wire fence, with a single sentry at the gate.

Fifth. The case of Janina Lukaszyk, aged 16, who was taken to a concentration camp after the Warsaw rising. The court decided that, in spite of her youth, she might have spread the spirit of rebellion to other Polish cities, and that the motive of her imprisonment was, therefore, security and not national persecution.

Sixth. The case of Krystyn Ostrowski, from whose mansion valuable personal property was removed to Berlin between November 1939 and April 1940. The court ruled that as the anti-Polish "AB" action had not come into effect until the spring of 1940, and the plan to destroy Polish national life in the Lublin area did not come into operation until the winter of 1942–43, the measures in respect of Ostrowski's property were not an instance of national persecution but only of requisition for military purposes.

Seventh. The case of Jan Stolarski. Stolarski was 15 years old when deported to Germany for forced labor. He was arrested in 1943, and held in prison and a concentration camp until he was liberated at the end of the war. He was accused of having incited his countrymen to keep up Polish traditions and to sing Polish songs, as well as voicing anti-Nazi opinions. He suffered permanent damage to body and health as a result of his ordeal in Germany.

The claim has been rejected by the Germans with the following explanation:

> The claimant was not injured . . . as part of the Nazi rule of terror and in contempt of human rights. His deportation for forced labor was not due to his being of non-German race or a national of a foreign state. It was a measure taken to relieve the shortage of labor caused by the war, which affected people of all nationalities.
>
> The claimant's arrest and imprisonment were not the consequence of his nationality but of his attitude and anti-Nazi utterances, which must have seemed to the then authorities an incitement of the Polish laborers. From 1943 onwards, German nationals, too, were severely punished for expressing anti-Nazi opinions.

I will quote some further examples of decisions on claims for compensation. These are referred to in a memorandum drawn up by the German Catholic Bureau, a body officially representing the Catholic Church in the Federal German republic, and submitted to the Federal Parliament. Its title is "Das Problem der National-geschadigten—ein brennendes Anliegen der Friedensarbeit"—The problem of those injured on national grounds: a matter of crucial concern in the work for peace.

Eighth. The wife of a Polish officer, mother of a nine-year-old daughter, was arrested by the Gestapo in 1940. She was detained in Germany for nearly 5 years in a prison and concentration camp, losing 50 percent of her ability to work. The ground for her arrest was the discovery in her house, during a search, of some copies of a periodical designed for the education of children, as the Gestapo had closed all schools in Poland.

The German compensation bureau rejected her claim for damages on the ground that she had been persecuted not on account of her nationality but merely because she had supported an illegal periodical, thus constituting a threat to the German occupation forces in Poland.

Ninth. A 17-year-old youth was arrested in Warsaw in 1942 and sentenced to imprisonment and later to a concentration camp. In May 1945 he was put on board the SS *Cap Arcona*, and was one of the few who survived when the vessel sank.

The reason for his arrest was that his father was an active member of the socialist movement in Poland, and the Gestapo, being unable to lay hands on him, adopted this method of blackmail. During their investigation it came to light that the son was being educated at a clandestine school organized by the socialist-influenced educational society known as Tur.

The German compensation bureau rejected his claim for damages on the ground that he was not persecuted for his nationality but only on account of his father's illegal activity, and that in addition he took part in the forbidden courses arranged by Tur. School activities organized by a political party bore the character of a resistance movement against the forces of occupation.

Tenth. A 16-year-old girl was taken from her parents' home in Lwów in 1942. She was held in prison and in concentration camps and was made to do heavy work in an ammunition factory in Germany, as a result of which her health broke down. At the end of the war she was rescued and taken to Sweden by the Swedish Red Cross.

She was never told the reason for her arrest, but she suspected that her persecution was due to the fact that two elder brothers of hers were resistance fighters and were shot by the Germans.

The German bureau refused compensation for loss of health on the ground that she was not persecuted on national grounds but because she represented a definite danger to the German forces of occupation. There was no doubt that the military or police authorities at the time had taken account of her partisan associations.

Eleventh. A 14-year-old boy was held in the worst concentration camps from 1943 to the end of the war on the ground that he belonged to the Polish scouts' organization.

The German bureau in 1967 rejected his claim for compensation for loss of health on the ground that he was not persecuted for reasons of nationality but for the sole reason that the scouting organization was markedly anti-German in sentiment and that its activity thus represented a definite danger to the German occupying forces.

Twelfth. The Nazi regime in Poland closed all secondary schools and higher academic institutions. Consequently teachers and pupils organized themselves into societies and tuition continued in private homes. In 1944, all the teachers and pupils of an "illegal" school of this type at Malogoszcz were arrested and held in prison and later in concentration camps. One of the pupils recently applied to the German authorities for compensation for loss of health and ability to work.

His claim was rejected on the ground that the persecution took place not on national grounds but by reason of activities which constituted a definite danger to the German occupying forces.

Thirteenth. A Ukrainian woman applied to the German bureau for compensation in respect of her loss of health due to forced labor in Germany, when she had been made to load heavy stones onto railway trucks, to lift rails, and so forth. The bureau rejected her claim on the following ground:

> Although the claimant was as a matter of fact obliged to perform heavier labor than was to be expected under the regulations governing work on the railway, it does not follow that this was a case of discrimination. The railway administration at Cologne has correctly pointed out in its letter of 13 December 1967 that Ukrainian women were in general more suited to railway work because they were much stronger than German women and those of other nationalities, being accustomed in their own country to far harder physical labor.

HOW TO REPLENISH THE LAND AND WATER CONSERVATION FUND: CHARGE FOR FEDERAL LANDFILL PERMITS, DO NOT GIVE THEM AWAY

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Wisconsin (Mr. REUSS) is recognized for 30 minutes.

Mr. REUSS. Mr. Speaker, on behalf of myself, Mr. DINGELL, Mr. GUDE, Mr. MCCLOSKEY, JR., Mr. MOORHEAD, Mr. MOSS, Mr. SAYLOR, Mr. VANDER JAGT, and Mr. WRIGHT, I introduced H.R. 14526, a bill to amend the Federal Property and Administrative Services Act of 1949 to provide for sale of relinquishments of the navigation servitude.

The people of this country are fed up with the filling in of our shallow waters by real estate speculators, airport and highway builders, and garbagemen.

Most of our commercial fish and shellfish, and most of our sport fish, inhabit these shallow waters during all or part of their life cycle. Many species spawn here, and when the waters are filled, they cannot survive. Likewise, many of our water birds feed and rear their young here. Filling in rivers almost always increases the flood danger, and frequently causes pollution of the remaining waterway. All filling destroys open space, which is essential to our spiritual refreshment in the age or megalopolis. It destroys the view to the water of householders behind the filled area, and inevitably depresses their property values. It diminishes the areas available for boating and swimming and other forms of public recreation. It may alter the entire ecology of the area.

In the 20 years prior to 1967, over 7 percent of the important fish and wildlife estuarine habitat of the United States—568,800 acres—has been lost by filling and dredging. In one State, California, 67 percent of the habitat has been lost. Already 40 percent of San Francisco Bay has been filled in. Many more acres—no one has the total figure—of navigable water which was not important fish and wildlife habitat or not in an estuary have been filled in.

Most filling of shallow waters in no way enhances the quality of man's life on earth. When our food and sport fishes disappear, and flights of waterfowl no longer streak the sky, it is humanity—people—who are impoverished by the loss.

Present Federal law actually encourages filling shallow waters. Because it gives away, for nothing, the right to fill, and because fill is cheap, it is always cheaper to make filled land in shallow water than to buy nearby dry land.

Land submerged by navigable water of the United States is subject to the navigation servitude of the United States.

What happens is someone wants to fill in submerged land and erect on it a high-rise building or an airport runway? Does he buy a relinquishment of this Federal navigation servitude, paying full value?

Far from it. He gets a filler permit, free, gratis, from the Corps of Engineers. If harbor lines have been established by the corps, he may not even need a permit. He just fills away. The value of the navigation servitude, your property and mine, the property of all the people of the United States, becomes his windfall profit.

The monetary values being grabbed from the public are enormous.

Let me give an example, discovered by the Conservation and Natural Resources Subcommittee of the Government Operations Committee in its investigation of the proposed Hunting Creek landfill just across the Potomac River, south of Alexandria, Va. One Francis T. Murtha recently bought 4.84 acres of land fronting on Hunting Creek, for $700,000, somewhat over $144,000 per acre. Then he got the Virginia legislature to pass an act authorizing the sale to him of 18.8734 acres of the submerged land just in front of his land, for "not less than $30,000"—about $1,590 per acre. The $1,590 an acre is perhaps a fair value for the submerged land encumbered by the navigation servitude of the United States. But when it is filled it will clearly be worth just as much per acre as the adjacent fast land, that is $144,000 an acre. The profit, unadjusted for the minimal cost of filling—Hunting Creek is only 3 feet deep—would be $142,410 per acre or a total of $2,700,000 for the whole 18-plus acres proposed to be filled. This amount is, roughly, the value of the navigation servitude, the property of the people of the United States, that would be conferred on Mr. Murtha for free by a Corps of Engineers permit to fill Hunting Creek.

Hunting Creek has not been filled. It is not in the public interest to fill that historic body of water, the nearest place to the Capitol dome where citizens can go to see myriads of waterfowl in season. A permit was issued, through official neglect in the Interior Department, to fill 9½ acres of the creek. This permit is now facing revocation by the Army Corps of Engineers.

The bill I introduce today will stop this land-grabbing at the public expense.

The Federal navigation servitude over areas of water not needed for navigation or any other public purpose, including the preservation of open space, is in fact surplus property of the United States. Like other surplus property, it should be sold, not given away to speculators for the asking. H.R. 14526 will provide for sales of relinquishments of the navigation servitude, for full market value, as determined by appraisal.

Net proceeds of sales of the navigation servitude, like proceeds of other sales of Federal real estate, will be placed in the land and water conservation fund. The purpose of this fund is to buy lands and waters for public recreation and fish and wildlife preservation. Thus, today's bill will, for the first time, provide for replacement in kind of water areas lost to filling and dumping.

Every fiscal year since its establishment until this year, the land and water conservation fund has gone broke. Its revenues were clearly insufficient to do the job it was created for. The last Con-

gress provided that sufficient Outer Continental Shelf oil revenues be placed in the fund, in addition to its other revenues, to make the total annual income $200 million. However, this year the administration has recommended appropriation out of the fund of only $124 million. The administration wants the oil revenues for other purposes. An alternate source of revenue for the land and water conservation fund is urgent. H.R. 14526 will provide needed revenues of hundreds of millions that are now being given away.

H.R. 14526 will therefore serve two purposes. By raising the price of submerged land to full market value, it will remove the present economic incentive to fill in our shallow waters. And it will replenish the land and water conservation fund and provide for eventual replacement in kind of areas lost to filling and dumping.

Giveaways of the Federal navigation servitude will no longer be authorized. State and local public bodies as well as private speculators have raided our shallow waters. The harm they do to fish and wildlife, esthetics, and the general quality of the human environment is just as devastating as the harm done by private greed. Public bodies also must be discouraged from landgrabbing, by a requirement of paying full market value for the submerged areas they preempt for airports, freeways, and dumps.

An exemption in favor of public bodies from paying full value for release of the navigation servitude would simply continue existing geographic discrimination in our grant-in-aid programs. For example, the Federal Airport Act authorizes grants ranging from 50 to 62½ percent for land acquisition. If a city builds an airport by filling a river, without paying the United States for release of the navigation servitude, as it can under existing law, the city is actually receiving a Federal grant greatly in excess of 62½ percent. Such a grant is available only because of the geographic accident that the city is near navigable water, and is denied to all landlocked communities. The requirement in H.R. 14526 for payment of full appraised value by public bodies and private speculators alike is thus necessary to correct injustice, as well as to protect our waters, and augment the conservation fund.

At the turn of the 20th century, as today, we in Congress were allowing the navigation servitude to be given away gratis, piece by piece. The grabbers then were power companies, who lobbied through special acts making perpetual free grants of water power rights in our flowing rivers. President Theodore Roosevelt stopped this scandal with his historic James River Dam veto message. He wrote:

> Through lack of foresight we have formed the habit of granting without compensation extremely valuable rights, amounting to monopolies, on navigable streams and on the public domain . . . A reasonable charge should, of course, be made for valuable rights and privileges which they obtain from the National Government.
>
> * * * * *
>
> I will sign no bill granting a privilege of this character which does not contain the substance of these conditions. I consider myself bound, as far as exercise of my executive power will allow, to do for the people, in prevention of monopoly of their resources, what I believe they would do for themselves if they were in a position to act.

Today the raid on the navigation servitude is led by real estate speculators, airport authorities, freeway builders, and garbagemen. What they seek to convert to their selfish and short-sighted use is still the property, of enormous value, of all the people. The people, through their representatives in Congress, must stop this raid in irreplaceable resources of the Nation, just as Theodore Roosevelt stopped the power interests' raid of 60 years ago. H.R. 14526 will do the job.

IS IT TOO LATE TO SAVE AMERICA?

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Louisiana (Mr. RARICK) is recognized for 30 minutes.

Mr. RARICK. Mr. Speaker, a concerned American patriot, whose lifetime of devoted service to his country speaks for itself, recently journeyed from his home in Annapolis, Md., to deliver a significant address to a group of other patriots in Los Angeles, Calif.

Lt. Gen. P. A. del Valle, U.S. Marine Corps, retired, has abundantly earned the right to comment on the problems of the day, and I commend his forthright talk to this House and to all Americans.

Asking, "Is it too late to save America?"—the general concludes that it is not, if we use the brains God gave us, renounce anti-Christian materialism, and return to God.

I include in my remarks an extract from the "U.S. Marine Corps Biographical Dictionary," the citation accompanying General del Valle's Distinguished Service Medal, and the full text of his thought-provoking address:

[From the U.S. Marine Corps Biographical Dictionary]

LT. GEN. PEDRO A. DEL VALLE, RETIRED

Commanding General, 1st Mar. Div. during the attack and occupation of Okinawa, Apr. 1 to July 21, 1945: b. San Juan, Puerto Rico, Aug. 28, 1893. Upon graduation from the U.S. Naval Academy in June 1915, Pedro Del Valle was commissioned a Marine second lieutenant on June 5, 1915. After finishing a course of instruction at the Marine Officers' School, Norfolk, Va., he went on foreign shore duty with the 1st Prov. Mar. Brig. in the Republic of Haiti.

In May 1916, he landed from the USS *Prairie* and participated in the capture of Santo Domingo City and the subsequent campaign in the Republic of Santo Domingo. A tour of sea duty followed as CO, Marine Detachment, USS *Texas*, serving with the British Grand Fleet under Admiral Beatty during the surrender of the German High Seas Fleet.

In Feb. 1919, he was detached to the MB, Quantico, Va. After another tour of sea duty, on this occasion aboard the USS *Wyoming*, he was assigned as Aide-de-Camp to Maj. Gen. J. H. Pendleton and accompanied the general in an inspection tour of the West Indies. In 1924, he went to HQMC, Washington, D.C. While stationed there he was Marine Corps Representative on the Federal Traffic Board.

In 1926, he was ordered to foreign shore duty with the Gendarmerie d' Haiti for three years and upon his return to the States in 1928, attended the Field Officers' Course at the MCS, Quantico, Va. Upon graduation he became an instructor, then served on temporary duty with the U.S. Electoral Mission in Nicaragua. After a tour of sea duty as Squadron Marine Officer on board the USS *Richmond*, during which tour he participated in the operations resulting from the Cuban Revolution in 1933, he was ordered to HQMC.

From Oct. 1935, to June 1937, he was Assistant Naval Attaché, attached to the American Embassy at Rome, Italy, and on duty as an observer with the Italian Forces during the Ethiopian War. He returned to the States to attend the Army War College, Washington, D.C., and, following graduation, was assigned to HQMC where he was Executive Officer, Division of Plans and Policies. He became CO, 11th Marines (Artillery) in Mar. 1941. He was serving in this capacity when the U.S. entered WW II. He remained as the regiment's CO, and led it overseas in 1942, participating in the seizure and defense of Guadalcanal as part of the 1st Mar. Div. (Reinforced) from Aug. 7 to Dec. 9, of that year.

From May to July 1943, he served as Commander of Marine Forces (less aviation), on Guadalcanal, Tulagi, Russell, and Florida Is. He returned to the States to become President of the Marine Corps Equipment Board. He went again to the Pacific in Apr. 1944, this time as CG, 2rd Corps Artillery, 3rd Amphibious Corps, and took part in the Guam operation in July and Aug. of 1944. He became CG, 1st Mar. Div. and was awarded a Distinguished Service Medal for his leadership of that organization on Okinawa from Apr. 1 to July 1945. At war's end, he was ordered back to HQMC to become Inspector General and was assigned duties as the Director of Personnel, Oct. 1, 1946, a post which he held until his retirement. He was transferred to the retired list on Jan. 1, 1948. Having been specially commended for the performance of duty in combat, he was advanced to lieutenant general on the retired list. His retirement climaxed more than 30 years of active service.

CITATION ACCOMPANYING GENERAL DEL VALLE'S DISTINGUISHED SERVICE MEDAL

Del Valle, Pedro A., major general, USMC: "For exceptionally meritorious service to the Government of the United States in a duty of great responsibility as Commanding General of the First Marine Division during the attack and occupation of Okinawa Shima in the Ryukyu Chain, from 1 April to 21 June 1945. A brilliant tactician, Major General Del Valle effected the strategic landing of his units on the western shores of Okinawa on 1 April and immediately initiated a vigorous offensive, slashing through Japanese resistance and cutting across the island to seize, in 72 hours of swift, aggressive action, a segment of enemy held territory extending from the west to the east coast. Turning southward, he advanced his forces toward the formidable system of natural and man-made defenses comprising the ramparts of the hostile stronghold at Shuri to find that heavy mud precluded the use of many supporting weapons and made supply almost impossible except by air. Analyzing the situation with keen military acumen, he organized his attack plans with unerring judgment and laid constant, bitter seige to the enemy until the defending garrison was reduced and the elaborate bastion destroyed. An indomitable leader, he continued to wage a relentless battle, attacking and violently overthrowing a series of heavily fortified, mutually supporting ridge positions to the extreme southern most tip of the island. Undaunted by the deadly accuracy of enemy gunfire, he repeatedly visited the fighting fronts, main-

taining close tactical control of operations and rallying his weary but stout-hearted Marines to heroic effort during critical phases of the long and arduous campaign. By his superb general-ship, outstanding valor and tenacious perseverance in the face of overwhelming opposition, Major General Del Valle contributed essentially to the conquest of this fiercely defended outpost of the Japanese Empire and his decisive conduct throughout the savage hostilities reflects the highest credit upon himself, his gallant command and the United States Naval Service."

IS IT TOO LATE TO SAVE AMERICA?

(Speech of Lt. Gen. P. A. del Valle before Western Front, Los Angeles, Calif.)

Mr. Chairman, Ladies and Gentlemen: You honor me greatly in coming here tonight. And I shall do my poor best to discuss with you this all important question: Is It Too Late To Save America?

I am no oracle. But I dare to venture this as an answer: "Not if this nation turns its back upon the Golden Calf and, asking God's mercy, comes back to Him in humble prayer." For this is the basic reason that we are in such a state of chaotic confusion that it is pertinent to ask that question. God provided us with a brain and if we do not use it, allowing the anti-Christian worshippers of Mammon to lead us into their miserable materialism, then we must accept the blame.

That we have been drifting into this condition for a long time is shown by the words of Abe Lincoln upon this subject: "We have been the recipients of the choicest bounties of Heaven; we have grown in numbers, wealth and power as no other nation has ever grown. But we have forgotten God. We have forgotten the gracious hand that preserved us in peace and multiplied and enriched and strengthened us and we have vainly imagined, in the deceitfulness of our hearts, that all these blessings were produced by some superior wisdom and virtue of our own. Intoxicated with unbroken success, we have become too self sufficient to feel the need of redeeming and preserving grace, too proud to pray to the God that made us."

Ladies and gentlemen, what would old Abe Lincoln say of the mess we are in today?

That our enemies are also the enemies of God is too obvious to admit of doubt. That they have been at it a long time is proven by the words of Alexander Addison depicting the French Revolution and pointing out its authors in a booklet published in Philadelphia in 1801. It has been reprinted and may be obtained from the Christian Book Club of America, P.O. Box 638, Hawthorne, California. I quote: "Lucifer conspired to dethrone God; and drew down on his and his deluded followers' heads everlasting destruction. . . . The pride of the Jews to govern themselves made them reject the Government of God; and discontent with His dispensations made them rebel against His Providence; and these distractions brought on them calamity and ruin."

"The slightest observation will show us that God hath set bounds to human liberty and rendered equality impossible." (This is an obvious reference to the slogan of the French Revolution "Liberty, Equality, Fraternity.")

"The Revolutions now operating in Europe sprung not from the impulse of a day, nor a sudden concurrence of random passions and circumstances. Their foundations were long laid, deep and wide, in an extensive and systematic operation on public opinion." (Here he describes a similar process of brainwashing as is being done on our own public opinion by the controlled news media.)

The author then refers us to Barruel's History of Jacobinism, which describes the objectives of this conspiracy as the destruction of Christianity, monarchical government, and all principles of civil society. They successfully propagated the abolition of the belief in Christ, then abolished Heaven and Hell. Having prostrated the altars they then attacked the Throne.

I will quote one more interesting paragraph: "It will be observed that the principles which led to the destruction of the French Monarchy led equally to the destruction of all government of whatever description . . . But the philosophers had employed the Jacobins as executioners of their vengeance on the Altar and the Throne; and these agents became their masters, silenced or murdered the Philosophers and proceeded in their own way . . . How little do men see, who promote insurrection or revolution, and hope to lead it, that they must soon sink under its force and be among the first victims of the fury which they excite!"

Ladies and gentlemen, if we substitute the word Liberal for the word Philosophers, and focus on the last sentence, you will realize how closely this fits our own situation. Indeed the violent deaths of some of these liberals here of late may well indicate that our Jacobins have already begun to take charge. Let those responsible for letting loose the revolutionaries here, profiting financially and expecting to be the leaders in their One World Government dreamed up in the Protocols by the Elders of Zion, beware lest their shipmates turn on them as the Jacobins did on the "philosophers".

My friend, Mr. Myron Fagan, has tackled the exposition of the so-called Illuminati today. In his pamphlets and records he does a great job. But in the end, the Council On Foreign Relations will be found to be a collection of highly placed suckers. The inner group has no intention of sharing this One World with anyone, certainly no traitorous dupes who would sacrifice God and Country for self and power, are going to share anything except the guillotine. God will not be mocked, and His hand cannot be stayed, except by faith and humility and prayer and works.

It is difficult to pin point who are the members of this inner circle, but Mr. Ned Touchstone of Shreveport, Louisiana, publisher of the patriot paper called "The Councillor" has a photograph alleging to be of their ancestors in the May 24th, 1969 number. It would appear that they are a group of financiers and bankers, and this brings us to the subject of the Federal Reserve Corporation.

My authority is chiefly Congressman Louis T. McFadden of Pennsylvania, now deceased, whose remarks in Congress on the Federal Reserve Corporation in 1934 appear in a booklet entitled "Congressman McFadden on the Federal Reserve Corporation." (Forum Publishing Co., 324 Newberry Street, Boston 15, Mass.) McFadden was for ten years Chairman of the Banking and Currency Committee of the House of Representatives, hence in position to speak with authority upon this subject. For an introduction I will quote the intrepid McFadden as follows: "Mr. Chairman, we have in this country one of the most corrupt institutions the world has ever known. I refer to the Federal Reserve Board and the Federal Reserve Banks, hereinafter called the Fed. The Fed has cheated the Government of the United States and the people of the United States out of enough money to pay the Nation's debt. The depredations and iniquities of the Fed have cost this Country enough money to pay the National debt several times over.

"This evil institution has impoverished and ruined the people of these United States, has bankrupted itself, and has practically bankrupted our Government. It was done through the defects of the law under which it operates, through the maladministration of that law by the Feds and through the corrupt practices of the moneyed vultures who control it.

"Some people think they are United States Government institutions. They are not Government institutions, they are private monopolies which prey upon the people of the United States for the benefit of themselves and their foreign customers; foreign and domestic speculators and swindlers; and rich and predatory money lenders. In that dark crew of financial pirates there are those who would cut a man's throat to get a dollar out of his pocket; there are those who send money into the states to buy votes to control our legislatures; there are those who maintain international propaganda for the purpose of deceiving us into granting of new concessions which will permit them to cover up their past misdeeds and set again in motion their gigantic train of crime."

My friends, after this introduction, if there are still some who doubt that the Fed is a private monopoly, the Fed has admitted as much. The present Chairman of the Board of the Federal Reserve Corporation, Mr. Wm. McChesney Martin, stated before a congressional committee, under oath, that the only control the Congress has over the Fed is that they can repeal the Federal Reserve Act.

You may wonder how and when this Frankenstein's Monster was foisted upon the once sovereign people of these United States. I shall now quote from a great booklet of 76 pages written by my good friend and fellow patriot, Mary Davison, Council for Statehood, P. O. Box 5435, Lighthouse Point, Florida 33064. "In 1909 a group of international bankers, headed by Jacob Schiff, Warburg, Lehman, J. P. Morgan, Drexel Biddle, Nelson Aldrich, Rockefeller, etc. met in secret at Jekyll Island, Ga. Their purpose was to create a Federal Reserve System for the United States and take our money system out of control of Congress and transfer it to a group of private individuals, the International Bankers, and thus enable them to steal the wealth of our nation."

Now, these conspirators knew that, even if they could get Congress to pass a Federal Reserve Act, the then President, Wm. Howard Taft, would veto it. So they waited until 1913, when their man, Woodrow Wilson, got into the White House.

Then, at 4 P.M. on December 24, when all but three Senators had gone home for Christmas, those three called themselves into session, they didn't even bother to call it a quorum. They submitted The Federal Reserve Act and two of the Senators, Carter Glass and Nelson Aldrich, voted yes and the act was "passed", and within an hour on that Christmas Eve, President Wilson signed it into law . . . and ever since then the gang that owns the Fed, as it is now called, many of them foreigners, whose names are unknown, have been looting us of our wealth. The Federal Reserve Act must be repealed before we ever have peace.

Another good friend and fellow patriot, Colonel Arch E. Roberts, Committee To Restore The Constitution, P.O. Box 986, Fort Collins, Colorado 80521, has written a revealing article, which first appeared in Mary Cain's The Woman Constitutionalist, entitled "The Anatomy of a Revolution". His "prelude" takes us back, if you will recall, to the situation during the French Revolution as described by Addison in 1801, and I quote:

"At the turn of the century, an ambitious and morally degenerate group of financiers and industrialists in America fixed upon a long-range plan which would ultimately deliver control of the world's people and resources into their hands.

"The basic objective was to dismantle the Constitution of the United States and erect in its place a world government covenant which the industrial-financial cartel would command.

The F/I cabala, to achieve its objective, adopted an operational procedure of infiltration, subversion and rebellion, aimed at the religious, economic and social disciplines of the existing order. By amassing their wealth

and influence to secretly sponsor nihilistic doctrine, it was thought that they might capture the intellectual leadership of church and college. Domination of pulpit and professional chair, they reasoned, would lead to mastery of the entire spiritual-educational process, the corruption of mass-communication media, and the creation of a fractured, rudderless society which would serve their purposes.

"Achieving political authority was an obvious prerequisite to success. The cartel, therefore, in 1912, forced a major penetration of the United States political structure by the elevation of Woodrow Wilson to the presidency.

"Quick to capitalize on this advantage, the cabala, in the closing days of the 1913 Congress, effected passage of three legislative acts which emasculated the Constitution and established a political base for their operations. These acts were: a. the Sixteenth Amendment to the Constitution; b. the Seventeenth Amendment to the Constitution; and c. The Federal Reserve Act.

"At one blow the cabala thus attained: a.—Unlimited financing via unlimited taxation; b.—Control of Congress by eliminating State supervision of legislation; and c.—Transfer of (the power of) coinage from Congress to their private bank, the Federal Reserve System."

I hope my listeners have noted how much the colonel compresses into small compass, *multum in parvo!* This two-page "Prelude" winds up as follows: "An in-depth study of the roots of rebellion, and an examination of those who perpetrate over throw of the American civilization, will be found in the following pages." And on the back of the booklet appears the price of this priceless gem . . . 20 cents each, 100 copies for $12.00! The author, by the way, is at this time engaged in a debate in New York. He will shortly initiate a campaign here in California in order to persuade the Governor and Legislature to use their constitutional powers to liberate this state from bondage to the United Nations.

Coming back to our discussion of the Fed, I shall quote from the most intrepid and persistent enemy of that evil institution, Wickliffe B. Vennard, Sr. of Houston, Texas, author of several books exposing it: "The Federal Reserve Hoax", "Conquest or Consent", "U.S. Rulers are Undiscoverable", "The Solution to the Federal Reserve Fraud" among others. I quote from the latter book, under the heading: *License to Steal:* "How would you like to step into the Bureau of Engraving, authorize the printing of a $50,000.00 bill, walk out with it, and leave a tab of ⅔ of a cent?"

Fantastic, isn't it? But that is just the beginning. Now you step into the Treasury Department and purchase $50,000.00 interest-bearing U.S. Bond with said bill. This is the manner in which the Treasury finances the budget. In most cases the Fed merely credits Government account, and hands the Government a book of checkbook currency, thereby saving the cost of printing the Federal Reserve Bank note $.0084 per note, regardless of denomination.

Then deposit the Bond with the Comptroller of the Currency, and he will give you $50,000.00 in currency. Remember, you retain ownership of the Bond, and the interest on the bond is payable to you.

Now you hoard the $50,000 currency in your bank vault as reserve for the creation of $1,500,000.00 of check-book currency which you can lend to John Q. Public at 6% interest, under the fractional reserve system.

The bond pays 4% annual interest and matures in 30 years, at which time the Fed will receive a second cash payment of $50,000 from the Treasury.

Now, remember, by law all Federal Reserve notes are obligations of the Federal Government.

We summarize the transaction: Treasury has received $50,000 cash, whereas the Federal Reserve has received and will receive within 30 years:

From the Bureau of Engraving	$50,000
From Treasury when the bond matures	50,000
Interest from the bond	60,000
Interest on loans to John Q. Public (at going interest rates)	3,000,000
Total	3,160,000

And all tax exempt (for a fraction of a penny).

This calculation was made when interest was at 6% and much lower, but, calculating this at 8% interest, the total would be $3,760,000. Fantastic, isn't it? Well, while you slept, Congress ratified this, the greatest fraud in the history of the world, on December 23, two days before Christmas 1913, when many of our loyal Representatives were home for the holidays.

Mr. Clarence Martin puts it this way: "Their program entails the enslavement of one-time free people of the world through the vicious 'usury cycle' of increased borrowing, increased interest, and increased taxation as practiced by them in this our country by the foreign bred and internationally controlled Federal Reserve Corporation, fallaciously called system, whose Class 'A' stockholders steal well over one million dollars from us every hour of every day of every year in 'interest' on 'illegal' Federal Rserve Notes which should have been issued by Congress as United States Notes, Gold or Silver Certificates—interest free".

If the Congress is too far gone, and in the hands of the Cabala, then they will not have the courage to repeal the act of a previous Congress. There is no other recourse but to demand that they take the only other course. The Federal Reserve Act has a clause which permits the Congress to buy back the Federal Reserve Corporation for the present market value, less than half a billion dollars. If they do not have the courage to do this, then we must revert to the Declaration of Independence which tells us in the second paragraph that it is the right and the duty of the people to, and I quote: "It is the right of the people to alter or abolish it." There's yet one possible course of action remaining, short of violence. The States, from whom the powers of the Federal agencies of government are derived, could simply declare by statute, passed by the Legislature and signed by the Governor, that the Federal Reserve Act, being in violation of Article 1, Section 8, Paragraph 5 of the Constitution, is not the law within its boundaries and fix suitable punishment for any who would attempt to enforce it. For the legislature of a state is supreme, except where prohibited by its own or the U.S. Constitution, and there is no power granted any federal agency to review or overrule such lawful statutes. For the U.S. Constitution is a solemn contract made by sovereign states by which these states surrendered only such powers as are written therein, and under contract law, the parties to a contract have the right and duty to police it, and to see that its employees, the federal agencies of government, do not usurp powers remaining with the states.

But alas! here again we run into the same snag in the state governments as with the national government. The power of the Fed's immense wealth reaches out and controls the Conference of Governors and likewise many of the state legislators. But some of us are trying. We worked on Alabama for a number of years unsuccessfully, but managed to get the statute through the legislature on the fourth try, only to have the governor chicken out. We are now engaged in a similar campaign in Georgia. Hope springs eternal in the human breast!

Here are two things which a very wise political advisor to a Member of Congress suggested we might do:

1. The new tax bill is now before the Senate. Demand of your senators that they vote to tax the Federal Reserve Corporation or give you a good reason why not, since it is a private corporation, that takes 15 billions from the borrowing public. Such a tax would relieve the voters of the country of a good percentage of their now unbearable taxes.

And: 2. Since the theory appears to be that it's all right for the government to be in debt, 'because we only owe it to ourselves," insist that your senators insert an amendment to the new tax bill providing for the purchase of the Federal Reserve Corporation by the U.S. Government as provided in the Federal Reserve Act of 1913. Then we literally would owe it to ourselves, thus automatically reducing our annual budget by at least 15 billions. The present market value of the Federal Reserve Corporation is less than half a billion. This would credit the Senators who voted for it with a great reduction in our taxes.

And this brings us to the discussion of what may well be the final step in the conspiracy of the "morally degenerate financiers" to destroy us as a nation and establish their one world government. The control of the cabala over our government is now so complete, that it no longer obeys the Constitution, but the United Nations Charter. Article 25 of the Charter reads as follows: "The members of the United Nations agree to accept and carry out the decisions of the Security Council in accordance with the present Charter."

At this point it will be noted that:

a. The Executive Council is, and always has been, under the authority of a communist officer, by agreement between Alger Hiss and Gromyko at San Francisco. This, in my book, comes under the name of treason. For under the Charter it made it possible for the Russians to know our plans in both Korea and Vietnam beforehand.

b. We have surrendered our sovereign right to make our own domestic and foreign policies, for we agree to carry out the decisions of the Security Council of the U.N. This explains our race-mixing decisions and civil rights laws at home, as well as our behavior in the infamous cases of the USS Liberty, the USS Pueblo, and the Korean shooting down of our un-armed reconnaissance plane, and the no-win wars in Korea and Vietnam. We are "carrying out the decisions of the United Nations."

Our entry into the United Nations was as sneaky as the passage of the Federal Reserve Act. It was foisted upon us as a treaty, so the cabala had only to line up President Truman and the Senate. We are the only nation hooked up with the U.N. by treaty. In the formulation of this Charter, which is in fact a Constitution for World Government dressed up as a document dedicated to "international peace and security", there were some prime security risks, such as Isaiah Bowman, Benjamin Cohen, Leo Pasvolski, and Alger Hiss. No sooner had the deed been written up at San Francisco, then Hiss and Pasvolski flew to Washington to convince the Senate to approve this treaty. With the exception of just two senators, Langer and Shipsted, the only ones who had read the Charter, the Senate ratified the U.N. Charter as a "treaty". The ground had been prepared by a twisted interpretation of the treaty clause in the Constitution in Article VI. "The Constitution, and the laws which shall be made in pursuance thereof; and all treaties made or which shall be made under the authority of the United States, shall be the supreme law of the land." This article was inserted to keep states from dodging treaty obligations incurred while they were separate sovereign states. But these two facts remain: 1. that

the U.N. is not a sovereign, and treaties can only be made between sovereigns; and, 2. that no authority is granted any agency of government to surrender our sovereignty as was done in accepting the Charter. The Supreme Court of California has ruled the U.N. Charter is the law of the land, superseding the Constitution!

Those wishing to get a good, quick understanding of the United Nations may do so by reading Colonel Roberts' "Invisible Government Behind the United Nations Organization", appearing in a coming number of The American Mercury.

I have a copy of this excellent and short indictment of the United Nations and its protagonists, and principal architects Leo Pasvolsky and Alger Hiss. This is what he says about them: ". . . Mr. Pasvolsky, although born in Russia of communist revolutionary parents, achieved phenomenal success in the U.S. Department of State. He rose to a key position which ultimately led to the transfer of U.S. sovereignty to the U.N.O. Alger Hiss, his assistant and co-author of the first draft of the Charter and later U.N. General Secretary at the San Francisco Conference, was at the same time a member of the Harold Ware communist cell in Washington, D.C., a Soviet agent, and a member of the Council on Foreign Relations."

The final draft of the Charter was approved by Truman 26 June, 1943. On 28 July the Senate, following a reading in the Senate Chamber by Leo Pasvolsky, ratified this extraordinary treaty by a vote of 89 to 2. The 2 were Senators Langer and Shipstead, the only ones who had actually read the Charter.

"In the words of the U.S. Senate", says Colonel Roberts, "The Charter of the United Nations thus became the supreme law of the land, and the Constitution of the United States of America passed into history."

At the end of the article are printed the 10 impeccable sources from which the article was taken. If any of my listeners would like to see my copy, I have it here with me. It is of great importance here and now, because Roberts will soon be in California to convince the government of this great state to lead the nation in the extirpation of this cancer which has deleted our sovereignty.

The significance of this is of transcendent importance and concern to every person who calls himself an American Citizen. The Senate's assumption that the U.N.O. Charter supersedes the Constitution places what we call the Government of the United States in the peculiar position of being a government without law, a government de facto, but not de jure. Since the powers of this government were only those ceded to it by the sovereign states in writing in the U.S. Constitution; and since the U.N. Charter gives this government no powers whatsoever, then, when they embraced the Charter and rejected the Constitution, they voluntarily surrendered the powers they legitimately exercised under the Constitution. They continue to exercise these powers only in usurpation of the sovereign powers they no longer lawfully possess, and in gross violation of their oath of office. Only by means of the controlled news media have they been able to keep the people from knowing the truth you are now hearing.

Our Declaration of Independence has this to say on what the people should do about a government which no longer secures to them their inalienable rights of life, liberty, and pursuit of happiness conferred upon all men by Providence: "That whenever a government becomes destructive of these ends, it is the right of the people to alter or abolish it, and to institute new government, laying the foundations on such principles and organizing its powers in such form as to them seems most likely to effect their safety and happiness."

This is a clear indication of *what* must be done. Other factors in the problem presented are the "when, where, why and how". I think if we look about us at the shambles of our former orderly country [illegible] the U.S. Constitution, the time, or *when*, is now. The *where*, it would seem has to be in the governments of the sovereign states. The *why* is in order to regain our lost security and happiness. The *how* is a sticky problem. If the State of California should enact appropriate statutes, after formally investigating the U.N. situation, providing for the enforcement of the U.S. Constitution with regard to the United Nations Organization within the bounds of the State of California as per Article IV of the U.S. Constitution, this is where the landslide against United Nations slavery and the restoration of Constitutional Liberty will begin to roll. If no state will do this, then, in historical sequence, we shall go through a period of chaos, terror, and revolution followed by a dictatorship such as exists in Russia, which is simply slavery. The only alternative to that sort of dictatorship would be a Napoleonic one, a military dictatorship.

If the inner circle of the Council on Foreign Relations are indeed the ones seeking to enslave us by means of the United Nations, which is meant by them to be a world government, then, "Why do we stand here idle?" This is the target towards which our wrath as a Christian Nation should instinctively aim our heaviest artillery. The C.F.R. has already been declared subversive by the American Legion. The United Nations, so-called, are not only Godless, but anti-Christian, anti the Caucasian race, and have suppressed the Constitution. We face the Jacobins of the French Revolution, the Sons of Jacob, the destroyers and assassins who slaughter our young men in useless wars and will make slaves of us. Arise, Americans, we can still save America! Let no man or woman here forget that each one of us counts, and that God will hear our cry for help if we ask him. Let us go forth from here determined to spread God's truth and restore God's law. If God be with us, then none can prevail against us.

Thank you kindly.

AMENDMENT TO. H.R. 14001 TO REPEAL THE DRAFT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. FARBSTEIN) is recognized for 20 minutes.

Mr. FARBSTEIN. Mr. Speaker, I intend to offer an amendment to the draft reform bill, H.R. 14001, when it comes before the House on Wednesday, which will put Congress on record in favor of abolishing and reinstating it, only upon a formal declaration of war.

More than any other single item, the draft has become the symbol of the gap between the generations and the major source of friction in that area. This was demonstrated dramatically in the September Harris poll which reported an overwhelming belief among those under 30 that the draft was wrong.

The draft is not at issue only because of the war in Vietnam, but because of its disruption of so many lives. Most places of business refuse to hire men who have not fulfilled their draft requirement. Vulnerability lasts for 8 years. That is a terrible bite out of a young man's life.

The proposed reform of the military manpower selection system, which would substitute a lottery—and vulnerability for only 1 year—for the current system is a step in the right direction. But still more equitable would be the total abolition of the draft.

Any system which requires some and not others to serve is inherently unfair. President Nixon has himself told the American people that the draft should be repealed. He has recognized that what General Hershey once said, "No draft can be fair," is true. Every reform, however called for, creates new injustices, even as it attempts to erase old ones. H.R. 14001 is understandable, therefore, only as a temporary measure urged by the President until conscription can be ended altogether. While it does attempt a greater equity in that the final selection will be a random one, and in that boys will know early in order to plan their lives, it is clearly inadequate and leaves untouched many of the basic inequities of the system. This is bound to be so simply because the draft means choosing from a large pool a few boys who will be forced to fight, to kill and to die against their wills. The lottery will create new problems for a large number of 17- and 18-year-olds. The Bureau of the Census reveals that the typical high school graduate is now 17, not 18. Especially for young working people not going to college, the President's plan will increase the hardship. Employers are hesitant not to hire this age group, but if they know the call will come for sure in the 19th year, they will simply stop hiring 17- and 18-year-olds at all.

The President has said he recognizes the basic injustice of the whole draft. He called upon the Nation's youth this summer to help him make decisions on the draft. In a press conference he announced creation of youth advisory committees in every State to assist him. But the President did not consult the youth.

In fact, the draft reform proposal to come before us received no public hearing, nor will this bill alone allow us a full public debate on the basic issues of the draft. Since the President favors draft repeal and seeks public and particularly youth opinion on the matter, I would hope he would welcome my amendment. Last week I wrote him concerning the draft.

The amendment gives the President full congressional support for ending the draft. It does not take hasty steps, but urges early action. Its intent will be clear to young people—without the confusing limitations of most of the reform proposals. The amendment calls for the complete abolition of all the draft laws—not just induction, but the entire Selective Service System. It further states that such laws should be reinstated only after a formal declaration of war. This clause is particularly welcome since it states more clearly than in any other measure before the Congress the principle of congressional control of military manpower, and the intent to exercise the Congress' right to induct only in wartime, as indicated in the Constitution.

If H.R. 14001 passes without the amendment, the gap between the generations will be widened. It will indicate that all the President and others have been saying about the draft was misleading. If, on the other hand, we give youth a clear indication of our firm intent to get rid of the draft—which a majority of those under 30 now holds to be an infraction of our democracy—we will have begun the process of bringing

youth squarely back into accepted political activity.

Because I believe we should have a full and open discussion of the draft, I intend to support the move by Congressman BOLLING to bring about an open rule. But should his motion be defeated, and the modified open rule be passed, I still intend to offer my amendment; for I believe it is contextually germane.

The extent of public support for the abolition of the draft is suggested by the following list of some of the individuals and groups which support ending the draft:

Draft repeal is supported by such individuals as:

Former Senator Ernest Gruening; Mrs. Martin Luther King, Jr.; Lewis Mumford; Maj. Gen. LeRoy H. Anderson, retired; Rabbi Arthur J. Lelyveld; Dr. George Wald; Dr. James Dixon; Emil Mazey; Rev. Channing E. Phillips; Dr. Harvey Cox; George A. Wiley; Right Rev. William Davidson; and Rear Adm. Arnold E. True, retired.

Draft repeal is also supported by several dozen labor, church, women's peace, civil rights, and students organizations. Representatives of one national group, whose object is the abolition of the draft, the National Council to Repeal the Draft, come from such organizational backgrounds as:

U.S. National Students Association;

United Presbyterian Church;

U.S. Catholic Conference;

Union of American Hebrew Congregations;

American Friends Service Committee;

United Christian Missionary Society of Christian Church;

B'nai B'rith Hillel Foundation;

Mennonite Central Committee;

American Jewish Congress;

Jewish Peace Fellowship;

Division of Social Responsibility of the Unitarian Universalist Association; and

The Board of Christian Social Concerns of the United Methodist Church.

Groups endorsing draft repeal include:

The executive council of Local 1199 of the Drug and Hospital Union;

Student World Federalists;

Ford Local 600 of the United Automobile Workers;

Americans for Democratic Action;

The House of Bishops of the Episcopal Church; and

The Unitarian Universalist Association.

One example of the widespread support draft repeal has is the collection in 1 day of 7,200 petition signatures in two Cleveland suburban shopping centers.

LANDMARK FIGHT IN THE MAKING: AEC VERSUS THE STATE OF MINNESOTA

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Pennsylvania (Mr. SAYLOR) is recognized for 10 minutes.

Mr. SAYLOR. Mr. Speaker, over the years I, along with a determined band of Members, have questioned the "untouchableness" of the Atomic Energy Commission. To date, our voices have been overwhelmed by the AEC's publicity wind generated with public money. At last, the public will begin to see the other side of the question concerning the proliferation of atomic plants when the Joint Committee on Atomic Energy opens hearings tomorrow on the "Minnesota case."

The issue before the committee is straightforward; that is, shall a State be allowed to protect its environment and people through the issuance of regulations which may be more stringent than those of the Federal Government? The impetus for this historic confrontation is the AEC's scheduled construction of a nuclear plant near Monticello Minn.

On Sunday, October 26, Victor Cohn of the Philadelphia Inquirer, examined the issues involved in the AEC-Minnesota fight and his excellent summary of a complex problem is worthy of close scrutiny by all Members.

The article follows:

MINNESOTA VERSUS THE AEC—A "LANDMARK FIGHT"—IS ATOMIC POWER WORTH THE PRICE?

(By Victor Cohn)

MINNEAPOLIS.—Minnesota has looked at the atom and found it partly evil.

On the verge of what seems an evitable age of nuclear power, citizens here—citizens in several states—are staring afresh at this form of energy.

They are rediscovering the fact, known in bomb-testing, that using it has a price. The price is an inevitable addition, "slight" or "great" depending on whom you ask, to the quiet violence that modern man does to air, water, land and himself.

The price has led the state of Minnesota into a grim legal confrontation with the U.S. Atomic Energy Commission. It is a fight—"a landmark fight," say federal and power industry officials—that threatens the growth of atomic power, threatens AEC regulatory authority all over the country and challenges the AEC's very doubleheaded structure as both promoter and protecter in atomic matters.

Minnesota simply wants to be tougher than the AEC in regulating release of radioactive wastes into the air and water. Minnesota Gov. Harold Levander—a rather lackluster middle-road conservative who is far from a crusader in other areas, is deeply committed to this. At a recent national governors conference, he won the unanimous support of fellow governors, Republican and Democratic.

HEARINGS TO START

The issue will be examined by the Joint Senate-House Committee on Atomic Energy at six days of hearings in Washington starting Oct. 28. But it is already being examined by state officials and many citizens in Minnesota, Maryland, Vermont, New York state and the metropolitan New York area, Illinois, Oregon and Colorado.

Since the Nov. 9, 1965, New York power blackout—"Black Tuesday"—a handful of people have successfully delayed or blocked every major power plant proposed for the New York area, complained a recent double-page ad in the New York Times. The ad was inserted by the McGraw-Hill power industry magazine, Electrical World, which complains, with the industry, that power-makers are suddenly caught in America's new awareness that pollution imperils man's survival.

The public AEC chairman Dr. Glenn T. Seaborg points out, is "uptight about the environment." At the same time, the U.S. is growing so fast and using so much electricity—for air conditioning, electronic computing and home hair drying—that generating capacity, more than doubled just since 1950, must double again by 1980 and more than triple by 1990.

At the same time nuclear energy, until recently an expensive experiment, finally seems to be coming into its own. Today only 1 percent of U.S. electricity is nuclear-generated—the AEC says the figure will be 50 percent by the year 2000. Seventy-nine civilian A-power plants are now on order or building.

What one AEC commissioner terms the "anti-nuclear movement" began in this state of lakes and streams when Northern States Power Co.—slogan, "Electricity is penny cheap"—began building a big 560 megawatt atomic plant near Monticello, on the fresh-flowing Mississippi River just north of Minneapolis-St. Paul.

At first all went swimmingly. Then NSP sought a waste disposal permit from the new Minnesota Pollution Control Agency. The MCPA, needled by a set of young University of Minnesota biologists, engaged Dr. Ernest C. Tsivoglou, professor of sanitary engineering at Georgia Tech, as a consultant.

CONTAMINANT RATIO

Tsivoglou, chief of radiological water pollution control, U.S. Public Health Service, 1956–66, acknowledged that nuclear plants in the U.S. commonly discharged only a few percent of the radioactive contaminants that the AEC would permit. NSP, in fact, said it would discharge no more radioactivity than 1 to 4 percent of what the AEC would allow.

Tsivoglou also acknowledged that the AEC has prudently set its standards in accordance with recommendations of both the Federal Radiation Council (FRC) representing several federal agencies and international bodies.

But he argued that knowledge of the effects of low-level radiation is highly imperfect, and future research may turn up new harm.

In effect, therefore, Tsivoglou recommended a set of standards at about 2 percent of the AEC level, and in May the MPCA issued NSP an operating permit specifying such standards.

STATE FUND

NSP said it would meet the new standards almost all the time, but occasionally might have to exceed them. It said it would have to modify its plant and shut it down more frequently to adjust to them, and additional annual operating expense would be a prohibitive $3.5 million a year, making future electricity slightly more than penny cheap in the upper Midwest.

NSP has sued the state of Minnesota in both state and federal courts, charging that its restrictions are unjustified and illegal. Nuclear power plant builders like Westinghouse and GE and even publicly managed utilities like TVA have rallied to NSP's support.

And leaders of the congressional Joint Committee on Atomic Energy—in particular, Rep. Chet Holifield (D., Calif.), chairman, and Rep. Craig Hosmer (R., Ill.), ranking minority member—have sharply and impatiently questioned Minnesota's action.

Hosmer, appearing on the University of Minnesota power conference platform, firmly said Congress has "pre-empted" the field of nuclear regulation for the Federal Government, as one too complicated for state-by-state action. He and others said that where states have exercised radiation controls—as in Colorado uranium mining and in medical X-raying—they have done miserably.

But also, he charged, the Minnesota issue is "a big political football—certainly it is among the Minnesota delegation in Congress."

NOT FOR PUBLIC?

He said any complaints about radiation standards should go to the Federal Radiation Council—"they're not a subject for public

rallies and placard making" and "you can't have 200 million people deciding" them.

In reply, Dr. Barry Commoner of St. Louis—Washington University biologist and environmental crusader—said "informed public opinion" should indeed rule, even to accepting or rejecting a particular plant.

"The public is entitled to this vote," agreed Prof. Harold Green of George Washington University's National Law Center, a former AEC associate general counsel. "Why, in a democracy, should the public not have the full opportunity to decide for itself, rationally or irrationally, what benefits it wants and what price it is willing to pay?"

Conference discussion then centered on that price: power plant radiation's alleged hazards or virtual lack of hazards, with scientists on both sides.

Commoner and Dr. Arthur Tamplin of the University of California's Lawrence Radiation Laboratory at Livermore, emphasized hazards. Commoner saw a possible U.S. increase in thyroid cancer of several hundred cases a year from power plant radiation escaping into the environment. Tamplin said nuclear plants now measure only over-all radioactivity. But particular radionuclides—individual elements or their radiation-produced daughters—may cause greater than average harm.

TRITIUM CITED

He pointed to tritium, a heavy form of hydrogen, chemically inseparable from ordinary hydrogen. Once in human cells, it becomes part of the human heritage—incorporated into the DNA that tells future cells and future children how to grow. He said AEC standards should be lowered; individual radionuclides should be monitored; and almost no plant wastes should be discharged into rivers, but all should be buried in atomic graveyards.

Other possible power plant dangers were discussed: their considerable thermal pollution, of discharges or hot water; possible plant accidents, "a remote danger," it was generally agreed, but a horrendous one. On each point some speakers saw little problem, others peril.

When scientists disagree, concluded lawyer Green, the public and public bodies must decide. But the AEC, he maintained, has "a bifurcated interest," a "conflict of interest" in acting by congressional mandate as both A-power's developer and salesman and its government regulator.

He told how AEC officials, once they decide a plant is safe, becomes its enthusiastic supporters and defenders. "Clearly," said Commoner, "standard-setting belongs in the hands of an agency concerned with all aspects of the environment," such as the Department of Health, Education and Welfare's Consumer Protection and Environmental Health Services.

S. David Freeman, director of energy policy for Dr. Lee Dubridge, President Nixon's science adviser, agreed that this policy issue "deserves thoughtful consideration."

NUCLEAR MAFIA

Again and again at the Minnesota conference, Rep. Hosmer bristled. "It is time," he said, "that people quit painting the AEC as some kind of a nuclear Mafia engaged in a vast conspiracy." Even gentlemanly AEC Commissioner James T. Ramey said Minnesota "is making a mountain out of a molehill."

Yet out of the Minnesota fight there may come some agreements or at least some new directions for nuclear power:

Commoner, Hosmer and Freeman agreed that environmental licensing and monitoring ought to encompass all kinds of power plants, not just A-plants. The AEC can now consider only radiation, not heat effects. Legislation now under consideration would partly remedy this, but still not create an "energy" agency.

Radiation standards in one way or another will probably be toughened. NSP and the state of Minnesota are talking compromise—this would in effect establish the right of a state to talk tough to powermakers.

This high-energy civilization needs to keep looking at other sources of power, not just the atom. Unless more and more power is provided us, we will flick the switch one day soon, but nothing will happen.

MANY TARGETS

The concern of the "new militant" environmentalists has only begun. "I assure you, gentlemen of the atomic power industry, you are not the targets," said Prof. Commoner. "All polluters are." One of the placarding and protesting Minnesota groups—MECCA or Minnesota Environmental Control Citizens Association—says, "We are a fighting group. Our members are willing to go to court, to work in the legislature and protest at hearings."

Gov. Tom McCall of Oregon has announced a nuclear power conference for Dec. 4–5. "I expect there will be a need for additional ones," patiently said Atom Commissioner Ramey. "We are," Commoner thought, "in the midst of a revolution in public attitude toward the moral acceptability of a level of environmental deterioration which has for a long time been accepted without general complaint." If this is true, the future will see more and more placarding about DDT, offshore drilling, gigantic accident-prone oil tankers and even, it may be, pollution-belching cars.

It may even see placards about people. The Minnesota conference's oldest speaker was white-haired M. King Hubbert, U.S. Geological Survey research geophysicist, respected world authority on man's resources. He spoke for developing new, advanced forms of nuclear reactors—breeder reactors—to conserve man's richest atomic fuels. But he pointed out that the nuclear fight, like the pollution fight, depends ultimately on control of man himself; "It is mandatory that we stabilize human population at some level we can live with—and we may even have to drop the population back to some livable level."

ARTHUR BURNS SHOULD BE GIVEN A CHANCE AS FEDERAL RESERVE BOARD CHAIRMAN

(Mr. PATMAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PATMAN. Mr. Speaker, over the past 10 days I have often been asked my opinion of President Nixon's nomination of Arthur F. Burns as the new Chairman of the Federal Reserve Board.

Arthur Burns is a man of the highest integrity; a dedicated, hard working, and extremely honest public official. From this standpoint, President Nixon has chosen well.

However, I do not feel capable of divining what Mr. Burns may or may not do as Federal Reserve Chairman. It would not serve Mr. Burns or the Nation well to engage in the endless "guessing" game about his possible performance.

All of us should give Mr. Arthur Burns a full chance to prove himself on his merits as Federal Reserve Board Chairman. Down the road, I may well disagree—and disagree strongly—with Mr. Burns, but for the time being I view the appointment with an open mind. I say, "give him his chance."

From my knowledge of Mr. Burns, I think he has a good understanding of the dangers of the concentration of power in the hands of banks and other economic giants. I think he has a good understanding of the need to keep the banking business separated from nonbanking enterprises. I also believe he knows how destructive Federal Reserve monetary policy can be on various sectors of the economy, such as housing.

How he approaches and deals with these problems will be the big test. I may disagree with his methods, but I believe he comes into office with, at least, an understanding of the magnitude of the monetary and banking problems and with knowledge of the tremendous power of the Federal Reserve to do "good or evil" for the people.

Mr. Burns has impeccable credentials as an economist and he has worked in this field his entire life. He cannot be faulted for lack of experience.

This is a contrast to his predecessor, Mr. William McChesney Martin. The son of a banker, Mr. Martin came to Washington from the New York Stock Exchange with a bagful of cliches about monetary policy. He had no experience in the field and the country has suffered as a result.

Mr. Martin will go down as one of Washington's greatest all-time "drum beaters" and "public relations" pitchmen. In this area he has rivaled the best that Barnum and Bailey could produce.

His rolling cliches have brought him some wonderful plaudits and laudatory newspaper columns. But press clippings do not make monetary policy and the sad record of Mr. Martin is now part of the economic history. The historians will look behind the beautiful—if contradictory—Martin cliches and see the hard evidence. The evidence will indict Mr. Martin as a failure; a man whose prime contribution was that he made the word "inflation" a national fetish.

But, I will discuss Mr. Martin's 18-year tenure more fully later this session.

Today, I want to emphaize the need to give the new Federal Reserve Board Chairman a chance to start with a fresh book. He cannot be held responsible for the Martin mess.

In this regard, I think it is deplorable that certain characters in the administration have attempted to undercut Mr. Burns even before he takes office. I refer specifically to the Treasury Department's frenzied attempt to sell a plan to strip the Federal Reserve of all its regulatory power over banks, leaving it only with authority in the monetary field. The plan would give all these powers to the Federal Deposit Insurance Corporation and the Comptroller of the Currency, two agencies well known for their banker-bias.

More importantly, an effort is being made to push this through the back door under the Reorganization Act in an attempt to bypass the Congress to the maximum extent possible.

From information I have received, this plan has no currency outside of certain offices in the Treasury Department and special committees of the American Bankers Association. These promoters have been attempting to sell their plan to the press as an administration idea.

It would seem strange, indeed, for the administration to name Mr. Burns as Federal Reserve Board Chairman and then announce a plan to take away a substantial part of his powers. I hope the administration will clarify this situation and make it clear that the Treasury Department is not running the Government.

Of course, there are many things that need to be coordinated and strengthened in the bank regulatory field and I intend to introduce legislation to accomplish this. But this should be done in an orderly fashion, with full hearings before the Banking and Currency Committees, and not through some hurried attempt just as a new Chairman is being installed at the Federal Reserve.

As this legislation goes forward, the Federal Reserve and its new Chairman should have a full opportunity to present their ideas. Some changes may be needed, but these should not come from some half-baked scheme which has all the earmarks of an intramural power play.

TIMES HAVE CHANGED—NOW TIME TO ESCALATE OR WITHDRAW FROM VIETNAM

(Mr. JOHNSON of California asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. JOHNSON of California. Mr. Speaker, during recent days we have heard much discussion about our past, our present, and our future role in Vietnam. Throughout this debate I have listened attentively—and I might mention that I was among those present and voting against adjournment the night of October 14 for I believe firmly that this Nation can only benefit from full, open debate of the difficult issues which face this Congress.

We were in Vietnam when I first came to Congress 11 years ago and in the years that I have served in this House of Representatives I have sought out a diversity of thought on this issue, both here and throughout the 20 counties which make up the Second Congressional District of California. Constituents whose views I have solicited and to whom I have listened range from the most vigorous and early opponents of our involvement there to the fine young, much decorated helicopter pilot—a son of a very good friend of mine—who voluntarily returned for an extra tour of duty in Vietnam because he is so impressed with the value of what this Nation is trying to do in Vietnam.

What are we doing there?

When we first sent advisers to Vietnam we were seeking to give the Republic of South Vietnam the guidance and assistance to withstand Communist aggression from the North and, most important, to preserve the right of self-determination which we as a Nation value so highly, and have treasured for two centuries for this is one of the basic tenents on which this Nation of ours was founded. It should be remembered that we had assistance from other nations as we fought for our own independence.

The war, as we all know so well, escalated steadily as we countered action with reaction. This Nation plunged deeper and deeper into the quagmire of war on the Asian continent. Eventually we had more than a half million troops fighting in that small, Southeast Asian nation no larger in area than my own State of California. The toll was tremendous—more than 40,000 American lives lost, more than a quarter million American servicemen wounded, more than $100 billion spent.

Throughout this process of escalation, the United States maintained a firm conviction that the people of Southeast Asia, who had turned to us for help in an hour of need as we had turned to other nations two centuries ago, must be allowed the privilege of self-determination. After all, this is a privilege which we in our daily lives accept as a right—the right to determine our own destiny through the orderly process of law rather than through aggression, raw force, and violence.

I cannot and I will not challenge the integrity or the sincerity of those who made the difficult choices which led to each step up the combat escalator, for I am convinced that they were honest, dedicated men who were doing only what they thought best for the security of this Nation and for the cause of freedom throughout the world.

But I can and will say today that the time has come to reverse this process with all possible speed.

Times have changed.

The decisions to escalate must be recalled in the light of the circumstances in which they were made, not in the light of subsequent developments. The initial attacks against North Vietnam came as a response to a direct attack upon American military vessels sailing in international waters.

Escalation came at a time of apparent solidarity in the Communist-bloc nations, at a time when the so-called domino theory appeared to have substantial validity. It could well have been true that other free nations of that critical part of the world would have fallen under the Communist scythe if the Republic of South Vietnam had been abandoned.

Because of our assistance, South Vietnam was not overrun by the aggressors from the north. Red China became embroiled in its own bloody revolution which was put down only after thousands upon thousands of Chinese were slaughtered in the Red Guard purges. Moscow experienced trouble in its own backyard, as is shown by the events in Czechoslovakia and Rumania.

During the long years that the United States has actively engaged in the fighting in Vietnam, other Southeast Asia nations have had an opportunity to strengthen their defenses and today with the two giants of the Communist world—China and Russia—engaged in a bitter dispute over their mutual border, the "domino" threat has diminished.

During these same long years during which the United States carried a substantial burden of the fighting, the Republic of South Vietnam has had an adequate opportunity to take the first steps toward self-determination through the election of its own legislature.

During these same long years of our active military participation, the Republic of South Vietnam has had an adequate opportunity to train a military force capable of defending its own right of self-determination.

The time has come for the Republic of Vietnam to accept the responsibility of its own defense.

Further delay will result only in ever greater reliance by that nation upon the crutch of our military manpower. This, in turn, can only atrophy the will of the South Vietnamese to fight for their own self-determination. It is time for this crutch to be cast aside and for the South Vietnamese to stand upon their own feet.

In fact, it is my belief that this is now long overdue. It was on March 26 of this year that I joined with several Representatives in Congress in the introduction of a congressional resolution declaring that it is the sense of Congress that the United States should begin to reduce its military involvement in Vietnam.

In recent weeks, many proposals have been made as how best to accomplish this goal. In considering all of these, it must be understood fully that under our system of government the conduct of our foreign policy is in the hands of the President and his appointees in the executive branch of Government.

With this fundamental principle in mind, I joined in a later congressional resolution declaring "that the substantial reductions in U.S. ground combat forces in Vietnam already directed are in the national interest and that the President be supported in his expressed determination to withdraw our remaining such forces at the earliest practicable date."

We have made a small start in troop reductions. It is my fervent hope and prayer that this can be "escalated" and the pace of our orderly troop withdrawal speeded so that all of our servicemen, including those who are held prisoners of war, may be brought home.

In the meantime, I would encourage what appears to be the new U.S. military policy of "protective reaction," a standfast policy which replaces the search and destroy strategy of maximum pressure. This new strategy hopefully will lead to a true cease-fire which can halt the bloodshed which has gone on so long.

This prayer is expressed, not for those strident young people who shout "Hell, no, I won't go," for they are the minority, a tiny minority in every way, except possibly for volume of noise. This prayer is said for the vast majority of our young people who have faced up to a dirty job by setting aside their hopes and aspirations for 2 or 3 or 4 years to serve their country.

They do not like war. No one in his right mind likes war. But they have quietly met their obligations to this great Nation of ours, and we can be proud of them.

For some, like 20-year-old David Edward Freesone, of Rough and Ready, Calif., a cease-fire will come too late. A

few hours after receiving word of David's death, his father wrote the following letter to the Grass Valley-Nevada City Union, expressing the anguish and pain which has been repeated more than 40,000 times throughout this Nation of ours during these long, long years:

Only hours ago, I received the shocking news that my son had been killed in action. David, a big strapping boy, a paramedic assigned to the 1st Infantry Division who only the day before he died, wrote "Don't worry Dad, this is a big base, eight or nine miles across where nothing ever happens."

Less than 24 hours later he was dead. Dead because of a system, a condition, or perhaps a military order. Dead because of a commitment made by this government to a foreign power, that we the American people would bolster small defenseless nations against Communist aggression.

Since the early days of Vietnam, particularly where America has been involved, 38,590 fine young Americans have died. Mind you, these aren't the "Flower Kids" or the addicts or the perverts. These aren't the rioters, the looters or the hate mongers, and these aren't the Black Panthers. The number I quote constitute the finest representation of mankind this world has ever known . . . or ever will know. Ironically, 99 per cent of these tragic fatalities evolve around those boys who are too young to have tasted life or true love; too young to have tasted success or to have entered a voting booth, but old enough mind you—to die as only men can die.

We are a sick race of people when we allow this to happen for we are a Democracy where the power is vested in the people. How is it then that we allow our sons to become tools of politicians? Haven't we got the sand to stand up on a united front to be counted? Why can't we say to anyone we choose to accost: "You're not telling us . . . we're telling you!"

I do not believe in anarchy or in rebellion. I despise any way of life contrary to the American dream as envisioned and contained in both the Declaration of Independence and the Bill of Rights. I believe it is the duty of any man to defend his country in the event we are attacked. The significant fact is however, we were never attacked by the Vietnamese. Nor were we attacked by the Koreans. Neither of these two conflicts come under the category of a "declared war".

And yet, the mortality rate spirals higher and higher.

Our beloved son is dead. We shall never see him again . . . nor shall we hear his voice. The day he left Sacramento for Vietnam, February 15, 1969, he stood tall and handsome in his uniform. We shook hands. I wanted to say: "David I love you . . ." but I couldn't. He was my boy but father and son just do not express themselves in this manner. So it was a warm handshake and a smile. "Do take good care of yourself, son." "I'll do that," he grinned.

My wife and I watched the plane until it was out of sight. I didn't look at her—but I knew she was weeping.

But . . . your sons. They're still alive . . . probably still at home with you. I want to say to you—how important—how precious they are. You never know just how short lived happiness can be. I do not imply that everyone who goes to Vietnam will die . . . but he will stand high on the roster of expendables.

I am furious with the cold dispatch of military endeavor. I despise the necessity for artificial limbs and eyes, and I detest most of all . . . the sound of 'taps' ending on a high note, for war is a condition of ignorance, just as profanity is a substitute for intelligence. I dislike intensely the camps that turn good boys into killers; to perform acts against humanity that in times of peace would bring a death sentence in any court in the land.

I must go on—I can't quit, for I must carry out the dream that gave my son—hope and enthusiasm. I must rededicate myself, to attain at least the stature he would expect of me. Additionally I must renew my faith in God, for it has been according to His promise that we are able to bear up under these tragic days.

Again I say, look at your children. Love them . . . guard them . . . protect them, and determine for yourself that they shall not be lifted from a battlefield in a canvas tarp or a plastic bag, and they shall not come home in a steel casket.

God be with you all.

So that this young life was not lost in vain, let us rededicate ourselves as this father has done to carry out the dream of his son and achieve peace, not only in Vietnam, not only in Southeast Asia, but throughout the world so that the family of man can live in harmony.

CONTRIBUTIONS TO CITIZENS' COMMITTEE FOR POSTAL REFORM

(Mr. GROSS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. GROSS. Mr. Speaker, for the benefit of the Members who may have missed them, I call attention to the remarks by the gentleman from Montana (Mr. OLSEN) starting on page 29321 of the RECORD of October 9.

There the gentleman lists the numerous contributors to an outfit known as Citizens' Committee for Postal Reform, Inc., which was formed for the purpose of drumming up support for conversion of the Post Office Department into a Government-owned corporation.

I will not reprint the long list, but particularly intriguing are the substantial contributions, ranging up to the $6,920 by McGraw-Hill, Inc., and from other big publishers throughout the Nation. It is unnecessary to point out that publishers are the beneficiaries of highly subsidized mail rates.

In commenting on these contributions, the gentleman from Montana properly expressed an interest "in just what type of activities are conducted with these sums."

After checking the third quarterly report filed by the Citizens' Committee for Postal Reform, Inc., with the Clerk of the House pursuant to the Federal Regulation of Lobbying Act, I can now enlighten the gentleman, at least in part. It might also be of some interest to the contributors to know how their money is being spent.

The report shows that "dues and assessments" received through September 30, 1969, total $226,761.24. Spending has totaled $43,944.35, which leaves a nice nest egg of $182,816.89 for the committee to play with.

With this huge amount available to the committee, Members of Congress ought to be put on notice to expect a massive propaganda campaign over the next several weeks in support of a Postal Corporation—a plan already rejected by the House Post Office and Civil Service Committee.

As a longtime member of the Post Office Committee and strong advocate of postal reform, it is my sincere hope that my colleagues will resist this pressure, for a postal corporation simply is not the cure-all it is alleged to be.

On the expenditure side, the citizens committee report shows that "wages, salaries, fees, and commissions" for the third quarter amount to $16,208.43. One of the principal beneficiaries is Claude J. Desautels, who is listed as the committee's executive director. He receives a biweekly salary of $961.54, or $25,000 a year.

Desautels, it should be pointed out, was a top assistant to former Postmaster General Lawrence O'Brien at the White House and the Post Office Department during the Kennedy-Johnson administrations. It is more than coincidence that O'Brien just happens to be the co-chairman of the citizens committee.

Running a close second to Desautels is James J. Marshall, who is listed as the committee's public affairs director. He receives a biweekly salary of $769.23, or $20,000 a year. In all fairness, I should mention that Marshall is a Republican, having been on the staff of the Republican Governors' Association prior to his present employment.

The report shows that the citizens committee has been strong on "travel, food, lodging, and entertainment"—to the tune of $3,060.02 for the third quarter only. There is another category of "all other expenditures," totaling $1,967.24. I have no idea of what "all other expenditures" might entail.

In the breakdown of individual expenditures, particularly interesting are those in behalf of one Jerry Bruno, of De Witt, N.Y. This is the same Gerald J. "Jerry" Bruno who served as the late Senator Robert Kennedy's top advance man and one of eight former Kennedy aides who received almost simultaneous grants from the giant, tax-exempt Ford Foundation following the Senator's death last year.

The Ford grant to Bruno was for a 7-month period, ending March 5, 1969, and totaled $19,450. With this money, Bruno supposedly studied presidential campaign techniques. After this venture, it obviously did not take Bruno long to catch on with the Citizens Committee for Postal Reform and his old friend, Larry O'Brien, but I am not sure how he qualifies as an expert on postal reform.

Be that as it may, Bruno has done all right for himself. For the months of August and September, he is listed as receiving $2,375.53 in consultant fees from the citizens committee, and $842.39 for travel.

At another point in the committee's report, Eastern Airlines is listed as being paid $185.85 for travel for Jerry Bruno. The Mayflower Hotel is shown to have received $83.29 for "J. Bruno," and in the same line the hotel is listed as receiving $317.38 for "L. F. O'Brien" and $119.48 for "dinner."

The committee paid $50 to National Postal Forum III with the notation, "registration fee for J. Bruno." And the Washington Hilton Hotel received $81.44 for "room for Jerry Bruno."

Here are a few of the other interesting expenditures by the citizens committee:

American Airlines, travel for L. F. O'Brien, $69.30.

The Federal City Club, 923 16th Street NW., Washington, D.C., luncheon for Post Office Department officials, $58.79. There is no explanation as to why it was considered necessary to lobby the hierarchy at the Post Office Department in behalf of a plan this same hierarchy is lobbying for, perhaps illegally.

Robert L. Hardesty, 3431 Monte Vista Drive, Austin, Tex., fee for draft of speech, $300. At that price, it must have been a dandy speech, but there is no clue as to who delivered it or where.

Hardesty, let it be noted, served at the Post Office Department and the White House during the last administration.

The former Senator Thruston Morton—cochairman of the citizens committee—reimbursement for travel, $406.59.

James Marshall, reimbursement for travel, $413.25.

The Newporter Inn, Newport, Calif., rooms for Desautels, O'Brien, Morton, $75.01.

O'Brien plane ticket, $147.

United Airlines, deposit, $425.

Last but not least, we find an item of $166.40 for "rental of limousine." Even in status-conscious Washington, is it really necessary for a lobbyist to come equipped with limousine?

All and all, it is a very interesting report and I call attention to it solely for the enlightenment of my colleagues and those who have contributed to the citizens committee. With an unspent nest egg of $182,816.89, I await with interest the committee's fourth quarterly report.

In the meantime, I will continue to work to the best of my ability for the enactment of meaningful and total postal reform legislation. It is an objective which can be achieved—and without the help of a high-powered lobbying group which has raised most of its revenue from giant corporations and big publishing houses.

FRESHMAN ECONOMICS NO. 9—SINKING THE GOOD SHIP PROSPERITY

(Mr. PODELL asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. PODELL. Mr. Speaker, the rate of inflation continues relatively unchecked, interest rates remain stratospherically high, unemployment increases, and our Nation's leaders calmly observe the phenomena. When the market crashed in 1929, no one pretended to know why, at the time it actually transpired. Today no such excuse exists. In this case, Government is actually the major culprit.

All the storm signals are flying practically in our faces. Unemployment has jumped drastically to 4 percent, and I have no doubt that this is just a beginning. Personal income rates are slowing significantly. Most ominous of all, inventories are rising and warehouses filling. When they bulge full, assembly lines will halt, and the fat will truly be in the fire. Last weekend, the Business Council spoke of decreasing consumer demand which will show more fully in times to come.

In the face of such ominous revelations, an increasingly isolated and uncommunicative administration sits tightly, screwing down the lid even harder on the average consumer and working person. Minority unemployment increases, credit supply weakens, and certain segments of industry resemble miniature disaster areas already. The elderly are a tragedy in and of themselves. Yet all we hear are Hoover-type platitudes which resemble wishful thinking more than economic certitude.

Nothing is being done about price hikes by major industries, which continue to come in a regular stream. Worthington Turbines raises prices 10 percent. Titanium Metals Corp. hikes its prices an average of 50 percent. Union Carbide chimes in with raises on polyethylene films. Allied Chemical announces aniline oil hikes. DuPont raises packaging film prices 2 to 5 cents per pound. Beaunit tosses in a 4-percent rise in rayon tire cord, and Olin's aluminum division jumps on the bandwagon with a 3-percent rise in electrical conductor products. Teledyne raises all its tungsten products 31 cents per pound. B. F. Goodrich hikes its prices 2.5 percent on all tires.

Monsanto, Continental Can, Norton Co., and Kaiser Aluminum all decided to be altruistic and raised prices on a variety of products, ranging from plastic dairy containers, polyethylene bottles, and vacuum equipment to panels of aluminum for mobile homes. Good old American competition in the race for the shrinking consumer dollar, pounded meanwhile to a shadow by a Government which allows such hikes while pursuing an anticonsumer policy.

Quarterly machine tool orders have just sunk to their lowest levels of the year, a prime indicator of how business views the coming business year.

Manufacturing capacity use is declining, along with industrial production. Our annual growth rate is slowing to a snail-like 2 percent in real terms. Since the last recession of 1960, the average was 5 percent. The money squeeze on the housing industry is growing tighter, as only 55 percent of Federal Housing Administration regional offices reported an adequate fund supply. Average interest yield on secondary sales of 7½-percent FHA mortgages is up to 8.4 percent. The composite index of stock prices, new orders, industrial materials prices, housing starts, and after-tax profits has been falling since April. Further, this set of signals has warned us of every recession since the end of World War II.

The utilities, both gas and electric, stand ready in the economic wings, armed with a staggering series of requests for rate increases, which this administration is doing nothing to warn against or show disapproval toward. More than three dozen of them in 30 States have filed for hikes, ranging from 5 to 16 percent. If approved, they would add a whopping $400 million to our utility bills. Consolidated Edison alone wants a $117 million hike, which would raise residential rates 14 percent, adding $1.50 monthly to average apartment dweller's $9.85 bill. The Federal Power Commission is already making permissive noises in their direction, inviting them to press the point. All the while, the administration howls about holding the line, damning the average working man and woman for spending. Labor is asking for too much, they whine. But the big boys? Why they are as innocent as so many lambs. And after all, Government cannot stand by and let these helpless corporations be victimized by the bloodthirsty consumer. So all hikes will probably go through, to be followed by others. Ah, well, once you have seen one price hike, you have seen them all.

While new car sales declined 2.43 percent in mid-October. While the major corporations plan new price rises. While tax reform dies aborning. While we thunder down recession road. The time of reckoning will come, and there will not be an excuse in a carload. Where will all the economic powerhouses be then? I wonder. People will listen until they are out of work. Then they will not listen.

SLANT OF THE MIND'S EYE

(Mr. RANDALL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. RANDALL. Mr. Speaker, on Saturday evening, October 11, it was my privilege to welcome to Missouri President Robert R. Mallicoat of Sertoma International, who gave the principal address of the evening at Sertoma's Missouri Conference.

The scene was the beautiful Elms Hotel in Excelsior Springs, Mo., which is a short drive from my home city of Independence, Mo. Present were dozens of my constituents from Independence and the Raytown area to share in this welcome for a truly distinguished leader of one of our great national service clubs. Founded in Kansas City in 1912 as the Cooperative Club, today it has grown into one of the most active service clubs of the Nation. The name was changed in 1950 to Sertoma coined from the slogan "Service to Mankind."

Although I am not a member of Sertoma, I was treated as warmly as if I were a member. I came away convinced that this conference was brought together and these clubs held together by the finest kind of common denominators; that is, the desire to be of significant help to someone else. People with such a philosophy generally make pretty good company. My evening was most rewarding because it was spent with members of an organization and their wives that were truly dedicated to the motto, "Service to Mankind."

President Mallicoat spoke without notes. Everyone present listened intently. I was so impressed, or rather inspired is the proper word, that I asked him would he please take the time to dictate his remarks to a secretary in order that more than the limited number who heard him might benefit from the philosophy of his speech.

The subject of International President Mallicoat's speech, "The Slant of the

Mind's Eye," emphasizes that how we look at the world is all in our own mind's eye. Even more important, Mr. Mallicoat brings out the point that how the world looks back at us as individuals depends quite a lot on how we look at the world. He says it is important we be concerned about our point of view because, although a day may have a few gray clouds in the sky, if we see it as a beautiful day and then all that day we will be able to open doors we can step through. Put differently, he says this means a dream grows from man's imagination and a dream is the first stage toward the full realization of our potential.

The reference to Islam's classification of four kinds of man is one that all of us could use to apply to our own lives.

Finally, the intriguing reversal of the letters of Sertoma into AMO TRES was a most fitting climax to his speech.

The address of President Mallicoat which I am delighted to share with my colleagues follows:

THE SLANT OF THE MIND'S EYE

(Speech of President Robert R. Mallicoat, of Sertoma International)

It's a beautiful day; there's a gray cloud in the sky. The grass is a lovely green; I'll have to mow it tomorrow. He's a grand fellow; he has his faults. Her hair-do is exquisite—it must take her forever to put it up.

It's the slant of the mind's eye—our point of view. How does the world look to us? What's the complexion of the things about us? How do we look to the world? It's all in our own mind's eye.

A man and his wife lived by the New England coast and she had been told by her doctor that the climate was too damp and they'd have to move to higher ground. He traveled into the Vermont hills to find a new place to settle. He chanced upon an old gentleman in a pleasant little town. He told the old gentleman what he was about and asked him "what are the people like up here"? "What are they like where you come from, son"? "That's what troubles us most. They're so very friendly; if you ever need help, they're quick to do whatever they can. There's a smile and a warm greeting whenever we meet. We can't bear moving away from these wonderful people". "Well, son," said the old man, "the people up here are pretty much the same."

A little later another fellow stopped to talk with the old gentleman and asked the same question, "What are the people like up here?" And the old gentleman asked the same question, "What are they like down your way, son?" The younger man told him that where he lived the people were just people, not particularly friendly. If you borrowed something from them, they wanted it back almost immediately. They rarely ever smiled and even less often had a good word to say to you. The old gentleman replied, "Well, son, the people up here are about the same."

Why should we be concerned about our point of view? You might say that if all you can see is the gray cloud in the sky, you may never venture out. But if you see it as a beautiful day, the door will open, you will step through, and be a part of all you can behold. Man's dreams grow from man's imagination. And a dream must be the first stage in the full realization of our own potential.

We've made a decision—a decision to be a part of Sertoma. And in so doing to be looked upon as the people in our community who care and who want a part in the shaping of the future. Yes, we consider ourselves as the responsible citizens. With this decision to be involved actively in matters concerning our fellow man, we've accepted an obligation. An obligation to lead. To provide the guidance which will assure a better community tomorrow and the future of our American heritage of responsible freedom and free enterprise. We choose to accept this opportunity of community leadership in an atmosphere made warm by the good friends who share our concerns and our desires.

In the words of Islam, there are four men.

He who knows not and knows not that he knows not is a fool—shun him.

He who knows not and knows that he knows not is a child—teach him.

He who knows and knows not that he knows is asleep—wake him.

He who knows and knows that he knows is a leader—follow him.

I choose to believe that we in Sertoma properly belong in the last. Knowing our own potential is the first step in fully serving this quality of leadership.

Point of view. The world must look its brightest or imagination is stifled and the dream is never born. Without a dream there is nothing for the leader to realize. But, by truly knowing his own potential, the leader can see the vista beyond and chart his course. When a man knows where he is going, there are always many to follow. The path of the true leader is well paved with compassion for those about him.

In the lore of the Orient there's a tale of a good and very successful man of commerce with many years on his shoulders. His only relatives were three stalwart nephews. He would leave his business to one of them, but could not choose among them. He called the young men to him one day and gave them each a coin. He told them to go into the market place and return at sundown with something which would best fill this room, but spend no more than this coin. He who fills it best shall have my business.

They went into the market place and among the tradesmen in search of their purchase. At sundown the three lads returned and were greeted at the door by the old gentleman. He asked the first, "and what have you brought"? With this the first lad brought forth a huge bale of straw which when untied covered most of two walls of the room. The others applauded as the straw was taken away. The second young man brought forth two gabs of thistledown which, when untied, filled half of the room. The others congratulated him as the old gentleman turned to his third nephew and said, "and what have you, my son"?

With his head bowed, he replied "I gave half my coin to a hungry child and most of what remained I gave in alms to the church and asked God to forgive my sins. With the farthing which remained, I bought this candle and this flint."

How do we see the world? And well we might ask how does the world see us?

A task is a job to one man, and an opportunity to another. Our choice is the task of leadership. Let it be our opportunity in service to mankind.

Some years ago, one of our Sertomans in Mexico told me that the letters of Sertoma in their country were sometimes reversed—amo tres, Three loves; amistad, friendship; libertad, freedom; el servicio a la humanidad, and service to mankind.

These are the three ideals of good men everywhere. Let us serve them well.

AMERICAN MERCHANT MARINE ENDORSES PRESIDENT'S FAR-REACHING REVITALIZATION PROGRAM

(Mr. RHODES asked and was given permission to extend his remarks at this point in the RECORD and to include extaneous matter.)

Mr. RHODES. Mr. Speaker, President Nixon's far-reaching program for the revitalization of the American merchant marine has been received with ringing endorsement by a broad spectrum of concerned citizens in the maritime field. I insert here for the information of my colleagues the texts of a telegram sent the President by Mr. Paul Hall, president of the Seafarers International Union of North America; a letter to the President from Mr. James M. Hannan of Michigan, president of the Navy League of the United States; and a statement by Mr. Edwin M. Hood, president of the Shipbuilders Council of America. Speaking for millions of members of national organizations with labor, industry, and national defense interests, these communications have a common theme—that there is not a moment to lose in putting the administration's comprehensive and challenging maritime policy into effect; I would hope this Congress can act upon it with minimum delay.

The telegram, letter, and statement referred to above, follow:

[Text of telegram sent Oct. 23, 1969]

Hon. RICHARD M. NIXON,
White House,
Washington, D.C.:

The Seafarers International Union of North America today has issued the following statement relative to your maritime message to the Congress:

"The maritime program submitted to Congress by President Nixon marks the first time in a third of a century that proposals have been made by the government to overhaul the out-of-date Merchant Marine Act of 1936.

The proposed legislation is a landmark in still another direction: It is the first proposal that has been made that takes into consideration the needs of the entire merchant marine—not only the one-third of this industry which has been the beneficiary of federal assistance since 1936, but also the two-thirds of this industry which has operated independently of government subsidy during this period.

President Nixon's proposals form the most substantial basis to date for a revitalization of the American Merchant Marine. It may be that Congress will feel that some amendments are necessary in order to make this program achieve its maximum effectiveness in terms of our balance of payments, the growth of our shipping and shipbuilding capabilities, the realization of our potential for sealift in time of emergency and the enhancement of our prestige around the world. What is important, however, is the fact that the President has enunciated a policy that, for the first time, should lead to the full development of our merchant marine."

We look forward to working with your Administration in achieving these goals.

PAUL HALL,
President.

NAVY LEAGUE OF THE UNITED STATES,
Washington, D.C., October 23, 1969.

The PRESIDENT,
The White House,
Washington, D.C.

MY DEAR MR. PRESIDENT: Your proposal to the Congress for the rebuilding of the United States Merchant Marine, reflecting as it does both your vision and the requisite long-term corrective measures, has provided a source of profound encouragement to the entire membership of the Navy League.

I wish to express my sincerest congratulations on your proposed action as one of primary economic and security interest to this nation. At the same time, I pledge my fullest support toward gaining the broadest bipar-

tisan support for the significant measure you propose.

You have, for the first time in American history, provided a comprehensive and long-range program to gain the concerted effort essential to an achievement of national oceanic purpose. I am confident that your challenge will encourage the various segments of the maritime industry to move cooperatively toward the goals which you have set.

In expressing my congratulations, I can assure you that the entire membership of the Navy League is committed to fulfilling our educational mission through continuing support of your "Maritime Program for the Seventies."

I have the honor to remain,

Yours faithfully,

JAMES M. HANNAN.

STATEMENT ISSUED OCTOBER 23, 1969, BY EDWIN M. HOOD, PRESIDENT, SHIPBUILDERS COUNCIL OF AMERICA

The American shipyard industry is gratified and encouraged by the maritime policy and program released today by The White House.

In scope and direction, these recommendations point the way toward restoration of the United States as a first-class maritime power. We are confident that the Congress will endorse President Nixon's maritime message and promptly enact the legislation needed to pursue the realistic objectives he expressed.

At long last, then, the indecision, hesitancy, tokenism and budgetary expediencies at the Federal level—which, over the years, have undermined and depleted America's maritime strength—will be ended. At long last, the highest office in the land has called for a national commitment with attendant priorities and levels of funding to develop the kind of modern merchant marine necessary for national well-being.

The President's program comes not a moment too soon. Precious time has been lost by the failure of previous Administrations to contend with the ever-accelerating obsolescence of the American merchant marine. Nearly five years ago, President Johnson promised to come forward with a plan and program to remedy our maritime deficiencies. He failed to fulfill that promise—and five years of inaction have compounded the fleet modernization problems that confront us today.

That time will have to be made up, and the burden falls on the American shipyards to compensate for the years of neglect by greater and more rapid production of the required ships in the years immediately ahead. I have unswerving confidence that the American shipyards will respond to the production challenges set forth in the Nixon program.

My confidence in the industry is based on past performances. During World War II in the four year period 1942–1945, the American yards turned out nearly 5,000 large merchant ships, 1,500 naval ships plus tens of thousands of service craft. This prolific output established a production record that will probably stand for all time. That was wartime, but it demonstrates what can be done when a national commitment and high priorities are assigned to shipbuilding.

Peacetime production by the yards during the post-war period also refutes the contention that the production of 30 merchant ships per year would overtax our facilities. The yards delivered 31 ships in 1952, 45 in 1953 and 38 in 1954—averaging 38 ships per year for this 3 year period. Between 1958 and 1963, 174 merchant ships were delivered—averaging 29 ships per year for this six year period.

Our shipyards have consistently maintained that if a program developed that exceeded the capabilities of their existing facilities, they would enlarge and expand their plants to meet the demands whatever the numbers might be. The only qualification they have made is that the program be of a size and duration to justify the additional capital expenditures. That view still prevails today.

A BAD SITUATION CONCERNING SMUT AND OTHER PORNOGRAPHIC LITERATURE

(Mr. SCHADEBERG asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SCHADEBERG. Mr. Speaker, for my 7 years as a Member of this House, I have been trying diligently to get some measure of legislative action to control, and hopefully, to diminish and ultimately eradicate completely, the distribution of smut and other pornographic materials among those who do not ask for it; do not want it in their homes; are offended by having it sent to them without their permission; and are outraged by having it sent to their children who are the innocent victims of this obnoxious trade.

In my first year in Congress, I took a special order to bring to the attention of my colleagues my concern about this matter and included in the RECORD—not the material sent to a 13-year-old lad, but the advertisements of books and magazines available for purchase along with the table of contents of some of them. This young man took the materials he had received to his dad, who in turn contacted me. To be sure the titles were shocking, but they did not consist of four-letter words, the use of which we seem so reluctant to stop.

I was asked to expunge these verbal advertisements from the permanent RECORD since quote, "They are not suitable to be placed in the RECORD." Naturally, I abided by the request, but could not help question why it was unfit for the CONGRESSIONAL RECORD, but not unfit for a 13-year-old boy to receive them.

I took other occasions to stress the necessity to do something about this unrestricted trade in smut—a trade designed to corrupt the soul of America. I introduced several bills, cosponsored others designed to prevent the expansion of this program of corruption for profit, but to no avail.

I felt that the one solution, which admittedly has some legitimate objectionable aspects, was to prevent the sale or distribution of a person's name without his permission. This would help stem the tide of the reckless use of mailing lists. This procedure would make the users of the mailing lists responsible for respecting the wishes of any individual whose name might be used. It would also prohibit, under penalty of fine and/or imprisonment the use of a minor's name without the consent of the parents—or legal guardian. In other words, it would deny the indiscriminate use of another's name by anyone, either for profit or for any other motive. It would require a license of those who are in the business of selling mailing lists, and would set up guidelines to be followed by those who would operate legitimately.

The details, of course, have to be worked out by the appropriate House committee, after the holding of the official hearings. Not being a lawyer, I have had to rely on the advice of House attorneys. The trouble is that while everyone insists that my approach as related to the use of mailing lists is impossible, no one comes up with any constructive alternatives. I get the impression that there is little desire to take realistic action in this area. The time to act is now. We must leave no stone unturned to try to correct the deteriorating moral climate in our society.

Legislation alone will not solve the problem, because this—as all our major problems—is a "people problem," the solution of which will require dedicated and continued effort of every concerned citizen as well as the dedicated concern of every Member of Congress.

I congratulate President Nixon on his determination to take effective measures through his Commission on Obscenity to carry out the wishes of the American people to protect the sanctity of their homes and the integrity of the mails. However, all is not well. There is a great deal of work to be done and I assure this House that I will do my utmost to assist President Nixon in this very important program. A nation which is morally weak is in just as vital danger of tyranny as a nation which is militarily weak and unable to effectively meet threats from without.

Mr. Speaker, in order to assess my colleages of some of the problems concerning us in the strengthening of the moral fiber of this Nation, I submit for serious consideration by my colleagues two articles, one by the Reverend Morton A. Hill, S.J., a member of the Presidential Obscenity Commission, as printed in the October 1969 issue of Morality in Media, Inc. The other is from the Postal Record, a publication of the National Association of Letter Carriers.

The articles follow:

[From Morality in Media, October 1969]

FATHER HILL CRITICIZES OBSCENITY COMMISSION

Rev. Morton A. Hill, S.J., said late this Summer that if the Presidential Commission on Obscenity and Pornography continues in the direction in which its chairman, William B. Lockhart, is leading it, it will wind up merely applying a bandaid to the festering, cancerous sore of obscenity in this country.

Hill criticized the orientation of the Commission's work, saying that it is concentrating the largest proportion of effort and funds on studies of effects which will be undoubtedly incomplete and admittedly inconclusive. He said this is primarily a legal problem, but that studies in the legal area are suffering because of this overemphasis on effects.

Lockhart has long been an advocate of scientific research into the effects of pornography. Hill noted that effects studies are only one of the Commission's mandates from Congress. The others include analysis of laws pertaining to the control of obscenity and pornography, and evaluation and recommendation of definitions—all with the aid of leading constitutional law authorities; the ascertainment of methods employed in the distribution of obscene materials, and

the exploration of the nature and volume of the traffic in such materials; finally, the recommendation of legislative, administrative or other appropriate action to regulate effectively the flow of such traffic, without in any way interfering with constitutional rights.

Hill said that not one leading constitutional law authority had been hired, although the Commission had been operative for eleven months. The Executive Director of the Commission had testified before the House Subcommittee on Appropriations last April that of the $1,249,000 appropriation asked for, $750,000 would go for research. Of the $750,000 allocated for research, $75,000 would be devoted to legal studies. When asked if this 10% would be for hiring lawyers, he said, "No. Some of them will be social scientists who will be hired to work on the national survey kind of research."

Father Hill is a member of the 18-man Commission appointed by President Johnson. Early in June, President Nixon named Cincinnati lawyer Charles H. Keating to succeed Ambassador Kenneth Keating on the Commission. Hill called the appointment "heartening."

The Jesuit priest submitted separate remarks to the President and Congress. They accompany the Commission's interim Progress Report, issued August 12, the day before the Summer recess of the Congress began. Congressman John Ashbrook of Ohio read the remarks into the Congressional Record for August 13. The separate remarks are reprinted here in full:

SEPARATE REMARKS COMMISSIONER MORTON A. HILL, S.J.

"The foregoing report accurately and appropriately states that the Commission on Obscenity and Pornography has no recommendations to make at this time. It also states that it relates the directions in which the Commission is moving.

"The report is not complete, however, because it does not record the vigorous dissent of Commissioner Hill, precisely on the subject of the direction in which the Commission is moving. It is becoming an 'effects' commission, and this is not what Congress intended.

"Public Law 90–100 states, as reported here, 'after a thorough study, which shall include a study of the causal relationship of such materials to antisocial behavior, to recommend advisable, appropriate, effective and constitutional means to deal effectively with such traffic in obscenity and pornography.' Congress did not intend that the study of effects be the principal task of this Commission, and that all recommendations be contingent upon the results of this study. Congress did not mandate us to prove that there must be a 'clear and present danger' of anti-social behavior before we make recommendations. Congress is concerned about the traffic in obscenity and pornography. Effects studies are only one of the tasks of the Commission.

"Even a cursory examination of the foregoing report, and the amount of space devoted to the section on effects, as compared to other areas, indicates that the greatest proportion of the Commission's efforts is being expended on effects studies. The major portion of funds allocated to contract studies will be channeled into effects studies.

"Now, behavioral scientists who have worked in this area concede that causal relationship is extremely difficult, if not impossible to prove.

"If the Commission continues in the direction in which it is going, i.e., expending the major portion of effort and funds on effects studies and making recommendations contingent on these studies, it will come full circle, and the traffic in obscenity will continue to flow. It must be repeated: this is not what Congress intended.

"Legal research is suffering because of the overemphasis on effects studies. For example:

"(1) The foregoing report states that obscenity statutes of the Federal Government and of the fifty (50) states have been assembled and are under review. Congress mandated that analysis of these laws and evaluation and recommendation of definitions be carried out with the aid of 'leading constitutional law authorities.' To my knowledge no 'leading constitutional law authority' has been hired. In fact, the phrase itself was omitted, in the listing of Commission duties, from every draft of the foregoing report, including the final draft which was approved by the Commission on June 5. It was inserted as a 'stylistic change,' after these separate remarks were presented, at or after a subcommittee meeting convened June 23.

"(2) The nagging problem of 'utterly without redeeming social value' should be analyzed and studied. I maintain that this is not a constitutional standard, since it was the opinion of merely three justices and not of the Court majority. Yet, it is being applied in lower courts as a test and being adopted into the language of state statutes. This is open to serious study, for this 'utterly without redeeming social value' so-called 'test' has led to an enormous increase in the traffic in pornography in all media. This question is not being thoroughly studied, and after six weeks of debate was included incidentally in the questionnaire to prosecutors. An oral commentary on the issue, delivered by a staff member at a legal panel meeting after my request for study, was based on the incorrect proposition that 'utterly without redeeming social value' is a constitutional decision of the Court. I repeat, it is simply the opinion of three justices. Thorough analysis of this issue could lead to a re-definition of obscenity. However, the decision was made that redefinition should await 'The outcome of our effects research.'

"(3) Reported 'descriptive' reviews of activities of Post Office and Customs Departments are in actuality editorial-type articles written in law review article style, somewhat critical of both departments, and so of little objective assistance.

"(4) In the area of traffic and distribution, which is a matter for intensive investigation as well as academic research: to my knowledge no investigators have been hired. One lawyer has joined the staff to work in this area.

"(5) Public hearings have not been planned. Hearings would be invaluable, in the ascertainment of methods of distribution as well as in the ascertainment of community standards for legal research.

"In general, I believe the foregoing report could be misleading, for it leaves the public with the impression that programs initiated are geared toward resolving the problem of the traffic in obscenity. A careful reading will show quite clearly that there is no program pointing in the direction of regulating this traffic. Of the three directions for additional effective legislative action pointed to, those dealing with obscene material and the adult community are in the areas of pandering and invasion of privacy. (Item (2) above makes one wonder if we are leaving open the possibility of other types of legislation). In other words, under the present chairmanship, the Commission appears to be moving toward permitting obscenity for adults, and therefore, will not provide constitutional 'means to deal effectively with such traffic in obscenity and pornography.' How can children be prevented from exposure if this situation prevails? With this in mind, I make the following recommendations:

"1. That each commissioner, under the direction of the Chairman, with the aid of staff, undertake a personal content analysis of one area of obscene material, so that the entire Commission will be aware of the rapidly changing situation. The expertise of commissioners has not been adequately utilized in this area, and this could lead to redefinition.

"2. That the Commission cut back on contract research into effect, and allocate—over and above staff and expenses—one-third of its appropriation to legal research, one-third to research and investigation into traffic and distribution and one-third into effects.

"3. That the Commission retain leading constitutional law authorities to guide us as to how we can constitutionally present legislation to Congress which will reverse the mislabeled Supreme Court 'test' of 'utterly without redeeming social value.' Roth is the only case (except for the recent Stanley v. Georgia decision on the invasion of privacy) in which a majority of the Supreme Court agreed. In that case the Court said:

" 'The unconditional phrasing of the First Amendment was not intended to protect every utterance . . . All ideas . . . having even the slightest redeeming social importance have the full protection of the guarantee . . . but implicit in the First Amendment is the rejection of obscenity as utterly without redeeming social importance. This rejection for that reason is mirrored in the universal judgment that obscenity should be restrained, reflected in the international agreement of all 48 states, and in the 20 obscenity laws enacted by the Congress from 1842 to 1956. This is the same judgment expressed by this Court in Chaplinsky v. New Hampshire . . .

" 'There are certain well-defined and narrowly limited classes of speech, the prevention and punishment of which have never been thought to raise any Constitutional problem. These include the lewd and obscene . . . such utterances . . . are of such slight social value as a step to truth that any benefit that may be derived from them is clearly outweighed by the social interest in order and morality, . . . We hold that obscenity is not within the area of constitutionally protected speech or press . . . The test (is) : whether to the average person, applying contemporary community standards, the dominant theme of the material taken as a whole appeals to the prurient interest.'

"Justice Clark, in dissenting opinion in Fanny Hill, called the 'utterly without redeeming social value' so-called 'test' novel and noted that only three members of the Court held to it. He maintained that it rejects the basic holding of Roth.

"4. That the Commission plan public hearings to assist in ascertaining methods employed in the distribution of obscene materials and exploring the nature and volume of traffic; and, in ascertaining from the American public themselves, what community standards are.

"5. That the Commission work diligently to recommend definitions of obscenity and pornography, as mandated by Congress in creating this Commission; noting particularly, that we are not restricted to the opinions of individual members of the Court, which are mistakenly called tests.

"6. That the Commission work to recommend legislation when the above have been completed—not awaiting the results of effects studies which will be admittedly incomplete, undoubtedly inconclusive, and unnecessary under the Roth decision.

"In the matter of effects, the Court said in Roth:

"It is insisted that the constitutional guarantees are violated because convictions may be had without proof either that obscene material will perceptibly create a clear and present danger of anti-social conduct, or will probably induce its recipients to such conduct. But, in light of our holding that obscenity is not protected speech, the complete answer to this argument is in the holding of this Court in Beauharnais v. Illinois . . . Libelous utterances not being within the area of constitutionally protected speech, it is unnecessary, either for us or for the State courts, to consider the issues be-

hind the phrase 'clear and present danger.' Certainly no one would contend that obscene speech, for example, may be punished only upon a showing of such circumstances.

"7. That the Commission move more practically to fulfill our mandate to 'recommend such legislative, administrative, or other advisable and appropriate action . . . to regulate effectively the flow of such traffic, without in any way interfering with constitutional rights.'

"Failing action on these recommendations, it is difficult to see how the Commission, under its present leadership, can produce the results Congress intended. If the Commission continues in the direction in which it is now moving, it will simply propose laws on pandering, invasion of privacy and sales to minors. Congress does not need a Commission to recommend legislation of this sort. Such limited proposals will not 'regulate effectively the flow of such traffic'."

[From Postal Record]

LET'S CLEAN UP THE MAILS

"Elsewhere in this issue there is reproduced the testimony which your national President delivered before a House Sub-Committee on the subject of pornography in the mails. We are against it. Our national conventions on several occasions notably in 1968, have passed strong resolutions asking relief from the disgusting duty of delivering moral poison to the homes of America, and particularly to the youngsters in those homes.

"The Federal Government has been troubled about this increasing problem for a long while. In October, 1967, the Ninetieth Congress passed a law attacking the problem and creating a Commission to study the entire subject and make recommendations. In January, 1968, President Lyndon B. Johnson appointed seventeen persons to the Commission and the anti-pornography movement was, supposedly in business.

"Last month, after 18 months, the Commission published its first (20-page) "Progress Report." After having read it we can only shake our heads and quote Horace to the effect that 'the mountains have been in labor and have brought forth a ridiculous mouse.'

The 'Progress' Report makes no findings and it makes no recommendations. As a matter of fact the Commissioners (with one notable exception) seems to take pride in this fact. The emphasis of the Report, it seems to us, deals more in the area of the 'effects' of pornography than on the methods of dealing with it. It is somewhat as if a medical journal were to publish articles on how cancer kills the patient instead of zeroing in on the problem of how to kill cancer.

"It announces that 'exploratory and feasibility studies' are under way in such fields as 'the relationship between availability of pornography and sex crimes,' 'the consequences of exposure to erotic materials among college students,' 'potentially erotic stimuli associated with the dating experience of junior college girls and of unwed pregnant high school girls.' We may be overly harsh in our judgment, but we get the impression that the Commission is interested in first finding out whether or not pornography is a bad thing, and then, perhaps, suggesting some means of slowing its growth.

"The notable dissenter from the majority opinion, Rev. Morton A. Hill, S.J.. points out that there is no need for a Commission to make studies such as these. The need is for action, and for positive guidance, not for fruitless exploration. The average American knows that pornography especially in relation to the young is an evil thing and he wants it driven out of the mails.

"We recommend that the Congress disregard the faltering leadership of the Commission and pass a tough anti-pornography law with teeth in it. We also recommend that the Congress pay less attention than it has to the possibility of a reversal by the Supreme Court. The Supreme Court of 1969 will, we think, prove to be far less permissive in this area than was the Court of the earlier 1960's which held, almost literally, that 'everything goes.'

"The American people want to have this flow of filth stopped. The letter carriers of America are sick and tired of having to handle and deliver to the homes of their patrons the degrading material that presently pollutes the mails. We want it stopped, too. And we want it stopped now.

"Postal employees, in their desire for economic and social justice, have been victimized for generations by dilatory Commissions and Committees making studies that last forever and which serve only as an excuse for not taking appropriate and obvious remedial action.

"We recognize a stalling act when we see one, and we feel the 'President's Commission on Obscenity and Pornography' is engaging in a classic example of this technique. Meanwhile, a whole generation of American youth is in danger of being corrupted and perverted by this steady stream of poison.

"We don't need any more studies; we need action. Now."

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. MANN (at the request of Mr. GIBBONS), for today and October 28, on account of official business.

Mr. PIRNIE (at the request of Mr. GERALD R. FORD), for October 27 through November 7, on account of official business as U.S. delegate to the Interparliamentary Conference.

Mr. MCCLORY (at the request of Mr. GERALD R. FORD), for October 27 through November 7, on account of official business as U.S. delegate to the Interparliamentary Conference.

Mr. BYRNE of Pennsylvania (at the request of Mr. DENT), for Monday, October 27, 1969, on account of illness.

Mr. FOUNTAIN (at the request of Mr. WAGGONNER), for today, October 27, 1969, until 1:45 p.m. on account of official business in Asheville, N.C., before the North Carolina League of Municipalities.

Mr. FALLON (at the request of Mr. GARMATZ), for October 27 and 28, on account of official business.

Mr. KLUCZYNSKI (at the request of Mr. BOGGS), for October 27 and 28, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. PUCINSKI, for 60 minutes, today; to revise and extend his remarks and include extraneous matter.

(The following Members (at the request of Mr. STOKES) and to revise and extend their remarks and include extraneous matter:)

Mr. GONZALEZ, for 10 minutes, today.
Mr. REUSS, for 30 minutes, today.
Mr. RARICK, for 30 minutes, today.
Mr. FARBSTEIN, for 20 minutes, today.

EXTENSIONS OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. MAHON and to include certain data and extraneous matter.

Mr. MADDEN in two instances and to include extraneous matter.

Mr. EDMONDSON in four instances and to include extraneous matter.

Mr. GRAY in two instances and to include extraneous matter.

Mr. HECHLER of West Virginia to revise and extend his remarks and include extraneous matter in connection with general debate on coal mine safety bill.

(The following Members (at the request of Mr. MILLER of Ohio) and to include extraneous matter:)

Mr. MESKILL.
Mr. RIEGLE.
Mr. ESCH.
Mr. SCHWENGEL.
Mr. ZWACH.
Mr. UTT in two instances.
Mrs. MAY in two instances.
Mr. SCHADEBERG.
Mr. WYMAN in two instances.
Mr. DERWINSKI.
Mrs. HECKLER of Massachusetts.
Mr. GUDE.
Mr. GOLDWATER.
Mr. ASHBROOK.
Mr. KEITH in six instances.
Mr. BROCK.
Mr. STEIGER of Wisconsin.
Mr. BRAY in two instances.
Mr. DUNCAN in three instances.
Mr. SHRIVER.
Mr. TALCOTT.
Mr. BUTTON.
Mr. FINDLEY.

(The following Members (at the request of Mr. STOKES) and to include extraneous matter:)

Mr. CORMAN.
Mr. ROONEY of Pennsylvania.
Mrs. CHISHOLM in two instances.
Mr. EDWARDS of California in two instances.
Mr. ANDERSON of California in two instances.
Mr. ALBERT.
Mr. COHELAN.
Mr. EILBERG.
Mr. ANDREWS of Alabama.
Mr. EVINS of Tennessee.
Mr. GIAIMO.
Mr. HUNGATE in two instances.
Mr. MOORHEAD in two instances.
Mr. JONES of Tennessee in two instances.
Mr. LEGGETT.
Mr. O'HARA.
Mr. GONZALEZ.
Mr. RARICK in three instances.
Mr. STEPHENS.
Mr. FISHER in two instances.
Mr. VANIK in two instances.
Mr. WOLFF.
Mr. BROWN of California in four instances.
Mrs. SULLIVAN in two instances.
Mr. PICKLE in two instances.
Mr. WILLIAM D. FORD in two instances.
Mr. CONYERS in five instances.
Mr. PODELL in six instances.
Mr. JACOBS.

SENATE BILLS REFERRED

Bills of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 232. An act to promote the economic development of the Trust Territory of the Pacific Islands; to the Committee on Interior and Insular Affairs.

S. 1455. An act to amend section 8c(2)(A) of the Agricultural Adjustment Act to provide for marketing orders for apples produced in Colorado, Utah, New Mexico, Illinois, and Ohio; to the Committee on Agriculture.

S. 1968. An act to authorize the Secretary of the Interior to permit the removal of the Francis Asbury statue, and for other purposes; to the Committee on House Administration.

ENROLLED BILLS SIGNED

Mr. FRIEDEL, from the Committee on House Administration, reported that that committe had examined and found truly enrolled bills of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 5968. An act to amend the act entitled "An act to provide for the establishment of the Frederick Douglass home as a part of the Park System in the National Capital, and for other purposes," approved September 5, 1962;

H.R. 9857. An act to amend the provisions of the Perishable Agricultural Commodities Act, 1930, to authorize an increase in license fee, and for other purposes;

H.R. 9946. An act to authorize and direct the Secretary of Agriculture to execute a subordination agreement with respect to certain lands in Lee County, S.C.; and

H.R. 11609. An act to amend the act of September 9, 1963, authorizing the construction of an entrance road at Great Smoky Mountains National Park in the State of North Carolina, and for other purposes.

ADJOURNMENT

Mr. STOKES. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 40 minutes p.m.), the House adjourned until tomorrow, Tuesday, October 28, 1969, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1280. A letter from the Secretary of the Air Force, transmitting a report of the facts and the justification for the proposed closure of certain military installations in the United States, pursuant to the provisions of section 613 of Public Law 89–568; to the Committee on Armed Services.

1281. A letter from the Director, Central Intelligency Agency, transmitting a draft of proposed legislation to amend the Central Intelligence Agency Retirement Act of 1964 for certain employees, as amended, and for other purposes; to the Committee on Armed Services.

1282. A letter from the Comptroller General of the United States, transmitting a report on the effectiveness and administrative efficiency of the concentrated employment program under title IB of the Economic Opportunity Act of 1964, Los Angeles, Calif., Department of Labor; to the Committee on Education and Labor.

1283. A letter from the Comptroller General of the United States, transmitting a report on the effectiveness and administrative efficiency of the concentrated employment program under title IB of the Economic Opportunity Act of 1964, Detroit, Mich., Department of Labor; to the Committee on Education and Labor.

1284. A letter from the Comptroller General of the United States, transmitting a report on the effectiveness and administrative efficiency of the Neighborhood Youth Corps program under title IB of the Economic Opportunity Act of 1964, Chicago, Ill., Department of Labor; to the Committee on Education and Labor.

1285. A letter from the Chairman, Federal Power Commission, transmitting a copy of the publication "Sales of Firm Electric Power for Resale, 1965–67"; to the Committee on Interstate and Foreign Commerce.

1286. A letter from the Secretary of State, transmitting a draft of proposed legislation to amend the Immigration and Nationality Act to facilitate the entry of foreign tourists into the United States, and for other purposes; to the Committee on the Judiciary.

1287. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting reports concerning visa petitions approved according certain beneficiaries third and sixth preference classification, pursuant to the provisions of section 204(d) of the Immigration and Nationality Act, as amended; to the Committee on the Judiciary.

1288. A letter from the Administrator of Veterans' Affairs, transmitting a report of the personnel claims paid by the Veterans' Administration during the fiscal year ended June 30, 1969; to the Committee on the Judiciary.

1289. A letter from the Administrator of Veterans' Affairs, transmitting a draft of proposed legislation to amend title 38, United States Code, to permit the furnishing of benefits to certain individuals conditionally discharged or released from active military, naval, or air service; to the Committee on Veterans' Affairs.

1290. A letter from the Chairman, U.S. Atomic Energy Commission, transmitting a draft of proposed legislation to amend the Atomic Energy Act of 1954, as amended, to authorize the Commission to charge Federal agencies fees for the licensing of nuclear power reactors; to the Joint Committee on Atomic Energy.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

[*Submitted Oct. 24, 1969*]

Mr. McMILLAN: Committee on the District of Columbia. H.R. 10335. A bill to revise certain provisions of the criminal laws of the District of Columbia relating to offenses against hotels, motels, and other commercial lodgings, and for other purposes; with amendments (Rept. No. 91–596). Referred to the House Calendar.

Mr. McMILLAN: Committee on the District of Columbia. S. 2056. An act to amend title 11 of the District of Columbia Code to permit unmarried judges of the courts of the District of Columbia who have no dependent children to terminate their payments for survivors annuity and to receive a refund of amounts paid for such annuity (Rept. No. 91–597). Referred to the Committee of the Whole House on the State of the Union.

Mr. McMILLAN: Committee on the District of Columbia. H.R. 10336. A bill to revise certain laws relating to the liability of hotels, motels, and similar establishments in the District of Columbia to their guests; with amendments (Rept. No. 91–598). Referred to the House Calendar.

[*Submitted Oct. 27, 1969*]

Mr. PERKINS: Committee on Education and Labor. H.R. 14252. A bill to authorize the Secretary of Health, Education, and Welfare to make grants to conduct special educational programs and activities concerning the use of drugs and for other related educational purposes (Rept. No. 91–599). Referred to the Committee of the Whole House on the State of the Union.

Mr. MILLER of California: Committee of conference. Conference report on S. 1857 (Rept. No. 91–600). Ordered to be printed.

Mr. STAGGERS: Committee on Interstate and Foreign Commerce. H.R. 14465. A bill to provide for the expansion and improvement of the Nation's airport and airway system, for the imposition of airport and airway user charges, and for other purposes (Rept. No. 91–601). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BLATNIK (for himself, Mr. HOLIFIELD, Mr. JONES of Alabama, Mr. REUSS, Mr. ROSENTHAL, Mrs. DWYER, Mr. ERLENBORN, Mr. BROWN of Ohio, and Mr. FINDLEY):

H.R. 14517. A bill to provide temporary authority to expedite procedures for consideration and approval of projects drawing upon more than one Federal assistance program, to simplify requirements for the operation of those projects, and for other purposes; to the Committee on Government Operations.

By Mr. BROTZMAN (for himself, Mr. DENNEY, Mr. BURTON of Utah, Mr. FISH, Mr. MIZE, Mr. FLOWERS, Mrs. HECKLER of Massachusetts, Mr. CORBETT, Mr. MCKNEALLY, Mr. RUPPE, Mr. MCCLOSKEY, Mr. LUJAN, Mr. DERWINSKI, Mr. WINN, Mr. WILLIAMS, Mr. MANN, Mr. ROBISON, Mr. POLLOCK, Mr. CLEVELAND, Mr. PUCINSKI, Mr. COWGER, Mr. FINDLEY, Mr. CARTER, Mr. FEIGHAN, and Mr. SEBELIUS):

H.R. 14518. A bill to require the Bureau of the Budget to submit to the Congress certain monthly estimates concerning national income and expenditures; to the Committee on Government Operations.

By Mrs. DWYER (for herself, Mr. ASHLEY, Mr. BROOMFIELD, Mr. BUTTON, Mr. DENT, Mr. DONOHUE, Mr. HUNT, Mr. MCDONALD of Michigan, Mr. MCKNEALLY, Mr. MORGAN, Mr. MYERS, Mr. STANTON, and Mr. WHITEHURST):

H.R. 14519. A bill to establish an Office of Consumer Affairs in order to provide within the Federal Government for the representation of the interests of consumers, to coordinate Federal programs and activities affecting consumers, to assure that the interests of consumers are timely presented and considered by Federal agencies, to represent the interests of consumers before Federal agencies, and to serve as a clearinghouse for consumer information; to establish a Consumer Advisory Council to oversee and evaluate Federal activities relating to consumers; to authorize the National Bureau of Standards, at the request of businesses, to conduct product standard tests and for other purposes; to the Committee on Government Operations.

By Mr. EDWARDS of California:

H.R. 14520. A bill to protect interstate and foreign commerce by prohibiting the movement in such commerce of horses which are "sored," and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. GILBERT (for himself, Mr. BINGHAM, Mr. BROWN of California, Mr. BURKE of Massachusetts, Mr. DADDARIO, Mr. FULTON of Tennessee, Mr. HARRINGTON, Mr. LOWENSTEIN, Mr. RYAN, Mr. ST. ONGE, and Mr. THOMPSON of New Jersey):

H.R. 14521. A bill to amend the Social Security Act to provide increases in benefits under the old-age, survivors, and disability insurance program, to provide health insurance benefits for the disabled, and for other purposes; to the Committee on Ways and Means.

By Mr. McDADE:

H.R. 14522. A bill to amend the Food Stamp Act of 1964; to the Committee on Agriculture.

By Mr. POAGE:

H.R. 14523. A bill to amend the Communications Act of 1934 so as to prohibit the granting of authority to broadcast pay television programs; to the Committee on Interstate and Foreign Commerce.

By Mr. POFF:

H.R. 14524. A bill to modify ammunition recordkeeping requirements; to the Committee on Ways and Means.

By Mr. RANDALL:

H.R. 14525. A bill to amend title 39, United States Code, to exclude from the U.S. mails unsolicited offers to sell, loan or rent certain obscene materials, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. REUSS (for himself, Mr. DINGELL, Mr. GUDE, Mr. McCLOSKEY, Mr. MOORHEAD, Mr. MOSS, Mr. SAYLOR, Mr. VANDER JAGT, and Mr. WRIGHT):

H.R. 14526. A bill to amend the Federal Property and Administrative Services Act of 1949 to provide for the sale as surplus property of relinquishments of the Federal navigation servitude over particular areas, and for other purposes; to the Committee on Government Operations.

By Mr. ROSENTHAL:

H.R. 14527. A bill to ban the mailing of unsolocited credit cards and require that solicited credit cards sent through the mails be sent by registered or certified mail; to the Committee on the Judiciary.

By Mr. STAGGERS (for himself and Mr. SPRINGER):

H.R. 14528. A bill to amend the Public Health Service Act so as to extend for an additional period the authority to make formula grants to schools of public health; to the Committee on Interstate and Foreign Commerce.

By Mr. ULLMAN:

H.R. 14529. A bill to amend the Military Selective Service Act of 1967 to provide for a random system for selecting individuals for induction into the Armed Forces, to eliminate inequities in the deferment procedures, to suspend the operation of such act after December 31, 1972, and for other puposes; to the Committee on Armed Services.

By Mr. VANDER JAGT:

H.R. 14530. A bill to amend the Internal Revenue Code of 1954 to permit an employer corporation to establish a plan under which its employees may purchase and hold stock in such corporation; to the Committee on Ways and Means.

By Mr. BINGHAM:

H.R. 14531. A bill to reorganize the functions of the executive branch of the Government which relate to the regulation of commercial uses of nuclear power, except those which relate to source materials, by transferring such functions from the Atomic Energy Commission to the Secretary of Health, Education, and Welfare to be administered through the Public Health Service subject (in certain cases) to disapproval by the Federal Power Commission or the Secretary of the Interior; to the Joint Committee on Atomic Energy.

H.R. 14532. A bill to amend the Atomic Energy Act of 1954 to permit a State, under its agreement with the Atomic Energy Commission for the control of radiation hazards, to impose standards (including standards regulating the discharge of radioactive waste materials from nuclear facilities) which are more restrictive than the corresponding standards imposed by the Commission; to the Joint Committee on Atomic Energy.

By Mr. COHELAN (for himself, Mr. McCLOSKEY, and Mr. McFALL):

H.R. 14533. A bill to amend the Land and Water Conservation Act of 1965 to provide that authority to enter into certain mineral leases with respect to the Outer Continental Shelf shall be suspended during any period when amounts in the land and water conservation fund are impounded or otherwise withheld from expenditure, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. FOLEY (for himself, Mr. McCLOSKEY, Mr. ANDERSON of California, Mr. BARRETT, Mr. CONTE, Mr. CONYERS, Mr. DELLENBACK, Mr. FRELINGHUYSEN, Mr. GREEN of Pennsylvania, Mr. HARRINGTON, Mrs. HECKLER of Massachusetts, Mr. KARTH, Mr. MATSUNAGA, Mr. MEEDS, Mr. MORSE, Mr. OTTINGER, Mr. PODELL, Mr. REES, Mr. REID of New York, Mr. ST GERMAIN, Mr. SAYLOR, Mr. WALDIE, and Mr. WHITE):

H.R. 14534. A bill to stimulate the development, production, and distribution in interstate commerce of low-emission motor vehicles in order to provide the public increased protection against the hazards of vehicular exhaust emission, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. FOLEY (for himself, Mr. McCLOSKEY, Mr. ADAMS, Mr. BELL of California, Mr. McCARTHY, Mr. BURTON of California, Mr. CORMAN, Mr. DADDARIO, Mr. EDWARDS of California, Mr. FARBSTEIN, Mr. GUDE, Mr. HECHLER of West Virginia, Mr. HOSMER, Mr. KOCH, Mr. LOWENSTEIN, Mr. MIKVA, Mrs. MINK, Mr. MOSS, Mr. POLLOCK, Mr. RYAN, Mr. SCHEUER, Mr. SYMINGTON, Mr. TUNNEY, Mr. UDALL, and Mr. YATES):

H.R. 14535. A bill to stimulate the development, production, and distribution in interstate commerce of low-emission motor vehicles in order to provide the public increased protection against the hazards of vehicular exhaust emission, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. HUTCHINSON:

H.R. 14536. A bill to establish in the State of Michigan the Sleeping Bear Dunes National Lakeshore, and for other purposes; to the Committee on Interior and Insular Affairs.

H.R. 14537. A bill to amend the Federal Water Pollution Control Act, as amended; to the Committee on Public Works.

By Mr. PURCELL:

H.R. 14538. A bill to amend title II of the Social Security Act so as to remove the limitation upon the amount of outside income which an individual may earn while receiving benefits thereunder; to the Committee on Ways and Means.

By Mr. SCHEUER:

H.R. 14539. A bill to amend title XVIII of the Social Security Act to provide payment for chiropractors' services under the program of supplementary medical insurance benefits for the aged; to the Committee on Ways and Means.

By Mr. MORSE:

H.J. Res. 972. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mr. WATSON:

H.J. Res. 973. Joint resolution to supplement the joint resolution making continuing appropriations for the fiscal year 1970 in order to provide for carrying out programs and projects, and for payments to State educational agencies and local educational agencies, institutions of higher education and other educational agencies and organizations, based upon appropriation levels as provided in H.R. 13111, which passed the House of Representatives July 31, 1969, and entitled "An act making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1970, and for other purposes"; to the Committee on Appropriations.

By Mr. COHELAN (for himself and Mr. KEITH):

H.J. Res. 974. Joint resolution to supplement the joint resolution making continuing appropriations for the fiscal year 1970 in order to provide for carrying out programs and projects, and for payments to State educational agencies and local educational agencies, institutions of higher education, and other educational agencies and organizations, based upon appropriation levels as provided in H.R. 13111 which passed the House of Representatives July 31, 1969, and entitled "An act making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1970, and for other purposes"; to the Committee on Appropriations.

By Mr. BROTZMAN (for himself, Mr. DENNEY, Mr. BURTON of Utah, Mr. FISH, Mr. MIZE, Mr. FLOWERS, Mrs. HECKLER of Massachusetts, Mr. CORBETT, Mr. McKNEALLY, Mr. RUPPE, Mr. McCLOSKEY, Mr. LUJAN, Mr. DERWINSKI, Mr. WINN, Mr. WILLIAMS, Mr. MANN, Mr. ROBISON, Mr. POLLOCK, Mr. CLEVELAND, Mr. PUCINSKI, Mr. COWGER, Mr. FINDLEY, Mr. CARTER, Mr. FEIGHAN, and Mr. SEBELIUS):

H. Res. 591. Resolution to amend the Rules of the House of Representatives; to the Committee on Rules.

By Mrs. SULLIVAN (for herself, Mr. ADDABBO, Mr. ANNUNZIO, Mr. BYRNE of Pennsylvania, Mr. DULSKI, Mr. EDWARDS of Louisiana, Mr. EVINS of Tennessee, Mr. HULL, Mr. ICHORD, Mr. JOHNSON of California, Mr. MOLLOHAN, Mr. POAGE, Mr. PRICE of Illinois, Mr. RANDALL, Mr. SIKES, and Mr. SMITH of California):

H. Res. 592. Resolution to express the sense of the House of Representatives that the United States maintain its sovereignty and jurisdiction over the Panama Canal Zone; to the Committee on Foreign Affairs.

By Mr. FLOOD (for himself, and Mr. CARTER, Mr. COLLINS, Mr. DOWDY, Mr. FISHER, Mr. FLYNT, Mr. FOUNTAIN, Mr. FULTON of Pennsylvania, Mr. GOODLING, Mr. HOSMER, Mr. LUKENS, Mr. MANN, Mr. RARICK, Mr. ROBERTS, and Mr. WOLD):

H. Res. 593. Resolution to express the sense of the House of Representatives that the United States maintain its sovereignty and jurisdiction over the Panama Canal Zone; to the Committee on Foreign Affairs.

By Mr. DEVINE (for himself, and Mr. WILLIAMS, Mr. McCLURE, Mr. WY-

MAN, Mr. LIPSCOMB, Mr. MICHEL, Mr. WYLIE, Mr. MESKILL, Mr. SCHERLE, Mr. SCHADEBERG, Mr. BUCHANAN, and Mr. MCKNEALLY):

H. Res. 594. Resolution to express the sense of the House of Representatives that the United States maintain its sovereignty and jurisdiction over the Panama Canal Zone; to the Committee on Foreign Affairs.

By Mr. HUNT (for himself, Mr. DELLENBACK, Mr. MYERS, Mr. DENNIS, Mr. LANDGREBE, Mr. GOODLING, Mr. JOHNSON of Pennsylvania, Mr. PELLY, Mr. SEBELIUS, Mr. CAMP, Mr. CARTER, Mr. QUILLEN, Mr. KUYKENDALL, Mr. BRAY, Mr. SNYDER, Mr. KYL, Mr. DUNCAN, Mr. WYATT, and Mr. MCCLURE):

H. Res. 595. Resolution to express the sense of the House of Representatives that the United States maintain its sovereignty and jurisdiction over the Panama Canal Zone; to the Committee on Foreign Affairs.

By Mr. WAGGONNER (for himself, Mr. PASSMAN, Mr. CAFFERY, Mr. GRIFFIN, Mr. LENNON, Mr. TAYLOR, Mr. HAGAN, Mr. BRINKLEY, Mr. JONES of Tennessee, Mr. FUQUA, and Mr. DOWDY):

H. Res. 596. Resolution to express the sense of the House of Representatives that the United States maintain its sovereignty and jurisdiction over the Penama Canal Zone; to the Committee on Foreign Affairs.

By Mr. DEL CLAWSON (for himself, Mr. HAMMERSCHMIDT, Mr. RUTH, Mr. SKUBITZ, and Mr. WHITEHURST):

H. Res. 597. Resolution to express the sense of the House of Representatives that the United States maintain its sovereignty and jurisdiction over the Panama Canal Zone; to the Committee on Foreign Affairs.

By Mr. DENT (for himself, Mr. BELCHER, Mr. MIZELL, and Mr. MILLER of Ohio):

H. Res. 598. Resolution to express the sense of the House of Representatives that the United States maintain its sovereignty and jurisdiction over the Panama Canal Zone; to the Committee on Foreign Affairs.

By Mr. HALL (for himself, Mr. GROSS, Mr. JOHNSON of Pennsylvania, Mr. SCOTT, Mr. RHODES, Mr. HUNT, Mr. TALCOTT, Mr. DICKINSON, Mr. KING, Mr. HUTCHINSON, Mr. THOMPSON of Georgia, Mr. DEL CLAWSON, Mr. BETTS, and Mr. SAYLOR):

H. Res. 599. Resolution to express the sense of the House of Representatives that the United States maintain its sovereignty and jurisdiction over the Panama Canal Zone; to the Committee on Foreign Affairs.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. GREEN of Pennsylvania:

H.R. 14540. A bill for the relief of Helena Janina Kuropatwa; to the Committee on the Judiciary.

By Mr. HENDERSON:

H.R. 14541. A bill for the relief of Jimmie R. Pope; to the Committee on the Judiciary.

By Mr. PUCINSKI:

H.R. 14542. A bill for the relief of Maria Rosa Occhino, Felipe Occhino, Franco Militello, and Anna Maria Militello; to the Committee on the Judiciary.

By Mr. BOB WILSON:

H.R. 14543. A bill for the relief of Mrs. Rolando C. Dayao; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and refered as follows:

307. By the SPEAKER: Petition of the Princeton Township Committee, Mercer County, N.J., relative to ending the war in Vietnam; to the Committee on Foreign Affairs.

308. Also, petition of Sister Terrence Marie, Caldwell, N.J., relative to establishment of a Department of Peace; to the Committee on Government Operations.

309. Also, petition of Henry Stoner, York, Pa., relative to review of statutes; to the Committee on the Judiciary.

310. Also, petition of A. W. Anderson, South Laguna, Calif., et al., relative to pensions for veterans of World War I; to the Committee on Veterans Affairs.

EXTENSIONS OF REMARKS

FACT SHEET ON CONTINUING RESOLUTION FROM COMMITTEE ON APPROPRIATIONS

HON. GEORGE H. MAHON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. MAHON. Mr. Speaker, on tomorrow the House is scheduled to consider House Joint Resolution 966, making continuing appropriations for November for those departments and agencies whose regular appropriation bills for fiscal year 1970 have not been enacted.

There is considerable interest among Members as to the provisions of the resolution in comparison to the one under which most of the Government has operated since July 1, and particularly the effect of the resolution on authorized funding levels for certain education programs—more specifically the one for "category A" and "category B" aid for schools in Federally impacted areas.

I have prepared a fact sheet on the committee resolution in general and its effect in this respect on the education programs. Copies will be available during consideration on the House floor.

I include a copy of the fact sheet and a supporting tabulation:

COMMITTEE CONTINUING RESOLUTION FACT SHEET—HOUSE JOINT RESOLUTION 966

(NOTE.—For impacted aid and other education programs, see items 10 and 11.)

A. THE PURPOSES OF CONTINUING RESOLUTIONS

1. *Continuing resolutions are not appropriation bills* in the usual sense. They do not make *additional* appropriations. They merely make interim advances that are chargeable against whatever amounts the two Houses of Congress finally appropriate in the regular annual bills.

2. *Continuing resolutions are nothing but interim, stop-gap measures* necessary to keep government functions operating on a rationally minimum basis between July 1 and enactment of the regular authorization and appropriation bills. They are designed to preserve the integrity and options of the regular authorizations and appropriations processes in the committees and in both Houses.

3. *Continuing resolutions were never designed and never intended to* "get ahead of the regular order", i.e., to resolve weighty, substantive, legislative or appropriation issues outside the framework of the regular bills. (If they were so used, a Pandora's box of disruptive and disorderly actions could well result.)

4. *Continuing resolutions have always been designed to avoid controversy so as to secure prompt enactment,* else they would jeopardize orderly processes and orderly continuation of essential governmental functions.

5. *Continuing resolutions are thus a growth, born of long—and successful—experience.* They have become standardized in their concepts and specific provisions. They apply universally, and consistently, to all departments and agencies. The basic concept over the years is this:

Legislative status of an appropriation bill when Continuing Resolution becomes effective:	Continuing Resolution funding level is always:
When neither House has acted.	The budget estimate or last year's level, whichever is lower.
When passed House but not Senate.	Last year's level, or House level, whichever is lower.
When passed both House and Senate.	The action of the two Houses; or if in disagreement, the lower of the two.

B. THE COMMITTEE RESOLUTION (HOUSE JOINT RESOLUTION 966)

6. *The committee resolution* follows the *basic concepts* of past resolutions. It is a 30-day resolution—for November only.

7. *The committee resolution* makes a change in the *application* of the concept and thus in the *effect* on some operations, by taking account of congressional actions on appropriation bills *since July 1* when the current resolution went into effect.

8. *The committee resolution* makes no change at all in 6 of the regular bills; they occupy the same position they did on July 1. It will have some limited effect on the Agriculture and Legislative bills which have moved to the conference stage, and on the Labor-HEW, State-Justice-Commerce, and Public Works bills which have moved to the Senate since July 1.

9. *The committee resolution, replacing the existing resolution effective November 1st, will produce* little or no change in authorized rates of interim spending levels for many programs and activities. But it will permit *significant changes in a handful of items in the Department of HEW, especially in the Hill-Burton hospital grants (about $100 million more) and in certain education programs (about $600 million more).*

C. EFFECT OF COMMITTEE ON EDUCATION PROGRAMS

10. *The committee resolution adds about $600 million* to the authorized spending level for education programs, as *shown on the attached table.* $319 million additional is for impacted area school aid (P.L. 874).

11. *For schools in Federally impacted areas,* the committee resolution would authorize funds at the 1969 level for both categories "A" and "B"; a total of $506,000,000—some $319,000,000 *above* the currently authorized rate. There would be no special restrictions with regard to "category B".

Payments are made periodically during the fiscal year but the final payments are not usually made until late September or October, i.e., *after* the fiscal year for which they are appropriated. Thus an increase in these funds at this time would have no practical effect different from that of providing them when the regular HEW bill is enacted.

EFFECT OF CONTINUING RESOLUTION ON EDUCATION PROGRAMS

[In millions]

	1969 level	1970 budget	1970 House bill	1970 continuing resolution: Present version effective July 1 (Public Law 91-33)	1970 continuing resolution: Committee version effective Nov. 1 (H.J. Res. 966)	1970 continuing resolution: Increase over present version
Supplementary educational centers (title III, ESEA) [1]	$165	$116	$165	$116	$165	+$49
Library resources (title II, ESEA) [1]	50	0	50	([2])	50	+50
Guidance, counseling, and testing (title V, NDEA) [1]	17	0	17	([2])	17	+17
Equipment and minor remodeling (title III, NDEA) [1]	79	0	79	([2])	79	+79
Impacted area aid (Public Law 874) [1]	506	187	585	187	506	+319
Higher education facilities construction grants, 4-year undergraduate facilities [1]	33	0	33	0	33	+33
NDEA student loans [1]	193	162	229	162	193	+31
Library assistance:						
Services	41	23	41	23	42	+19
Construction	9	0	9	0	9	+9
Title I, ESEA [1]	1,123	1,216	1,397	1,123	1,123	----------
Vocational education [1]	248	279	489	248	248	----------
Education for the handicapped	80	86	100	80	80	----------
Subtotal	2,544	2,069	3,194	1,939	2,545	+606
Other education programs	1,073	1,111	1,029	950	945	−5
Total, Office of Education	3,617	3,180	4,223	2,889	3,490	+601

[1] Joelson amendment items.
[2] Sec. 101(d) of the present continuing resolution made special provision for continuing State administrative activities only. Under the committee version funds for both State administration and program grants would become available effective Nov. 1.

RETIREMENT OF PHILLIP S. HUGHES

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. TEAGUE of Texas. Mr. Speaker, I want to call to the attention of this House the departure from Government service of the Deputy Director of the Bureau of the Budget, Mr. Phillip S. Hughes—known to his friends as Sam.

I first met Sam Hughes shortly after I came to Congress. I came to know him intimately when the Korean GI bill of rights was formulated and later in the outstanding work that he performed in connection with the Survivor Benefits Act, Public Law 881 of the 84th Congress.

Sam Hughes is one of those rare individuals who has absolute integrity, who can give you an answer which you completely disagree with but which at the same time forces you to see the logic of his position and know that his view is based upon considerable thought and a lot of plain ordinary horsesense.

Sam Hughes, in the few moments that he has had of vacation, likes to climb mountains. Perhaps this is one of the reasons why he has had the ability to see so far ahead in regard to Government programs. Certainly he has never lived in a rarefied atmosphere which one associates with heights, but has certainly been able to see clearly and much more so than many of us.

The Federal Government is losing, in my judgment, one of the ablest men who ever served it. An individual with rather keen insight once wrote "hindsight tends to etch deeply the clear lines of leadership that appeared blurry close at hand." Sam Hughes' actions were never blurry and he always showed positive leadership.

Sam carries with him the best wishes of all of those of us on the Hill who have had the good fortune to know him. We shall sorely miss his counsel and we wish him well in whatever endeavor he desires to pursue after the 21 years of distinguished service that he gave to the Bureau of the Budget.

SOCIAL SECURITY REFORMS: BRINGING THE SYSTEM UP TO DATE

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. STEIGER of Wisconsin. Mr. Speaker, among all the victims of inflation, none are more deserving of urgent attention and relief than the beneficiaries of social security. They have invested part of their earnings in the promise of a continuing income—and the Congress must act now to fulfill that promise, in pace with realities.

The President has taken the lead. His recommendation to increase basic benefits by 10 percent is nothing less than a positive obligation—and it is the level of increase that is actuarially sound. His recommendation to attach the future schedule of benefits to cost of living will go far to eliminate the repeated experience of playing catch-up, as benefits lag behind living-cost increases—and it will take the political gamesmanship out of this process.

Both recommendations are essential. Both are, in the broadest sense, nonpartisan. And both deserve the support, now, of the Congress.

Of equal importance is the President's recommendation that the "earnings test" be raised from $1,680 to $1,800—the amount beneficiaries may earn without any loss of benefits. He also would eliminate the 100-percent tax, the outright confiscation of all earnings beyond the $3,000 level. For all earnings beyond the exempt amount, he would substitute a 50-percent tax and thus maintain an incentive for earnings at any level within the capability of the beneficiary. To say that the Nation needs the experience and productivity of its older citizens is clear beyond question—yet, under present law, we penalize them for their enterprise. This irrationality must be eliminated, and the President has recognized the urgency of such a reform.

URGENCY OF ELECTORAL REFORM

HON. WILLIAM L. HUNGATE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. HUNGATE. Mr. Speaker, I would like to call to the attention of my colleagues the following article which appeared in the St. Louis Globe-Democrat on October 22, 1969:

URGENCY OF ELECTORAL REFORM

The proposal for abandoning the antiquated Electoral College system and adopting direct election of the President and Vice President was gathering cobwebs for discouraging months. Congress now seems in a mood to pass the amendment for popular election and submit it to the states.

This is what should be done without growing any more moss on the issue. There is every evidence the great majority of the people want the constitutional amendment providing direct vote for the President.

The nation should be afforded the right to decide, by submission of the change to legislative plebiscite in all states. Shucking the archaic, frustrating Electoral College from the Constitution should have been effected long ago. Further temporizing and indecision on Capitol Hill cannot be justified.

The need for dumping the undemocratic Electoral College process was trenchantly impressed on the country last November, when it appeared the choice of a President might be thrown into the House of Congress with attendant smelly political deals. In modern America it is utterly unacceptable that Congressmen might elect a President.

But when the danger of a House presidential selection was over, and Richard Nixon elected, apathy set in. Now that apathy appears to have lifted.

The House recently passed the amendment proposition by a whopping vote—339 to 70, or 66 ballots more than the required two-thirds for an amendment to the Constitution.

This has given the program a sudden, big impetus. So thumping a majority for the re- in the Senate. The House was overwhelmform in the House should carry great weight ingly willing to divest itself of a 188-year-old constitutional right.

Another influence toward approval of the amendment by the Senate Judiciary Committee—the obvious first hurdle in the upper house—was the appointment of Sen. Robert P. Griffin, Michigan Republican, to replace the late Sen. Everett M. Dirksen.

Mr. Dirksen favored the so-called "district plan", less satisfactory than popular election. Senator Griffin has declared he will support direct election.

The President has sensibly shifted his attitude on this reform. For some time he was lukewarm, even mildly antagonistic, toward dropping the Electoral College, which he thought could not be effected before 1972, the next presidential election. Now he thinks it can.

There is no reason to believe it can't. It should. Present public sentiment indicates it will be approved if it comes out of Congress

As in the House, a two-thirds majority ballot in the Senate is necessary for approving a constitutional amendment. Then the question must be submitted to the 50 state legislatures of the nation, where, 38 must ratify the proposal to place it in the Constitution and junk the Electoral College.

The House stipulated that the complete ratification process—by Congress and three-fourths of the states—must be completed by Jan. 2, 1971, if it is to be effective for the 1972 national elections. There is no reason this cannot be done.

The measure will have to be acted on however, with reasonable dispatch. It has been in the Senate committee about a month. If it is permitted to grow moldy there, this needed reform could be lost. Should it fail of adoption now, it likely will be pigeonholed many more years, as President Nixon observed when he called on the Senate Sept. 30 to indorse the revision.

A report published last April by Newsweek magazine said one reason the President now wished to abolish the presidential elector system is that he had personal knowledge of how electors sought to bargain away their votes.

The report stated several electors on the Wallace slate offered to trade their votes to Nixon in return "for presidential favors." Other similar offers were rumored; all were turned down.

One reason for reluctance in Congress over dumping the Electoral College was a feeling states would not approve the amendment.

There is growing evidence they would. A New York Times survey recently indicated 30 legislatures already have evidenced determination to ratify, or lean in that direction. As only 38 are necessary, it looms as no insuperable task to persuade the remaining fence-sitter legislatures. The prospect that a President could ever again be elected by a minority or by logrolling deals in Congress, can be eradicated before the next presidential campaign in '72.

NEW INDIANAPOLIS POLICE PATROL INNOVATION CUTS CRIME RATE

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. BRAY. Mr. Speaker, the war on crime is one that never ends, and its waging demands the initiative and inventiveness of all law enforcement agencies and individual citizens.

The city of Indianapolis, Ind., has come up with a plan, simple in concept yet effective in operation, that shows great promise. It is assigning personal patrol cars to policemen to drive off-duty as well as on. Indianapolis is the first major police department to utilize this, and the following story from the New York Times of Sunday, October 26, 1969, describes the practice, which could well be copied by other urban forces:

[From the New York Times, Oct. 26, 1969]

POLICE IN INDIANA DRIVE OWN CARS; NEW PATROL SYSTEM GIVEN CREDIT FOR CUT IN CRIME

INDIANAPOLIS, October 25.—In Indianapolis, policemen are assigned their own personal patrol cars to drive off-duty as well as on, and the system is given credit for helping to produce a pattern of reduced crime.

While the national average for the seven major crime categories in cities of half a million to a million increased by 13 per cent for the first nine months of this year, five of the seven categories showed a decrease in Indianapolis and all seven showed an average increase of only 1.2 per cent.

The record so far in Indianapolis this year is so encouraging to city officials that they are confident that the city's unusual pattern of big increases in most major categories may finally be broken.

Major crimes in Indianapolis increased at an average rate of 15.6 per cent in 1968 compared to 1967. Now, with the normally heavy crime months of June, July and August behind it, the Indianapolis police department thinks the average for 1969 may set a national example.

OFF-DUTY USE ENCOURAGED

Mayor Richard G. Lugar and Police Chief Winston Churchill give much of the credit to the system of individual patrol cars.

"Nearly all state police departments have assigned cars to individuals," says Raymond J. Stratton, deputy chief of operations, but we are the first police department to do so."

Under the Indianapolis plan, patrolmen are encouraged to use their cars, while off-duty for trips with the family to drive-in theaters or the grocery or church.

"As a result," says Maj. Frank Spallina, administrative assistant to Chief Churchill, "we may have as many as 400 cars on the street instead of the old 100 or so per shift."

Major Spallina says that "with all those cars running around or parked throughout the city" there is "more reluctance by juveniles to steal cars" and more hesitancy in general to commit crimes.

Several arrests have been made by off-duty policemen since the individual patrol car system went into effect in early June. Included were arrests made by off-duty policemen who stopped robberies or burglaries in progress.

A chief benefit of the program, according to Major Spallina, is the new spirit of pride it is giving the policemen, who have installed custom-fashioned equipment racks in their cars, or carpeted interiors, or who have spent their own money to improve such equipment as radios.

Major Spallina looks on the personal attention shown on the cars as healthy evidence of high morale.

In the first nine months of 1967, crime rose 16.1 per cent in Indianapolis compared to the previous year. In 1968, the increase was 21.2 per cent compared to 1967.

For nine months this year, only the categories of burglary and larceny showed increases—of 9.1 and 5.6 per cent respectively.

In the other major categories, murder was down 18.6 per cent; forceable rape was down 7.8 per cent; robbery was down 18.3 per cent; aggravated assault was down 6.6 per cent, and vehicle theft was down 12.3 per cent.

HIGHER EDUCATION IN A TIME OF CHANGE

HON. ED JONES

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. JONES of Tennessee. Mr. Speaker, in this time of unrest in our Nation, especially on our college campuses, it is reassuring to know that sanity still prevails among some of our educators. One voice of reason which rings out clearly in the Eighth Congressional District of Tennessee is that of Dr. Archie R. Dykes, chancellor of the University of Tennessee at Martin.

At the beginning of the current academic year, Dr. Dykes, one of the Nations truly outstanding college administrators, addressed his faculty with an analysis of the challenge facing higher education and a propsal for meeting this challenge. I was deeply moved by the speech, and because I feel that all American leaders can benefit from the reasonableness of Chancellor Dykes' observations, I am including the entire text of the address:

HIGHER EDUCATION IN A TIME OF CHANGE

The circumstances surrounding high education today are not unlike those portrayed by Charles Dickens in the *Tale of Two Cities*, describing the era of the French Revolution. To paraphrase his classic language:

"It is the best of times, it is the worst of times,
It is the age of wisdom, it is the age of foolishness,
It is the epoch of belief, it is the epoch of incredulity,
It is the season of Light, it is the season of Darkness,
It is the spring of hope, it is the season of despair,
We have everything before us, we have nothing before us . . ."

Indeed, these are difficult and trying times in America, perhaps the most trying and most difficult of any period since the Civil War, more than a century ago. Yet, within our complex, frustrating, and perpelexing problems, there exist the greatest opportunities our nation or any nation has ever had before it. And these same circumstances characterize colleges and universities throughout our land. Perhaps never before has higher education generally and colleges and universities individually been confronted with problems which so clearly threaten destruction, while, simultaneously, unparalleled opportunities lie before them for progress toward undreamed of achievements.

Truly, we live in a time of unparalleled change. And no one would question, I believe, that these great changes going on about us have enormous implications for all of us, in our citizenship responsibilities, in our family obligations, but especially in our duties as faculty members in an institution of higher learning.

Some time ago, an article in *Fortune* magazine, seeking to dramatize the gap between our present era and the past, quoted Robert Oppenheimer as follows:

This world of ours is a new world, in which the unity of knowledge, the nature of human communities, the order of society, the very notions of society and culture have changed, and will not return to what they have been in the past. What is new is new not because it has never been there before, but because it has changed in quality. One thing that is new is the prevalence of newness, the change in scale and scope of change itself, so that the world alters as we walk in it, so that the years of a man's life measure not some small growth or rearrangement or moderation of what he learned in childhood, but a great upheaval.

Change, then, pervasive and revolutionary change, is the dominant characteristic of our time. We are living through a series of concurrent and interacting revolutions in science, transportation, agriculture, communications, demography, civil rights, and, yes, education. Each of these revolutions has brought spectacular changes. Each has its train of tumultuous social consequences.

As a result of these great changes, we in education, like everyone else, are forever required to see our world through new eyes and to behave in accordance with new understandings and new concepts. In a world changing as rapidly as ours, ideas, understandings, beliefs, and ways of doing things rapidly become obsolete. Our best knowledge and our best understandings have an ever diminishing life before they are replaced with new knowledge and new understandings. In brief, we have intellectual obsolescence in shorter times than we have ever faced before in man's history. To per-

sist in behaving and conducting our affairs as if change has not occurred can result in catastrophe.

For a few minutes this morning, I wanted to share with you some of my thoughts about the implications of these changes to those of us here in this room, the faculty and staff of The University of Tennessee at Martin. Let me mention just a few observations that may be relevant.

1. The first implication of these changing times has to do with what we are trying to accomplish in education. Traditionally, we have viewed the major function of education as the dissemination of information, the teaching of facts, the instilling of knowledge. This is and will continue to be an important function of education. But in the context of a world of revolutionary change, when knowledge is doubling every ten to fifteen years in some fields of study, when there is increasing finiteness to the length of time in which the best knowledge will hold true, when new facts and new information are coming into existence with unparalleled rapidity, I think we may well wonder if the primary function of education has not changed. If schooling is regarded primarily as a process of absorbing the funded knowledge of the past, it seems to me it may well lose its relevance to the world in which we live. And if teaching is regarded as simply the peddling of facts and information, its demise may come in the years immediately ahead.

The National Science Foundation now tells us that knowledge in science is doubling every ten years; that of all the research that has ever been published, more than half of it has been published since 1950; that more than half of all money spent on research has been spent in the last eight years; and that of all the scientists who have lived since the dawn of history, more than eighty percent are living and working today. We are told authoritatively that approximately 2,000 pages of printed materials are published every sixty seconds. If an individual attempted to keep informed by devoting his full time to reading, he would fall behind by more than one billion pages every year.

The explosion of knowledge, or the "information revolution," is probably the most important single factor forcing change upon education. So much has been learned in so many areas that it is no longer possible for students to learn even summaries of existing knowledge. The sheer bulk of knowledge defeats any effort to teach it as a body of facts. We can expect radical reorganization of a given body of knowledge not once in the coming century, but several times, at intervals of ten to twenty years.

It would seem, therefore, that the primary orientation of education today and in the future must be toward helping our young people assume responsibility for their own education and providing them with the knowledge, skills and understandings which will enable them to assume the responsibility effectively. In a world of rapid change, the students in our colleges and universities must become the kind of people who can continue to grow and change, who can make education a lifelong process.

The dimensions of the problem before us were well outlined by John Gardner, former Secretary of Health, Education, and Welfare:

"The task of the school is to develop skills, attitudes, habits of mind, and the kinds of knowledge and understanding that will be the instruments of continuous change and growth on the part of the young person. Then we shall have fashioned a system that provides for its own continuous renewal.

"This suggests a standard for judging the effectiveness of all education—and so judged, much education today is monumentally ineffective. All too often we are giving young people cut flowers when we should be teaching them to grow their own plants. We are stuffing their heads with the products of earlier innovation rather than teaching them how to innovate. We think of the mind as a storehouse to be filled rather than as an instrument to be used."

2. The second implication of our changing ambivalent era for those of us in education has to do with the value aspect of education. In a complex, uncertain, and rapidly changing age, values become increasingly important because they determine the focus of our lives and give meaning and substance to our daily activities. Dr. S. L. Halleck, a psychologist at the University of Wisconsin, in a paper presented at the American Association of Higher Education meeting last March, stated that our present lack of concern for the value aspects of education may well lead to an elimination of certain features of life which many have assumed to be essential to man's humanity. He says, "I doubt that man can live without intimacy, without compassion, without ideology, without beauty, and still be man."

In the complex, highly interdependent world in which we live, we must depend upon our fellow human beings to live by an acceptable code of ethics and moral responsibility. We simply cannot exist in any kind of satisfactory way unless we can trust our neighbor or our colleague, unless we can believe that he has some sense of concern for our welfare, unless we can place confidence in his honesty and integrity.

Yet, on many college and university campuses today, a certin cynicism prevails with respect to such attributes as truth, courage, integrity, generosity, compassion, honesty, love, and honor. In some places, students possessing such virtues are considered "old fashioned" or "odd," or something worse. Many of us, as adults, are possessed with a pervasive uncertainty about what it is we believe in. Many of us have no well-thought-out system of values; many of us have no commitments upon which we are willing to take a stand, or as some of the more radical critics have suggested, many of us have no commitments at all. We are thus pushed about willy-nilly by the events of daily life like a ship without a rudder.

We are unable or unwilling to be discriminating or selective with respect to what goes on about us, and horrendous circumstances are perpetrated upon us by a society that can't seem to distinguish between good and bad, right and wrong. Thus it is that newspapers, magazines, and television continue to give our young people a formidable display of violence, cruelty, dishonesty, and inhumanity to man, while our national leaders are, one by one, assassinated; while our minority groups continue to cry out for equality of opportunity that is not forthcoming; while our crime rate continues to spiral upward at an alarming pace; and while our basic intolerance, suspicion, and distrust of our fellow-man move us ever closer to open conflict within our own country, not to mention world-wide.

We must remind ourselves, I think, that no society can survive without a moral order sustained by the individual. As our social organization becomes more complex and interdependent, and the need for personal integrity and for commitment to human values becomes more imperative. As one writer has said:

"The strength of a nation lies not in armaments, but in the heart, mind, spirit, and conscience of its people. Its morality, not in laws and government, but in the honesty and moral responsibility of its citizens."

We must remind ourselves, too, that to give our young people the power which today's education and present knowledge can bring without appropriate values to guide them in its use can bring catastrophe. Let us remember that prior to World War II, the best educated people in the world, at least in a technical sense, were the citizens of Nazi Germany. Yet, what nation has perpetrated greater crimes of inhumanity on mankind or brought more grief to the world?

The Existentialist Movement, developed in Europe after World War II and so well articulated by Albert Camus and Jean-Paul Sartre, argues that man makes himself by his choices and that in choosing for himself, he inevitably chooses for everyone else, so interdependent, so interlocked, and so inextricably intertwined is our welfare. They pose a hypothetical question which they say should and must be answered by everyone who is genuinely interested in being a truly moral person. Their question is: "What would happen to man and to the world if everyone did as I am doing, if everyone lived his life as I live mine?"

The point I wish to make is, and I'm probably doing so very poorly, is that in our age we must educate people capable of imposing upon themselves values and morals necessary for us to live together in a highly complex, highly interdependent world of rapid change. The more complex and highly organized our society becomes, the more urgent will be the requirement for men to work together cooperatively in an atmosphere of mutual trust, confidence, and respect.

In our age, such basic values as honesty, integrity, concern for our fellow-man, and compassion become matters upon which our very existence as a civilized society depends. If we fail in our colleges and universities to foster these attributes, then much of the purpose of education is lost.

We should remember, as Richard Hofstadter, professor of history at Columbia University, said sometime ago, "that at any level, from the primary grades to the university, the teacher is not merely an instructor, but a potential personal model for his or her pupils and a living clue to the attitudes that prevail in the adult world."

The question before you and me as faculty members of this institution is whether we, as we go about our daily responsibilities, exemplify to our students models which are worthy of their emulation and which will help them become mature responsible citizens of a democratic society.

3. The third and final implication I see in these changing times for us is that we, students, faculty, administrative officers, and all other members of the university community, must learn how to interact with one another more sensitively, sympathetically, and democratically than we now do. The great changes going on in higher education today, deriving largely from the changing world about us, demand that we do so. I do not believe that there is any substantive difference between the goals and objectives of the students, the faculty, and the administration; the goals of one are the goals of the other. Ours is, or should be, a cooperative enterprise in which we work together for the achievement of common purposes. To the extent that we cannot work together in a cooperative manner, to the extent that one of us is suspicious or distrustful of the other, then to the extent our total welfare suffers. We cannot have a productive and stimulating educational environment, we cannot expect adequate financial support from the public treasury, and we cannot expect our University to progress unless we work together to bring these achievements about.

Here on this campus, as all of you know, important steps have been taken to secure greater and more effective involvement of all concerned in the affairs of the University. Steps have been taken to increase the effectiveness of various faculty committees, new ways of involving students in campus affairs have been developed, Student Government has been strengthened, and a dialogue has been created with student leaders which assures representation of student views in the most important decisions affecting the campus. Just recently, as a result of a two-day retreat of administrative officers and student government leaders, it has been

recommended that each department head create a student advisory committee to work with him at the departmental level. But despite these important steps, more needs to be done toward making our campus a good model of democracy in action, and more will be done.

But while this progress is being made, while these steps are underway, universities must not permit themselves to be paralyzed by a tiny minority of anarchical students. There are processes, reasonable processes, through which change can be effected. We must insist that these processes be followed. The alternative to process is anarchy.

We in education sometimes seem bewildered by what has been happening on the campuses of our schools and colleges. We seem unwilling to speak out against lawlessness and anarchy because of fear of offending academic freedom or being labeled defenders of the status quo. But we must recognize that the basic freedoms of democracy can be destroyed by irresponsible action. Freedoms possessed by any person are precious, but they become obnoxious when one person encroaches on the freedom of another.

This is a principle we need to reiterate and emphasize today on every college campus through this land. For we live in a period when freedom is often equated with license to do as one wishes. Yet, we can have no freedom except within the context of laws and rules by which we are willing to live.

As an article in the *Washington Post* noted sometime ago, some of today's student radicals "are out of touch with and do not understand the principles of democracy. Their heroes are the modern revolutionaries and the language they talk is that of anarchy. Freedom of speech means nothing to them except as it protects their freedom to speak. The idea that differences are resolved through discussion and reason is irrelevant to them. The only thing that counts in their lexicon is power and the only way they believe power should be used is to enforce their belief on others. The more violent the action, the better it fits the rebels' purpose."

The historical parallels to this set of mind are only too easy to draw. It was Mussolini who used to distinguish between "a violence that liberates and a violence that enslaves . . . a violence that is moral and a violence that is immoral." And it was Hitler who wrote, "The very first essential for success is a perpetually constant and regular employment of violence." As Arthur Schlesinger has noted, "It is perfectly obvious why Mussolini and Hitler favored violence: It is because violence, by abolishing the procedures and civilities of society, opens the way for those who are most successful in the use of force."

No matter how worthy the goals, if they are sought through coercion and violence, the process of democracy itself may be destroyed. The abuses of freedom by a few could easily result in the loss of freedoms by us all.

I do not want my remarks to be misunderstood. Greater participation of students in university decisions, not only on our campus but elsewhere, is desirable and we should do what we can to bring that participation about. If we succeed, not only will the education of our students be enriched, but the quality of the decisions made will be enhanced. Faculty, students, and administration need to work together with greater resourcefulness than we have in the past to achieve a real partnership which will enhance the efficiency of the University as a real center of teaching and learning.

The subversion of the fragile structure of a university is all too easy, as we know from the events of recent months. That is why we must insist on a scrupulous and continued dedication to the conditions of orderly and peaceable discussion and dialogue in the decision-making process. Such strategies as sit-ins, occupation of buildings, the forceful blocking of university activities are not acceptable in an institution which holds as one of its highest values reasoned and intelligent discussion of problems of mutual concern. Such techniques are a thrust at the vitals of university life and will destroy any university where they are employed.

We are living through a period in which the need for teaching and learning and the use of intelligence and rational discussion in settling our problems—the services a university performs and the things it stands for—is greater than ever before. What kind of people would we be if we allowed this center of culture and hope to languish and fail?

These, then, my friends and colleagues, are some of the thoughts I have as we begin another academic year. What the year shall be and what it shall bring depends very largely on those of us assembled here in this room and our colleagues over the nation. Whether the months ahead shall be the best of times or the worst of times, a time of wisdom or a time of foolishness, a season of light or a season of darkness, the spring of hope or a time of despair, will depend upon what we do, day by day, as we fulfill our duties and responsibilities to the young people who come to us in search of education and learning.

I solicit your interest in and concern for the affairs of the University in the days and months ahead. In a democratic society, the responsibility for decisions and actions rests with all of us. The "they" we sometimes talk so much about is not an anonymous mass of faceless strangers, it is ourselves. What our University is and what it shall become will be determined by what we are and what we do in the weeks and months to come.

DR. DOMENICK IERARDO OF SOUTHERN CONNECTICUT STATE COLLEGE RECEIVES THE ELOY ALFARO GRAND CROSS

HON. ROBERT N. GIAIMO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. GIAIMO. Mr. Speaker, I am pleased to report that one of my distinguished constituents, Dr. Domenick Ierardo of Southern Connecticut State College, has received the highest award of the Eloy Alfaro International Foundation of the Republic of Panama.

This foundation, named after the great Latin American statesman, Gen. Eloy Alfaro of Ecuador, has awarded its coveted Grand Cross to outstanding Americans from all walks of life, including six former Presidents. I am gratified that Dr. Ierardo, an outstanding educator and humanitarian, has been included in this distinguished group.

It is therefore my pleasure to insert at this point in the RECORD the formal presentation address of Dr. Herman A. Bayern, American provost of the foundation; the investiture speech by Dr. L. Lester Beacher, American deputy provost and chancellor of Canada's Philathea College; the presentation by Dr. N. R. Caine, American deputy provost; and the acceptance speech by Dr. Ierardo:

PRESENTATION OF ELOY ALFARO GRAND CROSS TO DR. DOMENICK IERARDO

ADDRESS OF DR. HERMAN A. BAYERN

We are assembled here in New York today to honor an outstanding and distinguished Educator of reknown, Dr. Ierardo, Assistant Professor of Italian at Southern Connecticut State College, with the top honor of this Foundation—The Eloy Alfaro Grand Cross and Diploma.

We are here this morning to honor you in testimony; first, of our faith in the ideals of American democracy; secondly, in our devotion to the cause of universal education as the follower of these ideals; and thirdly, because of our confidence in the cooperation of all the peoples of the Western Hemisphere in the preservation of human freedom and peace of all the peoples of the world.

Such was the pattern of the life of our standard bearer, the immortal Eloy Alfaro, the great Democrat of Ecuador. As President of Ecuador at the turn of the century, he expanded and furthered educational institutions of his own country. He appealed to the Spanish Monarch to establish peace, and to grant the people of Cuba the freedom, for which they yearned and bled. Now, those people of Cuba pray once more that somehow, perhaps by Divine Guidance, they will again see their freedom restored—the freedom which Dr. Castro and the Soviet Union wrested from them, in direct violation of the Monroe Doctrine.

The Eloy Alfaro International Foundation of the Republic of Panama gathers and encourages the permanent political and moral values of the Americas. Elroy Alfaro was the most outstanding Ecuadorean in the Western Hemisphere. The action and thought which he placed at the service of his country were instrument and agency of the highest aspiration of half the globe. He worked for a broad land; he strove to raise the social level of the Indians; to spread education among his countrymen; to banish the exploitation of man by man; to act for the defense of liberty, regardless of frontiers; to create American public laws; and to free the flesh and the spirits from their chains.

The Eloy Alfaro International Foundation has neither political or lucrative purposes. The finality is to pay tribute to the memory of Eloy Alfaro, and make available all knowledge of his life and works, as a statesman and liberator. What Alvaro undertook and accomplished in half a century, constitutes the essential transformation of normal people.

Our guest of honor, Dr. Ierardo, was awarded the Eloy Alfaro Grand Cross and Diploma, by unanimous vote of the Board of Dignitaries, in recognition of his distinguished contribution to culture and humanity, and his outstanding merit and accomplishments in the field of education, in his work for worthwhile endeavors, and in further recognition of his efforts toward the establishment of international peace.

Eloy Alfaro was a citizen, not only of his native Ecuador, but of all the Americas. The personal integrity, the unwavering defense of the principles of truth, justice and friendship among nations; the self-control and self-sacrifice that marked one-quarter of a century of unflagging service to his fellow man, extended way beyond the confines of his own country, Ecuador.

He was a rebel and a conspirator, but his rebellion and conspiracy were directed against hatred, injustice, discord and tyranny. He was the leader of a generation fired with the hope and desire that responsible political action would enhance the prosperity of their country and the welfare of their people.

It is most fitting, therefore, for us this morning that we of the Eloy Alfaro International Foundation, have selected to present this highest award to a great American, Humanitarian, and Educator. None can ever doubt the limitless faith of Dr. Ierardo to the ideals of democracy and in the belief of our guest of honor that it was not from human hands, but from the Great Creator that every man, woman and child inherits the inherent right of life, human liberty, happiness, and equal opportunity, for learning, which has been the lifework of Dr. Ierardo, and with such opportunity the

priceless possession of truth, which alone can make man free.

You know, my dear Dr. Ierardo, that you now join a very select and elite group of Americans who have been similarly honored in the past. They include former Presidents, John F. Kennedy, Franklin D. Roosevelt, Herbert Hoover, Dwight D. Eisenhower, Harry S. Truman, President Lyndon B. Johnson, Vice President Hubert H. Humphrey, and other dignitaries such as FBI Director J. Edgar Hoover, former Governor Averell Harriman, the late General of the Armies Douglas MacArthur, Senators Mansfield and Dirksen, Dr. Marie L. Fetsch, Governor Nelson A. Rockefeller, Lieut. Malcom Wilson, Congressmen Celler and Ford, Senators of the State of New York, Brydges and Zaretzki, Assembly speaker, Anthony J. Travia, the Hon. Charles J. Tobin, Jr., the U.S. Commissioner of Education, Harold Howe, II, and the Honorable Albert Conway, former Chief Judge of the Court of Appeals of the State of New York.

It now gives me great personal pleasure, and it is an honor and a privilege for me to call on that outstanding Scientist who did the original research and development in the field of contact lenses and applied Psychology and is the Chancellor of Philathea College. He has been honored by many nations and Universities in recognition of his achievements in his professional field.

I am sure that Dr. Beacher feels it now an honor to invest you, Dr. Ierardo, with the Eloy Alfaro Grand Cross and Diploma.

THE INVESTITURE SPEECH OF DR. L. LESTER BEACHER

I am aware of the achievements and accomplishments of Dr. Ierardo. He is highly regarded by many distinguished Educators and many of my colleagues.

In recognition of his outstanding service to his beloved country both in peace and war and service to mankind, in the fields of education and international relations, Dr. Ierardo's outstanding activities in behalf of humanitarian causes, through fraternal, civic and patriotic organizations, are in keeping with the aims, ideals and principles and purposes of this Foundation. Therefore, it gives me much happiness, particularly in light of my long interest in the field of education, and as a former recipient, to carry out the determination of the Board of Dignitaries. I hereby present him with the Eloy Alfaro Grand Cross and Diploma.

TRANSLATION OF THE DIPLOMA TO DR. IERARDO, FROM SPANISH INTO ENGLISH BY DR. N. R. CAINE

As a former recipient of this honor, I will now translate from Spanish into English the Diploma granted to you by this Foundation:

Thus one goes to the stars

The Eloy Alfaro International Foundation, recognizing the special value of the services rendered by Dr. Domenick Ierardo, in support of the objectives of this institution, he has been awarded the Cross of the Eloy Alfaro International Foundation. In witness whereof, this diploma, with the seal of the foundation, is presented in the city of Panama, Republic of Panama, on the 25th of June, 1968.

ACCEPTANCE OF DR. DOMENICK IERARDO

I would like to express my gratitude to the Eloy Alfaro Foundation for the great honor bestowed on me today, by including my name among the select list of distinguished Americans.

It is only fifteen years ago since I arrived in this country from Italy with great hopes and a strong belief to succeed in my future life. Thanks to the constant and wonderful support of my wife, I am now back into the field of education. Today is for me the realization of my life's ambitions. I am proud to be a recipient of this high honor and I accept it with gratitude and a deep sense of humility.

If we examine the activities of General Alfaro, they reveal an outstanding leader of his generation who gave freely of his imagination and energy to all people who sought his counsel and assistance. While Alfaro lived a life devoted to the struggle for liberty and American unity, in the minds of Americans he is most revered because of his love for freedom and for Bolivar's ideal of American unity which the great Ecuadorean took of his own.

As we view present-day society, both at home and abroad, we observe that many problems arise, and there will be no better solution than human understanding to consolidate the ideals of democracy. Therefore, as education proceeds and knowledge increases, thought will be clarified, understanding will reduce prejudice, good will replace hatred, and the problems of the many minorities will find a solution.

Men can bring pacem in terris. There is a tremendous amount of good will in the world locked within the hearts of men and women of every race, creed, and color. If each one began to express to the best of his abilities the good will that he feels, there would be a better world within a matter of days—not months or years or centuries.

I shall always cherish this award, and I again express my appreciation to the Organization, to all who spoke in my behalf, to the American Provost for his confidence in me, and to all of you for coming here.

And may I close with words which, in many languages, in many forms, in many religions, have brought comfort and strength. "May the peace of God, which passeth all understanding, be with us and remain with us always."

CAMPUS UNREST

HON. GEORGE W. ANDREWS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. ANDREWS of Alabama. Mr. Speaker, the wave of unrest and disorder sweeping our Nation's college campuses have provided a severe test of the determination and ability of college administrators to restore order and return their institutions to some semblance of sanity. Many have failed the test. They have confused criminal activity with legitimate dissent.

A thoughtful and most reasonable approach to the rights and limits of dissent and a reminder to incoming students of the seriousness of purpose with which they should approach higher education was made recently by Dr. Harry M. Philpott, president of Auburn University.

The great Auburn president addressed a freshman convocation on September 19, 1969, and the following are excerpts from his very timely and thought-provoking speech:

EXCERPTS FROM A SPEECH BY AUBURN UNIVERSITY PRESIDENT HARRY M. PHILPOTT, FRESHMAN CONVOCATION, SEPTEMBER 19, 1969

You must enjoy freedom if you are to gain an education but this does not mean freedom as it is defined by some today. I trust that you did not come to Auburn with the idea of finding here a place "where every person can do his own thing." If so, you are in for a rude shock Monday morning at seven or eight o'clock when we have some antiquated ideas about class attendance and "doing your own thing" calls for more sleep. Freedom does not exist in the absolute for anyone. If we are to have freedom in the university, we must have safeguards that will prevent its destruction, safeguards that inevitably limit its expression. No freedom can exist without order, and order requires that we surrender some of our freedom for the common good.

For example, the university welcomes and encourages differences of opinion, knowing that this is necessary for great understanding. You will be free to advocate your opinions in discussion, debate and peaceful demonstration. However, you will not be free to advocate them in such a fashion that you deny freedom or the right to learn to others. Even as you do not wish to have opinions forced on you by others, you must not expect to be allowed to force your opinions on someone else.

The university relies on cooperation and not power, on diversity with tolerant understanding and not disturbance. It also requires from you commitment and dedication to things which are greater than you—to the ideal. In a society where too many seem totally preoccupied with their petty needs, vanities, and grasping egos, to speak of ideals may sound strange or even novel. I am, however, convinced that the unattainable quest for the ideal, the true and the beautiful is as fundamental to education today as it was in the Agora of Athens where in the shadow of the Acropolis Socrates prodded his students to think on these things.

Because of this, I have a strange sounding final word of advice for you. It is simply this: "Get lost." It does not mean that I want you to disappear but rather a simple reminder of the words of Jesus: "He that would find his life must lose it, and he that loses his life shall find it." Do you want an education? Lose yourself in the pursuit of knowledge and understanding. Do you want to be a constructive member of the human race? Lose yourself in helpful service to others. Do you want to find security and happiness? Loss yourself in great causes and endeavors. Do you want to find meaning and purpose for your life? Lose yourself in the higher purpose of the God who made you. "Get lost."

IN SUPPORTING SCIENCE—PUT FIRST THINGS FIRST

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. EVINS of Tennessee. Mr. Speaker, the Nashville Banner in a recent editorial called attention to the importance of health research in the war on disease.

The Banner has some interesting and pertinent comments concerning the matter of priorities which involve decisions which the Congress must ultimately make.

Because of the interest of my colleagues and the American people in this most important subject, I herewith place the following Banner editorial of October 21, 1969, in the RECORD:

IN SUPPORTING SCIENCE—PUT FIRST THINGS FIRST

Research is the fulcrum on which the searching mind rests its lever, applying motive power to lift—as it were—the Earth. It is the essential forerunner of all scientific accomplishment; and there is both institutional and regional pride that much of the research that won the Nobel Prize in medicine for Dr. Max Delbruck, Dr. Salvadore E. Luria, and Dr. Alfred D. Hershey, was done at Vanderbilt University, where Dr. Delbruck was an associate professor of physics from 1940 to 1947.

Science is applied knowledge, and these men have applied it well in their discoveries concerning what technically is called the replication mechanism and the genetic structure of viruses. Discoveries by searching contribute to the gaining war on human diseases.

Research is the key to progress in every field of science—in the vast catalogue of which Vanderbilt figures have engaged in their several departments, served notably the cause to which their dedicated work was addressed, and gained distinguished recognition.

The progress through research there is a dividend on the investments made—in the time devoted by the scientists to that phase of their calling, and the grants made in its behalf, by individuals, corporations, foundations, and the federal government—more of which are needed in the light of its demonstrated potential.

The record in this Nobel Award illustrates the point—for much of the exploratory undertaking was done during Dr. Delbruck's tenure at Vanderbilt, the pioneering enterprise which Dr. Luria shared while working here on a Guggenheim Fellowship.

Friends and colleagues congratulate them. At the same time, interest centers on the case for research, itself; more of which can be done in its area of expanding need, grants permitting.

It is an ironic post-development occurring in connection with these three Nobel recipients, in the announcement that each has suffered a reduction in his federal grant for his particular research. By National Institutes of Health disclosure—regretfully noted by NIH officials even as the Department of Health, Education and Welfare was congratulating them on the award—Dr. Luria's grant was cut from $60,731 to $55,266; Dr. Hershey's from $45,399 to $40,860; and Dr. Delbruck's from $406,274 to $373,760.

These are grants, remember, relating to the war on disease—and involving work for the health of human beings; including 200 million American citizens. Instead of cutting investments for the laboratories and scientists at work in such a field, it should be increased. It would be false economy indeed that curtailed it, for enlarged expenditures in any other field. Without derogating space projects in the slightest, it can be noted that in the order of importance, the moon shot or a trip to Mars cannot compare with the work for human health.

Congress it is that has wielded this axe, resulting in the cuts occurring—a setback which in the public interest, present and future, cannot be countenanced. There are places for the federal government to substantially trim—saving billions; but not at the expense of valid life-saving operations; nor to the diminishment of scientific skills to that end.

The federal government should establish priorities respecting its own investment for research; and there is no question but that health work, involving these hundreds of millions of lives, should head the list.

CAN WE AFFORD TO LET RAILROADS JUNK SERVICE?

HON. JOHN M. ZWACH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. ZWACH. Mr. Speaker, I am deeply concerned over the curtailment of freight and passenger railroad service to our rural towns in Minnesota.

Curtailment of this service would be a severe blow to the ability of some of these towns to weather the crisis in which they already find themselves.

Many of these towns were established by the railroads themselves as a marshaling place for freight and passengers which provided the revenue for the railroads.

In order to be able to afford through countryside America, the railroads, in their founding days, were given huge tracts of land by the Government. The land not used for the right-of-way was parceled out in townsites and farms and sold to raise capital for railroad construction.

The railroads were very active in promoting immigration from Europe to settle these town and farmsites.

Today, the railroads find it more profitable not to stop at these small rural towns they helped to found, but rather to concentrate their efforts on long haul full car or full train load hauls, cross-continent, if possible.

And so the railroads are now abandoning service to countryside America. This is disturbing not only the small towns, but the cities as well.

Mr. Speaker, as an example of this concern in the cities, I would like, at this point, to insert in the CONGRESSIONAL RECORD, an editorial written by William Sumner in the St. Paul Dispatch in regard to this problem:

CAN WE AFFORD TO LET RAILROADS JUNK SERVICE?

(By William Sumner)

It is absurd to let a basic transportation system crumble about us without reaching about for solutions. That is exactly what is happening to our railroads, however, and the reactions to each abandonment of a line here or a service there are predictable: public servants protest, but in the end have very little to offer the railroads as a substitute for revenues. This last deals with the passenger business, of course.

Now our Minnesota Public Service Commission promises to take a "hard line" against the abandonment of branch freight lines in the state, which is the most recent push of the Chicago and North Western Railroad. This public spirited company seems to be dedicated to the creation of instant ghost towns and antiques in the state, these being the small communities which have depended on freight service and the railroad stations left without function.

No one can be too impressed with any such hard line, however. Since 1956, when the ICC took firm jurisdiction, around 130 trains have either been abandoned or permitted curtailment of service. The main emphasis of concern has been placed on the abandonment of passenger trains, which is happening all over and attracts the cries and protests of airplane riding sentimentalists. But the abandonment of freights serving some of our small rural communities gets us into a different ball game, a situation in which it has to be asked (1) if this is something we can permit and (2) what alternatives there are to letting a transportation system junk itself.

The Public Service Commission apparently can do little. It isn't even current with all of the recent requests for cancellations. But before the rails become abandoned, to be invented at a later day when our highways and airports have become unusable, this state ought to acquaint itself thoroughly with what (on the surface, at least) resembles a crisis and raise some hell at the federal level, with Congress, not the ICC. It does little good to appear before a hearing board to beat one's breast over a proposed abandonment, particularly when the public official caught up in such testimony can't really recall the last time he has taken the train.

There has been so much propagandizing on both sides of this issue that one is hard pressed to find the truth. The railroads obviously don't want to get out of the big freight picture, just abandon runs they deem inefficient or nuisances, but with this, as with the abandonment of passenger service, it seems that one can make profit and loss statements lie down and roll over at will. And while no one wants to force a private operation to lose money, there is a chicken and egg question at work here that hasn't been completely resolved in my mind.

I can't speak for the small-town freight services now in danger of abandonment. But which came first with passenger service: rotten service or the abandonment by the public? Not here, but elsewhere, with other railroads, there have been concrete examples of the actual discouragement of passenger use. But before getting sentimental to the point of tears about how fantastically good our own passenger lines are, I'll have to recall the round trip by rail last summer to the Democratic convention in Chicago. The train was fine, clean, fast and comfortable and even with a compartment it was cheap.

But at the Chicago end a passenger had to have divine guidance to find the right train or, as it turned out, the entrance to the station. Passengers riding "chair" had to wait in endless lines while conductors went through their mysterious 19th Century checking-in procedures. The old, the halt, those burdened with children were kept in sweaty procession while this endless foolishness was ground out in the filthy and very hot and humid lobby. Occasionally, someone could be heard to garble over the public address system, which was the railroads' way of telling us when a train was arriving or departing.

I bring this up, I think, because one day somebody will discover that the best and possibly fastest way to get to Chicago—or Milwaukee, or other medium-haul distances—will be by a modern rail system and because there is a possibility that those running the show may not believe this.

AMENDMENT TO BE OFFERED TO HOUSE JOINT RESOLUTION 966 TO PROVIDE ADEQUATE FUNDING FOR EDUCATIONAL PROGRAMS

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. COHELAN. Mr. Speaker, on Tuesday the House will consider continuing resolutions for a number of departments. Included in these resolutions will be one for HEW. As my colleagues are aware, the House passed the HEW appropriation that provided over $1 billion additional for the Office of Education. Together with 227 of my colleagues, I introduced a resolution that would enable OOE to expend funds at the House-passed levels to act as an interim measure until there is a final appropriation bill. The House Appropriations Committee has reported a continuing resolution that would decrease by $649 million funds available for OOE. I am including for the membership the breakdown of the figures for their own States. Each Member can compare the figures for 1969—approximately equal to the Appropriations Committee's resolution—and the figures for H.R. 13111 which was cosponsored by 227 House Members. You will see that your State will suffer considerable losses in vital educational revenues. It is for this reason—the loss of necessary educational funds—that I plan to offer an amendment to House Joint Resolution 966 to provide adequate funding for these educational programs.

The material referred to follows:

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

OBLIGATIONS IN THE STATE OF ALABAMA

Program	Actual, 1968	Estimate, 1969	Estimate, 1970	Nixon estimate, 1970	House passed appropriation bill

CAN WE SAVE THE "QUEEN"?

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mrs. SULLIVAN. Mr. Speaker, it is possible that our "safety-at-sea" law has to apply to the only overnight passenger vessel left on our rivers—the *Delta Queen.*

The boat is never more than a few feet from the shore. She is the last of her class. She has put in every safety device possible. It would cost $10 million to replace her and this cost is beyond the amount that may be recovered with normal usage even though the *Queen* has been running with 90 to 99 percent capacity for the last 5 years or more.

What can be done to save the *Queen?*

I am inserting the story that appeared in the St. Louis Post-Dispatch on October 23. I am sorry that I cannot include the picture also, but I ask my colleagues to read the story, and if they have any solutions or suggestions, we would be glad to have them. Let the Merchant Marine and Fisheries Committee have your comments.

The story follows:

[From the St. Louis Post-Dispatch, Oct. 23, 1969]

QUEEN'S REIGN NEAR END

(By Toni Flannery)

Only Congress can save the Queen.

Only preservation can keep it as a landmark reminiscent of the era of floating palaces.

Unless favorable legislation is passed before November 1970, the Delta Queen—last of the overnight river boats—will be forced into retirement, and at this point retirement means either being put in mothballs or converted into a short-run excursion boat.

Ironically, the Queen is too old to qualify as a modern vessel and too young to be designated a historic landmark by the National Trust for Historic Preservation.

Last week the Civil Aeronautics Board approved an application by Overseas National Airways to purchase controlling stock of the Greene Line Steamers, Inc., operators of the Delta Queen. Greene will become a wholly owned subsidiary but will continue to operate the boat. No changes will be made in crew or land personnel, it was announced.

The Delta Queen, which makes frequently stops in St. Louis, (it was docked here today), will continue to carry passengers until the 1970 deadline.

Under terms of the sale, Overseas will build a new boat at a cost estimated at $10,000,000. It will not be a duplicate of the Queen, a California boat, but will be patterned after a typical Mississippi River boat, the Belle of Louisville (formerly the Avalon), with much more gingerbread and more ornate exterior.

The cause of the Queen's problem is the safety-at-sea law passed by Congress in 1966. It determines the safety requirements for passenger carriers and when interpreted strictly—as it is—applies to riverboats.

Capt. Clarke (Doc) Hawley, second master of the Delta Queen, pointed out on a recent stopover in St. Louis that riverboats are never out of sight of land. More specifically, the Queen is always within four minutes of land and can be debarking its passengers quicker than ships at sea can steer theirs into lifeboats.

Recently, William Muster, president of Greene Line, announced that the company had developed a design for a new riverboat. Shipbuilders were invited to bid, and it was discovered then that nineteenth-century riverboat elegance comes high.

Last November the low bid on a new boat was $10,000,000. Todd Shipyards, Houston, asked $8,500,000 and Bethlehem Steel, Beaumont, Tex., wanted $8,600,000, both stipulating that the owner would have to provide almost $1,500,000 in his own equipment.

A steam-powered paddlewheel was prohibitive in cost. Estimated figures include smoke stack $35,000, calliope with small steam boiler $25,000, gingerbread, $100,000, and interior wedding-cake staircase with brass risers and ornate metal grilles in handrails between the Texas deck and lounge, $100,000.

Plans for completion of this design are in the hands of Overseas Airways. Joan Evans of Greene Line said this week that the joint venture opened up new possibilities of providing one-way passage for many travelers who found the return trip by boat a little trying.

When the airline made application to CAB last August, the Greene Line president said that stockholders of his company had decided to sell so that the "passenger river trade can be perpetuated." Overseas president Steedman Hinckley said the Delta Queen probably would be preserved, perhaps to operate as a floating restaurant or day-excursion boat at Cincinnati, New Orleans, St. Louis and other cities. The airline said the purchase would open up new prospects in the civil charter market by combining air flights with riverboat tours.

ONA has plans for a plane-boat-resort tour package.

Should the Queen be converted into an excursion boat the entire passenger quarters area would be torn out. If it cannot remain in service the company hopes that some kind of historic preservation will be attained, possibly as a river museum.

Greene Line applied for recognition of the Queen as a historic landmark. It was told by the National Trust that anything declared a landmark had to be at least 50 years old.

The Trust, however, is interested in the Queen's fate and has chartered two cruises next spring for its members.

James Biddle, Trust president, said recently in the American Art Journal: "We hope that some group will manage to save the Delta Queen, last of the Great Mississippi River steamboats and a surviving symbol of a whole chapter in American History. The Delta Queen represents a pure American era, just as Casey Jones has no counterpart in any other country."

Hawley, associate of Capt. Ernest Wagner, said that it "represents a bit of Americana . . . and should be saved." The Queen is the essence of nineteenth-century riverboat splendor and, except for the wooden structure, is as modern a facility as any afloat, he said.

The Delta Queen has had a colorful career. It was built in Scotland in 1926. The cost was $875,000, highest price ever paid for a river steamer. When completed it was dismantled, crated and shipped to the United States where, at Stockton, Calif., it was reassembled and made ready for service between San Francisco and Sacramento.

It alternated ports with its sister ship, the Delta King, until the outbreak of World War II when both were turned over to the Federal Government and used as transport ferries in San Francisco Bay. Thousands of returning servicemen rode in them.

In 1947 the Queen was put on the market. Greene Line, with offices in Cincinnati, bought the boat but was faced with the problem of getting it to the Midwest. Federal authorities prohibited making the trip under its own power.

So the Queen was boarded up, towed through the Panama Canal and up the Mississippi. In Pittsburgh it was restored to its original grandeur.

Since then it has sailed the Mississippi, Ohio and other rivers from Cincinnati to New Orleans and St. Paul. It was here last week to take passengers for a three-day cruise and departed for another cruise on Monday.

Art Noveau elegance was built into the Queen, which accommodates 192 passengers and the crew. The brass is highly polished; most of the woodwork is mahogany, kept in high gloss; crystal chandeliers twinkle and the lavender and green copper lead-glass windows sparkle by the light of sun or moon. What was formerly the dining area is now converted to a lounge, and a former storage space near the galley is now the dining area with revamped decor, but the original iron-bark floor.

Passenger quarters range from deluxe twin bed accommodations with carpet, shower and toilet to upper-lower single bunks. There is only one class, however, and every passenger is permitted full use of public facilities.

An elaborate sprinkler system automatically turns on when a preset temperature is reached. A big bell that has been part of the gear of five major steamboats is available to sound an alarm, and, as an additional safety measure, the Queen is equipped with an oversized gangplank that can be swung to shore from either side of the boat.

The Queen is inspected annually by the Coast Guard and is given four spot checks by the Coast Guard at different ports each season.

The boat is built on a steel hull in which each rivit hole is galvanized to prevent rust It is fitted with the largest cross compound steam engines ever built for a boat, and the original equipment is still turning the 26-ton paddlewheel.

The safety-at-sea law is the aftermath of a fire at sea aboard the 30-year-old Panamanian cruiser, Yarmouth Castle, in 1965. At that time legislation was before Congress to strengthen regulation of international passenger carriers, and the loss of 90 lives in the fire underlined the need for action. Shortly after, a fire at sea aboard the Norwegian Viking Princess and a fire in port on the German flagship Hanseatic, increased the demand for preventive measures.

The safety law was based in part on the Safety on Land and Sea Conventions—three multilateral treaties dealing with international safety standards—containing "grandfather clauses" that permitted ships built before 1936 to operate without complying with improved standards.

In 1967 a complementary measure was passed by Congress abolishing the clauses and prohibiting vessels from overnight service unless built of predominantly fire resistant materials. The Delta Queen's hull is steel but its superstructure is not.

The Delta Queen was granted a two-year reprieve, largely through the efforts of Representative Leonor K. Sullivan (Dem.) Missouri.

NATIONAL BUSINESS WOMEN'S WEEK

HON. CATHERINE MAY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mrs. MAY. Mr. Speaker, last week marked the 42d observance of National Business Women's Week, and I would like to take this opportunity to salute the thousands of professional and business women who are such a vital force in the life of every community in this land.

Perhaps one of the more significant signs of the progress American women have made during the past century is

that so many women have achieved marked success in their chosen fields that those who are presidents of corporations, well-known lawyers, and respected public servants are no longer pointed out as unusual.

It is indeed an honor to join with the 180,000 members of the National Federation of Business and Professional Women's Clubs in extending well-deserved kudos to the American women who are making such remarkable contributions to the civic, professional, and business life of our Nation.

HE DID NOT SURRENDER

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an Associated Press release which I have recently read in the Fort Worth Star-Telegram for October 17 from the father of a young 18-year-old Army private first class who was killed in Vietnam. I would hope that those in this body who have supported the Vietnam moratorium and those who plan on supporting future ones would read this item.

The article follows:

[From the Fort Worth Star-Telegram, Oct. 17, 1969]

"HE DID NOT SURRENDER"—DAD OF WAR VICTIM VOICES "OTHER SIDE"

LAS VEGAS, NEV.—"When they read my son's name to advocate peace at any price—the price being defeat, let them remember that he whose name they read did not surrender," wrote an anguished Malcolm Thompson.

"When they read the name of Gregory M. Thompson, let them realize that they are proving before the world the truth of the oft-repeated Communist claim that many Americans have become soft, decadent and yielding to any determined force which opposes them . . .

"When those hypocrites read the list of dead who defended South Vietnam, let them know that they have reached the ultimate low in the world record of human infamy, in that they willingly and cunningly utter a dead man's name to achieve the defeat of the cause for which he died."

Thompson's son, Gregory, was an 18-year-old Army Pfc. who was killed in combat in Vietnam May 17, 1969. The father's words, in a letter sent the Las Vegas Review-Journal the day after Moratorium Day, mirrored the other side of America's continuing Vietnam debate.

"It is the ones who saw his body returned in a flag-draped coffin who should be heard—not the protesters," Thompson wrote.

"These transparent propagandists were not there to see my son buried, nor do they accompany me on my trips to lay flowers on his grave . . .

"It is we the parents who said goodby to him when he went away to fight—not the peace agitators.

"It is we the parents who wrote long, anxious letters to him during his three months of almost continuous combat—not the agitators . . .

"My son was killed while fighting for his country.

"America cannot be permitted perpetually to persuade its citizens to instill in their sons a sense of patriotism, loyalty and a determination to defend the oppressed, and then, after the sons have died, suddenly change her mind and yield to those who killed him."

THE PRIVATE PLANE—MENACE OR WHIPPING BOY?

HON. GARNER E. SHRIVER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. SHRIVER. Mr. Speaker, yesterday, the Sunday supplement, Parade magazine, carried an article written by Mr. Jack Anderson entitled "The Growing Menace of the Private Plane." It constituted a biased and unfair attack on general aviation. Mr. Anderson did not evidence knowledge of exactly what general aviation is and he obviously is not aware of the progress being made in recent years to establish a partnership between all segments of public and private aviation in behalf of maximum safety.

Mr. Arnold Lewis, aerospace editor of the Wichita Eagle and Beacon, has written a full and complete report on the nature and extent of the "Private Plane Menace." He has done a fine job of setting the record straight.

Under leave to extend my remarks in the RECORD, I want to call to the attention of House Members Mr. Lewis' article which should be "must" reading for those who have read the Parade magazine feature. The article follows:

THE PRIVATE PLANE—MENACE OR WHIPPING BOY?

(By Arnold Lewis)

Despite continuing progress toward developing and updating an antiquated national airport/airways system, the name-calling goes on.

Latest in the periodic verbal bursts of flak at so-called general aviation appears in the Parade Magazine Sunday supplement of The Wichita Eagle and The Beacon.

Authored by Drew Pearson's protege Jack Anderson, "The Growing Menace of the Private Plane" labels general aviation as primary villain in the turmoil created by overtaxed airports and navigational airways.

"His name is instant death," the article said of the private pilot hovering "unseen . . . in the crowded skies above the nation's airports."

To the private pilot, Parade gives credit for being present in four out of five in-flight near-misses over the nation's six busiest airports and for heavily financing a Washington lobby to preserve freeedom of the skies.

Apparently unknown to the writer is exactly what general aviation is and the progress being made through cooperative efforts of the entire aviation community and federal government toward a modern and workable national airport/airways system.

In 1968 there were more than 124,000 "private" planes in the U.S. civil fleet, ranging from small, two-place Cessna 150s in the $10,000 price range, on up to the $4 million to $5 million Boeing 737 business jet.

Serving some 10,000 U.S. airports, private planes annually carry as many or more people than all domestic commercial airlines using approximately 650 airports.

At the upper end of the general aviation fleet, the sophisticated business jet serves as just that, a business tool for corporations large and small, its value often being compared with that of a computer.

At the lower end, two-place trainers turn out an ever increasing number of pilots, many going on to serve as pilots for the nation's airlines.

In between uses to which general aviation aircraft are put are as wide and varied as the imagination of their owners.

They patrol petroleum pipelines, provide quick transportation for the sick and injured, haul freight, double the effectiveness and mobility of the businessman, serve as aerial taxicabs and provide recreation.

Crux of the problem facing aviation today, however, is capacity. Airport and airway navigational and control facilities just have not kept pace with increased aircraft fleets and increased utilization.

Contacted by the Wichita Eagle for their reaction to the Parade article were Frank E. Hedrick, president of Beech Aircraft; Dwane L. Wallace, chairman and chief executive of Cessna Aircraft Co.; and Malcolm Harned, executive vice president and general manager of Lear Jet Industries Inc.

All agreed that use of the nation's airspace was a partnership proposition and noted that considerable rapport had developed this year between general aviation and the public air carriers.

Industry and government officials are clearly aware of the solution; more concrete for existing airports, new satellite airports for general aviation, additional air traffic controllers, more modern radar and tracking equipment on the ground and in the air, improved navigation systems to provide better separation between aircraft, and specific approach and departure corridors at major airports to segregate aircraft according to class and performance.

Question being pursued by all parties involved is how to accomplish these goals and who is going to pay the bill—a ticklish and lengthy process when dealing with many and varied interest groups.

All sides in the issue understand, however, they will have to "give" a little, both in terms of dollars and in terms of some of the "freedoms" they now enjoy in operation of their aircraft.

Over the long range, the Nixon Administration's Airport/Airways bill currently before Congress would go far to relieve the congestion problem.

Based on user charges to finance a major portion of the program, the bill would assess general aviation nine cents per gallon on all aviation fuel, (currently two cents non-refundable), including jet fuel, which is not now taxed federally; it would impose an eight per cent tax on all airline tickets (currently five percent) and a five percent tax on all air freight way bills.

One alternate proposal has been made by the House Ways and Means Committee which would include an annual registration fee to all aircraft according to weight, in addition to a total seven-cents per gallon fuel tax for general aviation.

It appears now the Nixon bill, in one form or other will make it through Congress, possibly this year, according to Washington sources.

In the more immediate future, the Federal Aviation Administration (FAA) is attempting to formulate regulations which would segregate different classes of aircraft in high density hub airport areas to reduce possibility of in-flight and near in-flight collisions.

Included in a proposal that would require all aircraft landing at major airports be equipped with transponders—an electronic device which returns a positive signal from the aircraft to interrogating ground radar, thus facilitating positive air traffic control identification.

In-flight collisions such as that of Sept. 9, between an Allegany Airlines DC-9 and a

Piper Cherokee which claimed 83 lies, add new fuel to the airport/airways issues.

And, when a small general aviation aircraft is involved, the finger invariably is pointed toward the "little" plane by initial press reports.

Reaction holds the light aircraft had no right to be there, regardless who was at fault.

The Parade article declared: "It was a student with only 38 hours in the air, who rammed into an airliner in September over the Indianapolis airport while making a practice pass at the runway."

Actually the accident occurred some 20 miles southeast of the airport. Subsequent findings suggest it was the airliner that struck the light plane.

In an analysis of the 38 in-flight collisions occuring in the United States during 1968, the National Transportation Safety Board (NTSB), which investigates all fatal air accidents, found FAA's air traffic control system involved in at least seven.

And in all seven, traffic congestion, control tower visibility and human performance limitations, and inadequacy of VFR (aircraft operating under "see and be seen" visual flight rules) traffic flow procedures were found contributory to the chain of events leading up to collision.

"In-flight collisions are very rare at airports where traffic flow is directed in a positive and orderly manner," the NTSB declared.

In the analysis, NTSB said six of the 38 collisions occurred on or above an airport, 12 miles within the airport traffic pattern, five within two miles of the airport and 10 accidents more than five miles from the airport.

The collisions involved 76 individual aircraft and 71 fatalities, although total passengers and crew members totaled 246.

Of the aircraft, three were commercial airliners, one a military fighter and two were gliders—the remainder being powered general aviation aircraft. One collision, incidentally, involved two planes being used to herd horses in Wyoming.

Twenty-one aircraft were described as being on pleasure flights, while 20 were engaged in some form of flight instruction.

Concluded NTSB:

"While there was no evidence of adverse weather having been a significant factor in any of the 38 in-flight collision accidents, haze and/or smoke were likely to have been in the area in six instances; precipitation, showery in nature, was probably in the general area in 11 cases.

"All 38 collisions, however, occurred during daylight hours under VFR conditions (ceiling above 1,000 feet and visibility more than three miles).

"It was noted most collisions occurred in areas and periods of greatest general aviation activity and the most likely time and place for collisions to occur would be on bright clear Sunday afternoons in August at uncontrolled airports," NTSB said.

A common misconception among laymen, including the Parade writer, is that radar equipment on aircraft is used for spotting other aircraft.

Stated Parade: "Few private planes are equipped with radar, to act as extra eyes for the pilot."

Nor do any commercial airliners have these "extra eyes." Aircraft radar is for weather avoidance and does not detect other aircraft.

Parade also pointed out that the "private pilot who decides to go on a lark in the skies after drinking . . . is . . . probably the greatest threat to air safety."

It added that autopsies performed on pilots from the 692 fatal general aviation accidents during 1968 "indicate that as many as 200 had been drinking. Of these accidents, officials said that alcohol was the cause of 45 'beyond a shadow of a doubt.'"

As recently as September, however, Bernard Boyle, NTSB chief of the Safety Analysis Division, said he believed only a small percentage of private pilots fly after drinking.

In each of the past three years, he said alcohol has been attributed to 6½ to seven percent of fatal private plane crashes.

By way of comparison, National Safety Council states that alcohol probably is a factor in at least half of all fatal motor vehicle accidents.

Actually, the accident rate of general aviation aircraft is decreasing—5,069, or 1.36 accidents per every one million airplane miles flown in 1968 compared with 6,115, or 1.78 accidents per million miles flown in 1967.

The number of fatal accidents, however, increased from 603, or .18 per million miles flown, in 1967, to 692, or .19 per million miles flown in 1968.

At the same time there was a nine per cent increase in the general aviation fleet—from 114,186 in 1967, to 124,237 in 1968—and a corresponding nine per cent increase in the miles flown by general aviation aircraft, according to Aviation Data Service (ADS), Wichita.

Again for comparison, some 26 million (25.5 per cent) of the nation's 102.1 million motor vehicles in 1968 were involved in accidents accounting for 55,200 motor vehicle deaths, according to National Safety Council figures.

There were 14.5 accidents per one million miles driven by motor vehicles and .04 fatalities per million miles driven.

The FAA categorizes all non-airline and non-military aircraft in the United States as general aviation, or "private" aircraft. Its own fleet numbers more than 100.

Of the 24 million general aviation hours flown in 1968, as a point in fact, 69 per cent were for business purposes and 31 per cent could be labeled "personal use of aircraft," according to ADS.

The picture appearing at the top of the Parade article apparently was intended to depict the "private" plane menace.

A check by the Wichita Eagle of records maintained on each aircraft flown in the civil system revealed that all aircraft pictured have transponders, radar, distance measuring equipment, autopilots, redundant communications and navigation systems and, in essence, were equipped comparably or better than the two commercial jetliners shown in the background.

The five "private" aircraft in the picture represent a transportation investment by "private" businesses of $7.2 million, of which nearly $1 million is represented by the cost of electronic communication and navigation equipment alone.

Indeed, these private planes are waiting for the navigation, air traffic control and federal communications system to catch up so equipment they have installed can be used on any airport in the U.S.

Most businesses and corporations utilizing their own private aircraft today also are heavy users of the commercial airlines.

Whether public or private, air safety is a vital concern to all.

SALUTE TO GEORGIA COOPERATIVES

HON. ROBERT G. STEPHENS, JR.

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. STEPHENS. Mr. Speaker, it has been brought to my attention that the month of October is "Co-Op Month." The theme this year is "Cooperatives: Progress Through People."

The State of Georgia is observing this "Co-Op Month," along with the rest of the Nation. As part of this observance, the Georgia Council of Farmer Cooperatives prepared a leaflet showing the diverse ways cooperatives serve their members in Georgia. I think this information will be of interest to the Members of Congress. I am, therefore, including the following summary of these interesting statistics.

In the marketing area in Georgia there are 23 cooperatives with 87,700 members. These cooperatives have 7,170 employees and do a gross volume of business of $329,100,000. The major products marketed by these cooperatives are poultry, peanuts, milk and milk products, and grain and soybeans.

In the area of production supplies there are 14 cooperatives with 84,000 members. These cooperatives have 470 employees and do a gross volume of business of $49,-129,000.

In the area of services, credit is provided through Federal land bank associations and Production Credit Associations. Electric membership corporations provide electrical power and dairy herd improvement associations provide management services.

These are just some of the many services which are provided through cooperatives to aid farmers in nearly every aspect of their farm business. I join with the citizens of Georgia in saluting the fine work of our Georgia cooperatives.

It might also be of interest to point out that the first agricultural cooperative marketing association formed in Georgia was in our 10th District. This was in the early part of the 1930's when the Athens Cooperative Creamery was established in Athens, Ga., by my wife's father, A. P. Winston, Judge Henry West, L. M. Sheffer, Dr. Henry Fullilove, Dr. Harvey Cabaniss, and Emmett Cabaniss. It is still a successful operation, being now Better Maid Dairy Products, Inc.

SEEK MEASURES TO CONTROL PORNOGRAPHY

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. UTT. Mr. Speaker, I would like to include my statement on H.R. 6186 which would seek measures to control pornography, which I am cosponsoring:

STATEMENT OF JAMES B. UTT ON H.R. 6186

Mr. Chairman: I appreciate this opportunity of including some comments in the record of testimony on the various measures seeking to control pornography. I am a cosponsor of H.R. 6186 which would prohibit the dissemination through interstate commerce or the mails of materials harmful to persons under the age of eighteen years and would restrict the exhibition of movies to such persons.

My state of California has seen both a flood of the most vile presentations sent through the mails to the homes, and an expansion of the producers of the filth. Printing presses have run around the clock turning out the tons and tons of advertising material in full color and great detail. My constituents who are receiving such material are demanding that steps be taken to protect their loved ones from being exposed to the shock of seeing such trash.

There are now in effect laws that provide for imposing a prohibition on individual business firms against repeating a mailing to one who has objected to the post office, upon the receipt of what he considers objectionable material. This has only limited effect upon the pornographers. They can still make the first mailing with impunity. And furthermore, each separate filth peddler can make a first mailing to the same household.

H.R. 6186 details what would be considered pornographic and to be unlawful if sent to the home in which there is a minor. The broad interpretation of the word "knowingly" in the proposal would make it financially uneconomical for these depraved distributors to broadcast their filth on a mass basis. They would have to consider that any home could have minors present, and before making the first mailing, would have to determine in advance that such a condition did not exist.

I believe this would effectively stop this obnoxious practice without being subjected to the charge of censorship. I hope that the legislation can be approved by your committee at an early date.

A REPORT ON THE PRESENT GREEK SITUATION

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. EDWARDS of California. Mr. Speaker, the news from Greece shows a rising tide of protests against the military dictatorship there. Unfortunately, the same news shows that the U.S. Government continues to be linked with that dictatorship, resulting in a rising tide of anti-American feeling.

The current of events in Greece was recently studied by N. A. Stavrou, a professor at Howard University. He has been kind enough to provide me with a copy of his excellent report, one that details fully what is happening in Greece.

I insert this documented and first-hand study into this RECORD:

A REPORT ON THE PRESENT GREEK SITUATION

(By Prof. N. A. Stavrou)

The present report is based on facts assembled during a research trip to Greece which lasted from August 1 to September 13, 1969. This trip was made possible by a Research Grant given by the Social Science Division of Howard University and had as its primary objective the study of Protest Groups and their formation. A specific research plan had been worked out prior to my departure from the States. However, soon after my arrival in Greece I discovered that scientific research was impossible under a regime of martial law. I was given warnings by many people not to proceed with the idea of conducting a survey of public opinion by submitting questions to ordinary people, because they told me, "You don't know to whom you are talking." Consequently, I had to revise my research methodology in several ways. Systematic sampling of opinions had to be substituted by selective gauging of reactions to questions purposely made to provoke. To support such responses I sought to examine the behaviors of groups of discontented persons. I thought I would have a better understanding of what is happening in Greece if I concentrated on five sources of information: a) former political leaders now in active opposition; b) former high ranking military officers as well as officers in active duty when this was possible; c) former elected officials of small towns or private associations; d) plain people from all walks of life whose confidence I had to cultivate before they could talk as they felt, and e) the government's position which could easily be sampled from the censored press, or personal interviews when possible.

Some of the political leaders and personalities with whom I had extensive discussions on the subject matter of my study and the current Greek political situation are:

Hon. Panayotis Kanellopoulos, Former Prime Minister, Minister of Defense and Leader of the E.R.E. Party.

Hon. Stephanos Stephanopoulos, Former Prime Minister, Minister of Economic Coordination, Foreign Affairs, and leader of Liberal Party founded after his break with the Center Union (FDK).

Hon. Evangelos Averoff-Tositzas, Former Minister of Foreign Affairs (ERE).

Hon. Ioannis Zigdis, Former Minister of Industry (Center Union).

Hon. Emmanuel Kothris, Former Minister of Commerce, Deputy of Center Union.

Hon. Ioannis M. Tsouderos, Former Deputy of Center Union.

Hon. Spyros Markezinis, Former Minister of Economic Coordination and Leader of the Progressive Party.

Hon. Constantinos N. Rallis, Former Deputy and Minister of Information.

Hon. George Mavros, Former Minister of Defense and Interior, Governor of the Bank of Greece, presently considered as the leader of the Center Union.

Hon. George Rallis, Former Minister of Interior (ERE).

Hon. Harris Rentis, Former Deputy of Center Union, Minister.

Hon. Ioannis Varvitsiotis, Former Deputy of ERE.

Lt. Gen. Theodoros Griropoulos, Former Chief of Defense Staff, Chief of the Army, author (Retired).

Lt. General Petros Nikolopoulos, Former Chief of the C.I.A. of Greece, Former Chief of Staff of the Army.

Lt. Gen. Ioannis Sorokos, Deputy Chief of the Armed Forces (1969), Ambassador Appointe to London.

Gen. Alexandros Hatzipetros, Chief of C.I.A. of Greece.*

Lt. Col. L. Mavraganas, C.I.A. of Greece.

Gen. George Thomopoulos, Chief of G.D.E.A. (General Directorate of National Security).

With General Sorokos I had a rather extensive and probing (on both sides) conversation, while with the latter three individuals I discussed no substantive matters. From Gen. Hatzipetros I requested information on Front Organizations functioning in Greece between 1955–1967. He introduced me to Lt. Col. Mavraganas, who was ordered by the General to assemble unclassified information available in the Agency and give it to me. At the same time, Gen. Hatzipetros said that most of such information is kept by G.D.E.A., where he introduced me to Gen. Thomopoulos. Lt. Col. Mavraganas, after I told him what I was looking for, promised to send all information available and unclassified "as soon as the Colonel who specializes in such matters returns from his leave." Gen. Thomopoulos requested a specific list of types of information and I submitted one to him. He, too, promised to mail available information as soon as it could be assembled. So far, I have received no material requested from either agency.

In addition to the above-mentioned personalities, I have met a number of formerly high-ranking officials, local leaders, Union personalities, newspapermen and former Ministers who wish anonymity. Through newspapermen and friends, I have tried to get some information on the role and fate of the 45 generals who have been arrested and kept under solitary confinement in a hotel outside of Athens. One high-ranking officer whom I was able to meet in his place of exile talked with me "freely" after I told him who informed me of his whereabouts. The only place where I found suitable for an exchange of views with the gentleman was by the sea, where we could swim and talk without being followed by his guard, a plain clothesman, never more than 10 feet away. The number of swimmers made it difficult for the guard to see anything unusual going on between the General and another swimmer who could not be identified as a foreigner in the water. The gentleman not only talked to me under such circumstances, but he was also kind enough to write an extensive analysis of the issues of Anti-Americanism and effectiveness of the Armed forces. I had to make special arrangements to get this document, which is now in my possession.

On the basis of information received from the above-mentioned individuals as well as from hundreds of plain people I have the following observations to make on the current Greek situation:

Political Process: There is almost unanimous agreement among the politicians, former Deputies and local leaders that Greece is in for an absolute dictatorial regime which will be more repressive as the time passes. In support of such arguments everyone points to the current developments, such as decrees promulgated, compulsory laws enacted and proposed (the Press Law was the conversation piece during the last three weeks of my stay in Greece) as well as public pronouncements by government leaders. They all believe that the Salonica speech of Mr. Papadopoulos should suffice to convince any extreme optimist of the fact that Greece is going rapidly backwards. In addition to this, they point to the day to day behavior of the government, always with specific and irrefutable examples of brutal actions and uncontrollable arrogance on the part of the authorities. It appears to them, they argue, that the regime becomes daily more insecure and more repressive. They feel, and know, they say, that a police state is rapidly being perfected and political persecution continues unabated. Personally, I had opportunities to observe the presence of the police state. Deputies and former Ministers who wanted to meet with me hesitated to do so because they were followed by plainclothesmen. At least three former Ministers who met with me were continuously being followed and I was a witness of this. They are Mr. George Mavros, followed by three men in a Volvo car; Mr. George Rallis and one former Minister who wishes his name not to be mentioned. All political leaders that I have talked to, with the exception of Mr. Evengellos Averoff-Tositzas, feel that compromise with the present regime is impossible and whoever suggests it must be naive. The government, they point out, does not have and never has had such intentions. They have impressive evidence to support their position.

Mr. Averrof feels that the government is of course unwilling to compromise, but a militant position by other political forces will prevent solutions from within or without the junta. "When you promise to court-martial them," he said, "they will fight and they will stick together." In line with this position, Mr. Averrof feels that "the Mevros-Kanellopoulos Political manifesto was a mistake." Another slight variation from the position of the political world as I understand it comes from Former Minister of Economic Coordination and leader of the Progressive Party Mr. Spyros Markezinis. Mr. Markezinis feels that the present leaders are inept and inevitably will need the help of experienced people, if they "properly care about Greece, as they claim." He is also willing to be the Prime Minister of a Transitional government. "After all," he said, "I was a successful Minister of Economic Coordination and

*Introduced to him by Gen. Sorokos.

do not wish to become a Minister again." However, he, too, is pessimistic about the prospect of the junta giving up or even sharing power with anyone, and he qualifies his willingness to be Prime Minister with important conditions.

Many feel that the junta will try occasionally to absorb political personalities of Pipinellis type and transform them into "Von Papens of Greece." Such occurrences will help the government in certain ways, but it will not break the front of opposition. Personally, I have the feeling that two or three such persons entertain the thought of entering the governmental fold, but it is also quite likely that others who are with the government will resign. One candidate for resignation is Prof. Kyriakopoulos, Minister of Justice, who, I was told, had nothing to do with the Press Law, nor was he properly consulted about it. I feel that the arrival of the new American Ambassador will be the catalyst of certain developments in the relations of the Junta with the opposition, *if the Ambassador comes with specific policies in mind.* However, no one believes that the American policy will change drastically and furthermore, those who could have helped to an orderly development, have reasons not to trust the Americans.

Prospects: Everyone feels that as the government becomes more repressive and the opposition more experienced, organized violence will increase. My survey indicates, and practically all political leaders I have talked to agree, that the government has reached the *point of almost complete separation from the people.* The present rulers of Greece have absolutely no appreciation of the importance of support from below. At least four Former Ministers suggested that violence is justified because the regime itself is *violence par excellence.* Furthermore, they argue, "the bombs are better heard by the State Department and the C.I.A. than the voices of reason." "The Americans," they say, "do not consider the Greek problem critical so as to stop doing certain things because it does not appear critical. They look in the night clubs and bouzoukia joints and conclude that here is a happy people. Perhaps few bombs will help them awaken and realize that we are in a deadly crisis." In conclusion, everyone feels that orderly developments with the present government as a partner are impossible. Violence is to be expected and in the long run it will be more extensive. I have asked many leaders why they don't make an opening for a dialogue with the government. Their answer was quite simple and pragmatic: "The Greek people will brand anyone who deals with the present government a traitor and quisling. After all," they say, "if elections were to be held tomorrow, the political parties of 1965–67 will receive the same number of votes as then. We have our following intact," they say, "the junta does not have any at all." I sought to check on this claim and asked a local leader who is quite familiar with the attitudes of the countryside. He agrees that the political forces are divided as they were before the coup, but "parts of those forces have become militant" and in any outbreak of violence they will move to the left regardless of where they belonged before April 21, 1967. Mr. Mavros said that "we made our offer. In the political proclamation with Kanellopoulos, we stated that we are ready to form or support a transitional government," he said. The offer has been laughed off by the junta, who keeps referring to them as the "Ex-politicians."

On Support: I indicated above that the present regime of Greece has absolutely no appreciation for popular support and in the two years of its presence has done more to alienate its supporters than increase them. It is commonly agreed that even those who granted them good intentions earlier regret it now. Consequently, the support they have does not come from the people in general but from the following categories of special groups:

(a) People who make their living from governmental employment, especially those who got their jobs after April 21, 1967. From this group, however, one must differentiate, a subgroup which actively opposes the regime. There is, for example, an active underground group made up of Civil Servants which circulates pamphlets with anti-regime material.

(b) People who make their living indirectly from the state and from whom support is extracted rather than offered.

(c) Several extremist groups made up of people who have been active in the period between 1944 (such as people who composed the organziation X, under George Grivas) and who have the stigma of cooperation with the Germans. These people are presently zealous informers for the regime and are being identified by the people as such. It is also a rather curious development to note that former Communists are among those who have become informers and supporters of the regime. The noted examples are, of course, Mr. Savas Constantopoulos', editor of the newspaper *Eleftheros Kosmos* (Free World) who was a high-ranking member of the Greek Communist Party and Mr. Th. Papakonstantinou, another high former ranking member of the Communist party who was Minister of Education and who has the distinction of having studied in the Marxist Schools of Moscow.

One serious problem with all those who are working for the state is that it is expected of them to prove their loyalty by concrete acts of support for the "National Government." This is more evident in the countryside where everyone knows everyone else.

(d) A fourth group which supports conditionally the present regime is Big Business. Their support, as usual, depends on benefits they get by governmental policies. However, their rivalry can have serious political implications. Shipping magnates who brought their ships under the Greek flag, for example, did so for a very simple reason: They do not as yet pay a single penny of taxes to the State. This was confirmed by a former Minister of Economic Coordination, who is furious of the fact that the government insists on collecting taxes from his writings (exorbitant in his view) while big business gets a free ride. The fact that the Greek shipowners do not pay any taxes at all is based on a little known decree issued by the government which classifies ships into several categories for purposes of taxation. Ships over twenty-five years old, for example, are free of taxation for several years. Newly-constructed ships are free for ten years; ships repaired in Greek shipyards are free of taxation at a rate of one year per one hundred thousand dollars worth of repairs.

This business group will continue to support the government as long as it promotes its interests. It will also increase the opposition because the workers will be forced eventually to oppose it actively and with it the government. As of now, no one can speak of trade unionism in Greece and it is expected that the workers who lost all gains of the last twenty-five years will join the active opposition, and the government relations with big business will be affected seriously.

Opposition: It is rather difficult to examine the makeup of the active opposition. However, it is my view that the present regime is rejected by the vast majority of the Greek people of which a minority is prepared to do something against it.

Potential opposition will come, many believe, and I agree, from all those people directly affected by the present regime. The number of such people is quite impressive and it is sufficient to make up a strong revolutionary force. Many feel it reaches the vicinity of half a million people. When challenged on this figure, they proceed to calculate. They claim that there were over one hundred thousand elected officials who lost their jobs, beginning with the Mayor of Athens and ending with the water distributor (an elective position in some places) of the remote village. Add to this, fired civil servants and dismissed officers as well as all those individuals who had a "file" in the Security Agencies, as well as their relatives and you come up with a larger not a smaller number. Furthermore, they say, practically more than three-fourths of the leaders of associations of all sorts have been forced out. Many believe that not only do we have sufficient forces for future violence and upheavals, but also opposition leadership with respect and following.

From this number of affected individuals one ought to deduct a smaller group which has been "revolutionized" by brutal violation of individual rights. They are the people arrested since April 21, 1967. Many say the often-mentioned figure of six thousand is incorrect. They put the number of persons arrested at 70,000 with detainment periods roughly from a few days to years. The figure of 70,000 arrested was supported by a former Lt. General who wishes his name not to be mentioned. He himself has been arrested and detained for a prolonged period. I sought to crosscheck this information. From further investigation, I found nothing to warrant rejection of the 70,000 figure. It is claimed by many, and I fully agree on this, that the forces of potentially extensive violence are all present in Greece. What is lacking is organization and this might take some time because the opposition functions under a severe police regime which is in many respects harsher than in Communist states.

Active Opposition: There are opposition groups from all three political groupings. However, so far the Right Wing and Center Forces are playing their role. Mostly the Right Wing. The Center Forces, I was told, have not yet played their role fully, while the Left is rubbing its hands with pleasure seeing the government effectively destroying institutions which they could not. A former Minister told me that in many cases leftists organizations have betrayed other opposition groups to the authorities. For doing such things, he said, they are rewarded with state employment thus achieving another goal: infiltration of state agencies. Other Deputies and former Ministers had specific cases of such occurrences to reveal.

It appears to me that the active opposition is presently structured in three layers with only the Royalists and the Right systematically active. The Center Forces which according to some encompass a wide spectrum of intellectuals is rapidly organizing and will come forward. In the Center, I include the forces of Andreas Papandreou. The percentage of his following is disputed by many. One former Minister placed the following of Andreas at 20% of the Greek voters. Others give invariably larger or smaller figures. A former Minister of the Interior stated: "Regardless of what the precise number of Andreas' following is, the Americans must realize that he is a force and any solution without him is difficult if not impossible."

Tortures of Prisoners: I was very much interested in examining the charges of torture by the police authorities in Greece. My findings confirm that there was both psychological and physical torture. I have asked many people to express themselves on such charges, both former officials and plain people. One Minister believed that there was no wide-scale torture, but definitely there was, and still is, taking place in "preventive cases." People identified as opposition leaders, or people who are suspected of having information on opposition groups are systematically tortured, he said. He further stated that he "knew of four such cases in which

prisoners were brutally tortured." The same views have been expressed by a former Minister of Interior. This gentleman, whose honesty was never questioned, said, "It is repugnant to think that the Secretary General of the Ministry of the Interior and other high officials will themselves beat prisoners." He personally knows of prisoners beaten by Mr. Ladas. I have specifically checked on the case of Professor Mangakis, whose wife was court martialed and imprisoned for four years because she sought the help of foreign leaders for her husband. The government presented Professor Mangakis in a Press Conference in which he denied being tortured. Thus she was accused of slandering the authorities and a court martial sentenced her to four years in prison. It is widely believed, though, that the Conference itself was staged and at least five creditable people told me that the "correspondents" were intelligence officers. This I cannot confirm. I simply convey the allegations of people whose honesty I have no reason to doubt.

Besides the physical there is also psychological torture. It involves people who are repeatedly called into the police station for purposes of intimidation. One person, for example, told me of the pressures put upon his family a day after the constitutional referendum in which he voted "no." The man (in Northern Greece) returned in the evening from his fishing trip to find out that his entire family was in the police station for at least three hours, being drilled as to "why they voted no." Torture by police, I was told, does not involve only political crimes; it expands on any and all crimes. The individual has absolutely no protection and cannot complain anywhere, being afraid that he will be court-martialed for "slandering the authorities." There are two cases which I can refer to here. One involves a single Gendarm (horopfylakas policeman) who sent to court 10 percent of the population of a small town in three days. When I asked why several people didn't complain somewhere, the person who offered the information said: "No one is crazy to go to the Court Martial on top of it."

Another case which gives some indication of police behavior involved a person in the area of Thebe. Sometime ago a number of robberies and murders had been committed in Greece. The police naturally were looking for suspects. Finally they concentrated on one individual as the prime suspect. He was beaten so badly to "admit" the crimes, that he lost his sanity as well as his physical health. However, it was discovered later that all robberies and murders had been committed by a group of German tourists who have done the same in England and other European countries. They were tried and convicted, and their death penalty is now being appealed.

Economy: Not being an economist, I cannot offer an expert opinion on the subject. However, a comparative report of the state of the Greek economy composed by a number of former deputies and specialists signed by former Minister of Commerce Emmanuel Kothirs contradicts with figures the claims of the present government. Personally, I have the following observations to make:

For the time being there is economic stability in Greece about which I am not prepared to state how long it will last. The government is only doing patchwork with repeated loans and spending without control. Salaries of officers of all ranks have doubled in the last two years and the pesantry is offered "bribe-loans" and no one knows where the money comes from. There are definitely hidden dangers for an abrupt collapse of the Greek economy. This might be precipitated by the deadly struggle currently in progress between four economic giants: Onassis, Niarchos, Andreadis and Pappas. I can say definitely that the Niarchos-Onassis conflict had and will have political implications. A number of junta officers were furious, for example, when George Papadopoulos intervened in the refinery case in favor of Onassis after two expert Committees favored Niarchos. There is a group within the junta which is pressing for "moral purification" (ethiki apokatharsis) of the "Revolution" and this group was absolutely furious when Mr. Papadopoulos intervened in favor of Onassis after the two men had a man to man talk on the refinery contract. This group, apparently, is led by the commander of ESA (Greek Military Police), Col. Ioannidis, the man who sued Mrs. Mangakis for slandering his outfit. The Colonel was furious with Papadopoulos and his men when he learned that the leader who came to power to stop favoritism intervened personally in favor of Onassis. The Onassis-Niarchos feud brought to surface other disagreements among the junta officers. The "purists" pressed Papadopoulos to put an end to the question of monarchy "one way or another." They suggested that pressure ought to be put on the King to take a position, any position, on the issues of bombs and resistance movements, as well as on the question of his return which is favored by another group of officers.

The outcome of such pressures was a severe campaign against the monarchy during the first week of September in violation of Articles of the Constitution which have not been suspended. The same pressure was also behind the Papadopoulos speech in Salonica in which he rejects in toto the parliamentary system because he said "nowhere was progress achieved with Parliamentary system."

In conclusion, I would say that the struggle on economic giants in Greece will have serious political implications. Secondly, in the long run Greece is risking economic disaster and social discontent because so far all serious economic measures favor the big business. The repatriation of Shipping Magnates to Greece has no practical benefit for the Greek state and the collection of revenues, since no one pays any taxes for several years. Many claim that the return of Greek ships under the Greek flag provides for employment of Greek hands. This view is also erroneous. I was told authoritatively that the shipping magnates have been pressing and got tacit permission to hire as many as 25% foreign crewmen. This means that they are free to hire seamen from India and Pakistan at cheap salaries. From seamen, I learned that all benefits achieved during the last twenty-five years of unionization have been eliminated by daily decrees coming out of the Ministry of Merchant Marines. For example, now a seaman who works for a ship for less than two years, but who decides to return home before the two-year period, is obliged by law to pay his way back as well as the way of his replacement. Imagine what this means for a seaman who is in Japanese ports and wishes to return home. Seamen tell stories of daily posting of orders and memos in ships telling them what "they cannot do."

There are similar developments in other trade unions. For all practical reasons, one should consider free trade unionism as dead in Greece. Such organizations which are still formally in existence now have taken up another role totally unrelated to the interests of the membership: they have become the "transmission belts" or the regime and megaphones for propaganda. One example is the case of Professor Karageorgas who is imprisoned for his participation in resistance movements. During my stay in Greece, there were resolutions passed by many associations "condemning his activities with disgust," something that is totally unrelated with their official role.

Anti-Americanism: There is widespread anti-Americanism in Greece and it comes from all sides, including the Government. The opposition and the average Greek is anti-American because he believes that the present regime came to power with U.S. aid, and stays in power with their help. To my statements that they had a wrong view of the U.S. position invariably everyone would answer: "If the Americans did not like the present government, it could fall in 24 hours. They like it and they keep it." This answer was given to me by former Prime Ministers and by plain people. One Prime Minister said flatly, "The Americans can topple them in 24 hours. If they stop the jet fuel and other supplies, they cannot last long."

Another world-respected leader was bitter about the American role. "I don't say that the United States brought them to power as the average Greek does," he said, "what I am saying is that with your policies, you keep them in power."

I tried to rationalize with him, saying that the United States has a dilemma here as to what to do with an ally who fulfills its obligations to the alliance but whose regime the United States do not approve of. I mentioned to him the letter of the 50 Congressmen and Senators, and the answer of the Undersecretary of State as an example. He had many praising words for the Congressmen and Senators, but he insisted that "it is wrong to say that Greece fulfills her obligations to the alliance for several reasons: First, the alliance was set up to protect the Democratic way of life and the partners have undertaken the obligation to do that. Greece obviously violates the cardinal ideal of the alliance. Secondly," he said, "Greece's participation in NATO is only academic."

The Greek armed forces today have been transformed into a "politicized police force and the Greek people view NATO as the vehicle by which they were enslaved. Therefore, the armed forces do not fulfill their obligations to the alliance, as the Americans are led to believe. As for the occasional expression of concern about the prevailing Greek situation," he continued, "they are negated the day after they are made. Here is," he said, "the Secretary of State saying one thing the first day, and the next your government sends over an astronaut with an autograph for Mr. Papadopoulos, or Dr. von Braun, who is quoted as saying that 'Greece knows how to govern itself.' "

One high-ranking officer (I do not mention the service to avoid the likelihood of being identified by the authorities in Greece) who has been persecuted in a number of ways by the government, wrote an extensive analysis for me of the issue of anti-Americanism and its sources. "How can the Greek former Comrades-in-Arms not be anti-American, when the Americans are silent about their fate and when they are kept in prison." He, himself, returned several honors and resigned in protest from inter-ally associations.

A former Minister of Education told me that the issue of anti-Americanism is very serious and the government of Greece is responsible for this. "In their search for respectability," he said, "they sought accomplices for what they did on April 21. At first, the people were led to believe that the coup was the outcome of a collusion between three accomplices: the palace, the Americans, and the Army. The King, with his coup of December 13, proved to the nation that he was not an accomplice to this coup, at least. The Americans did not prove yet that they are not guilty. On the contrary, by their acts, they support the view that they are."

Origins and Make-up of the Junta: Authoritative information regarding the origins of the present military Junta contradict another myth: that they came to save Greece from Communism. Recent editorials in the "Eleftheros Kosmos"—a pro-government newspaper—places the origin of the Papadopoulos idea "to save the nation in 1958." My information supports the following:

(a) The conspiracy started as an idea in

1956, when the military organization, I.D.E.A., sought to convince a General to seize power and declare a personal dictatorship. The General reneged at the last moment and later became Minister in the Karamanlis government.

(b) In 1958 the "Idea" of Papadopoulos was taking the shape of an organization "within the I.D.E.A.," or the officers of the organization still in active duty.

(c) At least one General realized that "something was going on around Papadopoulos" and sought to disperse the key members of what appeared to him to be an organization. "I send," he told me, "Papadopoulos to Kilkis, Ladas to Filiates, etc." However, the General was accused by a prominent political leader of "persecuting officers friendly disposed towards E.R.E." (the rightist party). At one time, it said, the General raised the question of removing Papadopoulos from the Army for "medical reasons, since he was not old enough to be retired." However, during my interview, he avoided the question: "What was wrong with him?"

(d) Some of the key members of the present Junta, I was told by the same General, had political connections with political parties. Specifically, Ladas, Makarezos and a few others kept referring to Spyros Markezinis as "our leader." "I was teasing them," the General continued by referring to Markezinis as "their boss."

(e) The organization was tentatively identified as E.E.N.A. (standing for National Union of Young Officers).

(f) It is widely agreed, however—and there is substantial evidence to this—that the original members of the organization proceeded rapidly with the creation of power bases and satellite organizations of their own. This, they believe, will provide the seeds for developments from within. One such "satellite organization is the group of Col. Ioannidis, Chief of Military Police.

(g) It is also agreed and partially substantiated, that the government is rapidly promoting officers of trust and retires professional soldiers who were not members of the Junta but stayed with it for purely professional reasons. Newly promoted officers, when placed in key positions, tend to be "independent" of their leader Papadopoulos and the army is thoroughly splintered.

Solutions Proposed or Expected: The "best solution" proposed by former political leaders is a solution from the Army itself. They don't call it a counter-coup but there is no doubt about what they mean when they say, "The Army has a duty to vindicate itself in the eyes of the Greek people, and return to them what it has forcefully taken away."

A competent military leader suggests that out of 11,000 officers only a maximum of 2,500 ought to be considered committed Junta people. The rest remain professional soldiers whose effectiveness is jeopardized by a bad public image.

It is an undeniable fact that the officers corps is viewed upon as an "oppressive group and praetorian guard" by the people, and the element of time is important for a solution from within, i.e. before the officers condition themselves being also an elite group. A second solution supported by some is a "transitional government" which will prepare the nation for a return to Democratic procedures. This is not rejected by the political leaders as a "bad solution" but as "academic, because the present group has no such intention." The third "non-solution" will be violence and everybody agrees that it will increase as the time passes.

The element which will precipitate the first solution is commonly agreed to be a clear-cut declaration of opposition against the present government by the United States, or at least a clarification of the U.S. policy regarding the Greek problem. If the United States makes it clear and known that it is not happy with the prevailing conditions in Greece, there will be developments from within the junta. On the contrary, if we insist on a "business as usual policy," there will be an increase in violence from below. Furthermore, if we promote a "gimmick-solution" by insisting a compromise between the political world and the junta be made, then the violence will continue and it will be controlled by the left, while all those politicians who would cooperate with the present regime "will be isolated together with it."

As is evident from the present report, I do not propose any solution for the Greek problem. This is left to the policymakers. What I propose, however, is a clarification of the U.S. policy and a coordination of the activities of the U.S. missions in Athens. With such a clarification, the people and the Army will know what to expect and what to do other than what they are already doing.

MR. PRESIDENT: VIETNAM MORATORIUM SUPPORTED BY ESTABLISHMENT

HON. ROBERT L. LEGGETT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. LEGGETT. Mr. Speaker, last week the Nation expressed itself on American involvement in the Vietnam war. The President has made the decision to deinvolve, Vietnamize or deposture. There is little secret left with respect to American intentions. I pointed up yesterday that the students were not alone in their encouragement of the President's action—they were joined by a large portion of rural America.

Senator GOLDWATER and Gov. Ronald Reagan last night in Norfolk severely resented the moratorium expression of opinion to the President. They apparently think their hawkish, know-nothing views on nuclear bombardment of Hanoi should ring in a vacuum in the President's ears.

As further evidence of the broad support of the moratorium, I include at this point in the RECORD a letter from one of my Davis, Calif., constituents containing a published plea from the mayor of our town:

DAVIS, CALIF.,
October 19, 1969.

Congressman ROBERT L. LEGGETT,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN LEGGETT: The enclosures speak for themselves; however we hope this cover-letter will make it easier for you to receive the message of the 393 citizens of the city of Davis, California.

On October 8th Mr. Ralph Aronson wrote a letter to our local newspaper giving a personal statement of his sympathy for the Vietnam moratorium and his concern that the U.S. government not continue more-of-the-same in Vietnam. ("Vietnamization," in my own opinion is NOT a new solution—this having been what we originally set out to do from approximately 1954–55 on.)

The reaction to Mr. Aronson's letter was one of general agreement, but even more, it was a spur to try to communicate our own feelings as well. The 393 signees in the enclosed advertisement and attached sheet chose the method of a public advertisement as possibly a more effective form of "protest" than individual letters (that often exist in "intention") might have been. Not only do YOU receive the message, our community received it. There was no organized "push" for these signatures—people just passed the sheet from hand to hand from Friday, October 10 until Monday, October 13. The additional signatures are those of people who did not come in contact with a "sign-sheet" before the cut-off date for publication of the advertisement. They left their signatures at the editorial office of the local newspaper that they might be included with the "group" letter to you. High school and college students were not approached in this petition—we wanted to hear from the non-vocal part of our community and felt that student groups were making their own statement. Might I add that we were surprised to find a very wide cross-section of participation from conservative to liberal elements in our town.

Sincerely,

Mrs. BERDYNE MUSOLF.

WE SUPPORT AND ENDORSE MAYOR ARONSON'S REQUEST FOR ". . . A MORE PROGRESSIVE AND POSITIVE ACTION TO THE WITHDRAWAL OF OUR TROOPS AND AN END TO THE (VIET NAM) WAR"

(The entire text of Mayor Aronson's letter follows.)

Youth should not be blamed for the restlessness regarding the commitment of funds for SST planes—their impatience for funds for ABM over funds for poverty—or their concern for funds for Mars over solutions to problems of people—or their concern for programs benefiting minorities or disadvantaged.

It is time some of their restlessness, impatience and concern is rubbed off on some, or all, of us and we take up the struggle, declare ourselves and take a stand. I cannot, in my own mind, be convinced of our leaders' statements that the cessation of the Vietnam war will not release funds toward the problems in this country. Since according to them, this money cannot, or will not, be forthcoming for use at home. Is this then to be construed as a valid reason to continue this war which, in all purposes, it and all its attached problems represent the greatest concern of all?

Up to now I have been silent and apathetic to the cause, believing our statesmen were progressing toward a solution. I have allowed myself to be lulled by the pre-campaign strategy of our honorable President of the "secret" solution to the end of the war. After six months I have been more convinced that the "secret" lies in other hands than our own President and our own military and political leaders. We are being asked to enter into a 60 day moratorium not to publicly protest or demonstrate or criticize our leaders regarding their progress concerning the Vietnam war. Our honorable President seems to have forgotten that it was this same criticism and demonstration against the past political party's policy that got him elected. We have already had six years of such a moratorium regarding the apathetic attitude of the American people and, rather than a 60 day moratorium against protesting the war. I favor a 60 day peaceful, responsible, protest with letters to congressional leaders advocating a more progressive and positive action to the withdrawal of our troops and an end to the war.

I have been soothed by the declaration we are training more South Vietnamese to take over their own cause. I cannot believe that this, in itself, is a solution either, since this seems to be only a method of perpetuating a war rather than a solution to peace. If the training of South Vietnamese is itself a solution, then lets do it—if we can train our own boys in California, Texas, Georgia to fight under conditions in Vietnam, then bring 25,000, or 50,000, or 100,000 South Vietnamese here and train them quickly, easily, for fighting in their own country.

I don't know if a Mayor of a community of 20,000 people can have an affect in this regard, but if all Mayors of cities of 20,000 can reach Mayors of larger cities, and citizens of larger cities can effectively reach their State officials to communicate this concern to our National officials, perhaps they will get the message.

No more, enough!

I am not affiliated in this proposal with any organization, local or national, radical or conventional, I take this stand as an individual and ask other concerned citizens to join me as individuals.

RALPH ARONSON,
Mayor of Davis.

We, the undersigned, subscribe to the spirit of Mayor Ralph Aronson's statement and agree to have our names appear with an advertisement in the Davis Enterprise stating this fact and to have the advertisement distributed to President Nixon and Senators George Murphy, Alan Cranston and Representative Robert C. Leggett.

BIG TRUCK BILL

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. SCHWENGEL. Mr. Speaker, my editorials for today are from the Worcester, Mass., Telegram and the Boston Herald Traveler, in the State of Massachusetts. The editorials follow:

[From the Worcester (Mass.) Telegram, Aug. 5, 1969]

BEWARE THE BEHEMOTHS

(By James J. Kilpatrick)

WASHINGTON.—At one time or another, every motorist has known the miserable experience—sometimes the terrifying experience—of trying to pass a tractor-trailer truck in foul weather conditions. The boxcar profile blocks the road ahead. One gropes through rain and flying spume, hands gripping the wheel. Just a couple of feet to the side, 35 tons of steel are rolling along at 60 miles an hour. At last you get around; and behold: Another truck ahead.

NEW MAXIMUMS

A House subcommittee resumes hearings this week on a bill that brings these recollections vividly to mind. The bill would set new permissible maximum width, weight, and length limits for the interstate highway system. Truck and bus companies are ardently supporting the bill; the American Automobile Association, representing passenger car drivers, is just as dead set against it. For my own part, I wish there were some way to find a compromise down a middle lane.

Proponents of the bill make an excellent case—up to a point. The present interstate width and load limits were fixed 13 years ago, according to standards laid down in 1946. Since then, the interstate highways have come into being. It is a plausible contention that these magnificent freeways are capable of handling wider and heavier loads than the old primary highways could take.

The bill would permit the states to authorize an increase in single-axle loads from 18,000 to 20,000 pounds; an increase in tandem-axle loads from 32,000 to 34,000 pounds; and an increase in the gross load limit from 73,280 pounds to a higher figure obtained from a length and axle formula. The maximum permissible width would be increased from 96 to 102 inches.

WIDER TRUCKS

These changes are recommended by the U.S. Bureau of Public Roads. They are not opposed by the American Association of State Highway Officials (AASHO). The point is made that roughly half the states already permit these higher load limits, under a grandfather clause inserted in the basic federal act of 1956. The proposed increase in maximum width would make it possible for trucks to carry cargoes (such as plyboard) that comes in multiples of eight feet; the extra six inches, it is said, also would contribute to greater stability and to greater safety.

So far, so good. The ordinary motorist may wince at the greater width, but it is hard to object to the proposed new limits on weight. At about this point in the debate, however, the proponents run out of gas; the remainder of their case is much less impressive.

The bill proposes a federal length limit of 70 feet. It's too much. Oregon now allows up to 75 feet on designated highways, and Nevada has a 70-foot limit, but 27 states hold to 65 feet, Iowa limits length to 60 feet, and 20 states have a 55-foot limit. Both the Bureau of Public Roads and AASHO recommend 65

feet. In asking for this added length, the truckers are getting grabby.

"ONLY PERMISSIVE"

Proponents of the bill emphasize that the bill is "only permissive"—no state would have to approve the higher limits; and they point out that the new dimensions would apply to the interstate highways only. The answer to this is, unh-hunh, or who's kidding whom? Once the higher limits were authorized, the truckers' lobby would roll into high gear; few legislatures would resist. And, as spokesmen for counties and cities have observed, the new behemoth trucks would have to get on and come off the interstate system by way of old highways and bridges not meant for the mastodon size.

The truckers say that larger trucks will produce economies in freight expenses, which economies in turn will be passed along to consumers. It seems doubtful. Consumers have not seen many such economies lately. The truth is that this bill would benefit truck and bus companies. Okay, but let's leave it at that.

Substantially this same bill passed the Senate last year, but died in the House when the 90th Congress ran out of time. On balance, the better arguments still lie against the bill. Unless a reasonable compromise can be found, the resurrected measure ought to be interred again.

[From the Boston Herald Traveler, Aug. 27, 1969]

LOAD LIMITS DO NOT EXCEED

When Congress reconvenes next week it will face more prospective legislation calling for increased limits in size and weight of tractor-trailer combinations permitted to travel the interstate highway system.

Congress will be asked to approve a vehicle length limit of 70 feet (most states allow 65 feet or less), increase allowable width from 96 to 102 inches, single-axle weight from 18,000 to 20,000 pounds and tandem-axle weight from 32,000 to 34,000 pounds.

Spokesmen for trucking associations and some users claim that the additional cargo allowances would impose no greater stress on existing highways or bridges, would enhance vehicle safety, would enable up to 10 per cent savings on consumer commodities and would afford truckers a more equitable return on their road-use taxes.

According to numerous studies, there is little if any truth to these claims. The Bureau of Public Roads reports that a 20,000-lb. axle weight causes 51 per cent more pavement deterioration than an 18,000-lb. one; and a 22,000-lb. axle weight (still under the Massachusetts limit) causes 118 per cent more wear than a 20,000-lb. one. Also, the Bureau indicates most of the country's half-a-million bridges would require reinforcement to take the increased poundage safely.

As for vehicle safety, American Automobile Association surveys reveal that heavy trucks—over 13 tons—are involved in a disproportionately large share of fatal accidents, and that in collisions with passenger cars, occupants of the latter are far more liable to suffer grievous injury or death.

Concerning transportation costs, it would be naively optimistic to assume that a 10 per cent saving would be passed intact to the consumer; such economy would in any case be erased by increased costs of highway reconstruction and maintenance, for even the higher road-use taxes currently paid by trucks do not offset the accelerated deterioration they cause.

The proposed legislation serves only special interests, not the public interest, and Congress should reject it on those grounds. Locally, the Massachusetts legislature would do its constituency a service to consider retrenchment of heavy-truck limitations along current federal lines.

CONGRESSIONAL DUTY TO KEEP COUNTRY MILITARILY STRONG

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. BRAY. Mr. Speaker, the current debate over defense spending, and at what level our defenses should be, has unfortunately generated in many instances more heat than light. Not only the military, but the Congress itself, has come under heavy and frequently unfair and prejudiced attack.

The following article by Mr. John R. Blandford, chief counsel of the House Committee on Armed Services, appeared in the October 1969 issue of Government Executive. As Russ Blandford makes the point, it is the duty of Congress to keep the country strong:

A CONGRESSIONAL REQUIREMENT: TO KEEP AMERICA MILITARILY STRONG

HIGHLIGHTS

1—Soviets could substantially surpass the U.S. in the number of ICBM launchers by 1972.

2—Three Soviet ballistic-missile submarines are on station 800 to 1,000 miles off the U.S. coast.

3—The Soviet Navy is strengthening quantumly as the U.S. Navy weakens with age and small ship construction authorizations.

4—Section 412 of the Military Construction Act of 1959 and its amendments insures that more members of Congress are knowledgeable about weapon systems procurement.

5—"Congress may have to revert to the days when it operated only with ad hoc committees or as a Committee of the Whole, with no legislative committees with jurisdiction created by law."

6—"Very little is said about the fact that other agencies of the Federal Government have increased their expenditures during 1964–70 by over $47 billion."

7—"The scapegoat of the year is the military-industrial complex."

8—"The Systems Analysis Office still exists in the Department of Defense, although there is reason to believe, or perhaps hope is a better expression, that to some extent the wings of the analysts have been clipped."

9—"In discussing cost overruns, some non-military Federal projects make interesting reading."

10—"The chairman of the House Armed Services Committee, L. Mendel Rivers of South Carolina, is accused of having an inordinate number of military facilities and defense contractors in his district."

(By John R. Blandford)

In the furor of debate over the *Safeguard* system and the size of the Defense budget, little attention was paid to a stark statement in the Soviet Armed Forces Communist Party Journal *Kommunist Vooruzhennikh Sil* that it is mandatory for young recruits in the Soviet armed forces to be educated in "hatred for the enemy and the enemy is led by the United States."

A recent article declares that Russia not only is closing the ICBM gap, but by 1972 could substantially surpass the United States in the number of intercontinental ballistic missile launchers. The charge has not been refuted. Some even claim the Soviets already have an ICBM superiority.

The published report on "Soviet Sea Power," by the Center for Strategic and International Studies, states categorically: "The new Soviet Navy is the most modern in the world—a very large percentage of the ships afloat being less than 20 years old. The submarine fleet is the world's largest, consisting of between 350 and 385 ships, of which more than 100 are missile-armed. Forty to 45 are nuclear-powered and, since 1962, Soviet submarines have been able to fire ballistic missiles while submerged. The USSR is presently developing a *Polaris*-type submarine with 16 missiles and a present range of 1,500 miles. Shipbuilding yards in the USSR have a present capacity to build one of these SSBNs a month, and the number of USSR submarine-based ballistic missiles could surpass the U.S. total by 1971. Already, the USSR keeps three ballistic missile submarines cruising on station 800 to 1,000 miles off the U.S. coast, a number which could increase rapidly as the Soviets improve their on-station replenishment and supply system.

"The Soviet surface fleet consists of two helicopter carriers, two to 24 cruisers, 110 to 120 destroyers and frigates, 92 ocean-going escorts, about 150 missile-armed patrol boats, 400 fast patrol boats, 270 coastal escorts, 250 or more landing ships and a large assortment of mine sweepers, as well as support and auxiliary vessels; these vessels, along with the submarines, are distributed in five fleets—totaling about 3,000 ships—in the oceans of the world. Warsaw Pact navies add to the potential strength of the Soviet fleets."

In contrast to the strength of the growing Soviet Navy, 58 percent of the combatant fleet of the U.S. Navy is over 20 years old.

But these frightening challenges to the survival of our Nation have been obscured by an attack, wittingly or unwittingly, upon the so-called U.S. military-industrial complex and military expenditures.

As former Secretary of State Dean Acheson succinctly stated: "One of our failings as people, I think, is a preoccupation with witches . . . the witch has changed and is now the military-industrial complex."

It has become very unpopular to defend our military. And those committees of Congress charged with the responsibility for legislation dealing with our national defense are under increasing attack, both within the Congress and by all forms of news media.

The underlying cause is undoubtedly the frustration many Americans feel with respect to the war in Vietnam. But the debate over defense spending, overrruns, revised estimates and the procurement of weapon systems overlooks the genesis of the authorization process which has made it possible for Congress to become more fully informed with respect to defense spending over the past eight years than ever before.

Prior to 1960, the great *Safeguard* debate might never have taken place or it might have been swallowed up by the magnitude of the entire defense budget. In 1959, the Congress amended Section 412 of the Military Construction Act of 1959 by providing that "no funds may be appropriated after December 31, 1960, to or for the use of any armed force of the United States for the procurement of aircraft, missiles or naval vessels unless the appropriation of such funds has been authorized by legislation enacted after such date."

Thus, since the beginning of 1961, two legislative committees of the Congress, specifically the House and Senate Armed Services Committees, have authorized all major weapon systems before funds could be appropriated for such systems.

In 1962, the Congress amended the new authorization procedures by adding research, development, test and evaluation with respect to aircraft, missiles and Naval vessels.

In 1963, the law was further amended to include all research, development, test and evaluation performed by the armed services.

In 1965, the law again was amended to include all tracked combat vehicles. It is not unlikly that the law may be further amended to include other major procurement expenditures.

The so-called "412" legislation, since 1961, has controlled authorization bills (and re-

sultant expenditures) in sums ranging from $13 billion to $23 billion annually. By this action alone, many additional members of Congress have become increasingly knowledgeable about the weapon systems to be procured, their use, their cost and the process by which they are to be procured.

Prior to "412," only the Appropriations Committees were fully informed, except for information gleaned from posture briefings presented to legislative commitees for information purposes only.

DISAPPEARING MYSTIQUE

But now, the Congress no longer simply appropriates money in large "blank checks" for use by the armed services as they see fit. Specific sums are requested for aircraft, missiles, naval vessels, tracked combat vehicles and all research and development. During the classified hearings, so-called "below the line items" which make up the total lump sum requested for the major procurement items are presented to the Appropriations Committee.

The services may not later deviate from the numbers authorized by the Committees without prior approval of the appropriate committees, or without notifying the appropriate committees of their intention to do so. This procedure is called "reprograming" and is the process by which the services may change up or down the number of weapon systems to be procured by using funds authorized and appropriated for other items in the defense budget. It is carefully supervised and controlled.

Thus, in a period of eight years the mystique of defense spending has been slowly disappearing. There still are large expenditures which are not specifically authorized by the Congress annually for such things as ammunition, small arms, artillery, petroleum, uniforms, food and other military necessities. Nevertheless, the House and Senate Armed Services Committees have, with each passing year, delved more deeply into defense expenditures.

Study groups and task forces have been created in and out of the Congress to study the defense budget. It is not unlikely that several nongovernment organizations or groups may take it upon themselves to present independent defense budgets each year. This may well lead to similar study groups or task forces being created within the Congress—although not necessarily associated with the jurisdictional committees—to look into parity prices, foreign affairs, poverty programs, public works, Medicare, veterans benefits and many other matters involving substantial Federal expenditures. If this is carried to its logical extreme, the Congress may have to revert to the days when it operated only with ad hoc committees or as a Committee of the Whole, with no legislative committees with jurisdiction created by law. Whether this would be a healthy move is debatable, but the trend today might make it inevitable.

SPENDING ANALYZED

The present attack upon the standing committees of the Congress charged with the responsibility for writing the laws and authorization bills dealing with national defense (Legislative Reorganization Act of 1946) could well lead to a complete upheaval in the legislative process.

Defense spending is the target—or, perhaps, the committee system itself is under attack.

To the uninformed or to those dead set on reducing defense expenditures, regardless of the consequences, it might be well to analyze defense spending.

In spite of the size of the defense budget, defense spending, as presented by the present Administration for Fiscal Year 1970, is estimated at approximately $78 billion. This is an astronomical sum, but it only represents about eight percent of the Gross National Product.

In relation to the Federal budget, recommended defense spending amounts to approximately 39 percent of Fiscal Year 1970, compared to 42.5 percent in 1968, 41.8 percent in 1964 and 62 percent in 1953.

THE SCAPEGOAT

It also is interesting to note that from 1964 to 1970 defense expenditures have increased by $27 billion, which by itself may have led to the overdone and out-of-context military-industrial complex charge. Very little is said about the fact that the other agencies of the Federal Government have increased their expenditures during this same time period by over $47 billion.

Nor is that other part of President Eisenhower's now famous military-industrial complex address quoted very often in which he said: "We face a hostile ideology—global in scope, atheistic in character, ruthless in purpose and insidious in method. Unhappily the danger it poses promises to be of indefinite duration. . . . A vital element in keeping the peace is our military establishment. Our arms must be mighty, ready for instant action, so that no potential aggressor may be tempted to risk his own destruction."

Those who decry the military-industrial complex never refer to the fact that from Fiscal Year 1968 to Fiscal Year 1970 defense expenditures declined by $100 million, while other agencies of the Government increased their expenditures by $12.4 billion.

So the scapegoat of the year is the military industrial complex. But, those who attack it seldom if ever mention that more than half of the defense budget involves fixed charges that can only be reduced by drastically cutting back the size of the armed forces.

More than half of the defense budget, some $41 billion annually, is spent on people, including pay, allowances, transportation, retired pay and other costs which involve the procurement of no material things.

As Secretary of Defense Laird has said on many occasions, we spend over $41 billion annually, none of which buys a paint brush, a nail or a bullet.

PHILOSOPHY OF PARITY

Other parts of the defense budget involving operation and maintenance costs—including the cost of ammunition, fuel and the war in Southeast Asia—account for half the remainder, leaving about 25 percent of the defense budget for the procurement of weapon systems.

The House Committee on Armed Services is most conscious of this fact. When efforts are made to bring about reductions in defense spending, there are really only three areas subject to paring: the cost of the war in Vietnam, the cost of people and the cost for new weapon systems. And since new weapon systems, in most cases, replace aircraft and ships that simply wear out or are lost in operational or combat missions, it is significant to point out that our inventory of aircraft, ships, spares, guns, etc., is not increasing and, in some cases, is actually declining.

Even a substantial reduction in the size of the armed forces, for example, a reduction of approximately one million persons on active duty, would only reduce spending for people by some $8 billion annually. And if an all-volunteer force is the desire of the American people, then the $8 billion savings would be offset by the pay increases necessary to attain an all-volunteer force.

The House Committee on Armed Services looked for areas in which expenditures could be deferred for Fiscal Year 1970. One area was in the field of military construction. And here the Committee did defer programs.

Another area is in the field of research and development. But cuts here pose a more difficult problem. The Committee on Armed Services cannot ignore the fact that substantial cuts in research and development may lead to serious weapons gaps in the years ahead.

There appears to be an abiding faith in the minds of some that if we do not devise new weapon systems, devastating as they may be, the Soviet Union or Communist China will be happy to maintain a state of parity with us. Somewhere along the line, in the past few years, the philosophy of parity, as opposed to the philosophy of superiority, in the defense of the Nation, has crept into many decisions affecting our security.

But those members of the Committee on Armed Services who must deal daily with orders of battle, are not at ease when they realize that the Soviet Union has 350 submarines, as opposed to our 146. The Committee on Armed Services of the House is not happy about the fact that the Soviet Union has 25 surface-to-surface missile ships—destroyers and cruisers—and we have none. And we are well aware of the fact that the Soviet Union has 150 missile patrol boats, while we have none. But there are some who feel that, since we have 16 attack carriers and the Soviets have none, we no longer need to build new carriers.

The Soviets have at least 13 new fighters, eight of them prototypes. Our newest operational fighter is the F–4, first flown in 1956. With the exception of the F–111, the United States does not have a new fighter in production now. This serious gap will be bridged in part by the production of the F–14 for the Navy and the F–15 for the Air Force.

SYSTEMS ANALYSIS

But there are or were those in the Department of Defense, particularly in the Office of Systems Analysis, who believe it is a mistake to build the F–14 and F–15, based on the theory that the aircraft are too expensive and that there is no need for such sophisticated weapon systems, with all-weather capability and highly accurate bombing devices. This philosophy is most mystifying. It seems to be based on an assumption that any war involving the use of fighter aircraft will be conducted in Europe, in lovely weather and in the daytime only.

The Systems Analysis Office still exists in the Department of Defense, although there is reason to believe, or perhaps hope is a better expression, that to some extent the wings of the analysts have been clipped.

Because of the experience with the C–5A and F–111 and the cancellation of the *Navajo*, the MOL and the B–70 and other expensive programs, there are those who believe that vast amounts of money have been wasted by the Department of Defense and, thus, by the Congress for not anticipating the problems encountered in these programs.

A study of any of those programs will reveal, *however*, that the technical gains to the Nation in many cases far exceeded the entire cost of the program, including cancellation costs. The present inertial guidance system came from the *Navajo*. New wing structures and new metals came from the B–70 program. Miniaturization and new control methods came from the MOL program.

The so-called overruns of the C–5A program became newspaper headlines until a clear analysis established that the costs overruns were not nearly as great as advertised. Inflation, over which neither the Government nor the contractor had any control, accounted for a large portion of the overruns. There were unanticipated engineering difficulties and these led to the "milestone" approach for the new defense procurement programs. (The "milestone" approach provides for a scheduled periodic review and decision-making point in the development of

a program to insure that the program is meeting quantity, cost and time factors.)

The "milestone" approach may also eliminate complex formulas for second runs, based upon the over-costs of the first runs. But there is hardly a defense program today that has not experienced some cost increase, simply because of the rising cost of living.

Those programs that are almost on target—such as the production of the Navy A–7E, the Air Force A–7D and the development of SAM–D by the Army—are not headline makers.

In discussing cost overruns, some non-military Federal projects make interesting reading.

The interstate highway system was originally estimated to cost $27.6 billion. Today, the cost estimate is $56.5 billion, a 104 percent increase. The Kennedy Cultural Center in Washington, D.C., was estimated to cost $46.4 million. Its present estimated cost is $66.4 million, a 46 percent cost overrun. The lunar module, in our space program, was estimated to cost $388 million. Its current estimate is $1.9 billion, a 389 percent increase. In 1958, Medicare costs were estimated to be $3.79 billion. The present estimate is $5.33 billion, a 40 percent increase.

These cost overruns are not particularly well advertised, but woe to the defense contractor who has to enter into a new field, for his cost overruns will be front page stories in the present atmosphere of downgrading the military and everything associated with it.

OTHER DISTRICTS VIEWED

The chairman of the House Armed Services Committee, L. Mendel Rivers of South Carolina, is accused of having an inordinate number of military facilities and defense contractors in his district. As of June 30, 1968, there were in Chairman Rivers' district 11,300 active duty military personnel and 14,790 civilian employees. The military payroll was $63 million annually and the Federal civilian payroll was $123 million annually. Prime contract awards involved $1 million in Fiscal Year 1968.

Let's look at eight other areas of the country during this same period:

San Antonio, Texas, had 53,000 active duty military personnel and 38,000 civilian employees. The estimated payroll for Fiscal Year 1969 was $284 million annually for military personnel and $324 million annually for the Federal civilian employees. Prime contract awards in San Antonio in Fiscal Year 1968 amounted to $96 million.

The Atlanta, Ga., area had 50,000 active duty military personnel and 14,000 civilian employees. The payroll of the military involved $250 million annually and the payroll for Federal civilian employees was over $122 million. The Atlanta area had $775 million worth of prime contract awards in Fiscal Year 1968.

The Pensacola, Fla., area had over 33,000 active duty military personnel and 14,000 Federal civilian employees. The military payroll is over $205 million and the payroll for Federal civilian employees exceeds $123 million annually. There were over $66 million in prime contract awards in Fiscal Year 1968 in the Pensacola area.

The Chicago area, including Great Lakes, had 35,000 military personnel on active duty and over 6,000 civilian employees. The military payroll is $159 million and the civilian payroll exceeds $48 million annually. There were $38 million in prime contract awards made in Fiscal Year 1968.

San Diego had over 95,000 military personnel and more than 24,000 civilians. The payroll for the military exceeded $401 million and the civilian payroll was over $229 million. Prime contract awards in Fiscal Year 1968 involving defense matters exceeded $391 million.

The Bremerton-Seattle-Tacoma area in the State of Washington had over 53,000 active duty military personnel and more than 24,000 civilian employees. The military payroll exceeded $259 million and the civilian payroll exceeded $218 million. Prime contract awards in Fiscal Year 1968 exceeded $470 million.

Fort Rucker in Alabama had 11,555 active duty military personnel and 3,205 civilian employees. The military payroll exceeds $68 million annually and the Federal civilian payroll exceeds $24 million annually. In 1968 there were over $37 million in prime contract awards.

The Norfolk-Portsmouth area of Virginia had more than 21,000 military personnel and nearly 35,000 civilians employed. The military payroll is almost $94 million annually and the civilian payroll is in excess of $271 million. Prime contract awards amounted to $68 million in Fiscal Year 1968.

But, depending upon which newspaper one reads, it would be easy to conclude that the vast bulk of defense spending is in the Charleston, S.C., area. The newspaper attacks made upon the House Armed Service Committee and some of its members make prophetic those words of Alexis de Tocqueville: "In order to enjoy the inestimable benefits that the liberty of the press ensures, it is necessary to submit to the inevitable evils that it creates."

And—sadly enough—defense spending and the much maligned military-industrial complex are not the only targets of those who would take over the functions of the Bureau of the Budget, the Department of Defense and the House and Senate Armed Services Committees.

MILITARY DISCIPLINE

From press reports and the *Congressional Record*, one gains the impression that the Nation is completely disenchanted with the present Selective Service System. Strangely enough, public opinion polls and the lack of complaints from those most vitally affected—the inductees—do not substantiate the charge of disenchantment. (This, however, should sound familiar, since the public opinion polls with respect to the ABM system throughout the Nation are almost universally two-to-one in support of the ABM system, notwithstanding the close vote in the Senate.)

And then there is the Uniform Code of Military Justice, which applies to our armed forces. It was written under the mandate of Article I, Section 8, of the Constitution, but is a favorite target for many courts, not excepting the Supreme Court. Perhaps discipline is not vital to a military organization, but no one has suggested a better alternative.

And in attempting to maintain discipline, the military must also assure justice. The two do not always coincide.

Perhaps the Constitutional rights so many Americans have fought so hard to preserve are now being very cleverly exploited to destroy us.

Only time will tell, but the United States of America cannot indulge the luxury of defeat, with the hope that her conquerors will be as generous as we have been to those we have defeated.

One thing is certain: So long as the present senior members of both the House and Senate Armed Services Committees are in the Congress, President George Washington's advice that "to be prepared for war is one of the most effectual means of preserving peace" will continue to be their watchword.

H.R. 5582

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. UTT. Mr. Speaker, I would like to include my statement on H.R. 5582 which would permit three additional judges for the southern district of California, which I am cosponsoring:

STATEMENT BY MR. UTT ON H.R. 5582

Mr. Chairman, I am a cosponsor of H.R. 5582 which would permit three additional judges for the Southern District of California, one of the fastest growing areas in the world.

Fast growth is always accompanied by problems of a legal nature, both criminal and evil, and Southern California is no exception. The two active judges now permanently assigned to this District are carrying a caseload, which in 1967, was 826 per judge as compared with the national average of 252.

Indicative of the growth of cases, in 1968 there were approximately 2,500 criminal cases filed in the District as compared with 2,094 in 1967. This heavy load requires that civil cases drag on interminably, with only a handful being processed annually. The problem is mitigated somewhat by the use of one and sometimes two visiting judges, but they seldom handle pleas, arraignments, pretrials, or motions.

Crime is on the increase throughout the nation, and it can only be helped to prosper when criminals fail to get quick and sure punishment for their transgressions. This is impossible when there is a shortage of judges in an area.

The Chief Judge of the District stated that "we are in desperate straits," and no more urgent plea can be made for the approval of this legislation at the earliest possible date.

CONGRESSMAN CARL ALBERT INVITES ATTENTION TO THE REMARKABLY FINE CONTRIBUTION OF GREEN THUMB, INC., TO IMPROVEMENT IN THE ECONOMIC STATUS OF ELDERLY CITIZENS IN RURAL AMERICA

HON. CARL ALBERT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. ALBERT. Mr. Speaker, I have had occasion to visit the locations of projects in my home State by which Green Thumb, Inc., has brought increased income and new hope to elderly men in Oklahoma. I have read of its splendid work in other States.

On October 12 of this year there appeared in Oklahoma Ranch and Farm World an excellent and informative article concerning the work of Green Thumb in the State of Oklahoma. At this time I am presenting this article for publication in the CONGRESSIONAL RECORD so that all interested persons may learn what is being done by the National Farmers Union in cooperation with the Labor Department and local community action programs to advance the cause of elderly people in our rural communities. The article is as follows:

GREEN THUMB

(By Herb Karner)

"Green Thumb" may mean an extra amount of gardening skill to some, but to a growing army of old men, it means much more. It means a chance to retain the dignity of work; a chance to earn a half-way decent living in declining years; it means a way of avoiding the stigma of "welfare" and it means a chance to contribute something worthwhile to society.

What is "Green Thumb"? It's a program dreamed up and fought for, and now admin-

istered by, the National Farmers Union in cooperation with the Labor Department and local Community Action Programs (CAP) which in turn is part of the Office of Economic Opportunity (OEO).

Green Thumb would never have become a reality had it not been for leaders of National Farmers Union who fight battles of small farmers. They became enraged when they stood by and watched what was happening to old farmers, and launched a battle for their survival.

It's not an expensive program as most such self-help projects go. The amount of federal money is a pittance compared to others. But it does help and that's the big objective of NFU—helping old farmers.

Green Thumb provides supplemental income for needy rural residents with agricultural backgrounds. Originally Green Thumb workers were assigned to highway beautification projects but these activities have been extended to the development of roadside and community parks, landscape around public buildings and hospitals and emergency activities such as assisting school districts.

In the Southwest, Green Thumb has been most active in Arkansas, but is now being implemented in seven Oklahoma counties where needs are greatest. Oklahoma's program is headed by Chester Stone, staff member of the Oklahoma Farmers Union at Oklahoma City.

Nationally the project was given the green light in January of 1966 with funds provided by OEO through the Department of Labor.

Five Arkansas counties were selected to try the experiment. Pike, Cleveland, Fulton, Madison and Newton. More than half of the residents in these counties were far below the poverty income level. Lewis J. Johnson, Jr., is director of the program for the Arkansas Farmers Union; and Dr. Blue Carstensen, of the National Farmers Union Washington Office, is national director.

Since the beginning in Arkansas, not only has the program spread to other counties, 14 states have adopted Green Thumb. They are besides Oklahoma and Arkansas, Indiana, Kentucky, Minnesota, Nebraska, New Jersey, New York, Oregon, Pennsylvania, South Dakota, Utah, Virginia, and Wisconsin.

This year there will be more than 2,000 Green Thumbers doing gainful work. They'll average about 68 years old, and—get this—their average yearly income per couple averaged around $900 before getting Green Thumb work. The general criteria for Green Thumb jobs was to need supplemental income; be past 60 and be able to do outdoor work. Goal of Green Thumb leaders is to give old men an opportunity to earn up to $1,500 a year additional income. Green Thumbers earn the federal minimum wage of $1.60 an hour and work eight hours a day, but are limited to three days work weekly.

How's it working? The year the program began it provided work for about 140 men. In 1967 it was expanded to include 11 counties in Arkansas and employed about 236. Last year 537 were employed in 31 counties and it is hoped to include 35 counties with more than 600 working in Arkansas, according to Johnson.

Green Thumb started in Oklahoma last year and currently is active in Lincoln, Oklahoma, Sequoyah, Haskell and Leflore counties. Helping Stone as state supervisor, is Ronald Ragland who is field supervisor for the eastern part of the state.

Sooners who work on the project also must be older than 60 and follow the same regulations.

"We want to spread the funds as far as possible," Stone said. "To be eligible a person's income must be under $3,000 a year if he has a family, and below $1,700 if he's single. He's got to have a farm background, and need a job."

Surprisingly, there's a waiting list for old men wanting work. They are not on welfare rolls. Some get small Social Security checks, but are victims of economic inflation. They cannot compete with younger men for jobs, but they still have skills, energy, know-how and desire to do a day's work for a day's pay.

While money is important, it isn't everything to the Green Thumb crew. Take the case of John McKinney. He's a 78-year-old retired farmer living in Sallisaw.

"I'm sure thankful for the Green Thumb program. Gives me a chance to get out in the country. After all, I spent my life with cows, mules and horses and growing things.

"Oh, I've got a garden in town—have a city lot, and a good garden. Course, it's kinda burned out now, but a garden ain't the same as farming.

"Quit 'bout 10 years ago. Biggest mistake I ever made. Had about as good a 140 acre farm as you'd find, but my wife wanted to move to town, so I sold out and moved to town to please her.

"And, she's real well satisfied. But not me. Now, working three days a week gives me something to do beside sit in the house and stare at four walls," he said.

"Yessir! Never dreamed 10 years ago that land would get as high as it is . . . it was bringing around $25 to $30 an acre, and that's what I got for mine. But it didn't go far, and this extra I earn sure comes in handy," McKinney said.

Currently projects in Oklahoma involve city parks, and other municipal projects. Green Thumb officials work in cooperation with city officials who are in need of dependable labor, have the equipment and necessary funds for improvements. Green Thumb supplies the labor.

"Kinda like the old WPA days," one oldtimer said who is working on the Vian City Park. "Back in them days we built a lot of things. Bridges, courthouses, roads—you name it, we built it. 'Made work' they called it, but by God, we at least gave 'em their money's worth."

And everyone concerned with Green Thumb today agrees that these old men—considered over the hill by society—are giving more than their money's worth to society.

"Without the assistance of the Green Thumb in the building of toilets, fireplaces, picnic tables, as well as the clearing of trees and brush burning, the development of these assets in Becker County (Minn.) would not have been possible, said Duane N. Winter, land commissioner.

And, Sister Mary Michael, administrator of the Eureka Springs Municipal Hospital at Eureka Springs, Ark., said "twice during the past year our hospital has benefitted by the work of the Green Thumb men. The first was a rock retaining wall along the street in front of the new wing. In December these good men transformed our dark, dingy basement in the old hospital building into a bright, clean sparkling place."

There's an added dividend. More than 100 Green Thumbers last year found jobs with other employers. Almost without exception what happens is this: The Green Thumb work proves to the world that age does not keep a person from doing a good job. But the most important thing is that it proves to the Green Thumber himself that he's not a "has-been." He finds out that he can still do a days work. Sometimes this is the most important part.

Green Thumb officials are encouraging and helping Green Thumbers find employment with private employers. For one thing, they can usually earn more money on such jobs. For another thing, when they move out to a new job, they make room for another old man to take their place.

So keep your eyes open as you drive around Oklahoma and Arkansas. If you see an old man cheerfully working away, and if he's wearing a shiny green hard hat, he's a member of a proud corps, the Green Thumb. Stop and get acquainted. He'll take time to tell you what he's doing, and how proud he is to be doing something worthwhile.

REFLECTIONS ON VIETNAM

HON. CATHERINE MAY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mrs. MAY. Mr. Speaker, a number of my colleagues know Robert W. Lucas, until recently assigned to the Washington press corps. Bob is a newspaperman of wide experience and I am happy to say is now executive director of the Yakima Herald-Republic in my hometown of Yakima, Wash.

Bob Lucas recently wrote an editorial entitled "Reflections on Vietnam." It is the finest piece of its kind and I, therefore, want to share it with my colleagues:

[From the Yakima Herald-Republic, Sept. 18, 1969]

REFLECTIONS ON VIETNAM

(By Robert W. Lucas)

It is not easy to write with fairness and balance about the war in Vietnam. The more one knows about it, its political origins, the dismal chronology of faulty assumptions and indecisive and senseless engagements—the heroism and sacrifice, the corruption and waste, the suffering and grief associated with it—the more difficult it becomes to judge the war cooly and responsibly. But this is an effort to do just that.

President Nixon continues to support the general hypothesis of his predecessor on the rationale of the war, although with significant modifications of strategy designed to end it. Both the Johnson and the Nixon administrations may be right in justifying their commitment of United States power in Asia. But I have never seen it that way and do not now.

Since 1965 and until this summer. I had unusual opportunities in Washington to follow the course of decisions on the prosecution of the war. As a White House correspondent, in constant and close contact with both columnists and reporters, and the highest officials of the government. I watched the policy struggles at close hand. And on occasion I was privileged to meet and talk informally and off-the-record with, among others, Walter W. Rostow, Cyrus Vance, Robert S. McNamara, Dean Rusk, Ellsworth Bunker, Vice President Humphrey and President Johnson himself.

With great respect for the sincerity, the depth of commitment and the exhausting labor of those men who were carrying the lawful burdens of the conflict, I concluded that they were often victims of events almost beyond their control. They were forced to grapple with an inexplicably confusing challenge to free world interests in old Indochina, and do so coincidental with the eruption of serious troubles at home. And this mix of cause and effect led them into the blind alley called Vietnam.

When the scholars and the historians have had time to analyze events of the late decade, this is what I believe they will find:

What started as a hopefully pragmatic, idealistic and even inspired effort to help those Vietnamese who, for political or religious reasons, attempted to remain outside Ho Chi Minh's Communist dictatorship in Hanoi, was transformed by our political rhetoric and military pressure into quite

something else. The rescue mission was enlarged to become a crusade against the flood of Red Communism into all Southeast Asia and, as an afterthought, to honor treaty pledges presumably valid under the SEATO pact.

Now, our modest adventure which started with the dispatch of 35 American military advisers in August, 1950, has become an essentially futile, unacceptably expensive and brutalizing misuse of American military power.

Why? Some people seriously believe the war could have been won and could still be won without setting off the holocaust of World War III. They may be right. But it seems clear to me that a majority of the American people do not want to take that chance.

Why, then, have we wandered so far into the trackless wilderness of Asia where General Eisenhower refused to go for the relief of the besieged French at Dien Bien Phu? Here are the reasons as I see them:

We did not give due regard to the history, character and traditions of the 30 million Vietnamese people.

We failed to pay intelligent respect for the struggle of those ancient, culturally distinctive and durable people to free themselves from the domination of invading Mongols, the Chinese, the Japanese and the French over the last 2,000 years.

We ignored the inherent and inescapable limitations of involving ourselves, with our machines of modern warfare, in the civil strife of an Asian society, 10,000 miles from home, at the vortex of a social upheaval that had within the last two decades thrown up a militant, menacing and dominant power of a half-billion people—Red China.

We did not reckon with the sophistication, independence and enlightenment of the college-age generation of Americans—the most worldly, best-informed and least tractable generation in our history.

We paid too little attention to the subsurface but powerful and prevalent abhorrence of modern weaponry and warfare as projections and instruments of foreign policy.

And finally, we did not anticipate the deadly fallout of distrust, contempt and suspicion for the word, the judgment and the motives of this country's leaders.

The staggering mood of frustration among so many people of this country arose from the war. But it was intensified by the convergence of other crises in our national life.

The shocking increase of crime—an offshoot of social mobility and the scandalously unfinished business of urban reconstruction and reform.

The explosion of the Negroes' aspirations and resentment, and their desperate catch-up quest for identity, social justice, and a fair chance as equal citizens of a free country.

Without the war and its byproducts of divisiveness and nihilism, our society would still be guilt-ridden and restless. With the war—its toll of blood and treasure and its forced tithe of resources—the American people are gravely threatened with loss of confidence in their system, a decline of faith in their constitutional principles and a dilution of trust in their institutions of government.

I personally observed a President of the United States reduced from a strong, optimistic, humane and immensely talented chief executive to a humbled, addled and rejected politician, Lyndon B. Johnson was badly informed. I think he was cut down and left vulnerable by the miscalculations of advisers in both the military and diplomatic cadres under his command.

I witnessed the slow and painful recognition of error among some of the men close to Mr. Johnson.

Proud, vain and at times overpowering, Lyndon Johnson listened to the rising chorus of dissent. But having tested and tested again the incomparable intelligence available to him, President Johnson—convinced of the weighted accuracy of that guidance, and deeply persuaded of the righteousness of his course—would not and could not measure the real scope and depth of that dissent. He clung to the belief that the protests were largely the work of Commies and their dupes, visionary academicians and their misled students and a mischievious press.

Now it is Mr. Nixon's war—to enlarge, to diminish or to end. I believe he is trying, as Mr. Johnson tried, to find a way out—and with results that are measurable if not sensational.

Those who are dogmatically demanding a precipitous and total withdrawal are ignoring dangerous consequences of such action to the internal political stability of this country, in my opinion. But Mr. Nixon should be aware that further deception, rationalization or manipulation of public opinion to sugar coat the bitter pill of American disengagement in Vietnam would be a cataclysmic mistake—not only for Mr. Nixon—just one expendable citizen among us—but for all the people of this nation. And the people, God bless 'em, are what count.

NEIGHBORHOOD LEGAL SERVICES PROGRAM SHOULD NOT HAVE GOVERNOR'S VETO

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. MOORHEAD. Mr. Speaker, someone once said, "Laws grind the poor, and rich men rule the law."

As legislators, I am sure most of us in Congress would not want this criticism leveled at us, and yet sometimes one has to wonder.

A recent move by the senior Senator from California would amend the antipoverty authorization bill to provide for a Governor's final veto over activities of the neighborhood legal services program.

Writer William Raspberry ably describes the havoc that would result across the Nation if this amendment is allowed to become law, in his column in the Washington Post of Friday, October 24.

The neighborhood legal services program was included in the war on poverty so that there would not be one law for the rich and one for the poor. It provides legal representation for the disadvantaged, research into the legal problems of poverty, education for the poor regarding their rights and responsibilities, and in general tries to help people improve their circumstances.

In Pittsburgh, specifically, a team of 24 attorneys assists an average of 1,700 clients in consumer problems, housing, bonding, social security, veterans', and family problems each quarter.

I certainly intend to express my opposition to the chairman of Education and Labor Committee concerning the Murphy amendment, and oppose it on the floor should it be offered when the House debates this legislation.

The Raspberry editorial is included herewith in the RECORD for the attention of my colleagues:

DEVELOPMENT OF POVERTY LAW IS THREATENED BY SENATOR MURPHY

(By William Raspberry)

It is easy to confuse the function of the Neighborhood Legal Services with that of other lawyers—say public defenders or court appointed attorneys—who handle legal matters for poor people.

Much of the NLS work is precisely like that of the old-line programs, providing routine legal representation for people who can't afford to purchase it.

But if that were all there was to it, NLS would not have become the vital force it is. Nor, of course, would it have aroused the hackles of Sen. George Murphy (R-Calif.).

Where NLS has made its mark is not so much in the routine practice of law as in the development of poverty law.

Take landlord-tenant law, which had undergone vitually no change at all over the past hundred years. Then came the Neighborhood Legal Services with its suits on behalf of poor tenants, suits which are beginning to clarify the rights of tenants in courts that have traditionally been the hand-maidens of landlords.

Much law is being made in the process. It is no longer, for example, just a matter of having a judge consider whether an eviction has been properly carried out in terms of sufficient notice and that sort of thing.

The courts had always acted on the assumption that a landlord could evict, absent a lease, anytime he chose to do so. They had never addressed themselves to such questions as retaliatory evictions against tenants who exercised their right to complain about housing code violations or to organize tenants' groups or otherwise "make trouble" for landlords.

Now it seems clear that there is underway a legal trend that will lead to unprecedented protection of tenants, rich as well as poor, against the whims of their landlords.

This sort of case law development is difficult enough for litigants who can pay for good legal counsel. It would be impossible for poor people except through something very much like the Neighborhood Legal Service.

Much of the work done by NLS attorneys has been directed at reform of state and local government institutions—the attack on welfare residency rules, for example.

And therein lies the real mischief of Sen. Murphy's amendment to the antipoverty authorization bill. The amendment would give governors final veto power over NLS activities. (Under present law, a governor's veto can be overridden by the Office of Economic Opportunity.)

Can you imagine the governor of New York (or the mayor of Washington, D.C., for that matter) not exercising his veto over NLS attempts to knock down the one-year residency requirement for welfare recipients? Or the governor of California holding still while NLS lawyers attacked his attempt to whack $16 million off the State's Medicaid program?

These are matters of vital interest to poor people, even when they run counter to what state officials see as their own best interest.

The Murphy amendment says it's all right for poverty lawyers to act so long as they don't interfere with the institutions and attitudes that are keeping poor people poor. If the amendment is adopted, it could reduce the NLS to the sort of bandaid legal assistance that court-appointed lawyers provide.

Fortunately, opposition to the Murphy proposal is coming from such irreproachable sources as the board of governors of the American Bar Association and the National Legal Aid and Defender Association.

Congress' choice is either to kill the Murphy amendment or to kill effective poverty law.

RELIGION REMAINS TARGET IN RUSSIA

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. DERWINSKI. Mr. Speaker, as the Soviet propaganda machine labors to create an image of their being "the good guys in the white hats," it is necessary that an objective rather than dreamy attitude be maintained toward the Soviet Union. A column by the distinguished international correspondent of the Copley Press, Dumitru Danielopol, in the September 23 Elgin (Ill.) Daily Courier-News has just come to my attention. The information contained in the article is, I believe, essential to our understanding of true conditions in the Soviet Union.

The article follows:

[From the Elgin (Ill) Daily Courier-News, Sept. 23, 1969]

INTERNATIONAL SCENE: RELIGION REMAINS TARGET IN RUSSIA

(By Dumitru Danielopol)

WASHINGTON.—Religious persecution inside the Soviet Union no longer captures headlines, but it proceeds in grim inexorable fashion. From time to time we are reminded of this sordid Russian tragedy.

Two Baptist ministers, Trofim Feidak and Vladimir Vichinsky, leaders of a 500-member Baptist community, have been sent to labor camps for five years for conducting religious services.

In the Ukraine, Catholic Archbishop Vasyl Velychkovsky, who had been released after many years in prison camps, was arrested again last January along with numerous priests, monks and nuns.

The National Council of Churches recently reported that "the continuing harassment and persecution of Christians and Jews is an alarming reminder that freedom of religion in the Soviet Union is still under severe limitations."

Those "limitations" are increasing.

The Kremlin has apparently decided it must step up anti-religious efforts for its own survival.

A half century of preaching atheism and persecuting all forms of religion, Soviet leaders find has failed to uproot the Russian's convictions. Even the younger generations who were never supposed to hear about religion have shown a disturbing interest in the churches of their fathers.

The Soviets, of course, blame their failure on the West.

"During recent years the anti-Communists have noticeably increased their religious propaganda in the ideological battle against the Soviet Union and other Socialist countries," says one Moscow propagandist.

"Liars, provocateurs and falsifiers of all shades, coming from Imperialist centers of propaganda infringe Soviet laws and social standards by encouraging religious groups and individual fanatics."

V. Suyarko, writing in the government Nauka i Religia, says:

"It is of special importance to pursue the process of change and elimination of faith in God . . . the turning away from religion . . . and bring the Soviet citizens who are still living in captivity of religious illusions along the road of spiritual liberty . . ."

The Kremlin will learn that this resurgence of religion in the Soviet Union has nothing to do with "imperialism."

It springs from a deep religious strain in the peoples of Russia and it reflects their protest against the fossilized, reactionary tyranny which claims the right to think, to speak and to decide for all men.

The most significant return to Christianity is that Stalin's own daughter Svetlana Alieluyeva who was baptized into the Christian faith in May 1962 long before she ever thought of leaving the Soviet Union.

DR. JOHN A. GRONOUSKI

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. PICKLE. Mr. Speaker, the University of Texas has been fortunate to secure the services of Dr. John A. Gronouski as dean of the new Lyndon B. Johnson School of Public Affairs.

Dr. Gronouski, we will remember, is the former Postmaster General and Ambassador to Poland. I am certain my colleagues remember Dr. Gronouski's term as Postmaster General. We came to respect him as a man and administrator, and an outstanding educator. He brings to Texas a wealth of experience. In talking with public administrators, I have learned that this new school of public affairs holds the promise of becoming the Nation's top training ground in this vital field. We are, indeed, honored to have gained such a qualified dean as Dr. Gronouski.

I include in the RECORD the following article from Texas Times, a publication for the University of Texas system:

GRONOUSKI NAMED TO PUBLIC AFFAIRS DEANSHIP

Dr. John A. Gronouski, who has been U.S. postmaster general and ambassador to Poland, is the new dean of the Lyndon B. Johnson School of Public Affairs at The University of Texas at Austin.

Dr. Gronouski's appointment was approved Sept. 12 by the Board of Regents on recommendation by UT Austin President Norman Hackerman and Chancellor Harry Ransom of the UT System.

"The University and the School are indeed fortunate in Dr. Gronouski's acceptance of this appointment," Dr. Ransom said. "He brings excellent academic credentials to the post, combined with broad experience in administrative government at the state, national and international levels."

HOLDS JOINT APPOINTMENT

Dr. Hackerman said Dr. Gronouski's teaching experience in the academic community and his professional experience as postmaster general, ambassador to Poland, and tax commissioner for Wisconsin, give Dr. Gronouski a fine base from which to develop an excellent program and recruit faculty for outstanding students the school will attract.

Dr. Gronouski, 49, will hold a joint appointment as professor of economics at UT Austin. His appointment as dean and as professor of economics was effective Sept. 15.

The LBJ School of Public Affairs will offer graduate level programs in public administration and service. The school, which will be in the north Section of Sid W. Richardson Hall, is adjacent to the Lyndon B. Johnson Presidential Library.

FIRST STUDENTS IN 1970

The school will accept its first students in September, 1970. The Regents also approved a Master of Public Affairs degree program for the school, subject to approval of the Coordinating Board, Texas College and University System. The school will eventually have several hundred students.

Dr. Gronouski, a native of Dunbar, Wis., earned a bachelor's degree at the University of Wisconsin in 1942.

He entered the Army Air Corps in April, 1943, as a private. He became a navigator, flying 24 combat missions over Europe. He was discharged as a first lieutenant.

Dr. Gronouski returned to the University of Wisconsin, earning a master's degree in 1947. Prior to receiving a Ph.D. from the same institution in 1955, he taught at the University of Maine and served as a research associate for the Federal of Tax Administrators.

ARTICLES, STUDIES

The author of numerous articles and studies, Dr. Gronouski joined the faculty of Wayne State University in Detroit in 1957, teaching public finance, state and local finance, and money and banking.

Dr. Gronouski in 1959 won a Civil Service appointment as research director of Wisconsin's Department of Taxation. In October, 1959, he became executive director of the Revenue Survey Commission and in January, 1960, was named State Commissioner of Taxation.

The late President John F. Kennedy nominated Dr. Gronouski as postmaster general on Sept. 9, 1963.

He was reappointed by President Johnson as postmaster general and sworn in in February, 1965.

In August, 1965, President Johnson announced that he was naming Dr. Gronouski ambassador to Poland.

Warsaw has been the contact point for the U.S. with Communist China. In his role as ambassador, Dr. Gronouski was the United States' representative in the "Warsaw talks" held periodically with the Chinese ambassador in Warsaw. He also was as deeply involved in efforts of the U.S. government through the Polish government to induce North Vietnam to engage in peace negotiations. Warsaw contacts were used extensively during the bombing pause at the Christmas season, 1965, in the winter of 1966 and during the period early in 1968 leading up to the Paris peace talks.

HONORARY DOCTORATES

Dr. Gronouski, who holds honorary doctorates from Alliance College and Fairleigh Dickinson University, serves as a trustee of the John F. Kennedy Library. He also is a member of the Polish Institute of Arts and Sciences, honorary co-chairman of the committee for the endowed chair in Polish studies at the University of Chicago, and a member of the board of trustees of the National Urban League.

Dr. Gronouski is married to the former Mary Louise Metz. They have two daughters, Stacy and Julie.

ON REORGANIZING THE NAVY DEPARTMENT—ROBBING PETER TO PAY PAUL?

HON. SHIRLEY CHISHOLM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mrs. CHISHOLM. Mr. Speaker, for the past several months I and several other Members have been waging a losing battle with the Navy Department over the transfer of activities from the Naval Applied Sciences Laboratory in Brooklyn to other areas of the country, notably California and Maryland.

Since the Navy failed to ever justify the

transfer on fiscal grounds one must suspect that there were other reasons. The ad hoc Committee To Save the Naval Applied Sciences Laboratory has come up with some interesting statistics which show that while the Department of Defense employment figures have increased nationwide by 30 percent between the years 1960 and 1968, in New York State there has been a decrease of 40 percent. Those figures are submitted below for the RECORD:

DEPARTMENT OF DEFENSE EMPLOYEES, BY STATE

States	1960	1961	1962	1963	1964	1965	1966	1967	1968
Alabama	36,040	35,950	35,384	33,485	33,147	32,160	31,986	27,212	26,040
California	139,710	144,765	142,166	138,052	135,227	145,077	168,951	175,246	174,772
Colorado	14,002	14,716	14,813	14,577	14,427	14,985	16,716	17,576	17,439
Florida	23,589	24,246	24,147	24,407	24,475	25,708	30,301	31,624	32,468
Georgia	31,754	32,666	34,160	33,004	33,393	34,815	43,437	44,024	46,612
Hawaii	18,855	18,848	18,545	18,390	18,626	29,551	21,742	22,831	22,767
Illinois	27,978	28,495	30,059	28,332	28,479	27,544	29,972	30,711	31,083
Indiana	10,806	11,258	11,651	11,787	11,986	12,756	15,671	17,123	18,471
Kentucky	11,302	12,283	12,215	11,533	11,548	13,064	17,027	17,331	16,658
Maine	11,574	11,550	11,137	10,478	9,087	9,093	10,037	10,545	10,32

DRAFT REFORM

HON. JOHN J. DUNCAN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. DUNCAN. Mr. Speaker, the President's draft reform legislation gives us an opportunity to do something constructive for our young people—to minimize the disruption of the draft on individual lives and to make it as fair as possible.

Basically, the President proposes to reduce the period of prime vulnerability to the draft from up to 7 years to 12 months. And he proposes to select men for induction, from among those classified as available, on a fully random basis, giving all an equal chance.

It is my conviction that there is a broad national consensus as to the desirability of the so-called prime age group system, with prime vulnerability of 12 months. Under it, selections for inductions would be made each year from class I–A men aged 19 at the start of the year and those whose college or other deferments expire during the year.

We have got to recognize that there are more men available and qualified in each class of 19-year-olds—and those coming off deferment—than are needed for service. The fairest way to make the selection in these circumstances is by a fully random system.

Enactment of the President's legislation would permit him to provide for random selection—the fairest, the simplest and most understandable method of initiating a prime age group system in present and foreseeable circumstances.

DRAFT REFORM

HON. W. E. (BILL) BROCK

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. BROCK. Mr. Speaker, I would like to add another thought in connection with the President's request for reform of our present draft system.

Not only does equity require a change from our present requirement of choosing the "oldest first," as the President noted in his message, but the history of the current GI bill education and training program also suggests that the older a veteran is, the less likely he is to take advantage of his education and training entitlement after he returns from service.

Young Americans should have their period of prime vulnerability to military service reduced from 7 years to 12 months. They should also know that, if they are called into service, they can look forward to resuming their education at a relatively young age when they return from service; an education provided them by a grateful Nation under the GI bill.

It seems to me that those young Americans liable for military service would prefer having their period of liability shortened. And I am certain that our young citizens who cannot afford to go to college would much prefer completing their service obligation at the youngest possible age so that they could enter college after service under the GI bill and still be competitively young with their contemporaries when they graduate.

This is just one additional reason the draft reform recommended by President Nixon should be enacted by the Congress.

AMERICAN LEGION SEEKS CURB ON FLOW OF SMUT TO MINORS

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. DULSKI. Mr. Speaker, the need for action to curb the flow of smut to homes where minors reside is fully recognized by our Committee on Post Office and Civil Service.

Hearings on various proposals, including my own, now are underway before our Subcommittee on Postal Operations, whose chairman is the gentleman from Pennsylvania (Mr. NIX).

The demand for action is overwhelming. Every Member of Congress is receiving complaints almost daily from rightfully indignant constituents.

Because of the traditional privacy of first-class mail, effective law is not easy to develop.

PUT ONUS ON DISTRIBUTOR

What we need to do—and what I propose—is to put the onus and the responsibility directly upon the smut distributor.

I believe our approach will work and I appreciate the support which my proposal is receiving.

In particular, I am appreciative of the very helpful and well-prepared statement which was presented to the subcommittee the other day on behalf of the American Legion.

This organization—of which I am proud to be a member of one of its larger posts—has been in the forefront of this fight right along and once again has made a valuable contribution to our legislative deliberation.

Mr. Speaker, as part of my remarks, I include the text of the statement made to our subcommittee by Chairman Earl Franklin, Jr., of the Legion's National Child Welfare Commission:

STATEMENT OF EARL FRANKLIN, JR., CHAIRMAN, NATIONAL CHILD WELFARE COMMISSION, THE AMERICAN LEGION, BEFORE HOUSE SUBCOMMITTEE ON POSTAL OPERATION, OCTOBER 22, 1969

Mr. Chairman and Members of the Subcommittee:

On behalf of The American Legion I thank you for the opportunity to place on the record our views on the dissemination of obscene and pornographic materials.

And may we say at this point, gentlemen, we do have some understanding of the tremendous complexity and intricacy inherent in this subject.

Like many other groups, including the Congress of the United States, The American Legion has wrestled with this problem in its present context since 1946.

As an organization we have adopted no less than twenty resolutions since that time and have worked with many different civic groups in an attempt to find an appropriate solution to this vexing and needless scourge which has and is inflicting itself upon our society.

Yet, we find today's tide of filth defies description.

FAVOR PROSECUTION

The American Legion deplores the further extension of the printing, publishing and pandering by purveyors of these sexually provocative publications, whether they are distributed through the mails or in other ways.

We are in favor of prosecuting these merchants of filth.

We endorse the position of Professor Harry Clor who, is in a book published last spring titled "Obscenity and Public Morality," indicated true freedom of press must be preserved, but "obscenity is an evil of sufficient magnitude to require the attention of organized society."

Mr. Chairman, The American Legion, as an organization, does not assert that it qualifies as an expert in constitutional law, but we do not believe one has to be a expert in constitutional law to recognize and discuss pornography.

In order to save the time of this Subcommittee and to avoid repetitive testimony you have undoubtedly received from other sources, let us qualify ourselves as having at least some knowledge of the subject in this way.

LEGION HAS DONE HOMEWORK

We have reviewed the relevant sections of Title 18, United States Code Annotated. We have examined Federal law pertaining to the postal service in 39 U.S.C.A. We are acquainted with the series of decisions of the Supreme Court in this area.

We are familiar with the July 1969 Progress Report of the Commission on Obscenity and Pornography. We have read many treatises in various University Law Reviews. We have talked with postmasters of different sized cities and are aware of the constitutional lights and shadows involving First Amendment protection versus Federal censorship.

We realize that although some would make the Postal Department the "whipping boy" and others would make the same department the "nation's censor," the mailing of objectionable material is but one facet of the whole problem.

We have discussed the subject with literally thousands of people at our Child Welfare Conferences held annually in five different areas of the United States. We have examined many of the approximately 140 bills introduced by about 175 members of the Congress in this session.

We have read studies of "cause and effect" and have been unable to determine they are conclusive. We have read the testimony of the Postmaster General given on July 8, 1969, before a Subcommittee of House the Committee on Government Operations.

These, Mr. Chairman are some of the things The American Legion has done in order to have a better grasp and understanding of a very complex and intricate problem.

LEGION RECOMMENDATION

In order to contribute by way of active participation to the solution of this problem as an organization, The American Legion has in recent years tackled the problem in three specific ways:

First, we have recommended to our members and to the general public that when they receive unsolicited offensive and objectionable material, they immediately contact the post office with the request that they, as addressees, receive no further material of this nature through the mails.

The second recommendation that we have made to our members is that they give strong support to their police departments, their prosecuting attorneys, other law enforcement officials and the Postal Department and show a willingness to testify in cases in which they have first-hand knowledge.

We likewise suggest that our members encourage the prosecuting attorney in each of the states to take cases to the grand jury if he is undecided in the matter of "contemporary community standards."

The third thing we have done as an organization is to transmit to our various American Legion state officials a copy of New York Penal Law No. 484–h which has been declared constitutional by the United States Supreme Court.

CHILDREN AND YOUTH PRIMARY CONCERN

As I am sure this Subcommittee is aware, this law addresses itself to the exposing of minors to "harmful materials." As a National Child Welfare Commission, children and youth are our primary concern.

In our discussions with our members across the nation we find increasing concern, indignation and anger because so many advertisements which they consider obscene are mailed to juveniles.

We find an increasing hostility, not only to those who mail such material, but also to those, who in the judgment of some of our members, permit it to continue.

We find in discussions with postmasters of different sized locations that this is a problem faced by rural areas, small towns and large cities alike.

We find that in perhaps the last three years there is an increase of possibly 100 per cent in the amount of objectionable materials being mailed without solicitation.

We find, as this committee is undoubtedly aware, mass mailing techniques have been adopted by many distributors.

LAW ON BOOKS 100 YEARS

Under Federal law for more than one hundred years it has been a criminal offense to send obscene material through the mails.

On July 8, 1969, the Postmaster General testified that although some 400 commercial dealers were under investigation currently, an estimated 95 per cent of all complaints resulted from the indiscriminate direct mail advertising of perhaps 15 major promoters.

It is difficult to understand and to us it seems almost unbelievable that in a Nation of over 200 million people, many must suffer what to them is the indignity of unsolicited obscenity because of the actions of some 15 individuals or corporations.

These statistics cause one to wonder what has really happened to law enforcement in the United States.

It is not difficult to understand, however, after reading a number of the decisions of the United States Supreme Court, why there is confusion in the minds of postal officials, police officers, prosecuting attorneys and other law enforcement officials in the area of pornography and smut.

NEED TO DISPEL GRAY AREA

That there is confusion is, in our judgment, beyond debate.

It appears to us the apparent and obvious reason for this confusion is that insufficient guidelines have been developed to dispel the "no man's land"—"the gray area"—in the minds of both the general public and particularly those charged with law enforcement.

Frankly, we have about reached the conclusion that in matters of determining what is and what is not obscene, the Nation is not much further along than was chemistry in the days of alchemy.

In reading arguments both pro and con, we have many times been reminded of the medieval philosophers who, by repute, arduously debated how many angles could stand on the point of a pin.

We do not mean to be facetious for the fact remains that no official body has yet been willing to specifically define what is obscene and what is not. No one has been willing to delineate between what is constitutionally unlawful and what is morally sinful.

JOB FOR CONGRESS

Since to us it seems to be essential that such distinctions be made in order to establish guidelines for the direction of law enforcement officials, the courts and other agencies of Government, it would appear that the Congress—as the elected representatives of the people—would be the logical body to make this determination.

That this is a difficult job certainly goes without saying, but in the history of this great Nation, the Congress has debated and found solutions to many difficult issues that were acceptable to the majority of citizens.

It is the position of The American Legion that while it, too, may not be able to define hard core pornography, it, like Mr. Justice Potter Stewart, "knows it when it sees it."

A great many of the bills introduced on this subject in the Congress contain one or more sections which provide that any person who mails sexually oriented advertisements must place his name and address on the envelope or cover and "such mark, symbol or notice as the Postmaster General may prescribe."

VIOLATE FIFTH AMENDMENT?

Although some of the bills carry provisions for restrictive use of such information as may be provided by the special mark or symbol, we, as laymen in a lay organization, wonder if the courts might not take the position that such a requirement violates the Fifth Amendment.

Also in some of the bills that have been introduced is a provision for amending Chapter 51 of Title 39, United States Code.

Basically, such suggested amendment would make it possible for anyone on his own behalf or on behalf of children under 19 years of age who reside with him, to file a statement with the Postmaster General to the effect that he desires no sexually oriented advertisements to be sent to him through the mails from any source.

The Postmaster General would maintain a list of the names and addresses of such persons, such list to be made available to any person on conditions established by the Postmaster General including such service charges as he determines.

Any mailing of objectionable material to anyone whose name appears on the "prohibited" list would be cause for civil action.

ADMINISTRATIVELY FEASIBLE?

Mr. Chairman, we believe such amendment of the United States Code might be effective in helping stop the flood of material now being mailed.

However, we want to quickly point out that we are in no position to determine if such a plan would be administratively feasible.

We know from our own experience in mailing *The American Legion Magazine* to each r ember on a monthly basis that we have about 25,000 changes of address per month. Based on current membership figures this means that about .9 per cent of our members move each month.

Should about the same percentage of persons moving hold good for the population in general we would visualize a tremendous administrative job for the Post Office Department in keeping such "prohibited list" up to date.

If one assumes that such a list could administratively be established and maintained, we believe it would be of value in several ways.

First, it would remove many names from present mailing lists used by distributors for we feel sure many organizations such as The American Legion, religious groups and civic organizations would make a concerted effort to get families with minor children to place their names on the post office list.

PUTS BURDEN ON DISTRIBUTOR

It would also put the "burden of proof" on the distributor rather than the receiver. Under present regulations it is theoretically possible for one person who does not wish to receive such material to be forced to file several hundred complaints with the post office.

It would increase the administrative costs of the distributor for not only would he be charged a service fee to obtain the post office list but, likewise, he would have to check his own mailing lists against the post office list.

Regardless of whether the procedure we have been discussing is adopted as an amendment to Title 39, United States Code, we still believe, Mr. Chairman, that the first order of business is to specifically define what is and what is not obscene.

As we mentioned earlier, we believe this is the responsibility of the elected representatives of the people.

We recognize that Congress is confronting a time consuming job. We suspect, however, that the members of Congress on both sides of the aisle have been and are receiving a large volume of correspondence on this subject from their constituents.

As an organization, The American Legion believes that despite the difficulty of the subject matter it is not insoluble. We also believe that the Congress can develop guidelines and definitions that will be acceptable to the majority of the citizens of the United States.

Again, Mr. Chairman and Members of the Subcommittee, let me express the appreciation of The American Legion for the opportunity to place our views on the record.

OPERATION BETTER BLOCK

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. WOLFF. Mr. Speaker, American cities in recent years have found it increasingly difficult to be described in terms other than "urban blight." From this point of departure, observers then go on to cite rising crime, air pollution, traffic snarls, strikes, growing slums, and a host of other evils as proof that the destiny of American cities is irretrievably bleak.

This Mr. Speaker is both unfortunate and unfair. For as long as persons can find involvement in city betterment there is a future for our cities.

New York, as you know, has been particularly vulnerable to criticism. For as a world center, and heir to many titles, it has also gained a reputation for being a paragon of problems.

Surprisingly enough, and quite rewardingly I might point out, this very city has also given rise to the unique project which very well may lead to the rejuvenation of not only this city, but cities across the Nation as well. This is the renewal project called Operation One Better Block.

The plan, in effect, makes use of citizens' individual talents for the improvement of the particular neighborhood in which they live.

The remarkable success of this project should act as incentive to Congress to supply adequate funds for urban renewal and similar programs. For this Operation Better Block is testimony to citizen willingness to aid efforts to improve our cities.

A noted newspaper columnist and a close friend of mine for many years, has been very instrumental in the accomplishments achieved by this project. Miss Sylvia Porter, whose excellent column is read throughout the country, by continually reporting on the success of various neighborhood projects has spurred increased and dedicated efforts in Operation One Better Block.

Recently, another close and respected friend of mine, Ed Wimmer, a radio broadcaster for radio WPFB had a program dealing with this special urban renewal project. Since it warmly and comprehensively provides insight into the success of personal involvement in urban renewal, I would like to extend my remarks to include the transcript of Ed Wimmer's broadcast in the RECORD. I feel it confirms that our cities can survive as long as American citizens contribute their abilities to curing metropolitan ills.

The remarks follow:

"OPERATION ONE BETTER BLOCK"

(By Ed Wimmer)

In a recent broadcast over this microphone, I spoke to you about a Sylvia Porter column entitled "Operation One Better Block," praising a war going on in New York City against dirty streets, littered lots, ugly store and home fronts, open garbage cans, or any other kind of ugliness that individual citizens could attack.

According to Miss Porter (whose popular column is read by more men than women) "Operation One Better Block" is a clean-up, brighten-up drive that can start with one carpenter, one plumber, one clerk, housewife, teen-ager landlord, teacher, janitor, or businessman, making it individual, collective and contagious.

One Negro lady, Sylvia reports, spoke admiringly of her teen-agers who "cleaned up a vacant lot, and with a little financial help and guidance from guidance officials, turned it into a playground." Others pointed to flower boxes, neat fences and bright window panes. A start. Miss Porter says by the end of this year there should be "300 Operation One Better Blocks" in New York alone, if early enthusiasm and drive can be maintained.

Since 1947, our National Federation of Independent Business has been needling landlords, renters, small businessmen, taxing authorities, city planners, home builders, highway engineers, architects, building materials suppliers, painters, carpenters, plumbers, Chambers of Commerce, Congress, and local, state, and federal authorities all over the country, to institute programs aimed at ending blight. Ending it for the sake of people's health. For the sake of children—and as a means of saving countless thousands of small businesses so vital to the social and economic well-being of the nation.

New York is the biggest and has the worst problems of any city in America. Its budget approaches $7 billion. The air is so foul, reports one expert, that an average family spends $800 a year for medicine, cleaning, and hairdos. Crime records show homes robbed as if by schedule. Children are confined to their homes on Halloween, for other kids rob and mug them. Fifty per cent of known drug addicts are in New York. Jails are filled. Police protection has broken down. Courts are years behind in settling criminal cases. Teenagers roam the streets by the hundreds of thousands.

There are 1,000,000 on New York's relief rolls. Relief loads are increasing at the rate of 20,000 monthly. If the welfare recipients were moved out of New York City, they could become the *eighth* largest city in the U.S.

Behind these conditions, however, there is an enormous power for good in this great city. It can be found behind the wheel of a taxicab. In the vast office buildings and in the city's schools. On the police force. Millions of kids growing up who, if their intellectual capacities to meet new challenges are developed, will respond to such terms as Justice, Honor, Self-reliance, and Brotherhood, and to phrases like "Freedom of opportunity for all."

Where the biggest gap in New York's resistance to social, economic and political decay exists, I think, is in the colossal indifference of the people who head the giant corporate combines, huge banking institutions, chain stores, discount houses and international unions. They remind me of the biggest businesses of Calcutta, India, where only one per cent of $4 billion in profits in 1967, was given over to the social ills of a city where millions die of hunger, and in a country that has received some $10 billion in U.S. aid.

Imagine what could be achieved in social, economic and political reforms if the power represented in New York's corporate-banking and labor-union dynasties was directed against the evils threatening the city's very existence. Instead of devotion to people, however, there is only devotion to building bigger corporate combines, bigger bank mergers and holding companies, greater union power, and bigger skyscrapers to house them, so their emissaries can move across the nation, buying more farms, more corporations, more banks—creating bigger unions and greater centralization in government.

When we view the whole New York scene, and think about the power complex that the city represents, "Operation One Better Block" takes on a pitiful, insignificant resistance to the inevitable. So long as one human being is standing against the tide, however, resistance is never "pitiful or insignificant." It is magnificent, and it is for this reason that New York's press, city officials, educators, religious leaders and every other center of influence should give the movement support.

During the past ten years, the federal government has aided cities in bulldozing thousands of people out of home and business, letting the majority shift for themselves, many moving into fine neighborhoods where they create new slums, with only two out of five small businesses able to relocate and begin anew. An auto-dealer member of our organization decried this process and wondered why the urban renewal people didn't take a block or two at a time, weed out the worst and preserve the best, moving the displaced back into their neighborhoods as the projects proceeded.

Such a process may have been a little more costly. There may have been added disruption to rehabilitating large areas, but the people would have remained where they had chosen to live, and the small businesses could have held their clientele and continued to serve their community. It is true that the bulldozer theory is being abandoned in favor of "save the good and get rid of the bad" in slum or semi-slum housing, but the progress being made is so slow that, according to George Romney, it will take 40 years to make a dent in the problem.

Under such circumstances, what can self-reliant citizens do, but follow the example of "Operation One Better Block," and start on their own housing, on their own stores, factories, yards, streets, apartment buildings, sidewalks, churches, litter and weed-filled vacant lots, and thus begin millions of little projects that in the end may save us all from turning everything over to federal caretakers.

In one of our community beautification campaigns, a grouchy shoe dealer ready to throw in the towel was induced to put down a bright rug, modernize the front of his store, re-upholster his chairs in bright colors, and add some flowers and music. In thirty days he was smiling all over the place with a 300 per cent increase in his business. But this wasn't all. The steps he took led to modernization of the entire block.

The Secretary of a Chamber of Commerce in Pennsylvania writes:

"We see it, but we can't believe our eyes. After your talk the whole downtown came

to life. There are seven modernization projects underway. Two vacant corners are being black-topped for parking. Arrangements have been made to flower-box the store fronts, and the hotel has a contractor beginning modernization next week. The press has gotten behind us for the first time we can remember."

Scores of communities report similar demonstrations of local initiative, begun by our Federation, and we have asked Congress and municipal governments to develop tax incentives. An incentive such as a city giving owners or renters a five-year moratorium on tax increases when they upgrade properties. There is also the almost disheartening job of getting contractors, painters, fixture companies, architects, unions, and others who depend on upgrading properties and businesses for a livelihood, to get out of their swivel chairs and show people what they can do for themselves.

Color has become a principal weapon of defense against decay. It is a way of life. It builds morale in the conduct of small businesses, wins customers for small business, attracts young people to old neighborhoods; and what family is happy in a drab, darkened household? What community is moving ahead that lacks color and light?

Jefferson once said that "all things should be planned wih an eye to its effect upon the human spirit; we should surround ourselves with a maximum of beauty." After a long and careful study, a French scientist claimed that "high tension, heart action, anxiety," et cetera, can be reduced in surroundings painted in the right colors.

Compare the inside of most commercial aircraft with the inside of a railroad passenger car, and you will see why brightly costumed airline hostesses have bright smiles, and why passenger service on trains has all but died. Even bad food doesn't taste as bad in a colorful restaurant as it does in most of the eating places that mark our older communities.

In advocating an all-out effort of this kind, I realize the obstacles in many cases seem insurmountable, but anyone can improve his surroundings by improving his attitudes, without first waiting for someone else to change his or her thinking.

After the so-called "war" in Vietnam is over (if we can avoid another involvement to which we have already agreed on some forty-odd fronts), and if we can prevent ourselves from being stampeded into more rounds of huge defense expenditures, there will be enormous sums available to attack the slum problem, build new cities already on the drawing board, and get other projects underway to employ the victims of peace.

Until such a change is upon us, however, we had better realize right now that the ghettos and the campuses aren't going to wait for "peace on earth, goodwill to man" promises to be fulfilled later. Agitators won't just fade away. All reasons *why* any self-help started in blighted areas must receive all the outside help we can muster, and now.

If private initiative is mustered in this same period for block-by-block attacks on property deterioration, we will have something going that can pick up steam without waiting for cessation of hostilities. Thousands upon thousands of business streets can be saved, can draw trade away from the huge chains taking over everything in sight, so we have a lot more at stake than the usual chatter of too many Chamber of Commerce officials about painting up for profits.

I've said all along, that when a small business dies because of run-down conditions, lack of community pride, or absence of personal ownership responsibility, a part of democracy dies with it. If the people who have sat back and watched local ownership shrink to skeleton proportions in a growing number of towns and cities will respond to the "Operation One Better Block"—now, who knows but what we may have a miracle by the tail.

Jane Jacobs, famous author of "Death and Life of Great American Cities", a longtime critic of the bulldozer theory, and friend of small business, defends the need of re-developing all areas of our older towns and cities, but she says that when a city heart stagnates or disintegrates, a city as a "social neighborhood" begins to suffer its worst setbacks. Her own words:

"Without a strong and inclusive heart, a city tends to become a collection of interests isolated from one another. It falters at producing something greater, socially, culturally and economically, than the sum of its separated parts."

There is much talk today about building great numbers of NEW cities, and of abandoning the old, but what kind of business will monopolize the new if not the chains, so what have we gained as "a nation"? We need a new tax structure, and an aroused, enlightened public opinion, and our chances of winning both will depend on how deserving we become.

PRIVATE POWER COMPANY PROVIDES CITY LEADERS

HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. COLLINS. Mr. Speaker, one of the greatest assets in any community is to have privately owned and operated public utilities. In our area, we are fortunate in having our light, gas, and telephone all owned and managed by private enterprise.

These leaders not only do an efficient job of operation, but they add so much in building stronger communities. During the past decade Dallas County has been one of the fastest growing areas in America. The privately owned and operated utilities in Dallas County have been able, through long range planning and forecasting, to meet the rapidly increasing demands on their systems.

Dallas Power & Light Co. is an investor-owned electric utility, served by four electric generating stations. These stations have a total generating capability of 2,206,000 kilowatts today compared to 1,131,000 kilowatts a decade ago, and two more plants are now under construction.

The average annual kilowatt-hour use per residential customer is considerably in excess of the national average, having reached 9,189 kilowatt-hours at the end of September 1969. This compares to 4,289 10 years ago. The average cost per residential kilowatt-hour at the end of September 1969 was 1.85 cents compared to 2.31 cents at the end of September 1959. In a period of rising costs, efficiency and good management have provided electricity savings.

And, in the power company, we see another strength that goes into community building. This week, I attended the meeting of the Oak Cliff Chamber of Commerce. This is the largest area chamber in the United States, representing over 1,200 Dallas firms. The president of the Oak Cliff Chamber is Bill Lewis who is the manager of the Dallas Power & Light Co. in the area.

This called to mind the fact that in Duncanville, the president of the chamber of commerce is Ray Shaver, who is the manager of Texas Power & Light.

We have a big campaign going to raise $7 million for the YMCA. The chairman of the YMCA board in Irving is Mark Gordon, the manager of Texas Power & Light there. Next door in Grand Prairie, the board chairman of the YMCA is Texas Electric Manager Tom Bracken.

Right now, Dallas is engaged in its united fund drive to provide the community's private needs for 70 agencies. The chairman of the United Fund Drive is Lee Turner, president of the Dallas Power & Light Co. Last year we had an endowment fund drive for Dallas Baptist College and the leader of this was Lewis Austin, president of Texas Power & Light. The year before I had worked with Lewis when he was chairman of a fund campaign to double the size of the hospital out in Irving.

C. A. Tatum, who is chairman of the board of Dallas Power & Light, serves the executive committee of SMU and has been chairman of every committee on the Dallas chamber. And Charles Watson, vice president of Dallas Power & Light has been president of the Council of Social Agencies and for 15 years has been the right arm of the county hospital board.

For building hospitals, building schools, industry, providing funds for private charity, building YMCA's, planning highways, strengthening law enforcement, and in every way that we build a better community in which to live, we find the leaders of public utilities giving generously of their time and efforts.

It would be well for the Members of Congress to consider transferring all types of Government operations, including utilities, post offices, and public services of every type, over to private corporations. They will operate more efficiently and at lower cost and even more, they can also aid immeasurably toward building stronger communities.

In Dallas today, we are using twice as much electricity as we did 10 years ago—at a lower price of 1.85 cents compared to 2.31 cents. And we are never short of power, good prices, good service because we have top leadership through private utilities.

WE ARE NOT RUNNING FOR OFFICE SO WE CAN SPEAK OUR MINDS

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. FISHER. Mr. Speaker, under leave to extend my remarks I include a statement contained in an advertisement which was carried in the October 27 issue of U.S. News & World Report. The article follows:

WE'RE NOT RUNNING FOR OFFICE SO WE CAN SPEAK OUR MINDS

1. No taxpayer we know would allow anyone to go hungry, but he's getting tired of soaring relief rolls in this decade of all-time high prosperity, and he feels he's being

over-taxed to support people not willing to look very hard for jobs to support themselves.

2. We believe leaders who know far more about it than we do got us involved in Vietnam, and other leaders will get us out as soon as it is safe for America, but in the meantime we believe we should support our fighting men and not support our enemies by attacking our government.

3. We think every worker should be paid well for what he produces, but we object to the kind of inflation brought on by unions who demand more and more money for no more productivity.

4. Every American should get as much education as he can afford and absorb, but we think unkempt youngsters trying to tell a college what to do should be disciplined and sent home until they learn manners.

5. We believe this is the greatest nation in the world but that's in spite of—not because of—too many politicians who keep themselves in power by squandering the taxpayers' hard-earned money.

And we think the great majority of the 200 million Americans feel the same way we do.

We hope they'll say so.

DAY OF PRAYER PROCLAIMED FOR LOUISIANIANS

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. RARICK. Mr. Speaker, this body on October 14, unanimously passed House Joint Resolution 910 calling for a "Day of Prayer" for our prisoners of war, those missing in action, and our fighting men in Vietnam.

I am hopeful that the other body will, in its wisdom, enact similar legislation and a Presidential proclamation will be issued.

I am proud that the Governor of my State, himself—like many of us—a combat veteran, has seen fit to proclaim November 9, 1969, as a "Day of Prayer" in Louisiana, urging each citizen to support his church in honor of those who are now defending our great United States and especially those who are among the missing in action and prisoners of war being held captive by the North Vietnamese.

The proclamation follows:

PROCLAMATION OF THE STATE OF LOUISIANA, EXECUTIVE DEPARTMENT, BATON ROUGE

Whereas, there are more than 1,355 United States servicemen listed as Missing in Action or Prisoners of War; and

Whereas, more than 200 United States servicemen have been listed as Missing in Action or Prisoners of War for three or more years, longer than any United States Prisoner of War of World War II; and

Whereas, it is our duty as American citizens to urge support of the joint resolution before Congress relative to the Geneva Convention; in that, all Prisoners of War receive humane treatment, and such resolution (S. Res. 245) found in the Congressional Record and referred to the Committee on Foreign Relations reads as follows:

"Whereas the Government of North Vietnam, the National Liberation Front of South Vietnam, and the Pathet Lao—

(1) have consistently refused to release the names of prisoners of war;

(2) have declined to release immediately sick and wounded prisoners;

(3) have refused to permit impartial inspection of their prisoner of war camps;

(4) have not guaranteed the proper treatment of all prisoners; and

(5) have not permitted a regular flow of mail between prisoners and their families; all such actions being in violation of the Geneva Convention and basic standards of human decency:

Now, therefore, be it resolved, That the Senate of the United States most urgently calls upon the President, the Department of State, the Department of Defense, and all other concerned departments or agencies of the executive branch, the United Nations, the peoples of the world, vigorously to use all means of peaceful persuasion at their disposal to bring the facts concerning treatment of prisoners of war by the Government of North Vietnam, the National Liberation Front of South Vietnam, and the Pathet Lao, to the attention of all other governments, with a view of eliciting international support and respect for such measures as may be undertaken by the President, or such departments or agencies, and the United Nations, to obtain the prompt release of all Americans so held as prisoners of war.

Whereas, the Governor of the State of Louisiana asks that every church in Louisiana have a Day of Prayer on Sunday, November 9, 1969, in remembrance to all the brave men who have given their lives for our country, but especially remembering those who are Missing in Action and those who are held captive by the North Vietnamese.

Now, therefore, I, John J. McKeithen, Governor of the State of Louisiana, do hereby proclaim the day of November 9, 1969 as a "Day of Prayer" in Louisiana and call upon each citizen of Louisiana to support his church in honor of those who are now defending our great United States and especially those who are among the Missing in Action or Prisoners of War being held captive by the North Vietnamese.

In witness whereof, I have hereunto set my hand and caused to have the Great Seal of the State of Louisiana affixed. Done and signed at the Capitol in the City of Baton Rouge on this the 17th day of October, A.D., 1969.

JOHN J. MCKEITHEN,
Governor of Louisiana.

Attest by the Governor:
WADE O. MARTIN, JR.,
Secretary of State.

TASK FORCE ON AID

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. FRASER. Mr. Speaker, early this month L. Maynard Catchings, director for International Development, United Church of Christ, wrote to the New York Times concerning the makeup of President Nixon's task force to review the U.S. aid program. Mr. Catchings' views are worthy of our attention. I introduce them as they appeared in the Sunday Times, October 12, 1969:

OCTOBER 2, 1969.

TO THE EDITOR:

As reported in The Times, President Nixon has finally appointed the task force which was called for by the Javits Amendment to review the U.S. aid program. The line-up of this group is disturbing.

Over 50 per cent of the sixteen members represent the business and banking community and 25 per cent are university professors or administrators. Notably absent are people who by their involvements and commitments are in touch with the aspirations of the poor.

There is not a single black in the group who might have a sensitivity to the lot of the poor; there is not a single woman member who has struggled for women's freedom. There is not in the task force a single Protestant clergyman who has tried to respond to the claims of the ghetto, and there is not included a single youth who has reacted against the systematic exploitation of the poor by the Establishment.

Due to the built-in biases this task force cannot be expected to come up with bold new recommendations. It may be expected to further refine existing rationalizations for what obviously is an inadequate U.S. response to world needs.

It is indeed tragic in this day and time when we as a nation have the opportunity to lead the world out of the divisive state of affairs stemming from the gap between the rich and the poor countries that the Administration would call together such a task force. In its membership it has no unequivocating advocate for the poor nations of the world, yet we ask it to make recommendations for future directions of the U.S. foreign assistance program.

UCLA—EXTRAORDINARY JUBILEE

HON. JAMES C. CORMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. CORMAN. Mr. Speaker, the University of California at Los Angeles will celebrate the UCLA Extraordinary Jubilee at the Dorothy Chandler Pavilion of the Los Angeles Music Center on the evening of November 2. It is, to be sure, an extraordinary jubilee. The event signifies far more than the lighting of 50 candles on a birthday cake in honor of a great institution of learning. It signifies rather the lighting of many millions of candles against the darkness of ignorance. It demonstrates particularly the harmonious and productive manner in which a great university and a great community can work together and enrich each other. It is a success story that speaks well of the present, and bodes well for the future.

The story of the University of California at Los Angeles is the story of how higher education can combine its resources with the community for the common good. In addition to inspiring hundreds of thousands of students to achievement in higher education, UCLA has effectively played an added vital role. Programs for urban progress, cooperative effort with the Office of Economic Opportunity, summer camps for needy children sponsored by the student body—these are only a few of the ways UCLA has helped the community in building a better society for all its people. UCLA today is indeed an integral part of the community.

The American university system has become an essential factor in meeting many important national needs. Community involvement on the part of a university is as necessary today as the

university's time-honored role of protecting and preserving the principles of freedom in learning. The value of a university is measured not only by its educators, its libraries, its research facilities, and as the birthplace of great ideas, but, just as importantly, by the contribution of its students and graduates to public service.

Nowhere is this blending of community involvement with academic achievements more dramatically told than in the 50-year history of UCLA. It is this special accomplishment that will be proudly celebrated by the UCLA Extraordinary Jubilee. As such, this event deserves attention and tribute from the Nation.

THE TOUGHEST CONSUMER PROTECTION CODE IN THE NATION

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. FASCELL. Mr. Speaker, in recent years, one of the most significant domestic developments has been the increased activity by both Government and the private sector in the area of consumer protection. Although no one will claim that the marketplace is now free of deceptive practices and underhanded dealings, most will agree that some governmental agencies, with notable exceptions, are at least more aware of their responsibility to assure fair dealing to the American consumer.

But mere awareness on the part of governmental agencies is not enough. What is needed is a spirited and conscientious discharge of obligations by those agencies charged with protecting the consumer. An agency which undertakes such a vigorous enforcement action is the Trade Standards Division of Metropolitan Dade County, Fla.

The following article from the October 12, 1969, Washington Post states that the division enforces the "toughest consumer code in the Nation" and has the power to prosecute lawbreakers:

MIAMI BUREAU KEEPS WATCH TO FOIL FRAUDS

(By Paul Ashdown)

MIAMI.—Mrs. Richard Schermer scraped together $290 to enroll her daughter in a computer programming school. The class was never held and after her fifth attempt to get her money back she dialed a telephone number embossed in red ink on a business card someone had handed her.

It was the consumer hot line number.

High in the aging Dade County Courthouse, in a cluttered dusty office next to the palatial suite occupied by metropolitan Mayor Chuck Hall, a red phone rang and John Mays reached across a paper strewn desk to answer it.

"Trade Standards Division," he announced and patiently listened to Mrs. Schermer's plea for assistance.

SCHOOL OVERSIGHT

Mays went to the school and demanded Mrs. Schermer's tuition money be returned.

"We don't have it and I don't know any Mrs. Schermer," a gruff attendant told him.

Mays reached into his pocket and pulled out his credentials as a deputy sheriff. He was quickly ushered into another office.

An hour later he presented Mrs. Schermer with a check for $290, which had been misplaced through an "oversight" by the school's management.

Mays is a warm, cherubic man who looks anything but a consumer's advocate armed with police powers to enforce the toughest consumer protection code in the nation.

FIFTY CALLS A DAY

He answers the red phone more than 50 times a day to field complaints from Dade countians who feel they've been gyped and want something done about it.

Calls range from the bizarre to the insane, and include the dramatic.

A light bulb guaranteed for five years burns out in a week. A size 42 bra becomes a size 38 after three washings. A baby almost chokes to death on a pacifier that is "guaranteed safe."

More than 4,000 complaints have been filed since opening day last October.

The division is entirely separate from, but in communion with the Better Business Bureau. The division gives no advice about the reputation or ethics of the business community, as does the BBB. But it has power to prosecute lawbreakers. The BBB does not.

TOUGH ORDINANCE

The division's bible is a sleek, 28-page ordinance written into the county's municipal statutes. It took a special enabling act of the state legislature to get the landmark code into operation.

It's a tough law. Violators may be fined up to $500 and jailed for 60 days.

Mays and his staff have police powers to investigate, arrest and prosecute fly-by-night operators and crooked businessmen. The office can, but seldom does, attack rackets and large-scale fraudulent operations such as the home repair racket. These are left to other law enforcement agencies.

HONEST MISTAKES

Peculiarly, the office's implied powers have been enough to make the hair bristle on the necks of the county's gyp-artists. Only 17 cases have been filed—four are pending—and only two convictions have been made. Hundreds of other grievances have been straightened out by a quick phone call.

Sometimes an honest mistake has been made and easily rectified.

A man who rented a car for which he was to pay a charge for each mile driven complained when he noticed the odometer whirling at a pretty good clip and became suspicious. A check showed the mileage meter running 60 percent faster than the car actually traveled.

"He was good and steamed up," Mays recalled, "and who could blame him."

Mays found, after much investigation, that the rented car had originally been manufactured for export and the odometer was set to register, not in miles—but in kilometers.

UNITED NATIONS DAY

HON. ABNER J. MIKVA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, October 23, 1969

Mr. MIKVA. Mr. Speaker, I am pleased to join with my distinguished colleague and friend, GEORGE E. BROWN, JR., of California, as a cosponsor of House Concurrent Resolution 367, which declares the support of the Congress for the establishment of October 24, United Nations Day, as a permanent international holiday.

During the last several years, all Americans, Congressmen, and voters alike, have become increasingly concerned about the level of violence in our country. We have discussed this problem at length. We have conducted extensive hearings, and we have provided for the establishment of national commissions on civil disorders on the causes and prevention of violence, and on law enforcement and crime prevention. Our concern has clearly been based on the premise that the use of violence in our social and political life is inappropriate and illegitimate. I believe that this premise is a proper one and that we should do everything within our power to minimize, if not eliminate, the use of violence in our domestic life.

At the same time our interest in domestic violence has increased. We seem to accept the use of violence in our international affairs as either natural or inevitable. This need not be true today, and it must not be true tomorrow. The same arguments which cause to deplore and seek to eliminate violence in our internal life clearly apply with equal rigor and even greater urgency to violence in our international life. As we muddle through from day to day, from one minor crisis to the next, I fear that we sometimes lose sight of the constant danger of immediate and absolute annihilation.

The possibility of nuclear disaster with which we have lived for 20 years has not yet caused us to reconsider and revise our conceptions of national interest and national security. I am pleased to note that this very necessary reexamination seems to be beginning. We have begun to recognize that the domestic violence we all deplore is, in part, a consequence of our concentration on military might, regardless of its impact on our domestic life. We have only begun a long overdue discussion of national priorities, and I hope that we are beginning to understand that "providing for the common defense" and "promoting the general welfare" are bound together inextricably, that we shall never be secure as a nation until all our fellow citizens are secure as individuals.

But even within the international arena, our traditional conception of national security is dangerously outmoded. Since the development of nuclear parity, we have relied on variants of a theory of deterrence. Our continued survival demonstrates that deterrence has worked—at least so far. And therein lies the danger. So long as we continue to equate military power with national security, the danger of ultimate international annihilation remains. Indeed, this danger increases as our military technology becomes more and more sophisticated. If the United States and the other nations of the world continue on their present course, I fear that we are only postponing the inevitable.

No, Mr. Speaker, our security must not continue to depend on our military prowess. Our ultimate security depends on our patient but continuous efforts to eliminate the need for our massive military strength. Just as we have sought to establish the rule of law in our national life, so too must we strive to establish

the rule of law in our international life. Just as we cherish our traditions of discussion and compromise nationally, so too must we devote ourselves to the establishment of the same traditions internationally. Only in this way can we hope to eliminate what Raymond Aaron has called "the balance of terror." Only in this way can we ever hope to establish an international peace based not upon the constant threat of death, but on the continued assurance of international justice and equity.

The United Nations can be the instrument which will transform this vision into a reality. To date, however, our support for the principles of the U.N. Charter has been more profound in rhetoric than in practice. In the last decade particularly, we have not done all that we could have done to develop the U.N. as a forum for the peaceful discussion and settlement of international disputes.

All of our national holidays are in celebration of events in our past. We celebrate the events of 1776, 1918, and 1945, among others. I urge now that we should celebrate our hopes for a peaceful future, in addition to our pride in our past military achievements. I urge the passage of this resolution not only to praise what the U.N. has been, but to remind ourselves of what it must become.

VIETNAM MORATORIUM

HON. BARRY M. GOLDWATER, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. GOLDWATER. Mr. Speaker, an editorial which appeared in the October 20 edition of the Los Angeles Herald-Examiner is an excellent commentary on the October 15 Vietnam moratorium. I believe it adequately discusses the attitudes of America's largest city toward the protest:

Whatever else it showed, the so-called Vietnam moratorium must be considered a victory for President Richard M. Nixon.

Called by its ill-advised sponsors for the avowed purpose of a public declaration of "no confidence" in the President's pursuit of an honorable solution to the Vietnam conflict, the day of protest was a fizzle.

Outside the student community and a few dissidents, the nation was distinctly underwhelmed by the whole thing. The fact emerged that while everyone wants a just peace, there simply is no widespread dissatisfaction with our President's approach to the problem.

This was particularly true in Southern California. Attempts by the protesters to halt, or slow down, work at area plants were promptly and properly rebuffed by workers. Rallies throughout the area drew little or no support from any one but students with time to fritter.

Despite the hopes of its organizers the only fair evaluation of the day must be that, by and large, Americans support their President.

The concern of the students over the war is understandable. They are the ones who may be called upon to fight it. We wish, however, that in a day when students cry for an increased role in our society, they could show more capacity for facing up to the hard responsibilities—such as fighting for one's country—as well as the easier tasks of participating in American society.

While Los Angeles generally did not sympathize with the Vietnam moratorium, it was good to see the tolerance the community showed to those whom many felt were giving "aid and comfort to the enemy."

A minor plus of the day was the clear evidence that the city can take dissent in its stride and, despite the plea of the protesters, maintain "business as usual."

YOU CAN KEEP THE CHANGE

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. SCHWENGEL. Mr. Speaker, this year at the Old Thresher's Celebration in Mount Pleasant, Iowa, it was my great privilege to be present at the evening festivities at which an outstanding play was presented that reminded us of the rich heritage of our farm people in Iowa and the interesting story of our early development. This program was all done by local people and in the typical farm setting of an earlier period. It was very much enjoyed and appreciated by the thousands of people there. As part of that program, Dr. George E. La More, Jr., was invited to speak and he spoke on the subject, "You Can Keep the Change."

Dr. La More is head of the department of religion at Wesleyan College in Mount Pleasant. He has been there for at least 16 years and has been a highly respected member of the facility. His reputation as a speaker is nationally known. He has been called upon hundreds of times for graduation exercises.

It is natural that he would be involved in this kind of program because he is the kind of a man that has been involved in all major projects that help to make a community more worthwhile.

His talk before the audience that evening had to do with the importance of recognizing our problems and seek solutions with the guidance of experience. Because I think there is something of great worth and an important message in what he said, I am placing it in the RECORD so it can be read by many Americans:

YOU CAN KEEP THE CHANGE—ARE WE A CITY OR A PARADE?

(By George E. La More, Jr.)

THE FEAR AND HOPE OF CHANGE

All our hope and all our fear come packaged in the same event—the phenomenon of change. Change is the competition between yesterday and tomorrow, and every generation is locked into the tight challenge of negotiating some truce between memory and hope.

It can be stated more simply. Men seem to see life two ways, and the difference between the two has recently been repackaged as something "brand-new"—the "generation gap." Some men see reality as very static and feel they must stimulate change. This point of view seems to characterize persons under thirty-five. Other men see life as constantly changing in all directions, and feel their noblest efforts should be to create some stability and permanence. These seem to be a little older. Clearly, both visitors are true, but whole generations seem to specialize in one or the other of these views. In fact, which of these two views a culture takes most seriously may well be the most influential thing about it. Just now, in a period radically attached to youth and change, we desperately need to restore a balanced view, for total change is chaos as surely as total stability is death.

THE CONVULSIVE ACCELERATION OF HISTORY

The pace and acceptance of change in our time defies all previous historical comparison. John Gardner calls it an age of "change gone wild." It is a period of convulsive acceleration of the time process. The decade has replaced the century and the half decade is now replacing the decade. I mean that we now experience about a hundred years worth of historical change in a five year period, as measured by the clocks of yesteryear. The question is: Who can keep the pace? Who can keep sane?

A CALL FOR STABLE IDENTITY

Sanity can be maintained only if we can add two dimensions to the change *stable identity and intentional direction.* By stable identity I mean you. If you keep changing with the cultural change you are not simply a chameleon, but you change personalities every Tuesday and Thursday and become a successive nobody. Change becomes growth only when you add continuity, and in this bean bag universe the continuity has to be you! The trouble is that most of our identity is from the past. Most of your identity is postmarked yesterday and we abhore yesterday.

Lose your memory and you lose your name, rank and serial number. Just now we seem to be practicing what I call delibrate socialized amnesia, "Trust nobody over 35!" Beautiful. That should permit us to repeat the Nazi blunder twice in about seventy years. Hosea Ortegary Gassett once said—man has no identity, only a history. He is right, thus it is small wonder that a generation that rejects its past is confronted by an identity crisis.

A CALL FOR INTENTIONAL DIRECTION

The second factor we must find to keep change sane, is intentional direction. The main reason why we fear and resent change is not that we don't know where it is going. It is where it is going. I mean that somebody else is calling the shots. Michael Harrington in the Accidental Century rightly points out the fact that somebody else, some unexpected stranger, is always calling in the latest change and we are constantly caught trotting with our habitual pants half down trying to catch up to his change.

The only help for this comes when we begin to deliberately choose our future and steer our own change necessary to get from where we are to where we want to go.

Change there will be, inevitably, but we have the choice of whether we shall change forgetfully, recklessly, grudgingly, or deliberately.

IS HISTORY A PARADE OR A CITY?

Just now it is very, very difficult to get persons to commit themselves to an intentional future. Why? For many reasons—ranging from man's habit of cool, wait-and-see objectivity to the string of disappointments of our futuristic commitments have brought in this century.

But our basic problem rises from a deeper source. Our notion of the shape of history. Essentially we have the mental picture that history is a Parade in which the latest is always somehow better (more modern, more advanced) than anything before it.

We see how often man has committed himself to "sure things" in the past, only to be proved horribly wrong a little later. After we see that cycle repeated enough times we say, "Who am I to be committed to anything today—it will soon be disproved or overrun!"

Soon we take no age seriously, including our own. We live by a Kleenex calendar in which all pages are to be thrown away.

I suppose we got this notion from three major sources (besides our over-kill reporting of past failures). They are Darwin, Technology and Madison Avenue.

Darwin was not so naive as to believe in inevitable progress, but by the time Spencer peddled him we were told that each age is but cannon fodder to the better things to come! Who can take his own time seriously when it's what's up front that counts—a kind of futuristic, horizontal supernaturalism. This is receding carrot-on-the-stick hope!

The native assumption of technology has usually been inevitable progress. At least mouse traps are never expected to get worse. The newer the gadget, the better.

Of course, Madison Avenue has made its fortune on this model of history. The NEW is always better than the OLD on Madison Avenue, so be the first one in your block to buy a new —.

Out of all of this we have created a deliberate arrogance and scorn for our past. The first act of the barbarian in a literate society is to burn the books, so he can tell his lies retroactively. We are psychic book burners in a New Generation that uses the dateline the way people used to use the railroad tracks—"Trust nobody from the other side!"

The cruelest discrimination in our culture has nothing to do with race or poverty or peace. It is age! The ultimate disenfranchisement of man is to rub out his influence at death. Now we do it a little earlier—sixty-five at the latest! Try to get a job after you're fifty. Try to buy meat with your life savings—even your old value money is no good. Society builds for old people living mausoleums on the edge of town and thinks it a favor.

I have heard the Blacks properly fight their old image and absence in our radio, T.V. and magazines, but tell me, how must a forty year old listen to radio when it all sounds as if teenagers had taken over the transmitter? A Martian reading a Sears and Roebuck catalogue could only conclude that nobody lives past thirty in this country.

Someone will say, "Then organize the aged, they have fabulous voting power." Trying to organize the aged is like trying to stage a demonstration at a correspondence school. They are the only individuals we've got left.

Perhaps some will aim their remarks between my eyes: "LaMore, you're just showing your age." There is also a response for that: "You're next." You may not change colors but you are going to wrinkle!

There are deeper dangers, however, in our intergenerational discrimination. Nothing is more wasteful of man than for history to repeat itself. Now, history doesn't repeat itself automatically as the Greeks and certain Orientals said—*We* make it happen and we bring it about either of two ways: either by loving the fact too much and thus apeing it, or by loving it too little, thus forgetting it, and waddling out to repeat the same blunders, as Santayana warned, over and over—or to storm the same beaches generation after generation, when we could be getting on from that.

The other danger of scorn for yesterday is the one Etton Trueblood dubbed the "cut flower civilization". We live on the borrowed moral capital of the Puritans while laughing at them. Even Hugh Hefner depends on the afterglow of Puritan morality to give one that charming sin feeling when he unfolds his two dimensional woman in three places. Lose that feeling and nobody will buy the magazine.

We want the goodies without the founding faith—the free lunch without buying any beer. We like to recite "We hold these truths to be self-evident." When they aren't evident from a hole in the ground apart from the founding faith of Jefferson. We persuade the Hopi Indians that it is not the founding theology that justifies their rain dance but its usefulness for social cohesion. Then we wonder why they all stop dancing.

Today we love to laud the futuristic reformer. Well and good. But the authentic reformer does not break with the past. That's the burn-baby-burn rebel! Rather he builds on the best of the past. There was never more futuristic people than the Biblical Hebrews—always reaching for a promised land, a time beyond the Exile, the Messianic age, but while reaching for that future (on a landscape of radical change at the hands of Egyptians, Syrians, Assyrians, Babylonians, Greeks and Romans) they kept the strictest account of their part so as not to repeat it or forget who they were. Jesus was a profoundly Jewish innovator, and thus a conservative innovator, building on the best of the past, while very sharply purging it. "Think not that I have come to destroy the Law and the Prophets: (the best of yesterday) I have come to fulfill them"—build on them—carry them out a second mile!

In the book The Lessons of History, Will and Ariel Durant put it this way:—No one man, however brilliant or well informed can come in one lifetime to such fulness of understanding as to safely judge and dismiss the customs or institutions of his society for these are wisdoms of generations after centuries of experiment in the laboratory of life."

History is not a parade which keeps burning off its own tail because it is old and cold. It is a City. In this City of History there are old buildings, new buildings and middle age buildings as Robert Capon put it. In the course of a time some old buildings crumble, but some hold up, some should be renovated for the beauty and meaning they hold. A city of all new buildings is even more drab than one of all old buildings. If you don't believe it, go to Florence then compare it to certain total urban renewal jobs (in other substit).

A DEMOCRACY OF AGE AND YOUTH—THE LIVING AND THE DEAD

In other words I am calling for an intergenerational democracy of the living and the dead in which a man can dare to commit himself totally to visions of the current period, not held back because next year they'll think him a fool. No, in the city of history the insights that come from our failures are praised as much as our successes, for they save the future the trouble of finding this out themselves.

In this society of memory and hope Homer and Hemmingway are contemporaries, and so are Napoleon and Nixon, Jesus and John Glenn. Don't think this is etherial poetry. It is very tangible. Right now there are more people reading Homer than ever read Homer when he was alive. He is more alive today. Shakespeare is still the number one playwright, by number of performances in America. He is more alive than Tennessee Williams or Edward Albee. Mietzsche and Hitler said, "We are the new Master Race standing on the rubbish of old fools. So many slogans of youthful rebels today really cloak the belief, "History was a waste of time until we rolled in." On the other hand a fourteenth century scholar once said "We are dwarfs standing on the shoulders of giants." What vast historical commentary could be written around those two notions! I say we are fellow citizens with all ages.

Just now our old, live older, and our young dance earlier. We must reason together respectfully across the years. Change will destroy our every achievement and rub out our every hope unless we build this city.

You are a generation *gung ho* for reconciling man across divisions of race, poverty, ignorance, nationalism, denominations. You do a good job but now that you have built up some competence in crossing smaller streams I call upon you to bridge the great river—time—the adventure of change. I call you no longer to strut in a master-race parade, scornful of all those who passed before, but to build a city with spreading suburbs of memory and hope—a city which has come to terms with man's greatest adventure: the challenge of change.

CHESAPEAKE BAY STUDY

HON. GILBERT GUDE

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. GUDE. Mr. Speaker, because of my very great interest in Maryland's greatest natural resource, the Chesapeake Bay, I wish to call attention to the recent remarks of Maryland Public Service Commission Chairman William O. Doub. In a letter to Dr. William Eaton, chairman of the Governor's task force on nuclear powerplants, Doub recommended an independent study and ecological research on the effects of nuclear powerplant operations on the bay. Early last month I called on the House Public Works Committee to consider prompt action for full funding of the Chesapeake Bay study and construction of the hydraulic bay model. One of the first tasks would be the study of the effects of the widening of the Chesapeake and Delaware Canal, a project now 80 percent complete, on the salinity of the bay.

Various construction projects along the bay raise many questions about the growth of marine life and the ecology of the bay.

Suggestions such as Chairman Doub's merit official and public attention and I wish to share with my colleagues his remarks as reported in the Washington Post of October 16, 1969:

OFFICIAL ASKS STUDY OF BAY ATOMIC PLANT

(By Hal Willard)

BALTIMORE, October 15.—The chairman of Maryland's Public Service Commission proposed today that an "independent, in depth" study be made of the effects of nuclear power plants on Chesapeake Bay ecology.

Chairman William O. Doub said that although the commission has ruled that it has no jurisdiction over the construction of the nuclear plants now being built on the bay at Calvert Cliffs, "I personally have a continuing concern over the operational (effects) . . ." on the bay environment.

He said, "We can anticipate that efforts will be made to construct additional plants on the shoreline of the bay" and the study should "consider the cumulative effect" because the bay is "Maryland's greatest natural resource."

Doub told this reporter he had been informed that two more nuclear plants are planned for the bay by the Baltimore Gas and Electric Company, builders of the one at Calvert Cliffs.

Austin E. Penn, chairman of BG&E, said in a telephone interview that the company has a site near Perryman in Harford County where it intends to build a nuclear plant, but no specific plans have been made and operation would not begin for another decade. He said it would have two reactor units, as will Calvert Cliffs, but that no other plants are planned.

The commission ruling that it does not have jurisdiction over the plant already un-

der construction is being contested in court by plant opponents because a state law that took effect July 1, 1968, provides such jurisdiction.

But the company maintained, and the commission agreed, that its $50-million investment in the project at the time justified its claim that construction was underway before the law took effect.

Construction also was underway before any federal or state permits were issued or any public hearings held.

In that context, Doub sent a memorandum yesterday to all electric companies operating in Maryland asking that they start planning generating plants further ahead of the time they actually will be needed.

He told this reporter he was tired of having the commission "clubbed over the head" by operational deadlines that electric companies say are needed to prevent "the lights from going out." He said the commission should have more time for careful hearings without deadline pressures.

For example, the commission has jurisdiction over transmission lines for the plant under construction and hearings that began May 26 still are going on. (Other issues and other cases are being heard simultaneously.)

The company continually has pointed out that if delays force postponement of the January, 1973, operations date, some areas of Maryland could experience a shortage of electricity.

Doub also suggested in his study proposal that it be financed by private companies that will benefit economically from nuclear power plants. He said that in addition to Maryland electric companies, funds could come from member companies of the Pennsylvania-New Jersey-Maryland interconnection system and major industrial suppliers of nuclear equipment such as General Electric, Westinghouse, Babcock and Wilcox and Combustion Engineering. He also suggested that "certain charitable foundations" might contribute.

Penn indicated preliminary objections to BG&E sharing in the cost because "I'm not quite sure that studies by the state should be paid for by utility companies." BG&E has it own studies of bay ecology underway.

Doub's proposal was made in a letter to Dr. William Eaton, chairman of the governor's task force on nuclear power plants. Doub offered to meet with the 17-member task force to discuss the matter in detail.

Eaton said in commenting on the letter that although he had not yet discussed it with other members of the task force he feels "the question of further ecological research of the bay is important and merits serious consideration. The task force will give a report to the governor on the subject in the reasonably near future."

POLICE ARE DOING A GOOD JOB

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. PUCINSKI. Mr. Speaker, the following editorial appeared on Chicago's television station WBBM, which is a Columbia Broadcasting System affiliate.

Mr. Edward R. Kenefick, vice president and general manager, and Mr. Richard Westerkamp, editorial director, have performed a notable service in putting into proper focus the role of the Chicago police.

The editorial of September 25, 1969, follows:

POLICE ARE DOING A GOOD JOB

These are dangerous and explosive days in Chicago. They are days when the city's police are being called upon to maintain discipline and remain cool, even as their own safety is jeopardized.

They are doing their job well—they deserve praise. Yesterday at the Federal Building, a mob of youths attacked a police contingent. Ten policemen and two assistant corporation counsels were hurt. One of the injured policemen received severe cuts on his face as he was knocked to the ground and beaten. This violence was committed by men and women who were demonstrating in support of the eight being tried on charges of crossing state lines with the intention of committing a riot during the democratic convention.

Police then were accused of overreacting, of assaulting demonstrators, or taking part in what the Walker Report termed a police riot. The Chicago police today are acting intelligently and with great restraint. At the U.S. Customs Building this morning, there was another mob; this time an all white mob of some 3,000 building tradesmen who left their jobs to disrupt labor department hearings into charges of discrimination in the building trade unions. Again it was a mob control job for Chicago's police. Two more policemen were injured in a scuffle before that mob left the site.

Yes, these are dangerous days for policemen, and they are conducting themselves professionally—protecting the right of assembly and free speech under difficult circumstances.

We repeat, we support the rights of citizens to assemble, to demonstrate, to exercise their right of free speech. But we condemn mob action and we condemn attempts to provoke police with violence. We believe those who try this should be arrested and prosecuted to the full extent of the law.

FALMOUTH MORATORIUM

HON. HASTINGS KEITH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. KEITH. Mr. Speaker, the recent Vietnam moratorium gathered citizens together all across our country, in impressive displays of national concern over the war in Vietnam. There were 100,000 in Boston; there were 50,000 here in Washington. But even more impressive, in some ways, were the smaller gatherings—in some of the villages and towns of our Nation.

One of many such gatherings took place in Falmouth, Mass. The Falmouth Enterprise has written an editorial that I think captured much of the essence of the occasion, and I would like to share it with my colleagues:

FALMOUTH'S VIETNAM MORATORIUM

The Vietnam Moratorium observance here on Wednesday was a moving thing for those who participated. It may, too, have moved some who, at the start, were hostile.

There was a touch of venom in the hostility, which was apparently due to an expectation of something distasteful, of something abhorrent to patriotism and decency.

The affair in the high school auditorium was about as decorous a meeting as this town has seen. The President's name, when it was used, was used with respect. The speakers were articulate and restrained. They were impressive because they spoke reasonably and with such deep conviction of the great issues of war and peace and the future of this country and of mankind.

It was one of those incredibly beautiful October afternoons. The procession from the high school through Main street to the Village Green was a stroll, rather than a march.

A policeman watching the marchers go past said scornfully to an onlooker, "You can tell them by the dirt on them."

It was a curious remark to make about fellow townspeople, surely a reflection of what the policeman wanted to see, rather than what he saw. Perhaps he regretted it after he said it.

The marchers sat on the grass around the base of the flagpole and listened to the Rev. Robert A. Mayo; sat in the circle of intimacy created when a person speaks to a group without the electric amplification of a microphone. Mr. Mayo speaks to the American spirit, to the faith that endures so sturdily in this country through the most awful discouragements.

When he had finished, the group sang "We Shall Overcome". The singing was so soft that it was inaudible a few yards beyond the circle of singers. It is a moving, a strangely buoyant song that makes a great many things seem possible when one hears it sung.

IN SUPPORT OF H.R. 14020

HON. JOHN S. MONAGAN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. MONAGAN. Mr. Speaker, I support H.R. 14020, to raise the maximum allowable interest rate ceiling on U.S. savings bonds to 5 percent from its present level of 4¼ percent.

Under the terms of the bill the new interest rate will apply to all savings bonds issued on or after June 1, 1969, and to outstanding savings bonds for interest periods beginning on or after June 1, 1969.

The need for this legislation is obvious. The high interest rates being offered on competitive forms of savings have reduced the attractiveness of U.S. savings bonds to the point that redemptions now exceed sales. Since December 1968, the amount of savings bonds outstanding has decreased by more than $300 million. Because of the low volume of sales of bonds the Federal Government was recently forced to borrow funds on the open market at interest rates as high as 8 percent to meet its financial obligations.

No private financial institutions have voiced opposition to this legislation, and passage of the bill will have no appreciable effect on inflationary trends.

While enactment of this legislation will insure a stronger financial footing for management of the national debt, a failure to increase the interest rate would be a disservice to the 11 million people who buy bonds through the payroll savings plan.

Why should citizens who directly support the financial soundness of the Nation be penalized in the form of low returns on their investments?

I have been in frequent contact with the Treasury Department on the subject of noncompetitive interest rates on U.S. savings bonds, and many of my constituents have written me urging congres-

sional action to rectify this unfortunate state of affairs.

I find the present situation intolerable and I urge immediate and favorable action on this critically needed measure.

JOHN GLENN HIGH SCHOOL STUDENTS SEND LETTERS ON VIETNAM MORATORIUM

HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. WILLIAM D. FORD. Mr. Speaker, I would like to bring to the attention of my colleagues the peaceful efforts of the John Glenn High School students in my district to participate in the recent Vietnam moratorium.

On October 16, Joseph Chin, the president of the high school student council, and James McLaughlin, a Glenn faculty member, traveled to Washington to personally deliver over 1,500 letters written the previous day expressing the growing concern of the students over the war in Vietnam. In conjunction with the peaceful actions of those connected with the moratorium movement across the country, the students chose the means they felt would be most effective in presenting their ideas to the leaders of this Nation. Rather than participating in a boycott of classes or an organized demonstration, the students attended a formal faculty debate planned by Mr. Frank Higgins, principal of the Westland school, concerning the U.S. commitment to Vietnam. Following the presentation, each student wrote to me expressing his own feelings and suggesting policy changes.

According to Joseph Chin, the reaction was "overwhelmingly enthusiastic." The young people felt it was a constructive channel for student dissent while following the guidelines of the democratic process.

The student's letters ranged from humorous policy suggestions to poignant pleas for change, but in seven out of every 10 cases, the cry was the same: "Let us have Peace." As one student said:

It seems impossible that Man, Human, Intelligent Man, can only find a destructive answer in a constructive world. I hate war. But I don't have another answer. Just God. Just Prayer. Just Hope.

Many of the opinions expressed were divided sharply along age lines. Most of the ninth graders had not yet developed definite opinions on the Vietnam conflict. The greatest number of supporters of the U.S. commitment to Vietnam were found in the 10th and 11th grades, while seniors generally had very pronounced feelings for an immediate U.S. pullout.

Quite often girls requested help in revising draft laws. As one young lady put it:

Sending our boys to Viet Nam isn't helping our population any.

Another suggestion read:

They should send all the old men from ages 40 to 50. Because they had already had their lives to live and they should put something to good use when they are old. Soon there won't be any boys left.

Although most of the letters reflected feelings for immediate peace, some of the students supported the Vietnamese conflict. Most expressed a concern for the welfare of the South Vietnamese people. The need for a new rise in patriotism was cited by many disillusioned students.

I know we have the most democratic government around and I am glad that I live here.

One student wrote—

But who is to say we can't better ourselves. I still stand behind my President, my Country, and my Flag.

The vast majority of letters expressed a desire for immediate peace. Following the example of moratorium participants across the country, the students made their pleas quietly, but emphatically. As one read:

We love the people who are getting killed today.

Another student wrote:

Let there be peace on earth, to men of good will. It is time for us to prove that we are men of good will.

These young people have shown that they are no longer a part of the silent majority. By petitioning the Government on a subject of their great concern, John Glenn students have given us the opportunity to welcome them into the democratic process. It is time to give our attention to the young people's cries for peace, for no one is more directly affected by the Vietnam war than the young men called upon to give their service, and perhaps their lives, for a cause they do not understand.

On the evening of October 14, the night before moratorium day, I joined in an attempt to keep the House in session for an all-night debate on the Vietnam issue. I felt then, and I believe now, that a full discussion of the Vietnam situation is long overdue.

The President has stated, clearly and unequivocally, that we are no longer seeking a military victory in Vietnam. In view of this, I see no point in a continued sacrifice of American lives and money. I think it is essential that President Nixon provide the American people with an outline of the steps he plans to take for an orderly and sensible troop withdrawal.

I am well aware that such a withdrawal can be made only after full consideration of all factors relating to the safety of our troops. In a speech before an "action teach-in" at Ann Arbor, Mich., recently, Robben W. Fleming, president of the University of Michigan, cited a plan for troop withdrawal including the following points:

1. An announced unilateral decision to withdraw from Viet Nam.

2. Massive troop withdrawals, by which I mean Clark Clifford's goal of 100,000 by the end of 1969, and McGeorge Bundy's formula for removing 100,000 to 150,000 per year for the next two years until we are ultimately down to 100,000 volunteers serving on a rotating basis.

3. Advice to our friends in both Viet Nam and Southeast Asia that we will make the above moves and that we must therefore re-evaluate, with them, our position in that area of the world.

I support President Fleming's suggestion for troop withdrawal, and, in light of the tremendous support of the American people for the recent Vietnam moratorium, encourage each Member of the House of Representatives to do the same. In the words of a John Glenn High School student:

A policed world we are, but a policeman nation we should not be. Such a responsibility should not be on anyone's shoulders. Man is not as intelligent as he believes he is if he cannot find a better way, a better world, and a better peace.

LETTER FROM MOTHER OF VIETNAM CASUALTY

HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. FINDLEY. Mr. Speaker, recently I received one of the most difficult letters I have had to answer since I came to Congress. It was from the mother of a boy who was killed in Vietnam. The questions she asked are ones which each of us in Congress has had to face time and time again. They are the questions which President Nixon faces daily. I am placing her letter to me, and my answer, into the RECORD, so that many Americans across the Nation may read this thoughtful, provocative letter:

WHITE HALL, ILL.,
October 9, 1969.

Representative PAUL FINDLEY,
Washington, D.C.

DEAR SIR: The scrapbook we started when our only son was born 25 years ago has now ended. In it are clippings about his activities as A Boy Scout, his church work, when he was elected to the Honor Society, captain of the basketball team, president of the Student Council, when he entered the army and his marriage. The last entry in the book is when you had his name entered in the Congressional Record after he was killed almost a year ago in Vietnam. He was the last of the Tunison name and now the farm which has been in the Tunison name since 1821 will have none to carry on. He is the last of the five generations who have lived here.

May I ask what did he accomplish by his death? What good has it done for all these 40,000 men to give their lives? He often wrote that they were fighting with about a third of their real capabilities. Now there is talk of bringing home some of the men. Do you really think that the Vietnam forces in the South can hold the line, and what about our boys who are left over there without adequate support? Bob thought he was doing something for his country. Did he die that now we give up and quit when we really have not proved anything? Do you think if we give the North Vietnamese all the concessions they ask without having a single concession from them, that when we withdraw they will not sweep the whole of Southeast Asia into the camp of the communists? Where will we attempt the next stand or will we just sit down and let them take the Philippine Islands, the Hawaiian Islands, and on to our own country?

I am troubled for the future of a nation where the young men in college are so concerned as to how they can avoid the draft. We have degenerated a great deal from the days when Nathan Hale said he regretted that he had but one life to give for his country. Another twenty five years of drugs, agi-

tation, and draft-dodging and we will not even have a country. It is time that the people ended this racial strife, curbed the rising crime rate, supported our government at home and abroad while we still have a country. We have all heard it said that history repeats itself and signs are everywhere that if we want to remain strong, we had better change our course. Reducing our navy seemed a step in the wrong direction where our enemies become stronger every year. Arms reduction and limitation sound fine, but can be deadly unless both sides follow that line.

I would also like to know how many other places where we have our men stationed around the world can become future Vietnams? What have we learned that will prevent other Vietnams? I will say with Shakespeare: Beware of entrance to a quarrel: but being in, Bear't that the Opposed may beware of thee.

You have weighty problems to solve, and I hope you and your other Congressional leaders know the answers. But I would like to hope that we could eventually let our son know that his loss which was such a stunning catastrophe for us really did something for his country, and that it was not all wasted.

Sincerely,

Mrs. ENNIS TUNISON.

OCTOBER 23, 1969.

Mrs. ENNIS TUNISON,
White Hall,
Illinois.

DEAR MRS. TUNISON: If it were possible for me to share the burden of grief which you must feel over the tragic loss of your son, George, I would gladly. But that is a special burden which over 40,000 other American families have had to face in the last five years, and one which no degree of sympathy, no matter how genuine, can ever fully appreciate.

My burden is of a different kind. The people of Illinois have sent me to represent them in Washington in the Congress. Under the Constitution, it is the Congress which is charged with declaring war and raising and supporting an army. Yet we in Congress have not fulfilled that responsibility, and it is this burden which weighs heavily upon me. Ours is a duty which cannot be laid aside by inaction, for 40,000 men have died in Vietnam just as if Congress had acted to declare war back in 1964. That this has happened is unspeakable tragedy. Yet we must speak of it, we must learn from it, if we are to avoid a similar recurrence in a similar war in the future.

I am troubled by many of the same things which trouble you, and there are many things to which I do not have the answers. But of one thing I am certain. Your son did not die in vain. The price has been high, but America's sons will no longer have to go to war to settle brush-fire outbreaks of violence halfway around the world. Our own national security is not so infirm as to require our intervention every time there is an uprising on another continent. It is ironic indeed that we had to go to war in Vietnam to find out that we would not have to go to war in other "Vietnams." But the men who died there did not die in vain, because America will live on all the stronger, renewed and secure in the knowledge of her limited but vital role in the world.

A century ago, confronted with a similar tragedy which tore our nation apart, Abraham Lincoln pointed the way which we must follow today. Our duty, he said, is "that we here highly resolve that these dead shall not have died in vain; that this nation under God shall have a new birth of freedom."

The freedom we seek is one which will save thousands of our men from an untimely death in a far-off corner of the world. This is not freedom without responsibility, nor is it one which neglects our friends, when they most need us. Rather, it is freedom which recognizes the strengths and limitations of a great people, and by so recognizing them, becomes all the stronger.

Sincerely yours,

PAUL FINDLEY,
Representative in Congress.

NEW MARITIME POLICY

HON. HASTINGS KEITH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. KEITH. Mr. Speaker, as a member of the Merchant Marine and Fisheries Committee, I have long been aware of and concerned with the perilous state of our merchant marine. Thus, it was with a great deal of pleasure that I learned of the President's new plan to revitalize the Nation's merchant shipping capabilities. It is a plan that I believe has wide support throughout the Nation. The Patriot-Ledger, a daily paper from Quincy, Mass., has printed an editorial that reflects this national sentiment, and I am pleased to be able to share it with my colleagues:

[From the Quincy (Mass.) Patriot-Ledger, Oct. 22, 1969]

MARITIME POLICY

President Nixon's decision to revitalize the declining U.S. merchant marine is welcome.

Following World War II, American flag ships carried 57.6 per cent of U.S. foreign trade. By 1968, the total had dwindled to 6.4 per cent. Among world maritime nations, the United States now ranks sixth in the number af cargo ships and fifth in cargo capacity.

Additionally, the fleet is old and is not being replaced rapidly enough to offset the pace of decline. Seventy per cent of the freighters, 90 per cent of the bulk carriers and 50 per cent of the tankers are more than 20 years old, adding to the high costs of the U.S. merchant marine by being expensive to operate and maintain.

The precise details of Mr. Nixon's program have yet to be announced. Yet the broad outlines are apparent. The President wants a stepped-up merchant vessel construction program—about 30 ships a year, triple the existing pace; and he wants to increase the portion of the nation's foreign commerce being carried in American-flag vessels from the current 6 per cent to a stable level of about 30 per cent.

At least this is a start towards a coherent merchant marine policy after years of talk and no action, and disputes among the shipping industry, labor and the federal government.

The United States has a continuing interest in having a modern, efficient, competitive merchant fleet carrying a substantial portion of its foreign commerce. In this effort to improve our merchant fleet, we should be making the most of technological advances and automation. Many of the new merchant vessels should be nuclear-powered. The United States built the world's first nuclear-powered merchant vessel, the NS *Savannah*. But we have not taken advantage of our headstart.

There should also be acceptance by the sea-faring unions of the necessity for utilizing automation. If a new vessel can be operated with a reduced crew because of automation, the unions must realize that this is an opportunity for stable employment with higher pay for such crews, and that an expanded merchant marine by itself will increase employment opportunities even if average crew sizes are reduced. And the prospect of higher pay, improved living and working conditions on modern vessels, and hopefully speedier turnover times and shortened voyages, can make the merchant marine a more attractive profession.

OIL DEPLETION—A POLITICAL FOOTBALL

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. FISHER. Mr. Speaker, the level at which depletion allowance for the oil industry should be set has become quite an emotional issue. There is an old statement which says: "Don't bother me with facts—my mind is made up." With respect to the depletion allowance matter I would hope that those who are interested will take the time to study the facts contained in an article prepared by George H. Fancher, Jr., which follows:

[From the Denver Post, Sept. 28, 1969]

OIL DEPLETION—A POLITICAL FOOTBALL

(By George H. Fancher, Jr.)

The 1969 tax revision bill has passed the House of Representatives and is now before a Senate committee for review. In this bill, Congress recommends, among other things, that the oil depletion allowance be reduced from 27½% to 20%, that percentage depletion on foreign oil and gas production be eliminated for tax purposes, and production payments will be treated essentially as loans.

The basic tax structure of the United States was devised with the idea of taxing income and not capital assets. In the case of a manufacturing company, ordinary capital assets are depreciated, i.e., regular deductions are allowed over the life of the equipment with the idea of returning the cost of the asset—tax free—so that it can be replaced when worn out. The principle, though sound for the manufacturing business and other depreciating items, does not apply to depleting assets such as oil and minerals.

Tax laws must be based on realities in order to provide equity in taxation. The original intention of percentage depletion was to return as a tax deduction the value of oil in the ground including, to some extent, the exploration costs of finding new oil reserves. The present 27½% depletion allowance provides on the average a deduction of only $0.85 per barrel. It is extremely doubtful that anyone can buy or find economic oil reserves in the ground today in the U.S. for $0.85 per barrel. A more realistic cost for oil reserves is $1.25 per barrel. Therefore, the 27½% depletion allowance, similar to depreciation, is an equitable means of returning the cost of the capital asset so that a well can be replaced after the oil has been produced.

Critics of the petroleum industry challenge the depletion allowance as a tax loophole. A review of the facts should clarify this misconception.

1. Current gasoline prices are only 6% above the 1957–59 level compared to a 21% increase in the Consumer Price Index for the same period.

2. Oil company profits for the 20 year period through 1966 were below all other industries.

3. The oil industry paid 5.1% of gross revenue in direct taxes in 1966 compared to 4.5% for all corporations in the United States.

4. Domestic oil production is vital for our national security.

5. Depletion is a necessary incentive to encourage exploration in order to reverse the

decreasing trend in reserves and to meet the increasing demand for petroleum products.

LOW PRICES

Percentage depletion is responsible for keeping the price of petroleum products at a low level. The price of crude oil has remained essentially constant for the past 10 years, although the average price of all items included in the Consumer Price Index has risen 21% over the same period. The reason the retail price of gasoline has increased at the pump is because gasoline taxes have increased 21%.

BELOW AVERAGE PROFITS

In the past 20 years the earnings of the U.S. petroleum companies averaged 12.5% of invested capital, compared to 12.7% for all industries. On the basis of sales, only seven of the top 25 U.S. corporations are petroleum companies. However, it is interesting to note that not one of the petroleum companies is in the first 75 on the basis of returns on invested capital.

FAIR TAXES

The petroleum industry pays their fair share of taxes. In addition to income taxes, oil companies pay other direct taxes, one of which is the severance tax, paid only by extractive industries. In 1966, the petroleum industry paid $2.5 billion in direct taxes or 5.1 cents for every dollar of gross revenue compared to 4.5 cents for each dollar of gross revenue for all U.S. corporations.

Many critics charge that percentage depletion allows oil producers to recover their costs many times over. The facts are that while the oil industry realizes approximately one billion a year through this provision, it invests about five billion a year in exploration and development of new reserves.

NATIONAL SECURITY

Domestic oil production is essential to our nation's security. Inadequate import controls would severely weaken the national economy. Various levels of local government would be deprived of vital tax revenue which would necessitate an increase in the tax burden of all concerned, including the individual taxpayer.

INCENTIVE

Percentage depletion provides an incentive for operators to accept the great risks involved in the exploration and development of all mineral resources so essential to our economy and national security. Continued incentive is vital. Exploratory drilling has declined nearly 50% in the past 10 years due, in part, to Federal regulations on interstate gas production, increased drilling and exploration costs, low crude prices and increases in state and federal taxes. As a result, the oil reserves in the United States have declined to new 10 year lows for the second consecutive year. Today the petroleum industry provides 75% of our total national energy requirements. Federal government estimates indicate that by 1980 the need for petroleum products will increase by 50%. The petroleum industry will not be able to meet these demands if exploratory drilling continues to decline.

Add these facts together and it should be readily apparent that the petroleum industry needs greater incentives to establish new reserves, not a reduction of those now in force.

PFC. TERRY L. BOOTH

HON. JOSEPH M. GAYDOS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. GAYDOS. Mr. Speaker, it is with deep regret that I announce the death of another of our brave fighting men, Pfc. Terry L. Booth, of Clairton, Pa., who was killed in Vietnam on October 15, 1969.

We owe a profound debt of gratitude and appreciation to our dedicated servicemen who sacrificed their lives for this great country. In tribute to Private Booth for his heroic actions, I wish to honor his memory and commend his courage and valor, by placing in the RECORD the following article:

PFC. TERRY L. BOOTH

Marine PFC Terry L. Booth, 19, son of Mr. and Mrs. John Booth of 16A Woodland Terrace was killed in action Oct. 15 while serving with the First Marine Division in Quang Nam Province, South Vietnam, it was learned.

Pvt. Booth, a 1968 graduate of Clairton High School, had been in Vietnam only 45 days at the time of his death. The city Marine enlisted in the corps March 6 of this year.

CRISIS IN AIR TRAFFIC

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. FASCELL. Mr. Speaker, everyone is aware of the impending crisis in air traffic if constructive measures are not taken soon. Both the House Interstate and Foreign Commerce Committee and the Senate Commerce Committee have held hearings on this general subject regarding an Administration proposal. This proposal, the Aviation Facilities Expansion Act, is good; it would create additional airports, require a study of our airways by the Secretary of Transportation, propose a 10-year plan for adequate airport development. But, this bill fails to mention a vital part of any airport operation, the air traffic controllers.

Currently pending before both these committees of Congress is another proposal, one which would amend the Federal Aviation Act of 1958 in order to establish certain requirements with respect to air traffic controllers. Together with 28 of our colleagues, I have cosponsored legislation which would remedy serious weaknesses in our air traffic safety by upgrading the air traffic controller system. Senator HARTKE and 17 other Senators have introduced identical legislation, on which no action has been taken. Mr. Speaker, these bills which are endorsed by the Professional Air Traffic Controllers Organization, a professional group, concern essential aspects of the Nation's airports.

The Miami air traffic controllers have contacted me regarding the recent congressional hearings that have been held on airport development and airport safety. These men feel that testimony before congressional subcommittees by FAA officials has been less than equitable for all concerned. From the Miami Center, 150 air traffic controllers have requested me to enter in the RECORD the following letter which they wrote to FAA Administrator, John Shaffer. I do so at this time in order to bring the concern of the many air traffic controllers to the attention of our colleagues.

The letter follows:

MIAMI AIR ROUTE,
TRAFFIC CONTROL CENTER,
Miami, Fla.

Mr. JOHN H. SHAFFER,
Administrator, Federal Aviation Administration, Washington, D.C.

DEAR MR. SHAFFER: We are the one hundred and fifty Air Traffic Controllers that staff the Miami Air Route Traffic Control Center.

At this time there are one hundred and fifty confused and disappointed controllers at this facility. We have tried honestly and desperately to understand why you have undermined—without plausible cause—our every aspiration and failed to produce an alternate, workable solution to our problems. Perhaps if you knew the background of our dilemma, you would understand why we feel as we do.

For many years, Controllers all over the country could see the advent of the air traffic crisis. We lived through many years of promises made and broken by the FAA. During the Johnson administration we suffered major cutbacks in manpower and material. At this very time the airlines and aviation industry were building at a fantastic rate, but no allowances were made in air traffic control to compensate for this build-up in the sky. The Controllers' plea for help fell on deaf ears.

Finally in January of 1968, we, the Air Traffic Controllers of this country, united and formed our own professional organization in order to speak in unison to the layman and the Congress. This was done with our own time and money which we could ill afford but were eager to contribute for a better understanding of our cause. We were proud when we brought about Operation Air Safety, and to the best of our knowledge, not one Controller abused this operation. We merely stopped cutting corners—dangerous corners that would eventually lead to loss of lives. All Controllers had been extending themselves far beyond safe tolerance, trusting in their good judgments to cope with increasing work loads, but all Controllers feared the words, "relieve this man, he can't handle it." Yes, thank God for Operation Air Safety.

This organization we formed is called Professional Air Traffic Controllers Organization (PATCO). It was then, and is now, the only representative voice of the Controller. It *is* the Controller.

Other organizations represented the Controller before we organized PATCO. ATCA was the first. Today it is representative in FAA management and corporate membership only. It does not represent the Controller. AFGE and NAGE were taken on by the Controllers as the next step under executive order 10988. These did much for local policy but were never meant to be the voice of the Controller on professional matters. When these organizations began fighting PATCO, their memberships dropped sharply and will continue to do so. The Miami facility, which had exclusive NAGE membership, now has less than two dozen members, including teletype operators. Our PATCO membership is 97%. This, we believe, is the true picture throughout the country.

Now that it has been established that PATCO is the Controller, let us go on to what we have accomplished. We have brought out in the open, to all the public and the Congress, that there is an air traffic crisis. We remember vividly the words of our past Administrator, Mr. McKee—"You have done what no one else has been able to do; you have given us the vehicle with which we can approach Congress for assistance." We were getting somewhere. We then gathered all available data and, with the help of Congressmen, drafted a bill entitled "The Air Traffic Controller Bill" (S 1026; HR 7870). This Bill has as its background all the wisdom gained from years of study and all the best medical opinions available from extensive research. This truly was our salvation, and every Controller in this country

placed all his confidence in its passage. We have written to Congressmen in the past year asking support of the legislation. The support was tremendous and we had faith—a faith in the Democratic process which has made our country great. Finally, after waiting a year and a half, legislative hearings began.

Just prior to the hearings, the Controllers in Miami hosted the PATCO convention. We describe it as having been a most dramatic and highly professional affair. At the banquet, we vowed to do our best to hold together this present air traffic system until conditions improved. Senator Vance Hartke, our guest, gave an excellent speech complimenting the Controllers and the FAA.

The fateful day when the hearings began was the day when you, Mr. Shaffer, sat before that Committee and by your testimony shattered the hopes of every Controller in the country. We all had been pressured from every direction—stress, tension, overwork, and yes, underpay. Naturally, the news media released your testimony and a few disheartened and embittered Controllers walked off their positions. We were all angered enough to do so, but only a few took this drastic measure. You blamed this on PATCO as a well organized plan of action whereas, in fact, if it were not for Mr. F. Lee Bailey's requesting that we not lose our heads and that we stay on our positions, the following days would have been a disaster.

Mr. Shaffer, you now say that you were quoted out of context by the news media, but that does not diminish the fact that Congress, the Controllers and the flying public have interpreted your testimony as antagonistic toward our legislation. In only four months you seemed to know better what was needed, regardless of what years of collective experience and research indicated in the views and proposals set forth in our Bill. If you gained your knowledge from FAA management, couldn't you realize that you were dealing with a very antagonistic group—a group that has long been bombarded by everyone concerned for allowing this system to become so antiquated? If a system is inadequate, we have to know why it is inadequate before we can remedy it. Somewhere the blame must be placed, and in this case it is FAA management.

We then learned that you had an eight point program that was better than our Bill. This restored some our our hopes and we began to regain faith in you. But then came the "witch hunts"—the interrogation by FAA Security Agents at Denver, Kansas City, New York, etc.—regarding the Controllers' absenteeism. You indicated that this was required procedure—a mere formality—and that nothing would come of it. But within two days, via a barrage of telegrams, you gave us a warning, the notice of punitive action to those involved in the walk-offs, and withdrawal of dues deductions and PATCO recognition. You say that you have the highest regard and respect for all Controllers and at the same time you try to kill PATCO which *is* the Controller.

We would like to know why the Professional Air Traffic Controller cannot help management solve the air traffic crisis. We would like to know why the Blue Ribbon Panel was instituted when it is common knowledge that for years every possible study has been made on the Air Traffic Controller. We would like to know why the Agency has seen fit to tell Congress that our salary is $18,000 to $22,000 a year when the average radar Controller with eleven years of service and overtime is actually making $14,000. We would like to know why Congress was informed that there are 18,000 Controllers when there are less than 10,000 tower and center Controllers. We assume you are including flight service specialists in this count and they do not control traffic. We would like to know what has happened to your package. And finally, we would like to know why the Agency is against the Controllers' Bill and is anxious to stall until the next session of Congress, as it appears.

Mr. Shaffer, mere words cannot appease us. If you would listen to and support our ideas as represented in our Bill, you could build a system that would be admirable and acceptable to all. In the past, you have listened to false prophets that envisioned an automated air traffic control system placing control back in the cockpit. Even ALPA cannot be taken in by such unrealistic procedures. The idealist who envisioned this piece of equipment forgot about weather factors and the assistance of radar vectoring around weather and traffic. Every pilot and Controller knows that the air space element in any Controller environment changes constantly. Listen to the wisdom of active pilots and Controllers rather than to those of the past who have lost the picture. Invite them to go into the field and talk with the present-day Controllers who can best convey the many needs associated with air traffic control, such as:

1. Operational NAS equipment at every center and approach complex
2. A workable ALPHA Numeric System within the NAS equipment
3. Radar at every facility that handles air carrier jets.
4. Better radar and how and where it can be obtained
5. More runways and airports and suggestions as to their locations
6. More Controllers of the highest caliber
7. Higher pay to compensate for the tremendous pressure, tension, and responsibility connected to air traffic control
8. Early retirement for depleted Controllers

We could go on. But now is the time for deeds rather than words. Now is the time for the voice of the Controller to be heard with sincerity and honesty. Headlines such as "Major Air Disaster Claims 500 Lives" are tragic announcements, but more tragic is the reluctance to take appropirate action for which we are fighting to eliminate such headlines.

Yours sincerely,

150 AIR TRAFFIC CONTROLLERS.

THE BAY AREA RAPID TRANSIT SYSTEM

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. MILLER of California. Mr. Speaker, the Bay Area Rapid Transit System that will be in effect in Alameda, Contra Costa, and San Francisco Counties withing the next few years will be one of the most advanced and sophisticated rapid transit systems in the country. The managers of the Bay Area Rapid Transit System were not inhibited, therefore, they have designed a system that will incorporate the most modern technology.

The cars for the system will be built by Rohr Corp. under the direction of Robert J. Rucci. Rohr's reputation has been well established. It has been a subcontractor in the space program, and has applied their know-how to its undertaking as the builder of BART cars.

The cars will substantially be built of aluminum, and will have a dual braking system; one system of brakes will be friction brakes on the wheels, and the other system will slow the electric motors that drive the wheels. It is expected that they can decelerate from a speed of 80 miles in 20 seconds as smoothly as an automatic elevator.

We, of the bay area that will be served by BART, are very proud of the initiative involved in trying to solve the massive transportation problems that confront all metropolitan areas. We are happy to know that the modern technology developed in the space effort is being applied in the design of the cars, the track, and all other facilities.

I congratulate the Rohr Corp. of San Diego on the great contribution it is making in this area.

A CONCERNED VICE PRESIDENT

HON. LOUIS C. WYMAN

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. WYMAN. Mr. Speaker, Vice President SPIRO AGNEW is a concerned American. Just why he is concerned and how he became concerned is outlined in part by the distinguished columnist Stewart Alsop in this week's issue of Newsweek. In light of the tremendous amount of controversy attendant upon some of the Vice President's remarks in recent days Mr. Alsop's remarks take on added significance:

SPIRO SPEAKS

(By Stewart Alsop)

WASHINGTON.—What follows was excerpted from six double-spaced pages of notes on a talk last week with Vice President Spiro T. Agnew. It is an attempt to catch the flavor of the Vice President's manner of talking and thinking. The flavor seems worth trying to catch, and not only because Mr. Agnew is again in the news, with his famous speech about those "impudent snobs." There is another reason—the fact that Spiro T. Agnew could, quite conceivably, be President one day. There is a third reason, too.

Office in Old State, huge fireplace, gilded mirror, eagles on doorknobs, the works. Vice President reading blue-covered booklet with stars and seal, marked The President's Daily Briefing—the CIA intelligence summary. Face pink, healthy-looking, hands carefully manicured, French cuffs with gold cuff links, small, controlled smile. Talks easily with air of candor. Looks as though he'd been dieting. Rather Presidential-looking—a casting director would instantly choose Agnew over Nixon for role of Modern President.

He himself instantly brings up the subject of the "impudent snobs" speech:

"You know, there's a certain humor in the situation. They land on me for a few words out of context, but the other side can attack, and no matter what language they use, there's no criticism . . .

"Yes, I wrote the speech myself. I never submit my speeches to anyone. I did that speech on a Saturday, and there were not many people around . . . the trouble was, nobody paid any attention to what I really said . . .

"You have Ed Muskie asking why we won't stop testing MIRV's and Ed Brooke saying we're responsible for the strategic arms race. I was trying to answer that sort of thing . . . We've built no ICBM's since 1967, no nuclear submarines since 1965 . . . The Russians have 64 ABM's already, more than we'll have in 1974. They're building 100 ICBM's this year alone, and they're building nuclear subma-

rines just as fast as they can. Yet you have these statesmen blaming *us* for the strategic-arms race. That's what I meant by masochism . . . I've seen dozens of editorials about my speech, and *not one line* about this subject.

"I suppose if you want to get a point across, you say it in exciting language, and then bland out everything else . . . Of course if you use punchy language, you're automatically attacked for intemperance. But that risk is counterbalanced by the attention you get for what you say. If you can get your thought through to people, it can be worth the risk . . . If I had it to do again, I'd still deliver the speech just as I wrote it."

Agnew on the young:

"There is a fascination among young people with demonstrations as a means of communication. I have a theory about that. There is a direct relationship between the popularity of confrontation with young people, and the fact that they were brought up on television, not books. They're conditioned to action and emotion, not words. This is a perfectly natural thing—every day, they see action, violence, confrontation on television, and they are naturally more conditioned to action than logic. But there is a danger there.

"Young people who become involved, often for very salutary reasons, in a demonstration or confrontation, tend to become caught up in the event itself, emotionally, tend to be carried away by mob psychology . . . that is the danger . . ."

Agnew on his own generation gap:

"My 14-year-old daughter, Kim, wanted to wear a black arm band to school, to demonstrate against the war. I told her I had no objections if she really understood the fact. So I took a lot of time to tell her how we got involved in Vietnam, and the situation there, and so on. She said 'I understand what you're saying, but I don't agree.' So I explained the whole situation again, about the 1954 accord, and the 1962 accord, and she said, 'All right, but why not just get all of them out of there?' So I said, 'Kim, I have given you the arguments for not just getting out, and you just haven't given me a logical argument against it. So [here voice rises in parental authority] *there will be no black arm band and no participation in a demonstration.'*

"Well, there was the usual crisis, and I guess some mutual trauma, but after that, I think, I was nicer than usual to her, and she was nicer to me . . . I think kids keep pushing these days, to find authority, that they need authority at some point, and when they don't get it they're unhappy . . ."

Agnew on politics, George Wallace, and the South:

"I hope I'm still a politician, though some people might dispute it [small smile]. I've just come back from the South, and I'm sure now most of the people in the South don't want George Wallace. They didn't really want George Wallace in 1968, but they felt they had no alternative. They didn't really know who Nixon was—all they knew was that he was a professional politician who'd been around the track before. Now they've seen the President in action, I'm sure they feel more confidence with Nixon than with Wallace.

"I made a speech the other day in Jackson, Mississippi—2,400 people at a hundred a plate, the biggest political gathering in the state's history . . . In the South, the politicians have been caught in a cross fire, between George Wallace on the right, and Ed Muskie or George McGovern on the left. In 1968, they felt they had no place else to go but Wallace. But that's no longer true. Most people in the South, as elsewhere, want to be somewhere near the middle of the spectrum.

"We've made it clear that we will not support a racist policy . . . But there have been steps taken which the South understands and appreciates. Revenue sharing, for example . . . And we recognize the Supreme Court decision against artificial segregation, but we also recognize that the decision does *not* mean artificial integration . . . Wallace can't get off the ground now . . . I think the President can retain his support in the South, and I think he can retain his general support in the rest of the country . . ."

More talk about Vietnam, politics, and daughter Kim (who must be a strong character) which the Vice President puts off the record, and talk ends.

The third reason it is worth trying to understand the way Spiro T. Agnew talks and thinks is that he is a more formidable political figure than those who laugh at him realize. What he says may not be particularly original or profound. But he is formidable, all the same, because his style of speech and thought precisely mirrors the style of the "Middle Americans" who make up the great majority of the American electorate, and who will therefore elect the next President. After all, a lot of them have their Kims to worry about, too.

A CONSTITUENCY IS HEARD

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. EILBERG. Mr. Speaker, all of us have found that representing our constituents becomes a more complicated business with each succeeding year. I return home as often as this body's busy calendar permits and on those weekend trips I try to speak with as many of my constituents as possible.

A handshake, however time-honored this political practice is, can hardly be a substitute for a meaningful discussion of the issues confronting the Nation and its legislature. If you speak with 100 people on a weekend, can you be certain that their views are truly representative of your nearly 500,000 constituents.

All of us have been elected certainly to use our judgment, particularly as the issues grow more complicated and technology seems to want to outstrip our comprehension. But the Federal system mandates that each of us represent our constituent views in the councils of this Government.

Like many of my colleagues, I have adopted use of the questionnaire to determine the views of the people back home. I have been most impressed by my constituents' mounting disenchantment with the war in Vietnam. It is obvious they have had enough of the war and are interested in disengagement leading to eventual and total disentanglement.

I will not presume to judge their motives. Some no doubt believe the war an immoral excess on the part of this Nation. Others are appalled by the war's expense, now $30 billion a year, and the fact that its conduct is distracting and dividing America at home. Others have lost sons or husbands. And many, no doubt, are exhausted by the conflict and the controversy and now believe it is time to withdraw.

But whatever the individual reasons, these citizens have coalesced into an impressive majority which now speaks to the Congress and the President and says, "Enough."

With the unanimous consent of my colleagues, I here enter in the RECORD my most recent newsletter which includes the results of my questionnaire:

A BETTER TAX BREAK FOR ALL

OCTOBER 1969.

DEAR FRIEND: If you have been following the news from Washington you know that a battle is underway in Congress on the vital issue of taxes and a better break for all.

In August, the House of Representatives passed a tax reform bill which provides relief for all taxpayers, including the home-owning job-holding middle class. The bill also makes a start on closing some of the unjust tax loopholes which allow special interests and the very rich to avoid paying their fair share of taxes.

Although I am still not satisfied that the bill passed by the House does all that needs doing, it is a good beginning. It incorporates many of the provisions of legislation I introduced and it will assure a tax reduction over the next three years for virtually everyone in the Northeast.

The tax relief in this bill take effect as money gained by closing loopholes and drawing on other sources becomes available. The reform bill closes some of the obsolete and unwarranted loopholes that we have led to so much tax gimmickry and unfairness. Other loopholes were tightened including the oil and gas depletion allowance, reduced from 27½ percent to 20 percent.

As approved by the House, the bill will provide a tax cut of at least five percent for every lower and middle-income taxpayer.

THE SENATE MUST CHOOSE

First, however, the mill must clear the Senate in its present form without that body watering down the reform and relief provisions it presently contains. It is my sad duty to report that the bill and its provisions for tax relief are under attack in the Senate.

The Administration is seeking to cut the House-approved tax reductions by an average of about 50 percent. The Administration also has asked that corporate income tax rates be reduced by two percentage points rather than increased or held at the currrent rate.

The Administration is trying to make a public case that the House bill would reduce revenues to the Federal government in a significantly, unacceptable way. The simple fact is there is no significant difference in the revenues the House reform bill would provide with revenues the Administration's tax package would produce. The difference is who would pay, the middle class or the corporate rich and privileged. The House bill would require that the rich and the privileged pay.

The Senate must choose between justice and equity as embodied in the House bill and favoritism and special privilege as proposed by the Administration.

YOUR OPINIONS ARE HEARD

In the late spring, I asked you to give me your views on the major issues of the day and legislative proposals before this Congress. I want to thank the many of you who took time from your busy schedules to answer the questionnaire. After a busy summer of studying the questionnaires and reading the letters that accompanied them, the results have been tabulated. Here are those results by percentage.

JOSHUA EILBERG.

1969 CONGRESSIONAL QUESTIONNAIRE

	Yes	No	Undecided	No response
1. (a) Do you favor the Nixon administration's proposal to retain the 10-percent surtax through 1969 to curb inflation?	54	37	6	3
(b) If you answered "Yes," would you at the time insist upon closing tax loopholes?	60	1	3	36
(c) If you answered the first question "Yes," would you also insist on substantial cuts in military spending?	33	21	7	39
(d) Do you favor my bill to raise the standard tax exemption from $600 to $1,000?	83	4	2	11
2 President Nixon has said he will deploy Safeguard, a limited antiballistic missile system. Which of these options do you support?				
(a) President's proposal 38				
(b) No ABM system 31				
(c) Thin system 7				
(d) Thick system 12				
No response 12				
3. Most people believe that nonessential Government spending must be cut. In which of these areas would you cut spending? (Check up to 3. Figures tally above 100 percent because of option of selecting 3.)				
(a) Defense budget 39				
(b) Aid to education 8				
(c) Aid to cities 9				
(d) Space program 40				
(e) Health 2				
(f) Welfare 33				
(g) Foreign aid 80				
(h) Poverty programs like Get Set, Job Corps 32				
4. Would you increase or cut Federal aid to:	Increase	Cut	No response	
(a) Private and parochial schools?	44	44	12	
(b) Elementary and secondary public schools?	67	12	21	
(c) Colleges and universities?	37	46	17	
5. When the Federal Government assists in building low and middle income housing, should the community involved be consulted about location, need, and type of structure?	86	6	3	5
6. (a) In view of the closeness of November's presidential election, do you think we should change the way we elect our Presidents	79	13	3	5
(b) Are you in favor of my proposal to abolish the electoral college and substitute direct popular election of the President?	77	12	5	6
7. Are you in favor of reducing the voting age?	43	49	3	5
8. (a) Do you think the present draft system is fair?	22	63	8	7
(b) Do you think the draft system should be changed or reformed?	67	16	6	10
(c) Do you think the draft should be abolished in favor of an all-volunteer Army?	26	57	9	8
9. We all want the war in Vietnam to end. Which of these possible courses of U.S. action in Vietnam do you now most support? (Check one.)				
(a) Immediate withdrawal of U.S. forces 16				
(b) Gradual withdrawal of U.S. forces 32				
(c) Immediate cease-fire as the basis for talks 10				
(d) Continue present levels of military action 3				
(e) Step up military activity 7				
(f) Resume bombing of North Vietnam 5				
(g) Invade North Vietnam 5				
(h) Use nuclear weapons against North Vietnam 2				
No response 20				
(i) Do you think the Paris talks will lead to peace?	19	51	23	7
(j) Do you think the Nixon administration is doing enough to end the Vietnam war?	22	48	23	7
10. (a) Which do you think possesses a greater threat to world peace?				
The war in Vietnam 29				
Tension in the Middle East 56				
No response 15				
(b) Who do you think is wrong in the Middle East?				
Israelis 4				
Arabs 41				
Both of them 47				
No response 8				
(c) Do you think the United States should help in imposing a Big Power settlement on the Middle East?	29	50	14	7
11. Do you believe additional Federal laws are needed to protect the consumer?	83	8	3	6
12. Do you think the Constitution should be amended to permit prayer in the schools?	64	24	6	6
13. Campus disorders have spread across the country. If you were a college president and 100 students sat in your office would you:				
(a) Try to talk to them? 37				
(b) Kick them out immediately? 24				
(c) Call police? 20				
No response 19				
14. What kind of job do you think President Nixon is doing?				
(a) Fine 18				
(b) All right 52				
(c) Poor 17				
No response 13				
15. What do you think are the three most important issues facing America today? Please list below in order of urgency. (Using a weighted point system, the following results were tabulated by percentage):				
(a) The war in Vietnam 26				
(b) Urban problems 21				
(c) Law and order 13				
(d) Campus disorders 9				
(e) The economy and inflation 9				

The remaining 22 percent went in descending order to foreign affairs, ethics in government and politics, the public spirit and morality, the Communist threat, the Middle East, the problems of senior citizens, education, the antiballistic missile system, national resources and pollution, big government, the population explosion, and finally, big business.

JOSEPH L. GERHART GIVES A PERSPECTIVE WHICH THE NEWS MEDIA NEGLECTS

HON. BURT L. TALCOTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. TALCOTT. Mr. Speaker, every genuine American is "against war." Only the Communist aggressor who seeks to dominate other peoples and to acquire the land of other nations initiates war.

Most patriotic Americans, most citizens who believe in our representative system of government, most persons who truly want peace, most people who are concerned about the persistent inroads of communism, in this country and abroad, want to support President Nixon in his efforts to extricate us from this miserable war in Vietnam.

This huge majority in all walks of life, from every section of the country, regardless of race, color or creed, who support the President are frustrated and angered because they are not heard or seen to the same extent as those who oppose the President and our Government.

The overwhelming majority of American people are angry with the news media who consistently promote and glamorize the protesters, the demonstrators, and the anti-President crowds.

The great number of solid U.S. citizens who have contributed to the morality, stability and productiveness of this Nation are offended that a small number of hard core organizers whose objective is to destroy our reputation, our system and our institutions are given the greatest attention, time and space in the news media.

If you oppose the President, if you criticize the Congress, or if you want to bring down the Government or aid and abet the North Vietnamese or the Vietcong, you can always attract space and attention in the news media far beyond your numbers.

It would be helpful to provide balance, to help educate the curious and to fulfill the reportorial responsibility of the news media if all factions and all views were fairly reported.

Since the promotion of the October 15 moratorium began in earnest many months ago, during the demonstrations, and since, many constituents have written to me complaining about the disparate emphasis and the promotional effect of the news coverage.

Some resent the failure of the news media to give proportionate time, space or attention to groups or individuals who hold a different view.

Some ask why it is made so difficult for the majority to dissent from the dissenters. Some ask why the "straight and square," the decent and clean are rebuked whenever they try to speak out.

It is bad enough to believe that government ought to be pressured by mobs in the street, or that destruction or obscene behavior will receive more attention and consideration than polite, orderly importuning of the Government—but for the news media to aid and abet this behavior is alarming to many solid citizens who truly yearn and work for peace.

I insert a typical letter, one from Mr. Joseph L. Gerhart, the district superintendent of the northern California and Nevada district council of the Assemblies of God, who represents a large constituency.

His point is well taken. Three SDS members would be given more notice by the news media than 3,000 students who support a governmental official.

I believe Mr. Gerhart's letter deserves the attention of every Member of the Congress. It gives some much needed balance and perspective:

ASSEMBLIES OF GOD, NORTHERN CALIFORNIA & NEVADA DISTRICT COUNCIL, INC.,
Santa Cruz., Calif., October 15, 1969.

Hon. BURT L. TALCOTT,
Longworth House Office Building,
Washington, D.C.

MY DEAR MR. TALCOTT: I wish to express my very deep concern at the expression which is being voiced by some of our U.S. Government Officials in regard to the present policies and decisions of our President, Mr. Nixon.

It seems to me that this is the time when all Americans, regardless of personal opinions, would realize the necessity of standing with the President in endeavoring to save our Nation from Communism.

It is sad when uninformed people create great havoc and distress throughout the Nation but it is absolutely tragic when men who should be supporting the President are willing to stand against him most vocally by means of our news media.

We are all against war. . . . I am certain of that. We are also for America!

Who is going to give direction to millions of Americans who are distressed by what is going on but have no means of being heard? Is there any way to stem the tide of anti-Americanism which is being gushed out to us very day via the news media?

About a year ago when our District Youth held a Convention in Sacramento, more than 3,000 of them marched to the Capitol steps with posters and banners and songs, demonstrating their support of the Governor, the Nation and God. Did this make headlines? No! Not even the Sacramento newspapers gave prominent coverage. If it had been 3,000 SDS, it would have been on every national TV news release as well as all of the news media.

Very truly yours,

JOSEPH L. GERHART.

I WANT PEACE

HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. JACOBS. Mr. Speaker, under leave to extend my remarks, I include an article written by a former Member of the House of Representatives and former Ambassador, the Honorable Herbert Pell:

I WANT PEACE

(By Herbert C. Pell)

(I know how easy it is for an ignorant politician to yell "Communist" when he is at a loss for an answer or desirous of covering himself with a smoke screen. That is why I write this personal note. I should be among the first to be destroyed by communism. I am nearly 70 and have never been in business. I have lived all my life on invested property as did my father and mother and my grandparents and most of my great-grandparents before me. Economically I represent everything to which communism is hostile. I am one of the comparatively few Americans every one of whose ancestors became a citizen of the United States on July 4, 1776. I have always loved and enjoyed liberty. Since the day of my first effort in politics I have worked for personal freedom for all. I have lived in totalitarian countries and loath what I saw there. I know that a Communist government will inevitably degenerate into a totalitarian autocracy which is the opposite and the implacable enemy of everything I have enjoyed, of every material policy that has served me, of everything I have respected and of everything I have loved.)

I am for peace. I am for minding our own business. I am particularly opposed to a policy which boils down to an effort to impose American ideas and customs on other nations. This does not mean that we should not recognize the duties and responsibilities of our position.

We must properly understand the situation of the United States. This country is the leader of the free world which is a very different thing from being the free leader of the world. We are the first of a group of associates. We cannot act as the owner of slaves, as the paymaster of hirelings or as the dominator of satellites. The nations on our side are weaker and poorer than we are either because they are smaller or because they have suffered more, but they are not slaves, servants, or sycophants; they are free nations and can be led by their willing consent or not at all. We cannot treat them as tools to be broken in our interest. When we assume the burden of leadership, we assume at the same time a responsibility for the interest of those whom we lead. We cannot offend their conscience or sacrifice them for our own gain.

Are we to rush by ourselves all alone on a course of military adventure without the assistance, without even the sympathy of other nations which might have supported us in a less dashing policy. It is, of course, true that a leader must lead but another essential of leadership is to have followers. We cannot wisely ask the world to look to us for guidance if we obviously intend to consider no counsel but our own. The career of the Kaiser and of Hitler, as well as the example of Stalin should have taught us to consider the inevitable end of the largest and strongest lone wolf.

Intelligently we must recognize that the United States cannot be alone in the world. It cannot long remain prosperous in a company of ruined nations. So much is obvious. For a good many years to come, the core of individualist economy—if that economy is to survive at all—must be a prosperous United States. It is manifest that we cannot as a Nation continue as the leader and the bulwark of a civilization based on the assumption that peace is the normal condition of mankind if we persist in a policy of military adventure or turn ourselves into an armed camp.

If the United States is to be the first Nation of the future, if we are entering on the American century, let us hope—and do what we can to make it so—that the period of our leadership will be a period of peace, amity, and prosperity rather than a time of subordination for the world under the rule of a people themselves oppressed by the tools of their dominance.

Peace is not always easy to maintain: At the present moment its maintenance is and will be for sometime extremely difficult. As Governor Dewey once said, "We must wage peace."

Twice in our time we have seen that total war (and there is really no other kind possible) decides nothing, settles nothing, answers nothing, and leads to nothing. Winner and loser, both are vanquished. Is there a single nation on earth that got, by any imaginable system of accounting, a net gain out of either of the two wars we have lived through?

War is not a natural thing. It is the bankruptcy of leadership. It is the final and glaring proof that the governors of the world are not fit for their positions. Hatred of a foreign and unknown country is a drummed-up thing, and above all it is no essential part of patriotism, any more than hatred of your neighbors is an essential part of family love.

Peace is the only possible base for our civilization. It was built on peace and without peace it will die. War will ineluctably end the customs and the outlook and the way of life, the ideals and the national purposes which we inherited from our fathers to be held as a sacred trust for our children.

The inevitable result of war will be the complete destruction of everything that we value and the cutting of the taproots of democracy in the world. Manifestly with the effective end of prosperous democracy in the United States all freedom on earth must inevitably perish.

Can we afford to antagonize all other countries which normally would support us?

I have lived in totalitarian countries; I have seen independent nations lose their spiritual strength. I suggest an illustration which may at first appear unimportant. When I was a boy I traveled a great deal in Italy before the first war. I remember going to cafes in the summer, where the people sat around in groups up to a dozen at a table, all talking freely. I don't suppose 1 conversation in 20 had anything to do with politics. In 1938, I drove my son from Naples to Vintimiglia. The people still sat outside of cafes in summer, but they were at tables of two or three and their conversation was in whispers. Again, I believe that only a small proportion of these conversations were political, but the habit of fear controlled the minds of the people.

War will certainly destroy many forms of private property and of private investment and will practically annihilate all private business. From five to ten million at least of the best and most effective workers will be withdrawn from peaceful production. From fifteen to twenty more will be forced to devote their energies to the manufacture of articles of war. This will come pretty near to cutting our productive labor force in two. War priorities will reduce the manufacture of automobiles, houses, electric goods, roads, schools, hospitals, and everything else that we consume to the lowest possible level.

I have lived in countries where just this thing happened. I have gone through cities which I remembered as prosperous and active and found them like ghost towns and empty shops, hungry people, no traffic and above all, no hope and no liberty.

Another war with its crushing taxes will certainly mark the end of capitalism. Private capitalism depends on private investments and private investments depend on the willingness of people to forego present pleasures for future security and income. When my father forewent the expenditure of $100, he thought he was getting $5 a year for the rest of his life and $5 a year to be divided among his descendants for an indefinite time. Today the Government takes a great part of this return for income taxes and a lot of the capital in inheritance taxes. The result is that people will be less willing to save; less willing to give up present enjoyment for a much smaller ultimate gain. In the meanwhile factories must be erected; houses must be built; electricity and water supplied to new developing districts. Where is the money to come from? As these are necessities of life, it must obviously come from the State, which means socialism, and the administration of an increasing part of our economic structure by the Government.

It is quite certain that the Government will be obliged willy-nilly to do much more than this. It must direct the energies of the people into the canals which it will select. A man will not be able to build a hotdog stand or toy shop unless he can get materials allocated to him by the Government which practically means permission to go into the business, and he will not be allowed to do so, if the Government believes that a drug store or a fountain pen factory are more needed. With this extension of Government control of the economic lives of the community, there will inevitably come a system of censorship and the loss of all freedom of expression. We will be further and further from that idea of American liberty once expressed by an unknown cowboy, who said that he wanted to be able to look any man in the eye and tell him to go to hell.

Shortages inevitably mean rationing and rationing means Government control. But things will, and everybody knows it, go much further than that. With insufficiencies everywhere, the allocation of every short supply must be—or at least certainly will be—in the hands of the Government. Officials—wise or unwise—probably good men but not all-knowing, will have to decide what buildings shall be erected and what goods are to be produced. This is so obvious that no one can suggest any other policy. If there should be, as in the case of war there certainly will be, not enough steel to go around it would be obscenely indecent to allow one man to build himself a yacht merely because he could outbid the community.

There will be no field day for labor. There will be no overtime and no holidays taken at will when pockets get full, no shopping around for pleasant profitable or interesting jobs. Labor will be drafted in an all-out war and the workman will have no more freedom than the soldier. He will go where he is sent and do what he is told and get what the Government chooses to pay him and whatever that may be, it will not buy him very much.

All the improvements in labor conditions which I have seen coming in the last 50 years—many of which I fought for during the course of my career—will fall like trees in a hurricane. Strikes of laborers in factories will be as impossible as strikes of soldiers at the front. Anyone who is willing to think for 5 minutes must know all this and nobody thinking for a month can suggest anything else. I have seen this in other countries and I do not want to see it here.

Independent thought, independent expression will be crushed. The self-respect of free and thoughtful citizens will be destroyed by the continued knowledge that it is only at their own risk that they dare whisper any criticism of the elected officials of the Government. These would be the consequences of a great war.

Today, does any sane person believe that a conflict with Russia will mean anything but mutual destruction and ruin? Do we hope to overrun Russia as Germany was overrun and occupy it as Germany was occupied, and then build it again, as we are doing Germany and Japan into something very like what it was before? What do we plan to do with a victory?

It is manifest that a war with Russia will end in a collapse of common exhaustion. The representatives of a shattered Russia will meet the emissaries of a worn and exhausted United States and devise a means by which both can survive without continuing mutual slaughter and destruction. Is there any person in the world who imagines any other result possible?

Thirty years ago we tried to establish a democracy in Germany. The Germans are an educated and industrious people, accustomed to cooperation, but having had no experience in the workings of a democratic government, they were unable to maintain the structure of freedom and found themselves like the man in the Bible whose devil left him and returned with seven other spirits worse than himself. Are we going to make this same mistake again in dealing with Russia?

We are often told that we cannot negotiate with Russia. The Russian Government will not keep its word. Its guarantees and solemn promises mean little or nothing. Does any sane person believe that after wrecking the Russian Army, destroying the structure of the Russian Government, there will emerge from Russia a group of negotiators of greater integrity who will be more desirous of keeping their agreements and what is equally important, will have the power to enforce them at home?

It would be absurd to imagine that such a negotiation would be an easy or routine affair.

Russia has experienced enormous changes in the last 30 years; it is certain that the course of change is not yet run. The centers of political power and economic interest are far from fixed. We cannot expect a treaty with the government of such a country to endure very long—the best that can be sensibly hoped is imperfect and temporary, but even a temporary calm will allow the billows raised by the earthquake of war to subside a little, and every bit of calm makes stronger the settlement and integralization which can be the foundation of something more solid.

Our negotiators will be in the position of Eliza crossing the river, Pursued by bloodhounds, she arrived at the Ohio. She jumped on a floating piece of ice which could give her no prolonged footing, but was at least solid enough to provide a place from which she could leap to a second and a third, hoping that a fourth would drift along and that eventually she would arrive on hard ground. The temporary security of a cake of ice, even though it only deferred ultimate disaster, kept open the possibility of at last reaching land. It was better than bloodhounds or cold water. She would of course have preferred to cross by a bridge or ferry boat, but no boat or bridge presenting itself, she took a poor chance rather than accept inevitable failure.

I am perfectly certain that our system—the American system which everybody knows and which no one can accurately define—is, of all social structures existing today, the one which is most capable of development; most able to maintain itself; and especially that it can with the fewest and least dangerous repercussions alter its course to meet the strains of changes in the social and economic balance. After all, it has lasted without fundamental alteration for a century and a half, which is more than can be said of any government in the history of the world—even those which like the British have accepted basic changes in time to avert bloody revolution.

One of the things which we have most certainly learned from history and from our own observation of Mussolini and of Hitler is that dictatorships are impermanent affairs. The only possible opposition to an autocrat is revolution. Therefore, it does not take long for every criticism to be suppressed as revolutionary. In a short time we hear of such absurdities as "capitalistic biology"—a recent Russian contribution, which shows that truth can always outrun satire.

Germany, in 1930, was as far ahead of the world in the study of Atomic fission as is the United States today. After only 8 years of Hitler's government, the old and well integrated scientific world of Germany was shattered, and when called on to develop the atomic bomb, its disorganization was such that no effective progress could be made.

No dictatorship has ever been able to provide for an orderly succession of power. A dictator does not dare to make use of the best and strongest men. He fears that they will be intriguing for his place; that is why every dictatorship is weakened by sycophancy, nepotism, and bureaucracy.

Bodies can be enslaved; intellect can only be suppressed.

That is why I believe that time is on our side. In spite of crises and economic waves, which Communists believe will overwhelm us, it seems to me that if we hold firmly to real liberty and strive to extend it, it will be we, and not the worshippers of organization, who will most thrive. In the long run a people which controls its government will outlast a government which owns its people.

Our only peril comes from within ourselves; we may forget that our strength is liberty, and liberty is our strength. Thirty years ago I put into a Democratic State platform this phrase: "If the rights of the meanest and the most unpopular are traversed, the rights of all are in danger." Liberty cannot be a private possession, nor can it long be partial. It is universal and entire, or it will soon be nothing.

The real difficulty lies in the fact that the negotiators on both sides fear disapproval by the politicians at home. You can't buy a second-hand bicycle without some bargaining. The offers gradually come together, but there will never be any agreement if the seller fears he will be hanged as a traitor if he accepts a dime less than the original demand, and the buyer knows that he will be pilloried as an appeaser if he raises the bid by a quarter.

I do not know how it is in Russia, but in the United States today every person who dares to express the obvious fact that compromise is better than the best conceivable result of any possible war—which is the real belief of thinking Americans—finds himself attacked and stabbed on all sides by men sitting safely in public offices, who know very well that come what may, they will be safe from any enemy. Here, there, and everywhere you hear them shouting against compromise, calling the world to witness that their only desire is to shoulder a musket and face the wicked foe. It is only the superior quality of their patriotism that prevents them from selfishly indulging this wish. They must for the good of the Nation remain in public office while they cheer on the envied heroes.

Every radio blares hatred for the simple reason that it is profitable to do so. A radio commentator is paid according to the number of people who will listen to him, and particularly according to the number of hearers

he can attract who are stupid enough to believe that Thing-a-bob Soap, or Somebody's Toothpaste, or What's-his-name's Breakfast Food is better than any other on the market, simply because it hires a brighter comedian or a more exciting commentator.

As such people obviously will not think clearly in their own interest when buying soap, toothpaste or breakfast food, it is extremely doubtful if they will be willing to devote any serious thought to the public interest. They prefer phrases like "the best wash by gosh," or "hustle builds muscle" as guides to spending their own money, and want very little more for the formulation of their opinions. It is manifestly easier to excite such an audience than it is to force it to comprehend the simplest of reasoning.

This is why so many of the widely-heard commentators devote themselves to exaggeration and fear, and as far as I know, not one of them is advising calm consideration and certainly not one who dares to suggest asking the community to think for itself and answer the question—what we expect to do with a victory when we get one at enormous cost.

They have the effrontery to attack as cowards all who disagree with anything they shout.

The whole thing is contemptible. How much courage does it take for a Congressman or a Senator to yell for blood? Does a district attorney show a high quality of bravery when he howls against compromise? Right or wrong, no question of courage is involved. How much courage does anyone think it would take for me, 67 years old, living on an ample income quietly in the country, to clamor for gore, to demand the sacrifice of a million men 40 years younger than I am and then end my heroic address with a bitter note of regret that my years or my grapevines prevent me from joining the brave boys whom I envy. Such words do not come from the mouths of heroes or of patriots, but from the lips of self-seeking politicians hoping to ride into office on a wave of excitement that will conceal their own shortcomings. I have been in politics for 40 years. I was a Member of Congress 10 years before the oldest soldier drafted was born, and I know.

Most of the political shouters think they are backing a winning horse—that's all. Loathsome insects gather round anything that it rotten. Twenty-five years ago thousands of American politicians attacked the Catholics to get the Klan vote. Today they follow McCarthy. Twenty years ago they said as they drank their bootleg liquor, "There's one more election in prohibition." Today safe behind desks they think that war and hatred will keep their snouts in the public trough in 1952. It's as simple as that.

I am not one of those who appeal to fear, fear, fear. I say hope, hope, hope. In a speech which President Franklin Roosevelt prepared just before his death, he referred to "the impractical, unrealistic settlement of the differences between governments by the mass killings of people." We must hold to the old principles of our country which do not include fear of change, or mass terror, or dread of the future, or looking back to a golden age which is past forever. The people of this country need calmness and courage—not excitement and terror drummed into them by self-seeking politicians.

This is certainly a time for thought and not for emotion. In the most literal sense of the words I ask you for God's sake—for the sake of God, for the sake of your country if not for your own—to think.

I am for peace. I am on the side of the angels of God who sang "Peace on earth, good will to men." They were not popular with those who filled the inn and crowded Mary into the stables, but they were right all the same.

Why not negotiate now, while the young men are still alive?

TAX REFORM—OR TAX CHAOS?

HON. DONALD W. RIEGLE, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. RIEGLE. Mr. Speaker, several of my constituents in the Seventh District of Michigan have called my attention to a recent editorial in the U.S. News & World Report on the tax reform initiatives of this Congress. In his editorial "Tax 'Reform'—or Tax Chaos?", David Lawrence gives due credit to the Congress for taking up this long-needed reevaluation of our tax laws but criticizes some of the approaches toward "tax justice" and warns against a possible resulting chaos that can do more harm than its intended good.

While taking time to reflect on the way the Congress chose to handle this bill, he questions a system which gave Members of Congress so little time to adequately evaluate all the new provisions and thousands of pages of important committee testimony. Members of the Ways and Means Committee, who have worked so hard to get the ball rolling on tax reform, would be the first to urge all of us to understand the complexity of our tax system and to constructively focus public attention on fair and workable reform.

Mr. Speaker, I believe Mr. Lawrence's article fairly summarizes so many of the questions that my constituents, and other concerned people throughout this country, are asking—will this bill truly reform our tax laws in an equitable way, or will it create more fiscal havoc, dislocation of much-needed capital resources, and financial disincentive and disorganization. By thoughtfully evaluating current congressional efforts on tax reform, Mr. Lawrence offers a great deal to the ongoing efforts to formulate a more equitable tax system. Therefore, Mr. Speaker, I would like to enter Mr. Lawrence's editorial into the public dialog:

Tax "Reform"—or Tax Chaos?

(By David Lawrence)

The House of Representatives has recently passed what it called the Tax Reform Act of 1969. The measure is so full of questionable provisions that the Senate is finding it necessary to revise the bill completely. The general impression at the Capitol is that the task cannot be finished during the present session.

Although it is the first tax revision of a comprehensive nature undertaken in 30 years, extensive hearings were not held by the House. It is evident that the bill adopted was the result of pressures, mostly political.

The Senate Finance Committee, which now has begun detailed hearings, is issuing the full text of the testimony as presented each day. Already there are ten reports, totaling more than 800,000 words.

One of the reports contains arguments about the taxing of "Single Persons"—both widowed and unmarried. Two take up "Tax Treatment of State and Local Bond Interest." Another covers "Farm Losses; Cooperatives." There is a report on "Charitable Contributions" and one on "Charitable Contributions; Stock Dividends; Moving Expenses." Another deals with "Capital Gains; Restricted Stock; Lump-Sum Distributions Under Pension and Profit-Sharing Plans," and a further report covers "Financial Institutions." One document is devoted to "Limit on Tax Preferences; Allocation of Deductions; Tax Treatment of State and Local Bond Interest; Income Averaging; Maximum Tax on Earned Income." Another is on "Real Estate, Depreciation Deductions and Recapture; Public Utilities Depreciation, Earnings and Profits, Etc."

There is much wisdom contained in this testimony. But how could any committee take the time in the next 30 days to read it all carefully and get opinions from specialists as to the proposed recommendations? Criticisms offered by various organizations representing groups most affected by the suggested changes should be studied. Many of the pages of the reports are printed in very small type and are very difficult to read.

Does anyone believe that these volumes will be perused by all the members of the Senate and the House? How, moreover, can the public fix responsibility on those legislators of the House who have disregarded the simple rules of equity and yielded to a viewpoint supposedly advantageous to one class of citizens while obviously discriminating against another class?

Basically, a tax law is one of the most important factors in the economic life of the nation. It can impair the incentive of the individual.

"Tax reform" in a period of serious inflation is even more dangerous than in normal times. When there is no stability in the economic system, higher taxes imposed on particular classes will not prevent further inflation of prices.

Charitable institutions, which have long benefited from the philanthropy of the American people, will find themselves restricted in their operations if the bill passed by the House becomes law.

Certainly a tax bill should be designed to produce adequate revenue for the Government. But fundamental changes in the tax system that are made precipitately and without an opportunity for certain types of modification to be absorbed over a period of time in the operations of businesses can only do more harm than good. The "remedy" could prove worse than the disease.

There is allegedly a nationwide sentiment today for "tax reform" founded upon the idea that rich men have been taking advantage of "loopholes." But what is a "loophole"? If a rich man has "capital gains," should he be treated differently than the citizen of moderate means who is given the benefit of lower rates? There is much talk of closing the "loophole" of tax-exempt interest on State and local bonds. Wealthy persons particularly have been making such investments. But, unless carefully planned, this would add to the costs of State and municipal governments, which in turn would have to increase their own taxes. Already the proposal has brought about a highly disorganized market in these securities. Can this be justified because a few individuals with big incomes pay little, if any, taxes?

Time is needed—time for careful revision of existing laws, and particularly time to examine the novel proposals that are being recommended and to appraise their possible effects on the national economy.

There are always controversial provisions in tax laws, and the rule that should be followed is one which takes into account the ultimate benefits or ill effects of a change in tax rates or deductions.

We hear much nowadays about "discrimination" and about "equal protection of the law" for every citizen under the Constitution. But if one group of taxpayers is penalized for success, then the time has come to recognize that the taxing power is being abused. Capital formation—the constant flow of more and more funds into invest-

ment—is a prerequisite to our free-enterprise system and to the avoidance of state socialism.

Tax reform can be constructive only if the principles of tax justice are applied. We doubtless need some tax reform, but certainly not tax chaos.

FLY THE FLAG

HON. THOMAS J. MESKILL

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. MESKILL. Mr. Speaker, while there were thousands of people who supported the moratorium on Vietnam, it has almost escaped notice that there were many thousands who supported the President in his attempts to bring peace to Southeast Asia. One of the most inspiring ways in which these patriots expressed their support was to fly the American flag.

Last week, I received a brief note from a former distinguished Member of Congress, Mr. Ellsworth Bishop Foote, of New Haven, Conn. Mr. Foote enclosed an editorial that appeared on page 1 of the New Haven Register on October 14. The editorial recommended that Americans fly the flag at every home and business on Moratorium Day. It is a good suggestion. If the moratorium is carried over to this month, I hope that patriotic Americans will not hesitate to fly their American flags to demonstrate their support for the steady course the American President is taking to end the conflict in Vietnam.

Mr. Speaker, I wish to commend the New Haven Register editorial, "Fly the Flag for Peace With Honor," to my colleagues, as follows:

FLY THE FLAG FOR PEACE WITH HONOR

Tomorrow get out your American flag and fly it high.

There is no better way of showing Hanoi—and millions of friends and foes in other countries—that we are not seeking "peace-at-any-price" but rather peace with honor in Vietnam.

This is a dirty and ugly war that nobody wanted. The Register said so when President Kennedy took the expanded military steps that first bogged us down in Vietnam. We said so when President Johnson failed to control our goals there. We say so now.

But a war that nobody wants is not necessarily a war that everyone can abandon. The pages of history are littered with examples of peace-at-any-price attempts which invariably led not to peace but to ever disastrous and widespread war. It takes two sides to make a peace pact and the present impasse stems from the North Vietnam refusal to recognize an American involvement that no responsible American can deny.

Tomorrow's "peace moratorium"—let's face it—was conceived by the same left-wing campus manipulators who curiously have shown more respect for Ho Chi Minh and Chairman Mao than for the President of the United States. But the goal of peace—an honorable peace—is not the exclusive property of the young or the establishment-baiters any more than it is exclusive with campus pedagogues and politicians. It is the honest goal of the overwhelming American majority. As the demonstration apparently widens to attract a broad range of American opinion there is hope that it may be lifted out of the rut of just one more protest and give us, instead, a chance to show that disappointment and debate do not necessarily mean disunity or national disarray.

So fly the flag tomorrow at every home and business.

Let every flag that City Hall can muster be on display.

Let every flag that Yale can fly be seen above the campus.

Let the flag express American tradition, and American responsibility in the never-ending quest for peace and freedom. Let the American flag express, as no words can, our overwhelming desire for peace with honor.

Let's not be Star Spangled Suckers. Rather, let's fly the Star Spangled Banner.

ADDRESS BY J. H. CROMWELL

HON. FRED B. ROONEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. ROONEY of Pennsylvania. Mr. Speaker, James H. Cromwell, vice president and director of public relations of General Acceptance Corp., Allentown, Pa., delivered some most interesting and pertinent remarks at the annual convention of the Indiana State Consumer Finance Association which I feel are worth repeating.

I am inserting Mr. Cromwell's speech at this point in the RECORD:

The events which will mark this summer for most creditors and debtors are two: First, the heights which interest rates reached are extraordinary where not unprecedented—the Treasury paying rates as high as banks charged on auto loans not long ago; tax exempts selling at rates which equal or exceed many of the usury rates in effect in some States for centuries until the 1960's; corporation bonds issued at interest rates that would have equaled a tolerable rate of profit on risk capital a few years back. Second, the disclosure of simple annual interest rates on consumer and farm credit has begun to clear away the jungle of conflicting, confusing, deceptive credit quotations and credit plans which have developed in recent decades.

The high rates of interest may bring profit to some lenders; but when the probable buying power of the interest and principal at time of repayment are considered, the yield is little above yields which were attained in less inflationary periods.

The high rates on interest seem pretty heavy to long term borrowers; for example, the interest on a 25 year monthly payment loan at 8 percent totals almost one and one-half times the principal amount. The rates will seem heavy to financial institutions, like consumer finance companies, which use several dollars of borrowed money for each dollar of equity, in making loans at legally limited rates.

But heavy as the burden of interest may be, the rates may not have much effect on borrowing. The limit on credit may come more from lack of supply rather than from lack of willingness to borrow. The largest commercial banks assert that this is so, and real estate salesmen contend that the shortage of money, rather than the rate charged on loans, is the obstacle to building and selling houses.

The other and unique event of the summer, the introduction of Truth in Lending on a national scale into consumer credit contracts, may act somewhat like the high rates of interest; it may result in some shifting of the source and types of credit, without much impact on the total amount of credit sought. The disclosures of the cost of credit offered by various retailers and financial institutions may tend to shift consumers away from certain lenders, and towards lower cost sources of credit. But that sort of trend has been evident for years, in the growing relative importance of the U.S. Government and credit unions as suppliers of credit to consumers.

The disclosure of annual percentage rates on personal loans—which are perhaps 80 percent of the loans made by consumer finance companies—would be expected to induce borrowers to seek credit at credit unions or other sources where rates are below the rates allowed to small loan—consumer finance—companies. But other trends may modify consumer reactions.

One possibility is that banks' efforts to push their credit cards and check credit plans may displace some or even a large part of their regular personal loan business, and may displace the personal loan business of their institutions. The card is more convenient to the debtor; and it saves the repeated credit investigations which the banks would have to make for a series of regular personal loans. The card is attractive to the banks because once widely established, it will bring revenues from the discounts which the bank charges for handling the retail customer accounts, and may offer a way to get business for data processing, bookkeeping, and other affiliates. The card is attractive also because it will often or, perhaps some day, usually lead into a revolving credit account, with charges to the customer at an annual 18 percent rate, on top of the discount charged to the retailer.

This is why the banks are fighting the proposed FTC regulation that would ban the unsolicited mailing of credit cards. Those who violate the proposed regulation would be subject to the FTC's cease and desist orders, which federal courts can enforce by imposing a fine up to $5,000 a day. Banks are concerned not only because the FTC regulation might lead to a similar restriction on them, but they also oppose it on principle, because they fear it could be a "foot in the door" that might lead to additional regulations and restrictions besides the ban on unsolicited mailings.

But card credit will have to expand greatly to displace the personal loan. Banks' personal installment loans, which may include part of their credit card business now, currently total about $8.7 billion. Small loan companies have a very slightly smaller total personal loans, $8.7 billion when rounded. Credit unions are third in this branch of lending, with roughly $5.7 billion of personal loans, and sales finance companies are fourth, with about $3.4 billion of personal loans.

Some savings and loan associations and mutual savings banks make personal loans, but the total is smaller than for the other institutions. If these thrift institutions obtain broader powers to lend to consumers, their comparatively low costs of money and their great number of depositors may be expected to make them strong competitors in the personal loan market.

However, through the combination of personal loans and loans for purchase of autos and other commodities, the credit unions have achieved greater total volume of business than the small loan companies. The credit unions now have outstanding about 20 percent more loans than are held by the consumer finance companies.

The credit unions have achieved the highest annual growth rate among the consumer lending institutions in the last dozen years. From 1956 through 1968, their annual growth rate was an average of 14.45 percent. For commercial banks, the average was 10 percent. For consumer finance companies, the average annual rate of growth was 9.68 per-

cent. For sales finance companies, the average annual rate was 6.05 percent.

During the first half of 1969, the credit unions increased their loan volume about 7.5 percent, while the commercial banks attained a 5.3 percent rate, the sales finance companies a 4.1 percent rate, and the consumer finance companies a 2.6 percent rate.

In this year, the consumer finance or small loan company share of the consumer credit market has declined at a faster pace than in other recent years. In the past dozen years, the small loan companies share of total of personal loans made by financial institutions has fallen from 43 to 33 percent; while the commercial banks have increased from 31 to 33 percent; and the credit unions have advanced from less than one quarter to reach toward one third of the total of personal loans.

Will these tendencies continue, or accelerate? There are cost factors which for the present indicate a continued decline in the position of the personal loan made by the consumer finance company—but these do not necessarily indicate anything about the future relative position of the consumer finance companies, or the conglomerates of which they may be a part.

On May 16, 1967, appearing on page 12863 in the Congressional Record, Senator Williams of Delaware made a speech entitled the "World's Largest Banker". In the Senator's speech, he mentions 80 loan programs sponsored by various departments and agencies that promote large and small lending plans.

I wrote to Senator Schweiker and asked that he request the Comptroller General to review those departments and agencies mentioned in Senator Williams' speech to find out how much these loan programs cost the American taxpayer. He sent me a copy of a very detailed reply from Comptroller General Elmer Staats.

For fiscal year 1968, including all 80 programs, there was approximately $53 billion in various loans outstanding with the Federal Government writing off around $1.2 billion. The student loan program accounts for almost $1/20 billion in write-offs. So you can see the precedent for government subsidized "socially desirable" loans is full upon us. This, of course, reduces substantially our share of the consumer credit market although we seldom see the U.S. Government included in our statistics and projections.

Small loan company or personal finance company loans today are made under the disadvantage of two historical features—the maximum loan size and the interest rate limits. These limits originally were favorable. They induced capital to enter the small loan business, serve the needs of the working man, become the principal form of consumer credit for a while, and make the loan shark less familiar in many cities. But now they are often obstacles to competitive vigor.

The model statute for small loan companies initially allowed rates of 3 or 3½ percent per month, and maximum loans of $300. In three fourths of the States, the maximum loan has been raised to $1,000 or more. The average loan made by the largest consumer finance company two decades ago was almost $200; by the mid 1960's, it was three and three quarter times that large.

Maximum loan limits which have not kept pace with the increase in wage and salary levels—and the maximum would have to be several thousand dollars now to be as liberal as the $300 limit of 1910—work to the disadvantage of both small loan company and borrower. Maximum loan limits which are at the old historical levels compel borrowers to obtain multiple loans, at higher interest cost to themselves and at higher administrative costs to the lender.

If loan limits and maximum rates are revised as income scales rise, then small loan companies can remain competitive and their borrowers can save on financing charges. Independents often opposed this theory on grounds that higher ceilings lead to greater credit opportunities for the chains.

However, when money costs are at their present heights, and the trend is towards larger loans which for small loan companies are required by law to be made at lower rates of return, then the earning capacity of small loan companies from personal loans diminishes.

This cost feature which has worked to the disadvantage of the Chains as well as the Independents and works definitely to the advantage of the credit union, is the cost of borrowed money. Many credit unions have to borrow money to keep up their loan volume but for credit unions generally, interest is one of their smaller expenses, far behind salaries and insurance on borrowers and savers.

The advantage held by the credit union, in having a comparatively low cost source of capital and having the benefit of offering both an investment and a source of funds when needed, has led to a more rapid rate of growth in recent times than has been achieved by other lenders. This is a permanent advantage which will be magnified in the market by growing public familiarity with the credit unions—especially as it is aided by Government.

The concepts involving the growth of the cooperative movement into various areas of finance are not new. The Rural Electrification Administration has long been able to get 2% money from the Government and reloan it to cooperative members or potential members at reduced rates.

I am not here to discuss the pros and cons of these concepts, I just want to point out what is happening and how it should affect our government affairs operations. It is obvious the Government is becoming more interested in the appropriate roles of cash benefits as opposed to service benefits, so we should become more interested in Government fiscal policy.

This policy follows certain patterns. First, changing economic conditions create new demands upon existing enterprises; second, there is an attempt by these enterprises to meet such demands within existing governmental restrictions; and third, where such attempts are inadequate to the tasks of overcoming these restrictions, demanders' as well as suppliers' dissatisfaction mounts. Finally, a) the restrictions are relaxed or removed to enable the transformation of the existing enterprises in response to the changed demands; b) alternatively, a new type of enterprise, or the same type of enterprise under the guise of a different name, emerges in response to the changed demands.

One of the newest approaches to community credit expansion is Senator Proxmire's legislation (S2146) which would establish a new kind of financial institution, a "National Development Bank." These would be privately owned and wholly new banks or branches of existing banks. One-third of the directors of each bank would be required to live in the area served by the bank. Eighty percent of its consumer, mortgage or business loans would have to be for the benefit of persons living in rural or urban poverty pockets—of which there are about 800 throughout the country and in which 15 to 20 million Americans live.

This would be done by private enterprise, backed up by certain federal guarantees and a loosening of some of the current restrictions. Thomas R. Wilcox, Vice Chairman of First National City Bank of New York calls the Proxmire Bill a "sensible proposal," but if the Consumer Finance Industry, both Chains and Independents, do not or cannot meet the changed demands, the cooperatives will move in and we will go out of business together.

There are more credit unions in the United States than all other financial institutions combined—23,563 at the last count, with over 20 million members and assets of over $14 billion. Dr. Rudolph Modley, at the 1968 AIBA Convention, emphasized, "One of the most drastic differences between credit unions and other financial institutions is their ability to mobilize and use political power effectively."

On July 28 of this year, by a vote of 356–10, the House passed a measure establishing a separate Federal Credit Union Agency. The Senate recently completed hearings and this new agency should become a reality in the near future. It is obvious they have big plans.

And what else have the unions done to show us their power? Just this year their direct lobbying efforts with various Governors have resulted in vetoes of legislation favorable to us in Louisiana, New Mexico, Maine, Missouri, Michigan and they even forced a filibuster in Alabama.

But I am also not here to condemn the political activity of people with an axe to grind. I am suggesting that we do it on a grand scale for the unions have beaten us to the punch by at least a decade and the situation is out of balance.

To do the kind of job that is necessary, we must first eliminate the three cancers that are destroying our health and vitality: 1) lack of cooperation between Chains and Independents; 2) the bickering between our two largest companies; 3) lack of an effective lobbying effort because of two ineffective national trade associations.

I am going to say some things that perhaps have not been said before at any consumer finance meeting but they need saying. I want to make it eminently clear that I am not criticizing Carl Hawver and Max Denney, who are politically sophisticated and know what has to be done, but they can do only those things which are authorized by their Boards of Directors.

As we pointed out earlier, the Independents should recognize that higher loan limits do not necessarily mean greater credit opportunity for the Chains. The Independents should explore the possibilities in the Proxmire Bill. If One Bank Holding Company legislation is enacted as now drafted, and I am confident it will, a finance company will be considered "functionally related" to banking. Therefore, an Independent can form a "National Development Bank" and get a piece of the action. There are many other opportunities for Independents and Chains alike to increase their traffic in the Uniform Consumer Credit Code. We must work together for adoption of UCCC for in this omnibus bill, there is contained an exciting future for consumer credit.

U.C.C.C. provides for flexibility in local operations and the manager with ingenuity and initiative can find ways to implement additional income producing services. However, in the September 19 issue of Shop Talk, the AIBA legislative report, Congresswoman Leonor Sullivan is quoted as saying, "I would like to see such a Commission (National Commission on Consumer Finance) also investigate the possible need for a Federal consumer credit code." I hope the States get moving because a Federal UCCC may not be so exciting.

However, what is interesting to contemplate as a Federal law, is the concept of Federal Charters for finance companies. This would eliminate the criticism levied at UCCC for allowing indiscriminate licensing and at the same time abolish unrealistic C&A regulations. It could be an asset to Independents and Chains alike and my intuition tells me this will be a reality in the not too distant future.

Second, I have been deeply disturbed by the problems caused by the rivalry between Household and Beneficial. I am not aware of any problems here in Indiana, but in other States I receive reports too frequently from my men that one company refuses to participate significantly in a state legislative program because the other has a leadership role in drafting and promoting it. In New York, earlier this year, one actually walked out leaving the other companies holding the budget bag which meant another assessment. Because of these absurdities, the efficiency of a State Association is destroyed and unless corrected, there would be no point for GAC to continue paying dues into that Association.

Third, coming from Washington where I watched for ten years the streamlined efficiency of trade associations, I was appalled at the floundering of our two national trade associations. The big problems we are worrying about today are not, in the main, the big problems we were worrying about ten or fifteen years ago. As far as I can tell, almost no one forecasted what our present day problems would be. Moreover, the big problems we will face in the 1980's probably will be quite different from those we are facing today.

A strong trade association should today be engaged in research to name those problems of tomorrow and making preparations to lobby those they cannot name. The men that serve on the Boards of the AIBA and the NCFA, put together big deals every day. It seems odd that they cannot get their two Associations together. I will say that I understand that merger talks are underway and if these materialize, this will be a major step in the growth of the retarded power and influence of the Consumer Finance Industry.

Meanwhile, we all can add a new dimension in our public relations programs—utilizing sophisticated, executive leadership in guiding our employees into responsible political action. With the encouragement of S. Hayward Wills, Chairman and President of GAC, we have graduated three bipartisan political action courses made up of the senior officers. We are now making plans to start classes for all home office employees and hope eventually to have this morale building program into the field.

What if we don't do these things? Teddy Roosevelt once answered this question:

"In a republic like ours, the governing class is composed of the strong men who take the trouble to do the work of government and if you are too timid or too fastidious or too careless to do your part in this work, then you forfeit your right to be considered one of the governing and you become one of the governed instead."

SPEAKER JOHN McCORMACK

HON. WILLIAM T. MURPHY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, October 20, 1969

Mr. MURPHY of Illinois. Mr. Speaker, I join with my colleagues on both sides of the aisle in paying a richly deserved tribute to Speaker JOHN MCCORMACK.

JOHN MCCORMACK'S record needs no defense from me. In my many years of friendship with JOHN MCCORMACK, I have found him to be a man of unassailable honor and unimpeachable integrity. During some of the most trying times in our Nation's history, he has compiled a brilliant record of intelligent leadership and legislative accomplishment.

Both his public and personal life have been marked by honesty, loyalty, and devotion to duty. He represents to the highest degree the finest qualities of this Nation.

I consider it a privilege and honor to serve under his great leadership in the House of Representatives.

IMPORTANCE OF APPLES NOTED

HON. DANIEL E. BUTTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, October 27, 1969

Mr. BUTTON. Mr. Speaker, upstate New York, especially the beautiful Hudson Valley, is justly renowned for its production of one of nature's most luscious fruits, the apple.

Appropriately, the apple harvesting season in that portion of the valley which falls within my congressional district was celebrated in a feature article published recently by the New York Times. The article, by Bill Kovach of the Times staff, focused on one orchard, but it could well be considered to apply in spirit to numerous other producers of apples within the area.

Because of the pride which I, along with all my constituents, have in this very vital phase of our agricultural economy, I take pleasure in directing the attention of my colleagues to Mr. Kovach's article describing the contribution of Albany County orchards to the dietary delights of all.

Under the title of "Appleknockers Upstate Reaping Fruit of Labor," the article follows:

ALTAMONT, N.Y.—In each region of the country a special sign confirms the beginning of a new season. In the south it is the first whiff of wood smoke that drifts across a burning blue sky; in the Midwest it is the rustling ranks of dry cornstalks. Here, in upstate New York, it is the apples.

"Maybe," said one Hudson Valley farmer, "it's just that apples tell my mouth what everything else has been telling me all along. Anyway, they're what mean fall to me."

Since the first Dutch settlers brought seeds and cuttings into the Hudson Valley, upstate New York and apples have been synonymous. While other regions have their "rednecks" and "clodbusters," New York has its "appleknockers."

This year, in the orchards in the Hudson Valley along the Catskills, in the Lake Champlain region and in the area between the Finger Lakes and Lake Ontario, the state is expected to produce 22 million bushels of apples to keep its place as the second largest apple producing state in the nation. Only the State of Washington should produce more.

For men like Joseph A. Gatto, the season progresses not in terms of turning leaves, but the ripening of fruit. Beginning in late July or early August with the early McIntosh and continuing in to early November with the Rome Beauty, the time between summer and winter is ticked off by the swelling, coloring and sweetening of apples.

ALWAYS SOMETHING TO LEARN

Mr. Gatto, who has spent enough years in the business to know "that when you think you've learned everything, you know you're just beginning to learn," is manager of the Indian Ladder Farms here.

With a potential production of 70,000 bushels, this farm spreads over rolling hills on the eastern side of the Heldeberg (Dutch for "clear") Mountains where air masses influenced by the mountains temper local weather and produce the warm sunny days and cool frost-free nights at harvest time that the production of apples requires.

"It's not the simple business of watching apples grow that it was when Adam and Eve first tasted that fruit," he says with only a hint of humor in his voice. "It gets to be more of a science every year."

Harvest was in full swing when Mr. Gatto took a turn around the farm with some visitors recently. It was almost as if he knew every tree. He handled them gently as if he was afraid he might destroy the potential developed over years of care.
